"Just as England witnessed a surprising increase of her exports to America after the defection of the original thirteen States, so Spain may be recompensed materially, even morally, for the loss of the Antilles by an increase of commercial relations with Spanish America. After all, it is a matter of mutual interest. The future of Spanish production depends principally upon the increased purchasing power of Spanish America, where we can create new markets in regions hitherto little cultivated. South America, and especially the Argentine Republic, is benefited by increased Spanish immigration, already second only to that from Italy. Moreover, the Spaniards who emigrate are of rather better quality, being generally above the class of mere laborers. They increase the best element effectively, and as they rarely intend to return, they must affect the progress of their new home. Looked upon from this point of view, the United States has never ceased to be a British colony. There seems to us no subject better worthy of attention than the question how we may strengthen the bonds which unite us with South America."

The *Journal des Débats*, which recently hinted that the Argentine-Spanish fraternization must needs be pointed against the United States, has discovered its error, and says:

"It is a curious spectacle this: North America and South America, the one civilized by England, the other by Spain, approaching the mother countries from which long and bloody wars had separated them. But there is a great difference. The Anglo-Saxon 'alliance,' praised so much by Mr. Chamberlain, is manifestly desired more by England than by the United States, and British statesmen see in the United States merely a diplomatic tool. In other words, the North Americans are to aid them in the realization of their plans of world-conquest. Nothing of the sort can be imputed to poor Spain, who is just now too sore to form such vast plans, and the Ibero-American 'Union,' if it can be realized, will have a moral character rather than a diplomatic significance. It is this fact which renders it more likely of realization than the Northern 'alliance.' The latter is not desired very much in the United States. It is recognized there that, putting sentiment aside, England is a political rival of the great republic not only throughout the world in general, but also on the American continent. . . . South America need

not fear Spain; hence the South Americans approach the mother country much more heartily."—*Translations made for THE LITERARY DIGEST.*

CECIL RHODES AND HIS INFLUENCE.

IT is generally believed that Mr. Cecil Rhodes was mainly responsible for the South African war, and few people doubt that he will have much to say in the settlement of South African affairs when the struggle is over. Revered by many as the empire-builder, hated by many more as the evil genius of Great Britain, his influence is all the more remarkable as he has never bowed before "society," and treats men of rank with an indifference bordering upon contempt. We take the following from a character sketch in the *Paris Temps*:

Generally very moody and taciturn, Cecil Rhodes becomes lively when his ideal is mentioned. That ideal is British imperialism. The Anglo-Saxon race, he argues, owns three continents already. It is the richest, most powerful, most happy. It is destined to rule the world, and any land not already in the hands of other strong nations belongs by right to the Anglo-Saxon. He made up his mind to conquer Africa for his race. For this he made his money, and with that money he hemmed in the Boers by annexing the territory around the Transvaal. For this he organized the Jameson raid, and prepared for the present war. Outwardly, he does not look like a milliardaire, for he dresses plainly, almost slovenly. He is a heavy giant, but a restless one. He is up early, riding around for a couple of hours. What the world calls society he hates, and women, at least white women, have no charms for him. His only personal luxury is his park at Groote Schuur, where he keeps lions and where he grows flowers. Polite speech is not his strong side, and he never answers letters. His boxes are full of unanswered letters; he attends to telegrams only.

For his imperialist ideal, he spends his money freely; but whether he is working for England, or for a South African empire, or only for his own aggrandizement, nobody really knows. Matabeleland and Mashonaland already are called Rhodesia; why should not all South Africa be given that name? However that may be, Rhodes is an extraordinary man, one of those men who are sometimes called heroes, sometimes robbers, according to the point of view taken, and according to their success.

The *Handelsblad* (Amsterdam) thinks that Rhodes overrates the power of money. His attempt to corrupt the Transvaal Volksraad failed. Moreover, he greatly overrated the military power of England, and he did not credit the Boers with the determination they have shown. He certainly has not attempted to hide his disgust with the turn affairs have taken since he declared that Kimberley was "as safe as Piccadilly." To a correspondent of *The Daily Mail* (London) he said:

"The marvelous thing about England is her luck. We have made the silliest mistakes, we have had some most incompetent generals, but we are coming out all right, as we always do. Glad to have Kimberley relieved? Of course we are all glad, but in heaven's name why was it not done sooner? What was the good of all that messing about at Rensburg and Colesberg?"

Mr. Rhodes declares that there never were more than 30,000 Boers in the field. He has given vent to severe personal criticisms of Sir Redvers Buller and Lord Methuen, and it remains to be seen whether his influence is great enough to hold in check the enemies he has made by this. That influence is certainly extraordinary (considering the fact that Rhodes now holds no official position), for it is generally accepted that he forced Sir Redvers to change his plans. The *Manchester Guardian* says:

"Granted," it is sometimes said, "that the necessity of relieving Ladysmith compelled General Buller to throw up his original plans and go to Natal, why did he split up the forces in Cape Colony, giving General Gatacre a bare fourth of the forces he expected, and sending Lord Methuen to Kimberley?" . . . Mr. Rhodes forced General Buller's hand, and the result was—Magersfontein on the western frontier and, in northern Cape Colony, Stormberg, a desperate attempt at surprise with insufficient forces. And it is now known what were the thanks Mr. Rhodes gave General Buller for his pains."—*Translations made for THE LITERARY DIGEST.*

CORRESPONDENTS' CORNER.

Is the Drama Immoral?

Editor of THE LITERARY DIGEST: In your number of March 3 there was a list of operas whose themes, as stated by Herr Professor Graebner, of the Concordia Theological Seminary, are foul and immoral. The earnest mind is thrown into great doubt as to what is proper, not alone to see played, but to read. I have applied the professor's scale to some of my own recent reading and am shocked. I find that the "Idylls of the King" are beyond measure foul, setting forth as they do wars, murders, and the amours of a queen and a knight who was her husband's best friend, and the seduction of the unfortunate Merlin by Vivian. I opened Browning at a "Blot on the Scutcheon"; leaving this as obviously impossible, I tried "Pippa Passes" and found it a tale of horror, one of whose first headings reads, "Lucia's Wife and Her Paramour, the German Sebald." David Harum is the story of a man who made love to one whom he thought another's wife. Picking up *Scribner's*, I found that the sequel of "Sentimental Tommy," now running there, is the story of a man so base that he made love to a woman whom he not only did not wish to marry, but whom he did not even love.

I read some of the histories in the Old Testament—horrors! I could not listen to the blasphemies of Job or the passionate singing of the "Song of Songs." I hastened to the New Testament and found there stories of how a good man mingled in the worst society,—stories of publicans, of sinners, of harlots.

I have now given up the study of history, literature of every kind, alienism, physiology, biology, anthropology, philosophy, psychology. I have discontinued the *Ram's Horn* because a story in its last number tells of the downfall of a young man into sin and lust. I am now reading in mathematics only, but I suspect them, I suspect them. PROBUS.

Mormonism and Martin Luther.

Editor of THE LITERARY DIGEST: The *Catholic Mirror* (quoted in your columns January 27) makes a charge against Luther that, in the name of justice, must not pass without a reply. It is, I believe, generally admitted that Luther did sign that document by which Philip of Hesse was given a kind of permission to indulge in bigamy. This is certainly a sad blemish on the character of Luther, if it is true, and I have never met with a Protestant who did not deplore it bitterly. But if Mormonism is to be traced to this mistake of Luther's, I beg to know why it may not, with just as much reason, be traced to the Pope. And these are the grounds upon which I base my question.

Nine years before the Landgrave of Hesse laid his petition before the Lutheran theologians, Henry VIII. of England was negotiating with the Pope to be relieved of his first wife that he might marry Anne Boleyn. Everybody knows the predicament in which this placed the Pope; but few know the various means by which he tried to extricate himself. One of them appears in the following extract from a letter sent to Henry VIII., by his agent at Rome (see Lord Herbert's "History of England under Henry VIII.," p. 444): The italics are mine.

"Most serene and most powerful lord, and my most gracious sovereign, to whom all health and happiness, and the most humble acknowledgments of my duty and affection. Some days ago the Pope in private offer'd to me this proposal, as a thing of which he made much account, *that your majesty might have a dispensation to have two wives.* May God preserve your majesty's health. Rome, September 15, 1530.

"Your most excellent majesty's most obedient servant.
"GREGORY CASALIS."

Now it would certainly be absurd to try to trace Mormonism back to this; but it would be no more absurd than to trace it to Martin Luther.
ROCK ISLAND, ILL. C. A. WENDELL.

Tolstoy's "Resurrection"—A Correction.

Editor of THE LITERARY DIGEST: As I have just finished reading Tolstoy's "Resurrection," I was somewhat astonished at seeing in your last issue, in a review of this work, the statement that Maslowa, the heroine and the woman whom Nekhlyudoff had betrayed some years previously, was tried upon "the charge of having murdered her illegitimate child." Your reviewer certainly can not be familiar with this work, as Maslowa was *not* tried for this crime, but for the murder and robbery of a traveling merchant in conjunction with a man and his wife who induced Maslowa to give the merchant some poison in a glass of wine, telling her that it was simply a sleeping potion designed to counteract the effects of the stimulants which he had been drinking.

All the details of the post-mortem and chemical examination of the merchant's body are laid before the court and jury, and his stomach, etc., shown them. The jury, of which Nekhlyudoff was a member, while of the opinion that Maslowa was technically guilty of administering the poison, did not believe that she had any knowledge of, or responsible part in, the murder or subsequent robbery, and consequently should be acquitted. Through weariness, carelessness, and inattention to the judge's charge, the jury found her guilty of administering the poison, but failed to state that they attached no criminality thereto. On account of their criminal neglect of their duty, she was sentenced to hard labor in Siberia. Hence Nekhlyudoff's remorse for his neglect of his duty as a jurymen which was really the starting-point of his change of life, his "Resurrection."

Yours very truly,
PAUL RICHARD BROWN.

[The sentence quoted from our review was certainly a slip, and Mr. Brown is right. We had already, in a former number, described the novel, and in the sentence quoted made a brief reference to refresh the reader's memory. Apparently it was our own that needed refreshing on that particular detail.—*Editor of THE LITERARY DIGEST.*]

PERSONALS.

THE following amusing anecdote about Robert Louis Stevenson appears in the *London Daily Chronicle*: "It seems that for the last three or four years of his life Stevenson lived without a birthday, having by deed of gift made it a present to a little girl, Annie Ide, whose father was first land commissioner at Upolo in the Samoan Islands, and later chief justice. In the document by which this was done, Stevenson described himself as 'Advocate of the Scots Bar, author of 'The Master of Ballantrae and Moral Emblems,' civil engineer, sole owner and patentee of the palace and plantation known as Vallima, in the island of Upolo, Samoa, a British subject, being in sound mind and pretty well, I thank you, in body.' The reason for the deed was that the little girl 'was born out of all reason, upon Christmas Day, and is therefore, out of all justice, denied the consolation and profit of a proper birthday,' while he himself had 'no further use for a birthday of any description.' Among the rights and privileges carried by the document were 'the sporting of fine raiment, eating of rich meats and receipts of

gifts, compliments, and copies of verse, according to the manner of our ancestors." The deed, also directed that the recipient should add to her name that of Louise "at least in private," and should use the said birthday "with moderation and humanity, of *langue bonis filia familiae*, the said birthday not being so young as it once was, and having carried me in a very satisfactory manner since I can remember."

THE *Providence Journal* recalls this story, which President Eliot, of Harvard, told at an alumni dinner some time ago. "I can not acknowledge that as the years go by I am growing old, I have evidence to the contrary. When I was professor at Cambridge, a few years after my graduation, I learned that the students spoke of me habitually as 'Old Eliot.' A few nights ago, on the other hand, I met a group of students in the street, and when I had passed them I heard one say to the others: 'I wonder where Charlie has been so late.'"

It is said that when the present Emperor of Russia proposed to Princess Alice of Hesse, the following scene took place: He was standing at the time, and thus addressed the lady: "My father, the Czar, has commanded me to offer you my hand and heart." The Princess smiled at the queer, formal wording of the sentence, but immediately answered: "My grandmother, the Queen of England, has commanded me to accept the offer of your hand—your heart I shall take for myself."

JUST A COMPARISON.—Lord Russell of Killoren (when Sir Charles Russell) was once examining a witness. The question was about the size of certain hoofprints left by a horse in sandy soil.

"How large were the prints?" asked the learned counsel. "Were they as large as my hand?" holding up his hand for the witness to see.

"Oh, no!" said the witness honestly; "it was just an ordinary hoof."

Then Sir Charles had to suspend the examination while everybody laughed.—*Chicago Times-Herald*.

No Such Opportunity Again.

We predict that no such opportunity will be available again to buy a lot in New York City at a less price than one has to pay for lots in many inland towns. This is a rare chance to make an investment that will bring large returns. See Golden Opportunity first page of reading matter.

Remodeling a Gown

becomes a pleasing occupation, provided it was stitched on a *Singer Automatic*. The elastic seam made by this machine is perfectly safe when locked, but can be taken apart in an instant when unlocked. Thus its use is especially desirable for the clever woman who wishes to make over a garment so that it may conform to the changing styles. Whether in the hands of the amateur or the expert, this simple bit of mechanism is the most convenient and effective of any.

Having all the advantages claimed for other "automatic" sewing machines, the *Silent Singer* has many points of preference that can easily be demonstrated by comparison. Of *faultless construction and finish*, it is absolutely the lightest-running, the simplest and most compact. It is more easily threaded, and its parts are better protected from dust. The broad treadle better promotes the health and comfort of the operator, because it is lower and the position of the feet can be changed at will. These points are worthy careful consideration by those of delicate health or unaccustomed to continuous use of a sewing machine.

Current Events.

Monday, April 16.

—Boers are in full retreat from Wepener, marching along the Basuto border.

—Mafeking garrison is safe, but suffering from hunger.

—Governor Roosevelt appoints the Tenement House Commission.

—Major-General Roe orders the Seventh Regiment to the scene of trouble at the new Croton Dam; strikers kill a sergeant.

Tuesday, April 17.

—Lord Roberts reports that the Boer attack on Wepener is slackening.

—Montenegro, an insurgent general in Luzon, surrenders with his forces; an attack on United States barracks in Mindanao is repulsed.

—The plague breaks out in Persia.

—In the Senate, Mr. Hoar makes a speech on the Philippine question.

—The floods in the South continue to do much damage.

Wednesday, April 18.

—Reports are in circulation that General Warren has been recalled from South Africa in consequence of strictures upon him made by Lord Roberts.

—A Boer force has started to intercept General Carrington's expedition through Rhodesia.

—Minister Straus will not return to Constantinople until Turkey has paid the promised indemnity for outrages on American missionaries.

—More pay is conceded to the Italian strikers at Croton Dam.

—The President sends a message to Congress asking for supplementary legislation to aid in establishing civil government in Puerto Rico.

Thursday, April 19.

—The requisite remounts and equipment reach Bloemfontein.

Large Improvements.

More than \$100,000 spent last year in improving and beautifying Westleigh (Prohibition Park). \$25,000 to be spent this season. Only a few more lots to sell at sacrifice prices. Think of it, for more than a year our average sales have been more than a lot a day. See Golden Opportunity, first page of reading matter.

Rheumatism Quickly Cured

In an article contributed to the London Lancet, a Philadelphia Physician says: "Tartarilithine has given me results beyond all comparison superior to any preparation which I have tried. The promptness of its action is in many cases astonishing; a subsidence of distressing symptoms quickly following the administration of three doses of five grains each, taken four hours apart in a half pint of water on a reasonably empty stomach. The use of the preparation in the quantities named has sufficed in all cases so far treated, about twenty in number, to practically cure the disorder."

Tartarilithine is supplied in bottles containing 50 doses at \$1.00 and can be obtained of all druggists or post-free by mail. Pamphlets with Testimonials sent FREE.

—The Ecumenical Conference opens in New York City.

Sunday, April 22.

—Serious fighting near Wepener.

—The Filipino insurrection during the past week results in about a thousand rebels being killed, wounded, or captured.

—Secretary Long introduces the Navy Department's bill providing for the acquisition of land on either side of Pearl Harbor, Hawaii, and the establishment of a naval station there.

—Archbishop Corrigan sails for Genoa.

Successful Fruit Growing.

The address delivered by the superintendent of the Leonard Sprayer Company, of Pittsfield, Mass., before the Lenox Horticultural Society at Lenox, Mass., mention of which we made in previous issues, was such a popular success that the company have been obliged to change the plan of distribution. The address is almost a college education to fruit growers, fruit dealers, and in fact to anybody eating fruit or even having but few fruit trees, or in any way concerned. It was an admirable address, is quite lengthy, about an hour's talk. It is said that had it been placed on the market in book form it might have yielded the speaker a fortune; it no doubt would have sold at a good price. All rights were reserved, however. The full address, profusely illustrated, in pamphlet form, was intended to be sent to fruit growers and owners of estates, free for the asking, but requests for it came from all sorts of people. Dressmakers, school boys and girls, clerks, leaders of clubs, young lawyers, college boys, and many who never owned a fruit tree or even a bush under the sun, sent for it. The company had to draw a line at this point, as it was never intended for these classes of people. To prevent imposition, the address will only be sent to people interested in fruit culture, and a fee of 50c. in postage will be charged. This book exclusively treats of the interests of owners of fruit and shade trees, the kind of pumps in orchard work or in parks to be used, with comments upon the "home-made" sprayers, made on a barn floor by Mike—or Jim—with a hoe in hand, and its failure. Published on good paper, easy reading, plain in language, free from technicalities. We believe this book to be a good investment for owners of country seats or fruit growers. We have one on our table. The book is all right. Send for the lecture to the Lenox Sprayer Co., 30 West Street, Pittsfield, Mass. "Cut this out before you forget."

"COOK IN COMFORT."

This Stove

is cheaper and more convenient to use than any other oil, gasoline, or gas stove. It is the PRIMUS "ROYAL BLUE."

It burns kerosene with a perfect blue flame, without a wick—vaporizing the oil. It is perfectly safe, and makes no smoke or odor. Flame is instantly regulated and can be kept at any heat. It costs for fuel about one-half cent an hour per burner at full blast. For summer cooking there is nothing to compare with the "ROYAL BLUE." You are wasting yourself and your money if you are without it, for it will pay for itself in a year in saved fuel.

Prices \$5 to \$15. Send for catalogue—

If Your Brain is Tired

Use Horsford's Acid Phosphate.

Dr. T. D. CHORRIS, Supt. Walnut Lodge Asylum, Hartford, Conn., says: "It is a remedy of great value in building up functional energy and brain force."

"INTERPINES"

A strictly high class curative institution for the treatment of Nervous Disorders, Mild Mental Cases, and Drug Addictions.

FREDERICK W. SEWARD, M.D.,

Telephone, "Goshen 5." Goshen, New York.

The New Gymnastics.

To double your muscle, to gain enormous power in hand, fingers, wrist, arm, shoulders and back, to steady your nerves, to cure sleeplessness, you need only a **Hendrickson Grip Machine**. A revolution in exercising, which produces marvellously rapid results. It will double your skill at tennis, baseball, pitching, bowling, golf, billiards, piano playing, drawing, because it gives perfect control over arm and wrist muscles. Invaluable to bookkeepers [it cures writers' cramp and cold or trembling hands], stenographers, telegraphers, boxers, all who use their hands.

FREE TRIAL.

A pair sent to any address on receipt of two 10c postage and your promise either to send us the machine price, \$1.00, at once or to return them by mail within two days of receipt. Three strengths—athletes', men's, ladies'. Cork grips, nickel-plated metal. A simple, splendidly illustrated instruction with every pair.

THE HENDRICKSON WRIST MACHINE CO.
Dept. H, 135 Park Row Bldg., New York.

"Elastic" Cabinet

A system of units. A living, growing cabinet. Always fits your business—today a few units, next year more units, and get them as wanted. Units contain everything for the perfect arranging and classifying of business papers, letters, catalogues, etc.

"G-W" pays the freight.

Also "Elastic" Book-Cases, Card Indexes, Desks.

A Man's First Duty

is to provide for the support of his family and the education of his children. While he lives his energy supplies the means—Afterwards

Life Insurance

will accomplish the same result.

The Prudential

issues policies adapted to all needs and conditions, on all members of the family in good health, ages 1 to 70. Amounts \$15 to \$100,000.

Write for particulars.

The PRUDENTIAL INSURANCE COMPANY OF AMERICA

JOHN F. DRYDEN, President.

HOME OFFICE: NEWARK, N. J.

LET US START YOU. \$125 A MONTH SURE.

GOLD, SILVER, NICKEL AND METAL PLATING. NEW, QUICK PROCESS.

MR. REED MADE \$\$\$ FIRST 5 DAYS. Mr. Cox writes: "Get all I can do. Please 30 cents a day. King's business." Mr. Woodward earns \$110 a month. Agents all making money. So can you. Gentlemen and Ladies, you can positively make \$5 to \$15 a day, at home or traveling, taking orders, using and selling Prof. Gray's Platers. Unequalled for plating watches, jewelry, tableware, silverware, all metal goods. Home plate. Warranted. No experience necessary.

LET US START YOU IN BUSINESS. We do plating ourselves. Have experience. Make what you want. We have the only practical method, including all tools, lathes and materials. All sizes complete. Ready for work when received. Guaranteed. New modern methods.

WE TEACH YOU the art, furnish recipes, formulas and trade secrets. FREE. Failure impossible. THE ROYAL, OUR NEW DIPPING PROCESS. Quick. Easy. Latest method. Goods dipped in heated metal, taken out instantly, white, smooth, most brilliant plate, ready to deliver. Think plate every day. Guaranteed 5 to 10 years. A boy plates from 200 to 300 pieces tableware daily. No polishing, grinding or work necessary.

DEMAND FOR PLATING IS ENORMOUS. Every family, hotel and restaurant have goods plated instead of buying new. It's cheaper and better. You will not need to canvass. Our agents have all the work they can do. People bring it. You can have boys cheap to do your plating. The same as we, and soldiers to gather work for a small outlay. Including in support and legitimate. Customers all ways delighted. WE ARE AN OLD ESTABLISHED FIRM. Born in business for years. Know what is required. Our customers have the benefit of our experience.

WE ARE RESPONSIBLE and Guarantee Everything. Reader, here is a chance of a lifetime to go in business for yourself. WE START YOU. Now is the time to make money.

WRITE TO-DAY. Our New Plan—Samples, Circulars and Testimonials FREE. Don't wait. Send us your name anyway. Address:

GRAY & CO., PLATING WORKS, 240 MIAMI BUILDING, CINCINNATI, OHIO.

Patented Proof Folding Box. Adopted by U. S. War and Navy depts. in March and Sept. 1899. Only medal and award at World's Fair. Beautiful models, perfectly safe for family as well as apartment. See. Suits, cardboards, rulers. Packs in small case. Send 5c. for cat., 50 engravings. King Folding Canvas Box Co., Kalamazoo, Mich.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

"Chess Problems."

We are again under obligation to Will H. Lyons, Newport, Ky., for the beautiful and valuable book on problem-composition and problem-solution, by the late James Rayner, so many years Problem Editor of *The British Chess Magazine*. Mr. Rayner devotes twenty-six pages to the theory of composition and fourteen pages to the science of solving, and then gives us problems of the greatest masters of the art. We have never seen anything that treats of solving in so practical and lucid a manner, and some of the "general hints" are specially applicable to many of our solvers. Mr. Rayner strongly advises the student to solve entirely from the diagram. He says that this "secures accurate, thorough analysis, and, in an especial degree, increases the power of concentration, quickens the perceptions, and strengthens the memory." Many of our solvers send us all kinds of ridiculous key-moves, and often insist upon it that they are correct. Mr. Rayner's summary of key-moves to be avoided are: "1, checks; 2, captures; 3, Castles; 4, P x P on pawn; 5, P becomes a Q; 6, Obviously powerful and inactive moves."

We advise some of our solvers to memorize this summary; then they will not send "checks" and "captures" as key-moves. We can not commend this book too highly.

200,000

TO HAVE AND TO HOLD

By MARY JOHNSTON.

\$1.50.

It has everything which the recent sensational successes in historical fiction have had, and it has style, charm and "lift" besides.—*The Critic*.

ROBERT TOURNAY.

A Romance of the French Revolution. By WILLIAM SAGE. With illustrations by Eric Pape and Mary Ayer. Crown 8vo, \$1.50.

This story has an interest quite like that of Dickens' French Revolution story, "A Tale of Two Cities." The spirit and atmosphere of that tremendous time pervade it, and the dramatic situations and movements are absorbing.

THE SON OF THE WOLF.

Tales of the Far North. By JACK LONDON. With a frontispiece illustration. Crown 8vo, \$1.50.

Mr. London, a born story-teller, here makes the first contribution from Alaska to the literature of fiction. The stories are based on his experience and observations in that region, and contain vivid pictures of life in the vicinity of the Yukon.

A TEN YEARS' WAR.

An Account of the Battle with the Slum in New York. By JACOB A. RUIS. With 12 illustrations from photographs. 12mo, \$1.50.

A book of careful and trustworthy observations by an expert in the field of philanthropy which relates to the life of the very poor in cities.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., BOSTON.
11 EAST 17TH STREET, NEW YORK.

Union
Square
Hotel

The most centrally located hotel in the city—in the center of the shopping district, with quick and easy reach of all attractions up-town or down-town. Facing on Union Square Park, cor. 15th St., near Broadway. Every comfort and convenience—a home-like and satisfying hotel in every way. Rates reasonable. European plan. Circulars and rates sent on request.

Address: UNION SQUARE HOTEL, NEW YORK

Made for Your Convenience

Dickens' and Thackeray's Works.

THE OLD AND THE NEW.

Pocket Size Standard Novels.

The NEW CENTURY LIBRARY is a radical departure in the art of bookmaking. Each novel is published unabridged in a single volume which is so small that it is equally suitable for the pocket or satchel, and consequently invaluable for summer reading and traveling. As a library edition it is handsome in the extreme. The size is only 4 1/4 by 6 3/4 inches, and not thicker than a monthly magazine. India paper, the thinnest printing paper in the world, is used in making these books. Notwithstanding this the paper is very strong and remarkably opaque. The type is as large and as easily read as that you are now reading.

The volumes are published monthly in three bindings: Cloth, \$1.00 per vol.; Leather, limp, \$1.25; Leather, boards, \$1.50. Already published: *Dickens*—"The Pickwick Papers," "Nicholas Nickleby," "Oliver Twist," and "Sketches by Boz," "Old Curiosity Shop," "Martin Chuzzlewit." *Thackeray*—"Vanity Fair," "The Newcomes," "Pendennis," "Henry Esmond." For sale by all booksellers. Sample page and prospectus mailed free on request.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE BOER RETREAT.

THE change which Field Marshal Roberts and his army of about 200,000 men have effected in South Africa is made manifest by the congratulations which are now bestowed upon the Boers, not for their success in laying traps, but for their success in escaping from them. The *Boston Herald* regards the Boer escape from the neighborhood of Wepener as "a miracle of war"; while the *Baltimore American* describes the Boer campaign in the Free State by saying that "four thousand Boers march directly into the enemy's country, and remain there for weeks, doing an immense amount of damage, and when a most carefully prepared trap has been arranged for their capture, in which one-half of Roberts's army is engaged, they leisurely march off with all their prisoners in their hands." The *London Standard* says that "it is disheartening to find that these elaborate maneuvers have had so small a result," and the *London Daily Chronicle* remarks: "We are reluctant to criticize Lord Roberts; but it is impossible to shut our eyes to the fact that, during the last ten days, we have gained very little from our enormous display of force." The town of Wepener, where the Boers have been besieging the small British garrison, lies, as may be seen by the accompanying map, nearly forty-five miles southeast of Bloemfontein, so that Lord Roberts's army lay almost between them and their base to the north. The *New York Tribune* thinks that Roberts left the small garrison exposed at Wepener purposely, to lure the Boers southward where he could throw a net around them. Southward the Boers came, at any rate, but they found the Wepener garrison able to withstand their attacks, and last week a large British force suddenly swung out from Bloemfontein and began hemming in the little Boer force. *The Tribune* goes on:

"It is not always easy to catch your prey, however; not even after you have got him into your trap. Between the springing of the trap and its complete closure there is sometimes a chance for the intended victim, if he be sufficiently alert and agile, to

make his escape; or there may be cracks and crevices in the walls of the trap through which he can force his way. In the present case something of the sort appears to have happened. The Boers are as expert in getting out of traps as they are in setting traps for self-confident foes. After snapping at the bait and doing incalculable damage, they have slipped out of the trap between the springing and the fall, and are now in full flight toward the northern hills, and the trappers have had to abandon the trap and give chase—a stern chase, which is proverbially a long one. The British may yet overhaul the Boers, as they did in the race from Kimberley to Paardeberg. If not, the trap-setting will have been in vain, and the final settlement must come in the hills between Kroonstad and Pretoria."

Other papers think that the Boer movement southeast of Bloemfontein was a Boer, instead of a British, stratagem, and was intended to threaten the British communications and delay Lord Roberts's advance. If so, this menace is now gone and Roberts is free to move northward. "With the Boers out of Cape Colony, scattered from the Basutoland frontier and withdrawing north across the range from Natal," says the *New York Press*, "the British advance will find its skirts practically clear and the fighting all in front of it. This is the first requisite for a complete and successful advance to Johannesburg and Pretoria." The *Philadelphia Times* believes that we may now look for "events of material importance," and the *Brooklyn Citizen* expects that Roberts will now "begin his northern campaign in earnest." What he will encounter in his northern campaign is the subject of considerable conjecture. The *Philadelphia Ledger* remarks that if Roberts was kept at Bloemfontein by the Boer raid, "there is no reason why similar tactics may not be employed to further detain him in his long march to Pretoria." The *New York Times* says:

"There does not seem to be any more ultimate hope for the Boers now than there was for the Confederates in 1864. But it is to be borne in mind that the natural fortress of the Transvaal itself has not yet been attacked or approached. The recent fighting has taken place in the Orange Free State, not only fifty miles south of Bloemfontein, but almost on the border of Basutoland, which is part of Natal. With the advance northward the difficulties of the British army will progressively increase. Even now the difficulty of transport is very great. It is to that diffi-

SCENE OF THE RECENT MILITARY OPERATIONS AROUND BLOEMFONTEIN, WEPENER, DEWETSDORP, THABANCHU, AND LADYBRAND.

culty and to the want of remounts for his cavalry that the delay of Lord Roberts's advance is reported to have been due. When we consider the task of subsisting an army of 100,000 men in motion in a hostile country which will supply little toward their subsistence, and which is penetrated by only one line of single-track railroad, the undertaking is seen to be prodigious. It is upon these natural difficulties that the Boers must be relying to tire out and discourage the invaders. And the farther the British advance toward the Transvaal, the worse off they will be. Not only will they be so much farther from their base, or their advanced base, but larger detachments will be necessary from their fighting force in order to secure their communications.

"These considerations make it evident that, altho nobody can reasonably doubt the end of the struggle, that end can not be said to be yet in sight. No prudent English commander would any longer pretend to fix a date for its termination. Lord Roberts has shown his prudence in nothing more strongly than in avoiding the predictions in which his predecessor indulged."

REPUBLICAN COMMENT ON MR. QUAY'S DEFEAT.

THE exclusion of Matthew Stanley Quay, on constitutional grounds, from the Senate of the United States, is of special political interest as the result of a fight within the ranks of his own party. For this reason, we confine our quotations this week on the Senate's action to the Republican press. The Democratic papers are no more caustic in their comments than some of these papers in Mr. Quay's own party. Among those papers in Pennsylvania that bitterly resent his defeat as being the result of a conspiracy within the party to defeat the will of the majority are the *Philadelphia Inquirer*, the *Scranton Tribune*, the *Harrisburg Telegraph*, and the *Erie Dispatch*. The first named paper has the following to say:

"The Senate has struck a blow at majority rule and has made it possible for a few disgruntled bolters in any State where a legislature is closely divided to prevent a senatorial election. Vacancies will increase hereafter, and States in many an instance must be content with only half representation. Either this or the people must protect themselves by demanding a constitutional amendment requiring a popular vote for Senators.

"It now becomes the duty of all genuine Republicans of Pennsylvania to put an end to the bolters and insurgents. There is but one way to do it, and that is to refuse to nominate for the legislature any man who will not agree to abide by the will of the majority of his party when that will has been ascertained by caucus or consultation. Pennsylvania must have two senators, and she can have two only by party unity. As the Senate has decided that a minority has the power to prevent an election, it is

necessary to see to it that bolters are not sent to the legislature."

But the large majority of the Republican papers, the country over, look upon Mr. Quay's defeat with equanimity, if not with satisfaction. The *Philadelphia North American* (Rep.), the organ of ex-Postmaster General Wanamaker, one of Mr. Quay's strongest enemies in Pennsylvania politics, says of him:

"He has left no single deed behind him to plead in his behalf. He had no ability to construct laws, but only to undermine them.

MATTHEW STANLEY QUAY.

Mr. Quay tells our Washington representative that he considers this his best portrait.

He could not improve or devise governmental systems, but only debauch those already existing.

"He built his power on the cupidity, weaknesses, and vices of men. He associated with him no men of great talents, lofty character, or patriotic ideals. His instruments were generally as ignoble as his own aims. He believed that all men were at heart as corrupt as himself, and his keenest instinct was his ability to discern the vile part in human nature and reach it by an appropriate temptation. It was a peril for a young man to come within the area of his political influence.

"The departure of such a man from public life is as unqualified a blessing as his presence was a curse.

"All Pennsylvanians who love righteousness, justice, honor—all who love their State and country—may rejoice to-day."

The *Philadelphia Press* (Rep.), the organ of the present Postmaster-General, calls Mr. Quay's exclusion from the Senate "a great triumph for political morality," and the *Philadelphia Ledger* (Ind. Rep.) says: "The only personal thing involved in yesterday's victory or defeat was Mr. Quay's; the defeat was his; the victory was the country's and the Senate's." The *Philadelphia Evening Telegraph* (Rep.) calls it a "signal triumph for the cause of good government and honest politics," and the *Pittsburg Times* (Rep.) (Magee's organ) rejoices in this indication that the Senate "is still true to its high traditions." The *New York Mail and Express* (Rep.) thinks that the Senate's action "will be rec-

"Did you hear a call for help, Mac?"
"No, did you?"
—The New York World.

ognized by the sober sense of the country as a conspicuously righteous and wholesome proceeding," and the *Chicago Evening Post* (Ind. Rep.) declares that it "is beyond doubt one of the greatest moral victories ever won in American politics over vicious and corrupting forces." The *Chicago Times-Herald* (Rep.), indeed, refers to Mr. Quay's effort to obtain a seat in the Senate as "the most odious and unscrupulous attempt ever made to break into the United States Senate by a fraudulent title through appeals to every influence known to a desperate and powerful political trickster." The *Colorado Springs Gazette* (Rep.) thinks that Mr. Quay is "a very much abused man, and his personal character and actions have been grossly misrepresented," but sanctions the action of the Senate as "undoubtedly most in accordance with the precedents of the Senate and the conclusions of common sense as applied to a consideration of the law." The *Washington Star* says that to see "Mr. Quay and Mr. Clark thus walk the plank almost arm in arm" is a spectacle which "gives assurance of better things, and the country, without distinction of party, will be heartened and refreshed by it," and the *Hartford Courant* (Rep.) thinks that by getting rid of Quay "the Republican Party escapes one handicap in the coming presidential contest."

Some papers think that *The Courant's* sentiment is the one which led Senator Hanna, chairman of the national Republican committee, to cast his vote against Quay, altho Mr. Hanna himself says: "I was opposed to giving Mr. Quay a seat because under the Constitution he was not entitled to a seat." Whatever the motive for Mr. Hanna's action, Mr. Quay's friends are expressing considerable resentment, and it is said that they will stir up such an opposition to the shipping subsidy bill, Mr. Hanna's pet measure, as to insure its defeat.

Mr. Quay, it will be remembered, was a candidate for United States Senator at the last session of the Pennsylvania legislature, but, owing to an anti-Quay faction in his own party, he could not obtain a majority of the entire legislature, altho he received more votes than any other one candidate. The legislature adjourned without having elected a senator, and Governor Stone immediately appointed Mr. Quay. The question then arose whether the governor had a right to fill the vacant Senate chair by appointment, when the legislature had had the opportunity to do so and had failed. Upon this point there was a wide difference of opinion, so able an authority upon the Constitution as Senator Hoar holding the opinion that Mr. Quay should be admitted. The Senate, however, by the narrow majority of 33 to 32, decided against Mr. Quay's claim, and the center of interest in the case is now transferred back to Pennsylvania, where, it is said, Mr. Quay will make another trial for election at the next session of the legislature.

High Standard of Colonial Appointments.—The character of the men whom the President has recently appointed to the responsible positions in our new colonial possessions is such as to disarm the criticism of even those who have been strenuously opposed to the policy of expansion. Says the *Philadelphia Public Ledger* (Ind. Rep.), a paper which does not hesitate to criticize the President upon occasion:

"The system of government provided for Porto Rico is an anomaly to Americans; the President is clothed with very great powers, and it has been freely predicted on the floors of Congress that unworthy appointees, foisted upon the island through political pressure and Hannaism, would produce the most offensive kind of 'carpet-bag' scandal and misrule in Porto Rico. In naming J. H. Hollander for treasurer and John R. Garrison for auditor of the island of Porto Rico the President has obviously exercised the greatest effort to follow the principle of choosing the right man for the right place. Professor Hollander, of Johns Hopkins University, is a specialist on taxation and finance who

has given marked evidences of his knowledge and ability by his work and his studies on administrative questions. Mr. Garrison has been an employee of the Treasury Department for thirty years, and in the various important and responsible positions which he has occupied has gained a reputation as a thoroughly trained and one of the ablest accounting officers in the employ of the Government. These men are experts. They were obviously chosen for their peculiar fitness for the duties they will have to do. Their selection promises honesty, efficiency, good government, fair treatment for the Porto Ricans, and good name and fame for this government. . . . President McKinley in appointing officials like Governor Leonard Wood, Judge Taft, Governor Allen, Professor Hollander, and Mr. Garrison is pursuing both the right and the popular course."

Even the *New York Evening Post* (Ind.) praises the selection made, and declares that "the President could not do a shrewder thing than to set up a high standard in the first appointment for the island of Porto Rico."

ENGLAND'S WAR AND THE FAMINE IN INDIA.

SOME papers show a disposition to blame the British Government for spending so much money in prosecuting the war in South Africa and so little, comparatively, in relieving hunger-smitten India. In India, it is estimated, 80,000,000 famine sufferers need help; and England has sent, in subscriptions, £125,000 to aid the Indian treasury. In South Africa, where, the *New*

CIVILIZATION TO JOHN BULL: "If you have so much money to spend for my sake, give some of it here."
—*The Des Moines Leader*.

York Times says, "at most a population of 300,000 is directly involved in the outcome of the South African war," England is spending a thousandfold more, £150,000,000. The *Cleveland Leader* calls this contrast "one of the sorriest spectacles which our poor human nature has presented in many years. It is especially disheartening in view of the fact that it is the work of the nation which claims to lead the van of human progress and stand for all that is best in civilization." The *Philadelphia North American* makes the contrast still more vivid. It quotes as follows the appeal from *The Christian Herald* (New York) which is raising funds for relieving the famine:

"Every time the clock strikes the hour it tolls the death-knell of at least five hundred victims in India who have died for the want of a crust. The cable operates quickly, and your contribution to-day may save scores, hundreds, yes, thousands, of lives to-morrow.

"How many lives will you save?
"Two cents a day will support one life.
"One dollar will save a life for two months.
"Two dollars will save a life until the harvest.
"Five dollars will save a man, wife and child until the next crop is gathered.
"Ten dollars will save a whole family from death.
"Twenty dollars will save ten lives for four months.
"Twenty-five dollars will save them and afford them the comfort of blankets during the rainy and cold season.

"Fifty dollars would save five families.
 "One hundred dollars would save a small community."

Then *The North American* observes:

"Turning *The Christian Herald's* table into another shape, we may say:

"Two rifle cartridges a day will support one life.
 "One six-pounder shell will save a life for two months.
 "One twelve-pounder shell will save a life until the harvest.
 "One pair of cavalry boots will save a man, wife and child until the next crop is gathered.
 "One minute's discharge of a Maxim gun will save a whole family from death.

"The cost of the war for one second will save ten lives for four months.

"Two rifles will save them and afford them the comfort of blankets during the rainy and cold season.

"The cost of firing one shot from a six-inch gun would save five families.

"One scrub baggage-train horse would save a small community.

"One-fifth of the cost of attempting to conquer the Boers would save the entire fifty millions of England's starving subjects in India.

"The rescue of these lives is simply a matter of money. There is food enough in India. All that is necessary is the means of buying it. 'The cable operates quickly,' says *The Christian Herald*, 'and your contribution to-day may save scores, hundreds, yes, thousands, of lives to-morrow.' The cable would operate just as quickly at the command of the British Government as at that of benevolent Americans. If it be true that every one of us who contributes two dollars saves the life of some wretched Hindu who would die but for that succor, then every human being in India who perishes for lack of such assistance is murdered by the government that is abundantly able to supply it, but prefers to devote the price of ten Hindu lives per second to the extinction of republicanism in South Africa. That is 'the price that staggers humanity.'"

This, however, many papers consider an unjust view to take. The Indian Government, it seems, is undertaking to place a supply of food in every famine-stricken province, and to give work to every man who applies for it, and over 5,000,000 men, it is said, are now being helped in this way. Beyond these means of relief, says the *New York Evening Post*, "it is difficult to see how the government, as government, can go." After a recent discussion in the British House of Commons on the famine situation, Sir M. Bohnaggee, an Indian member of parliament, said that the debate should "convince the people of India that the British nation was neither blind nor indifferent to the hardships from which the Indian people are suffering." From all this *The Evening Post* concludes that there is "little ground for the assertion that the South African war has prevented the English Government from appropriating money for the relief of the famine-sufferers in India. Lord Curzon reports that he has in hand all the money he can properly spend." So, too, thinks the *Philadelphia Inquirer*, which says:

"The administration of that great country [India] is carried on by the Viceroy with the assistance of his own cabinet and of an exclusively local system of governmental organization. India is governed, not from London, but from Calcutta. It has its own budget, its own system of taxation and finance, its own separate and independent institutions of every kind, and so far as the action of the British Government is concerned it has not been affected in the slightest by the South African contest. None of the cost of that contest is derived from its treasury, and the great work that is being done for the relief of the sufferers from the prevailing famine is precisely the work, both as to character and extent, that would have been done under any circumstances. . . . England has her faults, and with regard to the South African war there is room for two opinions, but the government of India under British auspices is a subject not for censure."

An appeal sent out last week by a committee of missionaries

to India in attendance at the Ecumenical Conference in New York said:

"It is right we should bear our witness that the British Government in India is doing all that any Government on earth could do to save the lives of its distressed subjects, in relieving 5,500,000 of persons by direct government aid. It is achieving a greater work of rescue than any government has ever in the world's history undertaken before. With a skill derived from the carefully garnered experience of previous famine campaigns, with an unstinted expenditure of money and a heroic outlay of British energies and lives, it is doing all that an administration can do."

Prof. Washburn Hopkins, of Yale University, who in 1897 made a study of the famine then prevailing in India, writes an article on the present situation (*New York Evening Post*, April 27). According to him, the need in India is not for additional provisions, but additional money. "There is no lack of grain," he writes, "there is no scarcity of supply." He continues:

"Why, then, are the peasants starving? For the plainest reason, because they have no money to buy this grain. It is held by merchants, who have enough for the multitude, but will not give it away; nor may the government compel them to do so or connive at looting it. If any charitable folk will help the natives of India, and great indeed is their need, let them cable money, not send corn."

But the professor denies that this lack of money is due to the establishment of a gold standard or to excessive taxation, or to the British misgovernment of any kind. He writes:

"Drought is the cause. Whenever the monsoon rains fail and the winter showers also fail, there will always be a famine as long as the Hindu *ryot* remains what he is by nature and through inherited inability to escape the money-lender. The peasant works hard, but he is always in debt. Not only can he not save, but he will not. When times are prosperous, he lives as easily as he can; when bad times come he is unprepared, now as always."

Professor Hopkins scouts the idea that there were no famines in India before the advent of British rule. Famines lasting for years prevailed under Hindu and Mahomedan rule. Now the measures, both of prevention and relief, are vastly greater than they were then, and the burdens of taxation very much lighter. The professor repeats that the improvidence of the peasant class is the chief cause of the trouble. For a wedding or a funeral, the *ryot* will cheerfully double the mortgage on his estate, paying to the native usurer 150 to 300 per cent. interest, and this, too, "not on the sum loaned, but on this sum with a cipher added, which the usurer knows how to tack on and the peasant is too ignorant to discover."

Any LITERARY DIGEST readers who wish to contribute to the relief funds now being raised for India may send their contributions to this office and they will be promptly acknowledged and forwarded to those in charge.

A Government for Hawaii.—The conferees of Senate and House have unanimously agreed on a bill to organize Hawaii as a territory, so that the future government of these islands is now clearly outlined. The plan is described by the *St. Louis Globe-Democrat* (Rep.) as follows:

"It is proposed to give the group a governor and other officers appointed by the President, a legislature with two branches elected by the inhabitants, a territorial Supreme Court and a Federal District Court, and a delegate in Congress who may speak, but not vote. Suffrage is open to male citizens who read and write the American or Hawaiian language and swear allegiance to the United States. All the tariff laws of this country will apply equally to Hawaii along with the navigation laws on coasting trade. The Hawaiian lands are to be protected from monopoly by restricting the holding of any corporation to 1,000 acres. Local

option will govern the liquor traffic. Chinese immigration will be excluded as in the United States. Other labor problems will be investigated by the Labor Commissioner at Washington."

In contradistinction to Porto Rico, Hawaii is to enjoy free trade with every part of the United States. *The Globe-Democrat* thus justifies this apparent anomaly:

"There is good reason for this special adjustment. Hawaii has long been under American influences. Its revenue from direct taxation is on a satisfactory basis. Its population is but a tenth that of Porto Rico and is far better organized industrially. Under a reciprocity treaty Hawaii had enjoyed an approach to free trade with the American people. Its annexation has been regarded as a matter of course for many years. The acquisition of Porto Rico came upon the United States suddenly and recently. It involves some questions not found in Hawaii. For one thing, the island has required relief from destitution, and aid has been extended in the most generous spirit. With the passage of the bill agreed on in conference Hawaii will enter the territorial stage, and as its imports and exports last year amounted to \$37,000,000, it has a fine prospect of steady growth and prosperity."

ELECTION RESULTS IN LOUISIANA AND ELSEWHERE.

OF the four successful candidates whose portraits appear herewith, Gov. W. W. Heard (Dem.), of Louisiana, is attracting the most notice, on account of the new suffrage conditions in Louisiana which had their first trial April 17, and resulted in his election. The new suffrage clause of the state constitution admits to the suffrage only those who can read and write, or who pay taxes upon \$200 worth of property, or who are descendants of men who voted before the Civil War. It was on account of these restrictions, it is generally admitted, that the registration of voters this year fell off from 250,000, last year's figures, to 124,000. Only 7,000 negroes registered this year. "The new constitution," says the *New York Evening Post* (Ind.), "practically disfranchises the black race." Another result of the new suffrage law, thinks the same paper, was seen in the fact that only about 80,000 of those who registered took the trouble to vote. "There was so little opposition to the Democratic machine among the whites," it says, "that comparatively few of them bothered about the election." Others, however, think that the smallness of the vote may have been partly due to a heavy rain and wind storm, described by the *New Orleans Picayune* as the worst in seventeen years, which raged throughout the State on April 16 and 17. Many of the New Orleans voters went to the polls in skiffs and on rafts, and the *New Orleans Times-Democrat* prints a picture of the chairman of the Democratic campaign committee from a photograph taken as he was navigating the streets of the city on a private raft of two planks, trying to bring out a full vote.

The *Philadelphia Inquirer* and several other Republican papers are urging that the number of Louisiana representatives in Congress be reduced to correspond to the reduction in the number of voters caused by the new suffrage law. *The Inquirer* quotes in this connection the second section of the fourteenth

amendment to the Constitution of the United States, which reads as follows:

"Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State excluding Indians not taxed. But when the right to vote at any election for choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State being twenty-one years of age, and citizens of the United States, or in any way abridged except for participation in rebellion or other crime, the basis of representation therein

LOUIS D. CAMPBELL (REP.),
Mayor of Tacoma.

From *the Times*, New Orleans.
W. W. HEARD (DEM.),
Governor of Louisiana.

JAMES A. REED (DEM.),
Mayor of Kansas City.

GEN. ALEXANDER HARRISON (REP.),
Mayor of Hartford.

A NEW GOVERNOR AND THREE NEW MAYORS.

shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State."

"Here is a problem," says *The Inquirer*, "which the State will have to solve."

Another interesting feature of the Louisiana election was the ratification by the voters of New Orleans, by an almost unanimous vote (17,649 to 315), of a proposition to issue bonds to the amount of \$15,000,000 to provide the city with complete sewerage, drainage, and waterworks systems. It may surprise many

to know that this city of a third of a million inhabitants and the commercial center of an immense region has no adequate sewerage and drainage system. The *Louisville Courier-Journal* says of it:

"New Orleans is not entirely to blame in this matter. The location of the city and the peculiar nature of its soil are such that very difficult problems are presented in the matters of drainage and sewerage. The city has an area of about 25,000 acres, nearly all of which is surrounded by levees, and there is little grade anywhere. In addition the soil is of such a nature that ditching is difficult, and only the invention of new machinery renders it practicable. An elaborate system of canals and ditches has been devised, and these will be connected with drains, which will, in turn, be connected with the dwellings and other buildings. To obtain a current in these canals there will be seven great pumping-stations, which will cost from \$135,000 to \$350,000 each. These will be used to force the water to Lake Borgne and other points, where the sewage and drainage can be deposited without danger to the city's health. By separating the drainage system into six sections, each with an independent network of canals, it is hoped to avoid any serious consequences from accidents. The plan has been carefully worked out, and is pronounced perfectly practicable. . . .

"The results of to-day's election should mean a great deal for the cause of municipal sanitation elsewhere. The Cuban metropolis also waits upon the engineer for relief from the epidemics which threaten this country as well, and the sooner the work is undertaken the better."

The election of Gen. Alexander Hurbison (Rep.) as mayor of Hartford, Conn., is made noteworthy by the fact that he not only caused an overturn in the city government, winning a Republican victory after the Democrats had been in power four years, but he carried every ward in the city, and was elected by a larger majority than any other mayor of Hartford, Republican or Democrat, ever received. It may interest students of municipal politics to know that in the same election the Democratic candidate for collector also carried every ward in the city. The *Hartford Telegram* (Ind. Dem.) says: "Party lines were not drawn in yesterday's election; the contest was between men." A similar incident was a feature of the city election in Tacoma, where Louis D. Campbell, Republican candidate for mayor, and the rest of the Republican ticket were successful, except in the case of the contest for city treasurer, where F. B. Cole (Dem.) won by a good margin. Mayor James A. Reed (Dem.), of Kansas City, brings his party into power in that city after six years of Republican administration.

A COUNTRY WITHOUT STRIKES.

A COUNTRY without strikes, cities without "sweat-shops," a capital without tyranny, and labor without violence, are what Mr. Henry Demarest Lloyd has found in New Zealand. Not since January, 1895, has there been a labor strike of any sort in this British colony, and this, too, in the midst of an industrial development as enterprising, in proportion, as is to be found in Europe or America. The New Zealanders, Mr. Lloyd tells us, have solved the labor problem with compulsory arbitration, without alienating any capital, despoiling any workman of his employment, or depriving themselves of any of their liberty.

Mr. Lloyd is the author of "Wealth Against Commonwealth," and is an authority oft-quoted on industrial subjects. In this new book, "A Country Without Strikes," he fully explains New Zealand's law of compulsory arbitration, and how it has operated to bring order and peace to certain industries and trades formerly more or less demoralized by strikes and lockouts. It appears from his description to be quite similar in general design and spirit to the system pursued with such notable success for many years in the boot and shoe industry in England, tho in

New Zealand the system has been more fully developed and given a legal basis not given in England.

The war between capital and labor had become so bitter, we are told, that the New Zealanders, born experimenters, had determined to have compulsory arbitration. Their labor commissioner, W. P. Reeves, whom Mr. Lloyd calls a genius, framed a measure and, after three or four years of agitation in and out of parliament, succeeded in having it made a law. Mr. Reeves had no precedent to guide him, but his common sense created an institution that common sense could make good use of, and these island colonists and their judges seem to have found in it the means of working out the island's industrial salvation.

The five essential points of the law, as told briefly by Mr. Lloyd, are as follows:

"1. It applies only to those industries in which there are organized trades-unions.

"2. It does not prevent private conciliation or arbitration.

"3. Conciliation is exhausted by the state before it resorts to arbitration.

"4. If conciliation is unsuccessful, the disputants must arbitrate.

"5. Disobedience of the award may be punished or not at the discretion of the court."

Mr. Lloyd adds:

"The compulsion of the law is threefold: Compulsory publicity, compulsory reference to a disinterested arbiter—provided the disputants will not arbitrate voluntarily, compulsory obedience to the award.

"It does not forbid nor prevent disputes, but makes the antagonists fight their battles in court according to the legal code instead of the ordinary 'rules of war.'

"There is no 'making men work by law,' and no 'fixing wages by law.' The law says only that if they work it must be without strikes or lockouts, and that, if they can not agree as to prices, the decision shall be left to some impartial person, and not fought out."

But the state can not initiate arbitration, and no dispute, except in trades where trades-unions are registered, can be considered. This is to save the court from being overwhelmed with a flood of petty matters, and because the disputes that disturb trade come from organized and not unorganized labor.

But the interests of the poorest and most numerous laborers, the unorganized, are protected in the fact that any seven men in a shop can constitute themselves into organized labor, register their union, and take any dispute with their employer to the court. The state encourages labor to organize by granting it certain chartered rights; the unions can own property, can sue and be sued.

There are two sorts of tribunals or courts—Boards of Conciliation, and a Court of Arbitration—and in both the workingmen and their employers are equally represented by men of their own choice. There is a Board of Conciliation for every "industrial district," and one Court of Arbitration for the whole country. The Boards of Conciliation have from four to six members, and

HENRY DEMAREST LLOYD.

are chosen every three years in each district by elections held separately by the associations of employers and the associations of employees. Each board upon organization elects a chairman, some impartial outsider who is willing to act.

The Court of Arbitration is composed of three judges, appointed by the governor-general. One must be a representative of the trades-unions and nominated by them, one must be a representative of the employers' associations and nominated by them, and the presiding judge must be a member of the Supreme Court. This Court of Arbitration, if necessary, is assisted by chosen experts from the outside, representing both sides in the dispute.

The moment either side, with a grievance or dispute or with any apprehension of a strike or lockout, summons the other to court, it is a punishable offense for the workmen to stop work or the employer to close down. If an employer locks his men out without warning, he can be arrested, and so can workmen who go out without warning. Consequently all strikes and lockouts are prevented. Employers can summon their men to court only as members of a trade-union, but the men can compel any individual employer to appear in court. The court can compel the attendance of witnesses and the production of any papers or books in a dispute; they can also visit any shop or premises when work is being done. Lawyers are not allowed to appear in a case unless both sides are willing.

The decisions of a Board of Conciliation are not binding. The decisions of the Court of Arbitration are binding or not in the discretion of the court, and any violation of a decision that is made binding may be punished by fine and imprisonment. These are the most essential features of the machinery of this new institution.

Mr. Lloyd has explained how it has brought order and peace into the boot-making trade. Before compulsory arbitration, this trade was badly demoralized by strikes and lockouts. The employers and their men had exhausted private conciliation and arbitration; they had failed to secure a general understanding on account of a tyrannical minority of employers who would not deal with their men nor listen to the pleas of their associates in business. But as soon as Mr. Reeves's bill became a law, a notable change began to take place in this trade. The labor unions began to strengthen their organizations and register. Not long afterward, there was a meeting of the representatives of the boot-makers and their employers in Christchurch, and it was agreed that they would have no more strikes or lockouts in this industry, but would submit their disputes to the courts. In other words, they were preparing themselves to arbitrate gracefully, and to the courts they soon went.

This was the first case to be tried under the state arbitration act. The men asked their employers to appear, and both sides met in a spirit of amity. One of the employers, to be sure, voiced a sentiment often heard in labor disputes by declaring that the employers would "not for a moment deal with outside persons," or with "irresponsible bodies," or with men not in their employ; but it was soon seen that such talk was merely "bluff," for when the courts decided that the employers must deal with the unions of their men, whether they chose to designate them as "irresponsible bodies" or not, they were ready to do so. The workmen, in this instance, not being satisfied, appealed to the Court of Arbitration, and this court in its decision laid down a rule of the greatest interest, which has since been followed. The workmen had contended that only trades-union men should be employed. The court ruled that union men, when equal in skill to non-union men, should be given preference. This ruling was made for two reasons: first, because the employers had formerly preferred members of the trades-unions, and second, because the law was expressly intended to encourage trades-unions. In other cases, when it had been the custom of the trade to prefer non-union labor, the court has adhered to the custom.

The most interesting chapter in Mr. Lloyd's book is that entitled "A New Song of the Shirt." In this chapter he explains how the law was made to protect the sewing-women and to banish all the "sweat-shops" in New Zealand. At first the working-women were loath to take advantage of the law, for it seemed to apply only to the "workingmen" and their employers. But at the next session of parliament the law was amended so as to include workingwomen. The efforts of these sewing-women to get relief from their trying conditions illustrate one of the chief defects of the law, or, it may be, the inferior capacity of workingwomen for organization. The tailoresses' unions of Dunedin, Christchurch, and Wellington went before the Boards of Conciliation with their employers and a "log," or schedule of prices, and hours of work was arranged. The schedule of prices fixed by the courts split the difference between the demands of the tailoresses and their employers, and the courts ruled that all work must be done in well-lighted and ventilated shops. But the tailoresses in Auckland arranged a "log" privately with their employers, in which it was agreed that union labor should not be discriminated against in securing employment in the shop, instead of requiring the employers to give union labor preference, as the law had expressly commanded and as it had been the custom of the employers to do. In this way the employers with a private "log" have been able to keep out of court and keep down the wages of the tailoresses all over the country by "cut-throat" competition. An effort is now being made to amend the law so that a majority of the employers and labor unions in any trade can control the wages, etc., in that trade.

In this connection, Mr. Lloyd notes a remarkable result that this new arbitration is producing in New Zealand. The capitalists, instead of forming trusts, as they do in America, to strangle competition, encourage workmen to form unions and bring "cut-throat" competitors into court. For instance, here is a boot manufacturer, whose shop is operated by organized labor; over against them is another boot-shop filled with non-union men. The owner of the latter pays his men lower wages and cuts the prices of his goods. The owner of the former, to shut off this dangerous competition, schemes to get labor organized in the latter shop, and his competitor haled into court on the complaint of union labor. Thus labor shares in capital's schemes to kill competition.

TOPICS IN BRIEF.

WHEN Orléans said the war was over perhaps he meant it was all over Luzon.—*The Chicago Record*.

STILL look at the governors we sometimes elect by "direct vote of the people."—*The Chicago Tribune*.

THERE is one thing to be said in favor of Senator Clark. He furnishes his own plum-tree.—*The Sioux City Journal*.

INASMUCH as the sultan's ladies don't observe Easter, there seems to be no good reason why he shouldn't settle.—*The Detroit News*.

SENATOR CLARK will scarcely be accused of leaving public life a richer man than he was when he entered it.—*The Washington Star*.

THE Democratic press would like to utilize the Kentucky situation in the campaign, but they are not sure which end to pick it up by.—*The Minneapolis Tribune*.

GENERAL BOTHA is said to be a farmer. Buller is probably wondering what would have happened to him had the Boer leader been a soldier.—*The Chicago Record*.

THE question whether the Pacific cable is to be laid by the Government or by a subsidized corporation resolves itself, in the last analysis, to this: Shall the Government pay for the cable and own it, or pay for it and not own it?—*The New York Tribune*.

OWING to the South African war, there is a scarcity of ostrich feathers in the markets of the world, but it is probable that a suitable substitute will be found. In fact, there are many good imitations of the ostrich in the conduct of the war.—*The St. Louis Globe-Democrat*.

HERE is the story of an Irish soldier which is a brilliant vindication of his loyalty to his flag. A private was charged with having called for cheers for President Kruger in the barrack-yard. "An' why wouldn't we cheer him?" said Paddy. "Sure, if it wasn't for Kruger we'd have no fightin' at all, at all!"—*The Boston Transcript*.

LETTERS AND ART.

SUDERMANN ON THE CENSORSHIP OF ART.

BITTER resentment has been aroused among the scholars and dramatists of Germany by the recent efforts of the imperial government to establish a censorship in art and literature (see THE LITERARY DIGEST, April 14). In a recent meeting in Berlin, Professor Mommsen, the historian of Rome, Paul Heyse, the novelist, and the dramatists Gerhard Hauptmann and Hermann Sudermann, all combined to support vigorous resolutions protesting against the proposed law. Their stinging satire and humorous sallies were greeted with thunderous applause. The speech of Sudermann, pronounced by the German papers to be the best, is translated in the *St. Louis Mirror*. Opponents of artistic freedom, said Sudermann, oppose not merely the modern drama and modern art—they oppose the whole spirit of modern times, and attempt to annihilate modern culture. "The time is past when we made heroes out of our lieutenants, and a heroine out of the flower-plucking, innocent girl." The ideal of the present age is Shakespeare's idea—"to hold, as 'twere, the mirror up to nature; to show virtue her own feature, scorn her own image, and the very age and body of the time its form and pressure":

"Whoever has emerged from the fog and mist of romanticism and looks at the world and life with clear eyes, knows that persons with ideal natures do not exist, except in imagination. Human nature is a mixture of good and evil; the two ingredients absorb and penetrate each other, and it is only through this that a lifelike personality is produced. A hero that excites our sympathy and admiration, and yet is exhibiting some moral foible, some human deficiency of character, is *persona non grata* with the Philistines, because they intend making the drama and art generally the incarnation of the moral code. It is demanded that we should refuse sympathy to the sick and suffering woman, because she has sinned; if we do not mete out the proper punishment to her at the end of the fifth act, we are disgraced and censured.

"Usages and morality are not unchangeable. Everything flows, says the philosopher. Ideas of morality and immorality change in the course of time, and with times. The powerful, irresistible stream of life carries everything with it. Modern poetry and drama have a fine and delicate ear for the murmur of the waves of time. The antagonism between the growing and decaying is well defined and realized. Our Solons, however, have decreed that morality and customs are unchangeable, and that the binding rules are laid down forever in the Bible and Catechism. They declare that we are degenerates and apostates, if we make a step to the right or left. Plays that accurately and quietly describe modern conditions and social life, without stamping them with vitriolic disapproval, are, they assert, immoral, and not representing art. They would have us banish our classical masters from the stage. The passing of this law would, perhaps, mean the retirement of the immortal works of Shakespeare and Goethe. It would mean the ruin of the German theater and German art.

"Let me illustrate: The obnoxious play is submitted to the judge. No member of the Reichstag will probably deny that the average judge is a poor art critic. How can the dispenser of justice be expected to render a just and intelligent verdict in such matters? Suppose the subject is very *risqué* and suggestive: that, for instance, the guest tries to seduce the wife of his host, who has stolen away from the connubial couch during the night. While the sinners are engaged in dialog, they become cognizant of the fact that they are of the same blood and flesh, namely, brother and sister. This knowledge, however, only enhances their erotic excitement, instead of inducing them to separate in tottering horror, and the curtain falls on a scene of love-ecstasy hardly equalled in any work of ancient or modern times. You know what I refer to—Wagner's 'Waiküre.' It may be argued that this is a musical drama, but I believe that the music only intensifies the erotic character of the production. Yet, we are all fascinated and carried away by the grandeur of passion and tragedy displayed in the first act of the opera.

"If the substance of the drama were related to a German judge, could he be expected to do otherwise than to condemn the work as highly immoral and objectionable, if he had never witnessed its production on the stage? It is the artistic form, the ultimate intent, the composition of the integral parts that decides. A consideration of the dry, unadorned substance itself can never lead to a proper understanding or appreciative opinion."

THE EVOLUTION OF LITERARY FREEDOM.

THE change from age to age in standards of literary propriety has long engaged the attention of historians and critics. One of the latest writers on this subject is Mr. Andrew Lang. Why, he asks, did the very plain speech of our first famous novelists in the eighteenth century become a stumbling-block to readers of some thirty years later? Why did decency, or prudery, if any one pleases, come suddenly into vogue between 1770 and 1800? Why were such poems as Suckling's ballad of a marriage published about 1810 with lines and half stanzas omitted? How are we to account for Bowdler? This change of moral taste—as great, says Mr. Lang, as the change from belief in the witchcraft of an earlier period—corresponded to no similar "sweeping purification" of society. The age of Bowdler was the age of the regency of England, and what that was is known to all. Says Mr. Lang (in a recent number of *Blackwood's Magazine*):

"Between 1760 and 1770 we had Smollett and Sterne for living novelists, while in 1800-1815 we had Miss Edgeworth, Godwin, Miss Austen, Mrs. Shelley, Galt, and Scott. Writers more delicate in language and description can not be, nor could writers be much looser or coarser than those of the previous generation. The change of 1770-1814 lasted until quite recently. Novels were intended to lie 'on the drawing-room table,' and were meant to be fit for the young person. So stern were parents about 1840-1870 that they managed to find Thackeray 'improper,' and we all remember Thackeray's own remark that, since Fielding, nobody had dared to draw a man. *Col. Newcome* must have been born about 1800, and the colonel revolted naturally against *Joseph Andrews* and *Tom Jones*. By our time, of course, taste has altered, and lady novelists introduce situations which, I verily believe, would have made *Astrea* herself blush vermilion. But even now the *language* of the most advanced writers is far indeed from attaining the simple breadth of Smollett or Fielding, the many modern ideas expressed in fiction would have made *Roderick Random* exclaim in virtuous indignation."

Not the least curious point in this evolution is the difference exhibited in France and England. The dramatists of the age of Louis XIV. were "mealy-mouthed," and the translation of "Tom Jones" was forbidden "in the interests of virtue." The contemporary dramatists of England were "notoriously coarse and lewd." The coarseness in one nation began to die out just as in the other it began to creep in. Says Mr. Lang:

"A classical example of the change in England is Charles Lamb's anecdote about the young lady who looked over his shoulder as he was reading 'Pamela.' She soon went away, and Lamb says that there was a blush between them. This may have occurred about 1815, and 'Pamela' had been the very manual of virtue from 1740 to 1780, or thereabouts. It was put into the hands of ingenuous youth, and even of children. Richardson himself was the mere model of the proprieties, and thought Fielding 'low.' Diderot put Richardson on the same shelf as Moses. 'Pamela' was written, as Scott says, 'more for edification than for effect.' Anticipating the modern clergy who preach on Miss Corelli and Mr. Hall Caine, Dr. Sherlock praised 'Pamela' 'from the pulpit.' The novel was said to 'do more good than twenty sermons,' tho Lady Mary Wortley Montagu thought it more mischievous than the works of Rochester. Scott also reckoned it apt rather to 'encourage a spirit of rash enterprise' among hand-maidens than of 'virtuous resistance.' As a matter of fact, a generation or two later 'Pamela' made Lamb's young friend uncomfortable. She got up and went away. She belonged to the new age of Miss Austen, Miss Edgeworth, and Sir Walter. Nor

need we, even in this emancipated time, wonder at Lamb's young lady. I doubt if many even of our daring writers would have the courage (the lack of humor they have) to write several of the scenes which Richardson wrote, and which the clergy applauded from the pulpit."

Dr. Johnson, tho he confessed he had read straight through Fielding's "Amelia," told Hannah More she ought to be ashamed of saying she had read "Tom Jones." One can not guess what fly had bitten the doctor, remarks Mr. Lang; for, one inexcusable adventure of *Mr. Jones's* aside, "Tom Jones" is "a really moral work." Probably, Mr. Lang suggests, Fielding was condemned because he was humorous, while no one for a moment would make such an accusation of the evangelical Richardson. So also at the present period, says Mr. Lang, we find the virtuous "applauding the most squalid horrors of M. Zola and others, while they would fly in horror from Gyp." Why? Plainly enough because "Zola likewise has never been accused of humor."

Mr. Lang, on the whole, thinks that the change to prudery was due partly to the rise late in the eighteenth century of a "larger reading middle class," especially women. "They had not hitherto been literary, they had simply been housewives and stitchers; good mothers, not bookish. What they avoided in life, they disliked in literature." Still another and more effective cause is found by Mr. Lang in what he calls the "Wesleyan reformation," which not only reacted on the middle classes of the Wesleyan bodies, but upon the Anglican church. Mr. Lang writes:

"Wesley's movement was really (tho he did not know it) part of the Romantic movement; it began in an asceticism, and in an emotion, and in 'supernormal experiences' after the model of the ideals of the medieval church. Romanticism itself (in spite of some old French romances) is, in essence, 'a delicate thing'; knights amorous and errant are all unlike the festive wanderers of Fielding and Smollett. The squires of romantic lovers are no *Straps* nor *Partridges*, and the knights understand 'the maiden passion for a maid,' in a sense unknown to the lovers of *Sophia*, *Emilia*, and *Narcissa*. The new middle-class lady novel-reader could not put up with the infidelities of *Tom Jones*, *Roderick Random*, and *Peregrine Pickle*. She felt personally insulted (and no wonder) by their behavior. From all these influences, one ventures to conjecture, the singular and rapid change in taste, and the decent limitations on literary art (limitations hitherto conspicuously absent from English fiction), drew their origin. That the once Puritan middle classes deserve most of the praise is a theory strengthened by the example of America, where prudery as to the use even of simple, harmless phrases (for example, you 'retire' in America; you never go to bed) irritated Dr. Oliver Wendell Holmes. American literature is assuredly neither licentious nor coarse. But these hypotheses may be inadequate or erroneous, in which case the problem becomes vastly more curious and interesting."

The change lasted a full century in England, says Mr. Lang, but the influences introduced by science have probably fostered the new spirit of greater freedom manifested in Daudet, Zola, Thomas Hardy, Pinero, and most of the leaders of contemporary European literature. Nevertheless, in Mr. Lang's opinion, this new impulse of freedom, which existed in universal literature from Homer to Cowper, "seems to have expended itself."

Marie Corelli on Kipling.—Very outspoken is Marie Corelli on Rudyard Kipling's latest productions. The poem which has caused such enthusiastic comment from many sources has not to her the true ring which uplifts or moves. She writes:

"A real poem pushed vigorously down the public throat would have made the public voice sweeter and stronger. A real poem would not only have built up a fund, but a fame. Instead of degrading 'Tommy,' it might have improved and dignified his whole position. . . . 'The Absent-Minded Beggar' stanzas will mark Mr. Kipling's name with a fatal persistency as long as he

lives, cropping up with an infinite tedium and an exasperating sameness at every fresh thing he writes; and let him be wise as Solon, classic as Virgil, and strong as Samson, he shall never escape it. Like another sort of 'Raven' he shall see it 'sitting, never flitting,' on every 'bust of Pallas,' or new work he offers to the public: he shall demand of it, 'Take thy beak from out my heart and thy form from off my door!' and its reply shall be the one monotonous devil's croak of 'Nevermore!'"

THE CRAZE FOR HISTORICAL FICTION IN AMERICA.

THE historical novel is not at present flourishing in England, where the apparent revival of the novel of Scott, prefigured a few years ago in Stanley Weyman and to some extent in Anthony Hope, is now regarded as but a flash in the pan. *The Academy* pronounces the art of historical fiction "dead in England," and adds that "he who would succeed in raising it must first create for it a new form, a governing convention, more in accord with naturalistic tendencies than that which has miraculously survived all the artistic upheavals of ninety years." But matters are otherwise in America and France. The latter country, apparently abandoning realism for the moment at least, is witnessing a renaissance of the historical novel that bids fair to have still greater developments. Yet it is in America, *The Academy* remarks, that the historical novel overtops every other genre. And here it amounts to a positive "craze":

MR. PAUL LEICESTER FORD.

"It is making authors rich and turning publishers into millionaires; the circulation of it counts not by thousands, but by hundreds of thousands, and the man or woman who, having omitted to peruse it, can not discuss it with fluency, is thereby rendered an outcast. The two most notorious and amazing examples of its success (at the moment of writing), Mr. Winston Churchill's 'Richard Carvel' and Mr. Paul Leicester Ford's 'Janice Meredith,' altho neither is a year old, have between them already reached a sale of nearly three quarters of a million copies in the United States.

"These two long novels—they total over a thousand pages—both deal with the period of the American Revolution; they both include the figure of George Washington; and in other respects of tone, color, sentiment, and incident they are remarkably alike. The chief thing to be noted of them is their perfect lack of originality; they are not the fruit of any inspiration, but a dish meticulously concocted upon a recipe, and the recipe is by no means a new one. Conceive a musical composer who at this date should capture the ear of the populace by an exact, but lifeless, imitation of Mendelssohn. It is such a feat in literature that these authors have performed. To read their amiable stories is to wonder whether the art of fiction has not stood still for fifty years, whether the discoveries and the struggles of a dozen writers in France, England, and America since 1850 are, after all, in vain. 'Esmond' is a great book, but no man of a later period could possibly produce a great or even a fine book that resembled it, for time breaks every mold. 'Richard Carvel' is by far the better of the two American novels which I have mentioned;

and what one feels about 'Richard Carvel' is that it is the work of a man who kept a bust of Thackeray over a bookcase crowded with eighteenth-century literature, and wrote with one eye on this and the other (perhaps unconsciously) on that airy, fairy creature known in the States as 'the *matinée* girl,' forgetting that he, even he, ought to have a personality. Mr. Churchill has learned everything about his craft, except the two things which can not be taught—the art of *seeing* and the art of being oneself. He looks only at pictures, and then, piecing this with one and that with another, confects an enormous canvas without once leaving the gallery. He is not himself—artistically he has no self—but rather the impersonal automatic result of a century of gradual decadence from one supreme exemplar. In 'Richard Carvel' every primary tint is lost, every sharp relief smoothed down. The conventions which formerly had a significance and an aim properly related to the stage of art which evolved them have been narrowed instead of widened, until they are become meaningless, arbitrary, and tiresome. The heroine with her peerless beauty, her royal tantrums, her feminine absolutism, her secret, her hidden devotion, her ultimate surrender; the hero of six-foot-three, with his physical supremacy, his impetuosities, his careful impromptus of wit, his amazing combinations of Machiavellian skill with asinine fatuity, his habit of looking foolish in the presence of the proud fair, and his sickening false modesty in relating his own wondrous exploits; the secondary heroine, pretty, too, but with a lowlier charm, meek, steadfast, with a mission 'to fatten household sinners'; the transparent villain who could not deceive a sheep, but who deceives all save the hero; the 'first old gentleman'; the faithful friend; the boon companions; the body servant: all these types, dressed with archeological accuracy, performed at Mr. Churchill's prompting all the usual maneuvers with all the usual phrases and gestures."

Yet "Richard Carvel" and "the more saucy" Janice Meredith "have their merits, says the writer. In Mr. Churchill, particularly, one perceives a "laborious case, a certain moral elevation, an admirable sense of dignity," altho he could "no more avoid being tedious, profoundly, entirely tedious, than he could add a cubit to his stature."

The Academy finds one cause of this surprising vogue of historical fiction in the fact that America, tho a land of brief traditions, is beginning to feel a pride in them, and willingly rewards any well-disposed writer who ministers to this pride. Another factor is "the unique position and influence of young women in the United States":

"We are told that it is the women who rule the libraries in England; much more so is it the women who rule the libraries in America. And if you would know what sort of an intellectual creature the American woman is, what a curious mixture of earnest and gay, ardent and frivolous, splendid and absurd, read her especial organ, *The Ladies' Home Journal* of Philadelphia, which is one of the most brilliantly edited papers in the world, and has a circulation of over eight hundred thousand copies a month. Here, in this glowing and piquant miscellany, where religion runs column by column with modes and etiquette, and the most famous English-writing authors are elbowed by the Toppers and Friswells of New England, you will discern at large the true nature of Mr. C. D. Gibson's girl—the width of her curiosity, the consuming fire of her energy, her strange knowledge and her stranger ignorances, her fineness and crudity, her imperial mien and her simple adorations. It is fitting to remark of the American woman that she has a magnificent future. In the mean time she can not gainsay her *Ladies' Home Journal*, which stands as absolutely irrefutable evidence both for and against her. She is there in its pages, utterly revealed—the woman of the culture clubs, the woman who wistfully admires the profiles of star actors at *matinées*, the woman from whom Paderewski, at the Chicago Auditorium, has to be rescued by the police, the Madonna of the home, the cherisher of aspirations, the desire of men. It is she who reads and propagates 'Richard Carvel' and 'Janice Meredith,' artlessly enjoying the sugar of them, made oblivious of their tedium by her sincere eagerness to 'get instruction' from them, to treat them as 'serious' works—not as 'ordinary novels.'"

ADA REHAN ON "THE TAMING OF THE SHREW."

AN actress's view of a classic play may be very different in some respects from that of the student or spectator. Those who have seen Miss Ada Rehan as *Katharine* in "The Taming of the Shrew" will readily appreciate her introduction to the new

MISS ADA REHAN IN "THE TAMING OF THE SHREW."

Player's Edition of that play. That the character of the "Shrew" is an impassioned one may be seen by merely reading the part; but, writes Miss Rehan:

"I found *Katharine* a very exhausting part to play. Her first entry demands a height of passion which in most other plays would be the climax of an evening's work. This force has to be sustained throughout two acts; indeed, almost to the end of the play."

The rôle of *Katharine* won for Miss Rehan reputation in two respects. She says:

"Playing *Katharine* brought me much satisfaction, but a very bad reputation for temper. I have often been amused at seeing the effect that a first performance of the 'Shrew' in a new place produced on the employees of the stage. They shunned me as something actually to be feared. During the very long run I have often heard it said that I hated my *Petruchio*, and that our stage life only reproduced our private intercourse. I looked upon this as the greatest compliment that could be paid me."

In the late Augustin Daly's version of "The Taming of the Shrew," Miss Rehan writes that "he treated the play as Shakespeare intended, as a high classical comedy in five acts, beginning with the introduction, which had never before been given in America. He believed in *Katharine's* high qualities, and argued that *Bianca* was the real 'Shrew.'" It is interesting to obtain a critical analysis of a rôle from one who has acted the

part. In this introduction, Miss Rehan interprets and concludes by giving the reason for the popularity of the play. She writes:

"The touches of human nature in 'The Taming of the Shrew' account for its appealing so strongly to the public on both continents for over two centuries. Is it not a test of *Katharine's* being a really womanly woman that her own sex have enjoyed and understood her best? It is well known in literature that the more a heroine is made to suffer the greater is her triumph with her public, if, as *Katharine* does, she passes through fire, and comes out pure gold."

THE VITAL STUDY OF LITERATURE.

THE long-continued, laborious dissection of literary masterpieces, either in the ancient or modern languages, was a phase of education which sprang up toward the middle of this century, but which already seems to be passing away except for purposes of purely philological research. Mr. William Norman Guthrie, who writes in *The Sewanee Review* (April), is one of those who disbelieve in this view of literary study. Literature can not be taught, he says. It is not a science, but the "collective name for masterpieces of literary art." He writes:

"The teaching required is a personal preparation for enjoyment. The understanding of a poem, as a piece of writing, versifying, thinking, feeling, is not identical with the enjoyment of it, and its *raison d'être* is not the former, but the latter. The latter does imply the former; and yet is it not true that the former (the understanding) is not to be got so much from a vivisection of the poem, sure to become an autopsy before the student knows it, as from the proper education of the student in certain elementary arts and sciences, or more probably by his lessons in life's school of experience? For one who gets a love of Milton's epic from parsing a speech of Satan, there are thousands who ever after secretly congratulate themselves that they do not write like Milton. Fortunately for them, his fame is such that they may safely neglect to read his works. Dore will suffice—and the school memories of syntactic involution! Besides, well-bred people never discuss the classics—only writings warranted ephemeral and interesting! It is not that adults lack time, 'habits of study,' or capacity for continuous attention, for self-compulsion. No. They cheerfully labor at their callings in and out of season. They will acquire a science or an art as a personal accomplishment. But then a definite use is in view: an increase of power, a display of personal excellence. Why is literature so rarely the diversion of the busy man's leisure hours—his opiate, his stimulant, his food of the spirit? Those of us who know what literature has been to leaders of men in the past; how, directly or indirectly, from it the preserver and transmitter of our racial achievement, all of character almost and conduct derive; those of us who have, not merely professionally as teachers, critics, litterateurs, but personally as men and women, drunk freely of those waters of life and been refreshed, intoxicated—nay, renewed—as tho indeed they were love philters drawn from the fount of eternal youth—how can we help lamenting that so many about us refuse to drink with us to their health and our happiness? How can we not wish to do something to cure their self-complacent, wilful illiteracy? And who is to blame for the disease, if such it be? Who, if not the teacher, the critic, the litterateur? Their sins of commission and their sins of omission are indeed grievous. What was done at school for the adult of to-day? What were his text-books? Is their memory fragrant? And since he has been out of school what book about English literature has been put into his hands, which, vitally interesting in its conception and execution, showed to him the value of the subject?"

Indeed, it is just here, says Mr. Guthrie, that the student is most irritated. "Manuals of Literature," however erudite and meritorious, give only Pisgah sights of the Promised Land. They are histories of literary production, graveyards and tombstones rather than histories of literature in a true sense. What the ordinary unpedantic man wants is "vital criticism," says the writer, "based on principles for which the justification is in me."

"But what are, in the opinion of the writer of this paper, these

principles, and where are they to be studied? Manifestly at the book-shop, the news-stand, the office of the public library. Observe how mankind selects among books of contemporary authorship, for which no ancient fame imposes artificial reverence. Every one has noticed that the book of which but a few years ago, perhaps, several hundred thousand copies were sold is never to-day in demand. No one speaks of it; no one insists that you *must* read it. Everybody seems to have forgotten that it was once on every table, in every mouth. How is this? My bookseller tells me that more recent books have taken the popular fancy. So I discover at once the *law of death*. Other things being equal, the newest novel is the best. Old books are good, not because of their age, but in spite of it. Their survival is a proof that new books are not their equals in some important respects; for only if the old gives what the new can not supply does it continue to find readers. The greater the output of novels the higher the mortality rate. A work of fiction which in these days of excessive production and publication retains a respectable body of readers is not without peculiar merit. Then I understand why the classics are probably great. If they are not now mere fossils stored in glass cases of scholarly museums, if they are really living creatures still, great and wonderful must be, indeed, in them the spirit of life."

JOURNALISTIC ETHICS IN ENGLAND AND AMERICA.

SOME secrets of the sanctum, which throw new but not pleasanter light upon contemporary journalism, are revealed in a recent article by Mr. H. W. Massingham, late editor of *The Daily Chronicle*—dismissed from that paper, so it is generally understood, because he espoused the unpopular side at the outbreak of the present war. Mr. Massingham entitles his article "The Ethics of Editing"; but in truth English and American editing has no ethics according to the writer—at any rate only the ethics of trying by every possible means to keep itself in favor with the "ruling classes," without respect to the fundamental merits or demerits of great moral or political issues. In England, as in America, the advertisers hold the whip, it is alleged; and should through any chance a fresh, frank, and vigorous discussion of questions involving the "vested interests" occur, the advertisers would protest, and the delinquent editor would be dismissed. Mr. Massingham says (in *The National Review*, April):

"I premise, therefore, that the kind of opinion which, in the nature of things, chiefly finds access to the 'leading columns' of the 'great dailies' is conventional opinion on all subjects—that is to say, the opinion which the conductors of these journals believe to be congenial to the mass of people in England who own property, go to the more costly seats in theaters and opera-houses, and accept, without much question, most English institutions as they exist. It is clear that the ideas of these people are in the main shared by less wealthy classes, the similarity of views among Englishmen, rich and poor, being one of the sources of our national strength. On the artistic side of things this unanimity is remarkable. Twenty years ago, for example, nineteen Englishmen out of twenty who had ever heard Wagner's music thought it, on a first and second hearing, dull, noisy, and tuneless. Straightway the critics of the 'great dailies,' who were mostly in the same position as the rest of the listeners, proclaimed it to be tuneless, noisy, and dull. In the same way, Mr. Whistler's pictures of the Thames at night seemed to the average Englishman of twenty years ago, who had never observed the beautiful appearance represented, to be uninteresting blurs of paint. The art critics were of the same opinion. Now both these great artists are in favor, and again the critics (probably the same gentlemen, for we English journalists are long-lived, not suffering from the excessive strain of ideas) agree with the popular verdict. Or, take a different kind of example. There is a form of contemporary Scottish literature known as the 'Kail-yard' school, the name of which, I prophesy, will be unknown twenty years from now. These novels proved to be agreeable reading to many thousands of perfectly honest persons, and, again, the critics,

having, as a rule, no literary standard of their own, and being accustomed to follow that of other people, were able to find remarkable qualities in these strange productions.

"Necessarily, this habit of agreement with what Dr. Stockmann calls the 'damned, compact, Liberal majority,' must apply to the treatment of national questions as well as to matters of private taste, disagreement on which is indeed often treated in England as a form of want of patriotism. The editor of the 'great daily' must therefore say to himself, when one of these questions arises, not 'What do I think of it?' a reply to which might, indeed, be a matter of some difficulty, but 'What are the majority of my readers likely to think of any view I may take of it?'"

In America, Mr. Massingham goes on to say, this attitude is clearly recognized and generally accepted:

"They [Americans] do not require their editors—the American editor, in our sense, hardly exists—to be consistent; they expect them to be 'alive,' that is to say, to jump as quickly as the alertest mind in that quick-witted community, and to see at once the commercial advantages of such a course. Is that a cynical way of putting it? I maintain that it is the simple truth. Every inch of the space of a clever American paper is mapped out on 'business' lines. Every chance of a 'boom' is instantly taken. Every brilliant resource of organization is adopted in order to add to its effectiveness."

"If restraining forces are needed in the State," adds Mr. Massingham, "they can not come through our journals." He continues:

"I give the public what I think it wants, not what I think it ought to want," said a typical modern newspaper proprietor, who sedulously expounds this view in his newspaper. In such a process, the business of editing must become an almost automatic function. The great human show, moving daily more swiftly and with a greater blaze of color, needs expert recording. The editor is already growing to be more of a news-gatherer, less of an exponent and superintendent of critical work. In America the former function has practically superseded the latter. There are not a dozen daily papers in the States that employ an editor in the English sense, while the two richest newspapers in England can hardly be said to possess him."

UNIVERSITY EXTENSION AND CORRESPONDENCE SCHOOLS.

THE success of the university-extension idea during the past quarter of a century has been one of the most marked educational movements of the time. A branch of it less known to the public than the extension lecture system now so common in most of our cities is the department of correspondence teaching, by which all studies, from the most elementary teaching of the "three R's" to calculus and advanced literary study, are now brought within the reach of the many millions who can not attend regular lectures either in or out of a university.

The extent to which this system of home-study has been developed of late years would probably surprise many professional educators. Among the more prominent higher institutions which now recognize correspondence study as a regular department of university-study—"in absentia"—and accept it in part as preparatory to a degree, are the universities of Chicago, Wisconsin, West Virginia, and New York. From the *Philadelphia Press* we quote the following account of the recent annual conference of the correspondence section of the University of Chicago:

"This method of study in Chicago University proves useful in preparing for courses taken in residence, in supplementing them, in making up possible deficiencies prior to beginning regular work for a degree. The testimony of instructors, which is given in full detail in a recent issue of *The University Record*, shows that the work in many branches is better done than in the classroom, and that it is always more earnestly done. It is undoubt-

edly toilsome both for pupil and instructor; but this is no argument against it. This work is accepted in Chicago for a degree, but a year's residence is in all cases required before taking the degree.

"In pedagogy, Dr. C. A. McMurry says: 'I do not hesitate a moment in saying that those who took the course by correspondence did three times as effective work and gained three times as much satisfaction for themselves as those who did the work in the class-room.' Dr. C. J. Chamberlain, in botany, after admitting that he had originally believed that laboratory work was impossible through correspondence, says: 'This work is fully up to the highest standard of work done by all those who have taken all their botanical course in residence. Our correspondence students are the pace-makers in the department.' 'Correspondence work in history,' says Prof. E. E. Sparks, 'represents the very essence of self-help,' and he adds, what every one has noticed, that many students who are equal to historical investigation under the guiding hand of a professor fall off immediately when they endeavor to do the work alone.

"The testimony of students given in *The Record* is no less decided, and the demand for correspondence work is abundantly shown by the success of large schools like that of Scranton carried on by private agency. It is amazing that our universities, with this field open to the increase of their usefulness, and to their usefulness among the very ones it is most desirable to help—teachers, preachers, and the energetic isolated knowledge-lovers in small communities—do not enter upon this useful work. Routine and a constant tendency among all men to be satisfied with the habitual task instead of maintaining and cultivating a lasting appetite for more work is the secret cause why this field is left unworked."

In the field of primary and secondary education, particularly in the mechanic arts, one of the most remarkable successes has been attained by the famous International Correspondence School, referred to above, at Scranton, Pa. Originating as the "query department" of a technical journal of engineering in 1881, this school has developed into an institution presenting some sixty courses of study, conducted by a corps of two hundred and twenty-six instructors and assistants, with a large publishing establishment, spacious buildings, and even its own special railway instruction car. The number of students enrolled in its courses is said to be over seventy thousand, many thousands of whom are in countries as far apart as India, Russia, and Chile. The training is largely along technical and mathematical lines, but all the usual branches of primary education are covered by courses generally admitted to be of the most thorough and effective character. A recent number of *The Scientific American* gives the following facts relating to this school:

"The test of eligibility to become a student is that the candidate must be able to read and write English. The schools, to use the language of their prospectus, undertake to teach him 'whatever he needs to know.' In taking him through a course, the instructor proceeds upon the curious assumption that his pupil knows absolutely nothing about the subject. The assumption is curious and original, but thoroughly philosophical; for, if the student is acquainted with the earlier stages, he passes quickly through them, merely refreshing his memory, while the instructor is certain that in every case the student lays a proper foundation for future work. Starting, then, with the assumption that the student knows nothing of the subject, the schools send him his first and second Instruction and Question Papers.

"After studying the first paper, he returns his written answers to the questions asked in the Question Paper to the schools, and proceeds with his second paper. At the schools the answers are corrected in red ink and returned to the student, accompanied by the third Instruction and Question Papers and a letter explaining the errors and corrections in further detail than is possible on the answer sheets themselves. If the student secures ninety per cent. on his first paper, it is entered on the books as passed; but if he fails to get this percentage the paper is returned, and he is obliged to review the incorrect portion. This system is followed until the course is completed, when the schools' diploma is granted after a final examination."

SCIENCE AND INVENTION.

THE COMING TOTAL ECLIPSE.

ON May 28 next there will be a total eclipse of the sun visible in parts of the United States, so that our observers need not go to far distant lands for their investigations. The path, instead of being confined to the sparsely settled regions of the world, as it so often is, will cross the States of Louisiana,

PATH OF THE SOLAR ECLIPSE OF MAY 27-28, 1900.

Mississippi, Alabama, Georgia, South Carolina, and North Carolina, and will even touch Virginia. Says *The Scientific American* (April 21):

"The track of totality begins on the Pacific Ocean just west of Mexico, enters the United States near New Orleans, and passes in a northeasterly direction until it reaches the sea at Norfolk and Cape Henry. Its path then crosses the Atlantic Ocean and touches Portugal, Algiers, and North Africa, and will terminate near the northern end of the Red Sea. The eclipse will last 1 minute and 12 seconds near New Orleans, and 1 minute and 40 seconds near Norfolk. . . . A number of experimental stations will be established by the Government along the path of the eclipse. The necessary apparatus is now being gathered and arranged, and men specially adapted for the work are being engaged and are trained."

The following directions are given by the writer to those who desire to make sketches of the corona:

"Preliminary preparations should be carefully made where it is intended to sketch the corona with the naked eye. Those who expect to make a sketch of the corona unaided will have to confine their attention to sketching outlines or to some other particular feature, otherwise they will result in hasty and inaccurate work. Cooperation of groups of from two to five sketches is strongly commended. A sheet of paper of convenient size, of, say, 9x12 inches, should have drawn upon it a black disk, $1\frac{1}{4}$ inches in diameter, to represent the moon, with straight lines radiating at an angle of 30 degrees, as shown in our diagram. The positions of the various parts of the corona, as seen projected against the sky, are best referred to a vertical line obtained by mounting a plumb line so it is seen over the moon's center. The diagram upon which the drawing is to be made is to be placed upon any convenient support, so that the lines marked 'Top,' 'Bottom' shall be in the plane of the plumb-line, the top part

corresponding to the top string. . . . The dimensions of the various parts of the eclipse can be made with accuracy by estimating them in terms of the moon's diameter as a convenient unit. The party should practise together beforehand, each sketching only his proper quadrant from a corona drawing suspended at the angular height of the sun. The time of exposure of drawing should be slightly less than the known duration of the eclipse. White chalk on purplish blue paper gives admirable results. On eclipse day the sketchers should avoid fatiguing their eyes by too much observation of the preceding partial eclipse, and should rest the eyes for the last five minutes before absolute totality."

To amateur photographers who are anxious to catch the corona on their sensitive plates, the following directions are given:

"Photographs of the corona are of great scientific value, and may be obtained with instruments of moderate dimensions. Almost any good rectilinear lens may be used. One with an aperture of $2\frac{1}{4}$ inches and of a focal length of $32\frac{1}{2}$ inches proved very satisfactory in the Indian eclipse expedition of 1898. For plates of ordinary sensitiveness exposures of one or two seconds are ample. It is better to use a plate of normal sensitiveness instead of an extra rapid one, and to lengthen the exposure in proportion, because a slower plate is easier to handle and permits of a more restricted and prolonged development, and is less liable to accidental fogging. Photographs taken with amateur instruments are, of course, not as valuable as those taken with instruments provided with a driving-clock or other device for keeping the image stationary on the plate. In focusing, the instrument should be pointed at a well-defined object distant, say, from one-quarter of a mile to a mile, and the object brought to a short focus for center-plate. The image of the sun is really a small object, and occupies but a comparatively small part of the center of the field. The focal length of the camera in inches will give roughly the diameter of the sun's image in hundredths of an inch. Negatives should not be re-touched."

The eclipse, we are assured, may be profitably observed with small spy-glasses or opera-glasses. Red, the usual shade-color, is objectionable, and shade-glasses of some neutral tint or of blue should be used. Precise directions for amateur telescope observing parties are issued by the Naval Observatory at Washington, which will send them on request. The accompanying map is reproduced in *Knowledge* (London) from the [British] Nautical Almanac. The editor of *Knowledge*, after a careful review of

OUTLINE METHOD OF SKETCHING IN THE FORMS OF THE INNER AND OUTER CORONA.

weather conditions in the countries on the line of totality, concludes that Algiers offers the best chance of an unobstructed view. Of some new ventures in photographic observation and some others that have been suggested, he speaks as follows:

"Both before and after totality a series of photographs should

be taken of the partial phase. Since but one photograph has as yet been obtained of the corona after totality was well over, no definite rules can be laid down as to the style of instrument that should be employed. Therefore in this next eclipse all sorts of cameras might be pressed into the service, and some range of exposure should be given. One thing is certain—that in all cases the development must be carried out with the special object of restraining the high lights and giving opportunity for the feeble radiations to register."

Mr. Nevil Maskelyne, *Knowledge* adds, will kinematograph the corona at his station in America, and spectroscopic observations of all sorts will be made.

ARSENIC AS A COMPONENT OF THE HUMAN BODY.

THE somewhat startling discovery that arsenic exists normally in the animal organism is announced by M. Armand Gautier, a French chemist. He finds it—of course in minute quantities—in herbivora and carnivora alike, and no less in man than in the lower animals. M. Gautier tells thus of his discovery in *L'Union Pharmaceutique* (Paris), as translated in *The National Druggist* (April):

"I have demonstrated the presence of arsenic in all the thyroïdal glands which I have examined thus far, in man, the dog, hog, sheep, etc. Arsenic is always present in this gland, and always absent (or exists in imponderable quantities) in all others save and except the thymus and the brain. . . .

"We can, therefore, assert that arsenic is constantly present in the thyroid glands of both carnivorous and herbivorous animals, at least when the same are in a normal condition. In man (for the determination of which all of our experiments were directed after the perfection of our methods), we have found about 1 milligram [.015 grain] of metallic arsenic to every 127 grams [about 2,000 grains] of fresh or recent gland, say, about 1-127,000 part of the weight of the fresh thyroid, or 1-32,000 part of the dried gland.

"This minute quantity of the element is doubtlessly necessary, since it is constantly present in the healthy gland in all animals examined, and it must serve in accomplishing some normal function—a function as yet undiscovered, but certain and indispensable, since health without the thyroid is impossible, and there is no healthy thyroid without arsenic."

It is remarked by *The National Druggist* that the metalloid is doubtless introduced into the system through food substances in which its presence can easily be demonstrated. It becomes fixed in or on the nuclei of cells, in which we find it combined with the nucleins, and these arsenical nucleins must be classified with the already known phosphorized nucleins. Subsequent investigations made by M. Gautier make the presence of arsenic in the brain somewhat uncertain, but he states that he has determined its constant presence in ponderable quantity, in the normal mammary gland, in addition to the thyroid.

The author of *The National Druggist* article believes that medico-legal experts must take these discoveries of M. Gautier into account henceforth, but Gautier himself does not think that the discovery of normal arsenic in the human body cuts much figure from a medico-legal standpoint, altho he admits that circumstances might arise wherein the knowledge of its normal presence might be of importance. A curious fact was brought out in the remarks elicited from members of the French Chemical Society in the discussion of Gautier's paper. Dr. Lancereaux stated that in the case of a woman who, for more than a year, had been under arsenical treatment, the limbs became covered with a growth of long black hair, and that for at least eighteen months after cessation of the arsenic this growth still persisted. He said that it would be interesting to determine whether the growth and persistence of hair in this case were due to an effort of nature to eliminate the arsenic, or were the result of disturbances caused by the action of arsenic on the nervous system.

A NEW SUBSTITUTE FOR CELLULOID.

CELLULOID, which finds such numerous uses nowadays, is somewhat objectionable on account of its ready inflammability, and for other reasons. According to a note in *Cosmos* (Paris, March 31), a substitute called cellulithe is now made from paper-pulp, that is not open to these objections. Says that paper:

"The numerous uses to which paper is already put are well known, whether under the ordinary form or in the state of papier-maché. Now a new substance is obtained from paper pulp, which can be used for the same purposes as celluloid. The invention of this curious material, which has been named 'cellulithe,' is based on observations made long since on certain modifications undergone by paper pulp when subjected to long-continued beating. When it has been thus treated in the . . . mill whose office is to wash and defiberize the rags, a transparent and elastic fluid is obtained which hardens rapidly on drying and gives great strength to the paper; it is supposed that a colloidal, amorphous hydrate of cellulose is produced which separates from the cells of the pulp and acts as a glue. This is similar, as *La Chronique Industrielle* remarks, to the theory of the formation of so-called vegetable parchment or parchment-paper. By the action of the sulfuric acid, the cellulose is changed into amyloid, which with an excess of water gives a gelatinous precipitate that unites the fibers and finally forms a transparent sheet resembling parchment, except in suppleness.

"To prepare cellulithe, an exclusively mechanical process is used; that is, the pulp is beaten for an extremely long time. According to the particular kind of material employed, and also to the speed of rotation of the cylinder that does the work of the machine, the operation may last anywhere between 40 and 150 hours; it is prolonged until there is obtained a homogeneous mucilaginous liquid in which all trace of fiber has disappeared. This is called picturesquely 'milk of cellulose,' and its appearance perfectly justifies this name. If colored cellulithe is desired, colors are added at this stage of the process, and as in the state of extreme division to which the material has now been reduced, it contains much air, which might interfere with its smoothness, it is boiled to drive this air out. At the end of two hours the 'milk of cellulose,' boiled and filtered, is received in a perforated vessel, and then the water that it still contains is evaporated, either in the open air, or preferably in an oven at 40° C. Finally, a paste is obtained, which hardens slowly and attains the consistency of horn, with a specific gravity of 4.5. Like horn, this cellulithe can be worked, and has the advantage of not being inflammable like celluloid. Before drying sawdust and lampblack may be added, and then the compound becomes similar to ebonite. There is no need to say that this new substance may be applied to divers uses, and that its cost is reasonable, by reason of the material of which it is made and also because of the ease of manufacture and working."—*Translation made for THE LITERARY DIGEST.*

Maternal Impressions.—That psychic influence on the mother plays any part in the production of monstrosities is not believed by Dr. H. F. Lewis. If true, he argues, the theory of maternal impressions ought to explain every case, but thousands of monstrosities are born without any history of an impression, and there are many cases of impression not followed by the birth of a monster. "If it were true," says *Modern Medicine*, in a notice of Dr. Lewis's article, "it ought to be possible to classify monstrosities in species and genera according as they were due to certain casual impressions, such as from dogs, cats, and elephants. Internal anomalies about which the mother did not even know, such as congenital diaphragmatic hernia, bifid uterus, etc., could not be explained in this way. It is not conceivable that a mental influence could remove a part of the fetus already formed, neither could it add anything. The strongest blow dealt to the theory comes from the results of the experiments. All malformations and monstrosities can be explained by purely physical and mechanical causes, entirely remote from psychic influence, so that there is never any reason to invoke the mysterious or the supernatural to explain natural phenomena."

THE FALL OF A MOUNTAIN.

THE terrible landslide at Amalfi, Italy, shocked the world not because of excessive loss of life, for only a few persons were killed, but partly because its locality was one of the most picturesque in Europe, and famed among tourists; and partly because we are so apt to think of hills as rock-ribbed and everlasting that we are appalled by evidence that they are subject to change and decay, like all else in nature. The illustration, taken from *La Science Illustrée*, shows how large a part of the moun-

THE LANDSLIDE AT AMALFI ON THE GULF OF SALERNO.
(The part enclosed in a white line shows the extent of the landslide.)

tain at Amalfi was destroyed in the catastrophe, and the accompanying article by M. V. Delosiére, part of which is translated below, gives an idea of the cause and nature of the accident. Says this writer:

"On December 22 last, at 2:30 P.M., after rain had fallen for a long period, a whole part of the mountain overlooking the port [of Amalfi] split off with a terrible report, and fell, carrying with it houses, hotels, and particularly the greater portion of the Hotel of the Capuchins.

"The mass of matter that fell from the mountain into the harbor is estimated at more than 50,000 cubic meters [1,765,000 cubic feet]. Several sailing-vessels at anchor in the port were crushed under the rocky *débris* and others were damaged.

"One corpse was taken from the water, cut quite in two. The number of victims was relatively small. Ten persons were killed, among them two young English girls who stayed too long in the hotel in the hope of saving their valuables. . . .

"On our picture, which is from a photograph, the white line surrounds the portion of the mountain that was affected by the accident.

"These landslides are unfortunately only too frequent. They are almost always due to the destructive power of water. Among mountain chains there are few valleys where we do not see masses of rocky *débris*, often including blocks of vast size, as in the famous 'chaos' on the road from Luz to Gavarnie, the result of sudden falls of portions of the mountain.

"These falls take place when the base of an escarpment is undermined by water. This was the case with the rocks at Amalfi, notwithstanding their volcanic origin and their hardness.

"Landslides may also result from the slipping of an enormous mass of compact rock on a clay layer moistened by infiltrated water. In such a case there may be total destruction of a mountain. In 1806, on September 2, the Rossberg, situated to the north of the Righi, fell with a terrible noise from a height of 1,000 feet and over a region a league in length, covering with *débris* five villages, destroying the charming fields of the Goldau Valley and the lake of Lowez, and killing more than one hundred persons."

The cause of this catastrophe, also, the writer says, was rain. The mountain rested on a bed of clay, which was transformed by degrees into a slimy mass on which the superincumbent

rock slid as a launched ship slides on her soaped ways. Examples may easily be multiplied.—*Translation made for THE LITERARY DIGEST.* •

MAGNETISM AND ANIMAL GROWTH.

PERHAPS no field of scientific research has been strewn with more failures than that concerned with attempts to find some physiological effects of magnetism. That a force acting so powerfully on iron and nickel, and even on a gas like oxygen, should not make itself felt in some way on the human body seemed incredible; yet most experiments along this line have brought out no important fact. Some investigators have reported that certain persons, when their heads were placed between the poles of a powerful electromagnet, experienced curious sensations when the current was turned on and off; yet the majority of people report no such result, even when the magnet is powerful enough to attract heavy pieces of iron at a considerable distance. Those who revel in occult phenomena and accept the testimony of clairvoyants and their kind will find, of course, plenty of evidence that magnetism may affect the human organism; but this is not yet accepted by scientific men. Now, however, it is announced that Professor Herdman, of the University of Michigan, as reported in *Electricity* (April 18), has discovered that the rapidly reversed magnetic stress caused by a neighboring alternating current of electricity has an influence in stimulating growth. The professor is reported as saying:

"Whenever a current of electricity traverses an animal body, the magnetic field resulting from the current and surrounding its path must disturb in some manner the molecular (physical) and atomic (chemical) activities that are going on in the tissues and fluids through which the current of electricity passes. Almost everything now known about electromagnetism seems to imply that a magnetic field, whether produced by a permanent magnet or by a current, reacts in some manner upon all kinds of matter within the field, and in such a manner as to rotate in some degree every molecule, so as to make it assume a different position from what it would assume if not thus acted upon. We have found that the most noticeably physiological response to an electric current obtained from living animals is that resulting from sudden and wide differences in the intensity of the current. Having learned this, we have placed the human subjects of our experiments in a magnetic field occasioned by an alternating current. This produces no chemical changes in the body, but merely accentuates normal chemical action."

The apparatus used in carrying out the experiments consists, we are told by the writer in *Electricity*, of a solenoid, or hollow spiral of wire, about three feet in diameter, through which an alternating current of five amperes is made to pass. For animals a kind of solenoid cage was used. The animals (guinea-pigs) were divided into two groups of about the same size and age, and were carefully weighed. The groups were treated alike, except that from 5 P.M. until midnight one group was placed in the solenoid cage. This plan was pursued from the time the animals were a few weeks old until they had reached their full growth. Of the results obtained Professor Herdman says:

"Without exception, the animals immersed in the alternating current began to outstrip the others in weight at the end of the first week, and a gain of from 15 to 24 per cent. in favor of the animals within the magnetic field was apparent each succeeding week, until they neared the period of full development, when the weekly gain became perceptibly less.

"During two years ten separate groups of animals have been experimented on, each group containing from three to five animals, and uniformly those placed in the magnetic field gave evidence for the first few weeks of accelerated nutritive action. In the case of two groups, when the experiment was continued beyond eight weeks, the curve of increase shown by the magnetized animals, which until then ran 20 per cent. higher than that of the other group, gradually declined. At the end of the twelfth

week their weight had fallen a little below that of the other group.

"So far as these experiments go, they appear to show that alternating magnetic stress is in some way related to a quickened metabolism of tissue; that the magnetic energy goes through some sort of transformation and reappears as physiological energy. Growth can undoubtedly be accelerated by the use of electricity, but it must be admitted that the growth thus obtained is unhealthy, and in the end is disadvantageous to man or animal. Such diseases, however, as rheumatism and gout will in time be treated successfully by methods similar to those employed in the experiments described, that is, by enclosing the patient for a short period each day, until improvement is effected, in an electromagnetic field."

ELECTRICITY AS A RAIN-MAKER.

THAT electricity is indirectly the cause of rain is said to have been established by Prof. Elmer Gates, from experiments in his laboratory at Chevy Chase, near Washington. A correspondent of the *Philadelphia Dispatch* asserts that means have been devised for causing artificial rain on a small scale by proper manipulation of the electric current. According to Professor Gates, as interpreted by the Philadelphia journalist, since if one locality or cloud becomes positively charged some adjacent locality or cloud must acquire a negative charge, or *vice versa*, there must be one or more regions between the two where their particles commingle. Those of one being positive and those of the other being negative they attract, cohere, and form rain drops. When there are disturbances of electric equilibrium in the atmosphere, differences in density, pressure, temperature, and moisture result. Commenting on all this, *Electricity* (April 11) remarks:

"The above explanation as to the cause of rain will probably come as a surprise to persons who have hitherto looked upon it as simply due to a condensation in the atmosphere of moist air. In support of his theory Professor Gates is said to have charged a current of moist air as it entered his laboratory through an open window with negative electricity and a similar current from another source with positive electricity. At a distance between the two inlets and where the two currents mingled a mist was seen to form. When asked by the writer of the article already referred to how a complete thunder-storm might be produced by such artifice, Professor Gates replied that this was done by maintaining a layer of moist air in the top of a room and by charging this to a potential different from that of the floor below. If charged to a sufficiently high potential and with sufficient quickness there would result a sudden flash and discharge, accompanied by a fall of rain upon the floor. If Professor Gates's discovery ever extends beyond the laboratory, we may expect to see in times of drought immense static machines invoking rain for farmers by charging the breeze as it blows by either positively or negatively, in the same way that bombs are now occasionally projected into space in certain Western districts to please unsophisticated sons of the soil. And we are not sure but what the one process is as efficacious as will be the other."

A Pioneer Aeronaut.—H. T. Coxwell, who has just died in England at the age of eighty-one, was one of the most distinguished pioneers of aeronautics. In 1862, after the British Association had made a series of unsuccessful balloon experiments for the purpose of making meteorological observations, Mr. Coxwell constructed a special balloon 80 feet high, 55 feet in diameter, and holding 93,000 cubic feet of gas, and with James Glaisher, F.R.S., made a series of ascents that have become historical, Coxwell managing the balloon and Glaisher making the scientific observations. Says *Science and Industry* (April) of these remarkable ascensions: "The first ascent was made on July 17, 1862; on this occasion they attained a height of four miles, and traveled sixty miles in two hours. On September 5, 1862, Mr. Glaisher and Mr. Coxwell reached a height of seven miles, and very nearly lost their lives. At this great altitude men and other mammals experience great difficulty in breathing, and no mam-

mal could endure a much greater elevation, tho some birds soar to even greater altitudes. These intrepid investigators made many ascents together, and made highly important discoveries in meteorology; they discovered that the cirrus clouds that float at great altitudes are composed of ice crystals, and they also found that the direction of the wind changes at different heights. From these and other balloon ascents, valuable information has been gained as to the alternation of cold strata and warm strata of air, the temperature not decreasing regularly as the altitude increases. The ice clouds, which were discovered by balloonists, are much higher than any of the mountain observatories, and therefore can not be directly observed except by use of a balloon. However, the halo that occasionally surrounds the sun or moon reveals to us the presence of these ice crystals; for the halo is caused by the refraction of the light of the sun or of the moon in passing through the ice needles."

Infection and Postage-Stamps.—The brothers of the Saint Jean-de-Dieu Hospital at Ghent, Belgium, "who would seem," says *The British Medical Journal*, "to have a good deal of leisure time on their hands," have hit on a novel style of wall decoration. They have papered the parlor, the two refectories, the twenty-eight rooms, and all the corridors of that establishment with stamps, ingeniously arranged in such a fashion as to represent palaces, forests, rivers, flowers, insects, and even persons, the latter in life size. "All the subjects," says *The Journal*, "are treated in the Japanese style with remarkable perfection. Many Belgian painters have been to see these highly original works of art, in the execution of which some twenty million of postage-stamps have been employed. We are willing to believe that the artistic effect of this new style of mural decoration is admirable; but from the sanitary point of view—which after all should not be altogether lost sight of in the decorations of a building intended for the reception of the sick—we are disposed to think it a little questionable. A severe hygiene would doubtless proscribe any kind or description of wall paper as being likely to harbor the ubiquitous microbe. With regard to postage-stamps in particular, cause has recently been shown to regard them with special suspicion as possible agents in the dissemination of tuberculous infection. A French investigator has shown that the stamps are often infected by means of the saliva of diseased persons, and he has uttered a note of warning to this effect to stamp collectors. He had occasion to observe a man suffering from tuberculosis who plied a trade in stamps, and who was in the habit of sticking them on gummed paper after moistening them with his tongue. A number of stamps which had been thus dealt with were placed in sterilized water. The water was afterward inoculated in some guinea-pigs, all of which died with well-marked signs of tuberculosis. Against so subtle an enemy as tuberculosis no precaution can safely be neglected. The moral of the experiments to which we have referred is that postage-stamps are not to be recommended either as hobbies or as mural decorations except under antiseptic precautions."

SCIENCE BREVITIES.

THE secretary of the Paris Academy of Science has announced to that body, according to *La Science Française* (March 2), that the late Professor Hughes, the inventor of the microphone, bequeathed to the Academy the sum of 100,000 francs (\$20,000), the interest of which is to be paid each year to the inventor of the best practical device in physics, electricity, or magnetism.

It is reported that the French Aéro Club has received from an anonymous donor 100,000 francs, to be given to the aeronaut who, with a balloon, or any other aerial vessel, will start from the headquarters of the club, pass round the Eiffel Tower, and return to the starting-point, a distance of seven miles, within half an hour. The competition is international, and if the prize is not won within five years, it will be withdrawn.

NEW METHOD OF PRINTING BOOKS.—The curved pages of the ordinary book are injurious to the eye, we are told in the *New York Medical Journal*, April 14, by F. G. Murphy. He shows how the curved page causes a constant change of the focus of the eye as it reads from one side to another, necessitating a continued effort on the part of the ciliary muscles. The light also usually falls unequally upon both sides, further interfering with a continued clear field of vision. He suggests, therefore, that the printed lines run parallel to the binding instead of at right angles to it so that all parts of the line would be at equal distance from the eyes and be equally lighted.

THE RELIGIOUS WORLD.

SECULAR COMMENTS ON THE ECUMENICAL CONFERENCE.

THE spectacle of a missionary conference, comprising over two thousand delegates, drawn from every portion of the globe and representing nearly every Protestant body in Christendom, absorbed a large share of attention from the press during the past week. The delegates represented 14,000 active American and European missionaries and over 50,000 native missionaries engaged in foreign fields. Of the 104 missionary societies represented, 57 are in the United States and Canada; 35 in Great Britain, Ireland, and the British colonies; and 12 in various countries of the European continent, the latter including Germany, Holland, Norway, Sweden, Finland, and Switzerland. The *New York Tribune* (April 26) finds in the conference an indication that missionary zeal and the "higher criticism" are not incompatible. It says:

"The deliberations of the Ecumenical Missionary Conference thus far furnish not the slightest evidence that the widespread tendency to soften the harsher features of the traditional Protestant theology has 'cut the nerve of missions.' The public became familiar with that assertion a few years ago in connection with the controversy that arose in the American board over the status of certain candidates for the foreign mission field, who either expressed a belief in the opportunity of a probation after death for the heathen, or at least hoped that there would be such an opportunity for those to whom it had not been vouchsafed in this life. The board, if we remember aright, virtually decided that such an opinion was within the limits of tolerated belief, whereupon there were numerous predictions of the speedy failure of its work, which predictions, we are glad to say, have not yet been fulfilled. Indeed, it appears to have renewed its youth, and it is carrying on its various missionary enterprises with all its old-time energy and zeal. . . . It is not within the scope of the conference to discuss theological tendencies or to decide between the conservative and traditional schools of thought, and the representative men who compose its membership are in nowise disturbed by the fact that Christianity, being a living force and not a dead mummy enclosed in a cabinet, is constantly discarding old opinions and adopting new conceptions of the old fundamental verities."

The *New York Journal* (April 24) says:

"The most inveterate scoffer at mission work can not fail to be impressed by the scope and character of the great Ecumenical Conference now being held at Carnegie Hall. These men of many creeds have met, as Dr. Judson Smith says, not like the fathers at Nicæa and Chalcedon, to fashion a creed and define a policy, but to rehearse the deeds of God in many lands. It is a conference that will engage the attention of the entire Christian world; a conference whose strangest feature is the attendance as delegates of theologians with beliefs as widely divergent as the fields presided over by their missionaries. The attendance at the conference shows that the number of foreign missionaries is increasing steadily, and that in addition to purely educational phases their work is assuming more of a humanitarian character with each succeeding year. The conference also indicates a greatly increased tendency toward Christian union and Christian brotherhood, both in civilized countries and in missionary fields."

The *Philadelphia Record* (April 25) says:

"It all proves that this essentially commercial and industrial nation is not without its ideals. Even those who can not be classed as religious people do not confine their interests to business. They contribute to benevolent and other enterprises which have no immediately selfish interest for them from a sense of the higher duties of mankind. It is their inability to see this side of the American that leads foreign observers into error. Matthew Arnold, while admitting that Americans had achieved the highest political aspirations, complained that they had no ideals to save them from the most sordid living. He failed to penetrate the best motives of American life."

The *Boston Herald* (April 23) says:

"It is not a long time since the several Protestant sects have been sufficiently of one spirit to work in common friendliness without hostile rivalry. That they have reached this stage is a happy augury of efficiency of service without waste. There are now about 350 organized missionary societies of the Protestant churches of the world, and a large number of them are represented in this conference by officers, delegates, and missionaries. Statistics published in the almanac of the American Board of Commissioners of Foreign Missions for the current year, representing the work of 240 societies, give totals of 5,217 missionary stations, with 13,586 out-stations. To serve these, 12,646 missionaries are sustained, nearly equally divided between males and females. Under these, as assistants, are laboring 61,897 converted natives. The total number of church communicants of these missions is given as 1,585,124, and the income of the societies sustaining the missions is \$15,560,693."

The *Cleveland Leader* (April 22) refers to the influence of missions upon national and political progress:

"The missions are advance stations of Western civilization. They may alter the destiny of empires and the map of the world. But above all such elements in the work of missionary societies stand their lofty ideals, lessons of altruism and humanity, of faith and earnestness in the service of a spiritual master, which are of constant and immense value to the countries that furnish the missionaries and support the missions."

The *St. Paul Pioneer Press* (April 21) touches on the same point:

"As to the attitude of the secular Christian world toward foreign missions, it has wonderfully changed since Sydney Smith had his fling at Carey as a 'consecrated cobbler,' and since Dickens burlesqued the home sympathizer with missions in his picture of Mrs. Jellyby and Borrioboola-Gha. The world has learned that the mission work is one of the most powerful auxiliaries to the spread of modern civilization. Governments have found in the missionaries the most eager and serviceable agents in the establishment of law and order among savage and barbarous peoples."

The *Indianapolis Journal* (April 22) quotes from a recent address of Colonel Charles Denby, for many years United States minister to China. Colonel Denby said:

"I made a study of missionary work in China. I took a man-of-war and visited almost every open port in the empire. I went first to Hongkong, then successively to Canton, Swatow, Amoy, Fou-Chow, Ningpo, Shanghai, and up the Yangtze to Chin-Kiang, Nanking, Kiu-Kiang, Wuhu, Wu-Chang, and Hankow. Afterward I visited Cheefoo and the highest open port, Neuchwang in Manchuria, Takod and Tien-Tsin, and the island of Formosa. I lived at Peking and knew that city. At each one of these places I visited and inspected every missionary station. At the schools the scholars were arrayed before me and examined. I went through the missionary hospitals. I attended synods and church services. I saw the missionaries in their homes. I saw them all, Catholic and Protestant, and I have the same opinion of them all. They are all doing good work; they merit all the support that philanthropy can give them. I do not stint my commendation or halt or stammer about work that ought to be done at home instead of abroad. I make no comparisons. I unqualifiedly, and in the strongest language that tongue can utter, give to these men and women who are living and dying in China and in the far East my full and unadulterated commendation."

The *Chicago Tribune* (April 24) says:

"There is no need of any encomium upon the missionaries themselves, all men of high ideals and character, and many of them famous for their noble works. A meeting and interchange of ideas among 2,000 such men from all quarters of the globe can not fail to have good results. Taken in connection with the wider movement seen in Chicago during the World's Fair, and still manifest in events like the interracial services held last Sunday in a suburb of this city and in New York, the Ecumenical Missionary Conference is just cause for optimistic comment among Christians."

A writer in the *New York Sun* (April 26), signing himself

"Anglican," complains that the present conference "is in no sense ecumenical so far as Christian missions are concerned." He writes as follows:

"There is not a single representative present of the Roman Catholic Church or of any of the great Eastern churches. There is not a single representative present of the venerable Society for the Propagation of the Gospel, which has on its rolls the names of men like John Coleridge Patteson, 'the martyr bishop of Melanesia.' There is not a single representative from the English bench of bishops, a church which has enrolled on its missionary banners the names of men like Henry Martyn, of India; Samuel Marsden, the Apostle of New Zealand; Selwyn, the great missionary bishop of the Southern Seas, and Joseph Wolff, the pioneer missionary in Central Asia. Nor is there a single representative of those university missions of Oxford and Cambridge, which have recently given a bishop to Madras and another to Lahore, and have numbered among their missionaries Bishop Mackenzie, of Africa. These so-called ecumenical conferences assemble from time to time and ignore completely the work of the venerable Society for the Propagation of the Gospel in Foreign Parts, which 200 years ago gave the first impetus to missionary enterprise, which opened its stations in India in 1818, South Africa in 1820, New Zealand in 1839, Borneo in 1849, and has flourishing missions in China, in Japan, and in the islands of the South Sea."

PRESENT STATUS OF THE "OLD CATHOLIC MOVEMENT."

WHEN, in 1870, after the proclamation of the dogma of Papal Infallibility by the Vatican Council, Professors Dollinger, Friedrich, Reinkens, and other theologians withdrew from communion with the Roman See, and the body known as the "Old Catholic," or, more properly, the "Christian Catholic" church, was formed, it was freely predicted that the new movement would not reach its majority. Indeed, it has been pronounced dead over and over again since that time. From two articles, however, in *The Anglican Church Magazine* (February, March), the Old Catholic movement appears to be in a fairly flourishing condition, and to be adding, though slowly, to its membership. Says the journal mentioned:

"Roughly speaking, its adherents number 300,000 souls. It is firmly established in Germany, Switzerland, Austria, Holland, Belgium, France, Italy, and the United States, and is accepted by both the Greek and Russian churches as a pure and lively branch of the Church Catholic. It is governed by six bishops, signatories of the Utrecht Convention, and three bishops-elect, who await the formalities of consecration. In Holland it reckons twenty-three parishes, with a theological seminary at Amersfoort; in Germany ninety-three parishes and associations, with a second theological seminary; in Switzerland fifty parishes, served by fifty-nine ecclesiastics, and with a third theological seminary; in Austria twenty-three parishes, and some fifteen thousand adherents; while Bishop Koslowski, in his Polish diocese of Chicago, rules forty thousand souls. A mass of subsidiary figures, from Italy, Bohemia, Illinois, etc., all bearing testimony to the steady progress of the movement, may be advantageously studied in the annual *Altkatholisches Volksblatt*, published at Bonn. The literary activity of the movement is represented by the excellent *Revue Internationale de Théologie*, appearing quarterly, and containing articles in German, French and English; by four periodicals in Germany, three in Switzerland, two in Italy, one in Holland, one in France and one in Chicago. . . .

"The Catholic Reformed Church of Italy consists of two groups, one of which has elected Count Campello as its bishop, the other Don Paolo Miraglia, the latter with Piacenza as center. Italy is thus placed on the same footing as Austria, where the congregations have long been recognized as forming part of the Old Catholic communion with their bishop-elect awaiting consecration at the requirement of the state that a fixed endowment shall first be secured to the See. Under Count Campello there are parishes at Arrone, Umbria, with a mission at Terni, at Dovadola, Milan, Papigno (with one mission)."

The Old Catholic body differs from the Roman Catholic Church chiefly in its rejection of the dogma of Papal Infallibility, in its use of the vernacular in the liturgy, and in rejecting compulsory auricular confession and the authority of the councils of the Western church since the date of the separation of the Greek and Latin churches.

ROMAN CATHOLIC CRITICISMS OF BISHOP POTTER'S PHILIPPINE REPORT.

AMONG the many Roman Catholic replies to Bishop Potter's recent report on religious conditions in the Philippines (see *THE LITERARY DIGEST*, April 14), that of the Rev. Joseph M. Alque, S. J., director of the observatory in Manila, is the most authoritative and definite. Father Alque, who is just at present in this country on an important scientific mission, writes in part as follows to the *New York Sun* (April 5), referring first to Bishop Potter's charge that the friars had robbed the Filipino natives:

"The statements on which this charge is based are so erroneous that, in justice to the bishop and his companion and to the Episcopalian body, which he in some measure represents, as well as to the American people at large, I deem it important to make the following true statement about the taxes or fees for priestly ministrations in the Philippines, which Bishop Potter has been misled to represent as excessive.

"In the first place, it will be well to note that Bishop Potter spent a very short while in Manila, three or four days, and it is a matter of fact that the most serious Philippine people scarcely paid attention to his visit. Besides, the conditions of the war did not give him the best chances for obtaining exhaustive information about places outside of Manila. This may explain and partly excuse the incorrectness of his assertions, a few of which I will quote and examine in the order in which they stand in his report.

"Her religious orders, except, perhaps, the Jesuits, have robbed the people, wrung from them their lands, and taxed the administration of sacraments and ordinances of religion with a scale of exactions and impositions at once scandalous and outrageous.' It would be a curious thing to inquire from Bishop Potter what is the exact meaning of this 'perhaps,' because it is well known in the Philippine Islands that the Jesuits had neither parishes nor properties in the northern islands, and in the southern islands, where the Jesuit missions are, the people clearly state that neither money nor property has been taken from them by the missionaries, as authentically proved by an important document I possess, signed by General Bates, United States army, on the 27th of last December, who took the southern ports of Mindanao Island."

As to some of the bishop's other statements, particularly as to ecclesiastical fees and to concubinage, the charges are so grave, says Father Alque, that they should be substantiated by adequate testimony. He continues:

"No marriage, *e.g.*, can be celebrated by a priest of the Roman obedience without (a) a certificate from both parties of baptism; (b) of confirmation; (c) of a confession to a priest immediately preceding the marriage; as well as a certificate of marriage, all of which must be severally and separately paid for, and for which the charge is in each case from \$5 to \$8.' The first (a) is an ecclesiastical rule in force among Catholics everywhere; the second (b), as a rule, is not required in the Philippine Islands; with regard to the last, (c) the confession required before matrimony need not be made immediately before it. If a certificate be required in this case, it is only to assure the parish priest that the parties contracting marriage have prepared for the sacrament worthily. As for a certificate of marriage, that is nothing but the marriage license.

"Now, the bishop's main point is to prove that the religious orders have robbed the people. But if the people pay the necessary charges for these certificates willingly, how can he call it robbery? It is not clear from the bishop's words whether the charge in each case be from \$5 to \$8 for all the certificates to-

gether, or for each certificate for each party, which would make quite a difference; nor is it clear whether the \$5 to \$8 is estimated in Mexican money (the usual standard in Manila) or our own. But it is not worth while disputing this point, because the fact is that the fees for marriages in the diocese of Manila and everywhere else in the Philippine Islands are by no means so high as Bishop Potter asserts. The fees for marriage among native Indians, or of Indian with native, amount to \$1.75; among mestizos, \$3.25; among white people, about \$4. For poor people there is no tax at all, as I can show by innumerable instances.

"Charges are fixed by the archbishop, who, it is understood, divides their proceeds with the clergy who collect them." It is, indeed, very badly and maliciously 'understood,' because the true taxes are divided, not among the archbishop and the clergy, but among the laymen servants of the church who help in the administration of sacraments—for instance, the sacristan, the altar boys, the men in charge of the bells, etc.; and the remainder, if anything is left, belongs to the church treasury. I said 'if anything is left,' because I had to act myself as parish priest in the Ermita parish church of Manila during the blockade, because there was no other priest there, and it is a fact that at that time and up to the present the true taxes are insisted upon in so few cases that the laymen in charge of the church do not receive enough to live upon, and must be fed by the parish priest."

Father Alque denies that "thousands of people are living in a state of concubinage" in the Philippines. He admits that some cases exist, but a comparison of the illegitimate birth-rate in Manila will probably not compare unfavorably with, for instance, that of Calvinistic Scotland, where the official commissioners of the British Government on illegitimacy, after searching investigations, reported with grim humor that in their opinion the two points in which the Scotch were strongest were in "expounding of Scripture and in fornication." As for the real causes of this revolt against Spain, Father Alque says that they are complicated, just as are the causes of the revolt against the United States:

"Bishop Potter has no right to say that the cause of the outbreak of the natives against Spain was the taxation imposed by the religious orders or friars in the administration of the sacraments. The reason is plain and evident. Many of the parishes are administered by the natives, who are themselves priests; for instance, the cathedral of Manila, Marikina, San Roque of Cavite, Quiajlo, in Manila, Albay, the most important town in southeastern Luzon, all the parishes on the western coast of the island of Leyte, and many others which it would take too long to mention. Now, in all these parishes the same ecclesiastical law as to taxes was enforced by these secular priests, and it is a matter of history that nobody objected to it. Therefore, nobody can honestly say that the cause of the rebellion of the natives against Spain was the requiring of the true taxes in the administration of sacraments."

The Catholic News, commenting on this letter, says:

"Father Alque's comments on Bishop Potter's statements prove how unreliable they are. And this exposure of the untrustworthiness of the usual Protestant testimony about religious conditions in the Philippines should make the American people careful not to accept as truth what enemies of the Catholic Church say regarding the state of affairs in a land where they have spent only a few days. No one, not even a man of Bishop Potter's fertile imagination, can learn the truth in so short a time."

The Ave Maria says:

"If by some accident Bishop Potter, the sectarian dignitary of Gotham, were to appear in public in an unclerical collar, we feel sure he would never cease to bewail his negligence, or to fear that strangers might have thought he was not a bishop. But this considerably reverend man seems to have had no scruple about spreading evil reports against Catholic missionaries on his return from the Philippines. His stay was limited to a few days passed quietly at Manila. He repeated the usual accusations against the friars, and added a few more. . . . Either one of the two things: Bishop Potter prevaricated or himself has been imposed upon. However, his duty in the matter is perfectly plain. Any

honest man—any gentleman—could tell him what to do, and would urge him to do it with as little delay as possible.

"After the bishop has withdrawn his false charges and expressed regret for making them, we advise him to retire to his study and read and ponder what the president of Berea College, down in Kentucky, had to say last month about a large class of the Protestant natives of that State—their illiteracy, cruelty, vindictiveness, etc. If the bishop and the Rev. Percy S. Grant do this, they will probably regret that their communication to the Joint Commission on the Increased Responsibilities of the Protestant Episcopal Church ever found its way into print."

The Pilot (Rom. Cath.) says:

"Might not Bishop Potter have done a little missionary work on the question of marriage and divorce among his own flock in New York, before he set out to investigate at long range and by rapid transit the moral conditions in the Philippines? How about the Sloane-Belmont nuptials and 'the increased responsibilities of the church'?"

WILL ENGLAND BECOME ROMAN CATHOLIC?

WHETHER England is or is not likely to pass into the control of the Roman Catholic Church has been a subject discussed of late by a number of writers, who see in such an outcome nothing but ruin and desolation. They refer to history, and lay stress upon the powerful but narrowing influences which they allege the papacy has had on human progress; they call attention to recent events in France for which they blame Catholicism, and they exhort England to meet the danger, and crush it before all effort is too late. In an article in *The National Review* (February), Rev. Robert F. Horton, chairman of the London Congregational Union, writes from a strongly anti-Roman point of view. He sees in the *affaire Dreyfus* the direct result of Roman Catholic initiative. To him the clerical press in France is an abettor of injustice and is doing its best to drag a nation downward, as it has, he says, dragged down Spain and Italy. "Those generals of the staff," he writes, "who at Rennes elicited a cry of horror from the whole civilized world by their unblushing mendacity and their vindictive determination to hound an innocent man to destruction, were the first-fruits of a deliberate plan, formed by the Vatican Council of 1870, to capture the armies of Europe in the interests of the papal domination."

Such a state of affairs may, he thinks, yet be paralleled in England, where already Roman Catholicism is gaining headway among certain classes. Dr. Horton's views of English Roman Catholicism are not flattering:

"Last September I pointed out in *The Times* that the Roman Church could not be relied on as a force of social reform, because 25 per cent. of the persons in our prisons are Roman Catholics. Roman Catholics are about one in sixteen of our population, but they contribute one in four to our criminals. I might also have mentioned from the Fortieth Report of the Reformatory and Industrial Schools of Great Britain (1896) the striking fact of the greater proportion of relapses into crime from the Roman Catholic than from the Protestant Reformatories in Liverpool (p. 54), and the glimpse into a Roman Catholic population which is given there. In fact, it is the most appalling picture of vice, drunkenness, and mendicancy in thirty-three Roman Catholic homes that the imagination of Hogarth could conceive. . . .

"It was a shrewd remark of Adam Smith that 'the constitution of the Church of Rome may be considered the most formidable combination that was ever formed against the authority and security of civil government, as well as against the liberty, reason, and happiness of mankind,' for in his day the Catholic countries still stood with all the appearance of their immemorial prestige. But after the lapse of a century the flag of progress and liberty has passed over entirely to the Protestant countries, and there is not a Catholic state which can boast civil security or progressive liberty."

The advance of the Jesuit party has been the advance of

equivocation, says the writer; the moral temperament of Roman Catholicism is not, in Dr. Horton's opinion, a wholesome one, nor in harmony with that of Englishmen:

"I am driven to the conclusion that the standard of truth among Catholics is not the same as our own. They will hold back the truth (*suppressio veri*); they will imply what is not true (*suggestio falsi*); they will flatly deny and calmly assert, in defiance of facts, without any twinge of conscience. A liar in a Protestant country knows he is a liar, and is ashamed of it. Catholics equivocate, conceal, mislead, and yet are persuaded that they are not lying at all. . . .

"They explain, at a stroke, why the marriage vows are so often broken in Catholic countries, and why witnesses in the trial at Rennes so unblushingly foreswore themselves. This right to withhold truth and to declare you do not know what you do know without lying, when it is left to the conscience to settle to whom truth is due or not, obviously lays the way open for dissembling and deceit."

Mr. Richard Bagehot, a Roman Catholic, discussed recently, in an article from which we quoted, the question, "Will England become Roman Catholic?" and the answer was an emphatic "Never." But Dr. Horton disagrees with this verdict, and gives the following reasons for his belief:

"1. The prodigious growth of conventual establishments in this country.

"2. The training of Protestant children in Catholic schools.

"3. The methods which Catholic ethics permit the propagandists to use in making proselytes, on the one hand presenting Catholicism under a guise of Protestant truth, and on the other hand extending Catholic indulgence to some of our worst sins.

"4. The apostolate of the press.

"5. The persecution maintained by the Catholic press."

As for the Roman Catholic press, all the leading English papers are more or less under its influence:

"Let the curious closely observe one of the dailies; I will not be invidious by suggesting names. Notice the strange prominence given to everything that is going on in the Catholic community; observe the careful suppression of any meeting or utterance in the Protestant interest. Notice, too, this requires more pains, how frequently a sentence even of a prominent speaker, reflecting on the Roman Church, is quietly dropped out. Notice, also, how all these marks of the Catholic influence on the press are withdrawn for the time whenever public opinion is excited against Romanism, as in the days of the Rennes trial, and how the same hand appears as soon as excitement is allayed. Let any one, I say, watch a paper, and however astonished he, and even the editor of the paper himself, may be, he will be left in no doubt concerning the immense and practical hold which the Jesuit has gained over the English press."

IMPORTANCE OF THE INSTITUTIONAL CHURCH.

"PROTESTANTISM has become thoroughly alarmed at the drift of wage-earners from her churches." Such is the assertion made by Frederick Stanley Root in one of a series of articles which he has been writing on "The Modern Church" (*New York Evening Post*). This observation, in one form or other, is reechoed in many journals, both secular and religious, and is evidently arousing some very careful consideration on the part of various church leaders. One cause of this alleged "drift of wage-earners," it is thought, is the gradual removal of Protestant churches from the poorer and more congested districts of the large cities. This "up-town movement," as it is called in New York, is by no means confined to this city. Thus *The Interior* (Presby., Chicago) describes the situation in that city as follows:

"All the churches are gone in Chicago from the region between the river and we may say a line two miles south. Fire has recently wiped out the fine old Second Church, and we suppose it may not be rebuilt on the old site. The Second has already moved twice, farther and farther away from the location where

it was first planted. But there is a dense population in this district. The many fine hotels are full, and the lodging-houses are crowded."

The same tendency is visible, and has been for years, in Brooklyn. Referring to the recent determination of a strong minority in the Greenwood Avenue Baptist Church, of that city, to remain in their old field of work and organize a new church, with the Rev. Dr. H. Allen Tupper as pastor, *The Eagle*, of that city, says:

"The well-to-do professional and business men and their families are those who fill the Protestant Church. The workingmen have been growing out of sympathy with it for many years. We do not care to say that the Protestant Church has been growing out of sympathy with them, for such things as the determination of the minority of the Greenwood Church to remain on the old field and the abandonment by the Rev. Edward Judson a few years ago of a pleasant and agreeable pastorate in Orange, to work among the poor south of Washington Square in Manhattan, prove that there are Protestants who still believe that the lowly should have the Gospel preached to them."

Among the remedies discussed for this growing breach in the cities between the churches and the masses, the endowed Institutional Church seems to give most hope. "If the wealthy men who have made their 'piles' in these [crowded] sections," observes *Unity* (Unit., Chicago), "would but leave behind them a small proportion of that increment which they could not have earned without the help of that locality, there would be fewer church-abandoned territories in our great cities."

Mr. Root, whom we have already quoted, thinks that the Institutional Church is spreading in every quarter like a light against a darkening sky. The church which refuses, in the next twenty years, to cherish the institutional conception of Christ's work will be, he thinks, doomed to extinction. He continues as follows:

"The stress will be laid on a conception of religion which verily does the service of God in teaching how to make good bread in the cooking-school no less than in the teaching of the ethical content of the Gospel from the pulpit. The church of the past taught, 'Save your soul by dogma'; the institutional church will teach that he who seeks to save his soul by dogma leans on a broken reed. That church will say: 'Look! Here are fields white to harvest. Men suffer hunger, thirst, cry aloud in bitterness from the depths of crushing environment, lift their pale, wan faces to the brazen sky of social selfishness to discern one quivering rift of tenderness. Get hold of these men hand to hand, heart to heart, in the red, warm glow of real fraternity, and you shall save your soul by the self-revelation of its vastly nobler capabilities when enlisted in the work of the divine uplift of humanity.' The doctrine that a man must be urged to save his soul because of a personal and selfish fear that he may be lost, whatever the fate of others, is a dogma so abhorrent to the spirit of true religion that one is amazed to find it still prevalent in theology. And the broader conception of life and duty, as voiced by the enlargement of the office and work of the church, not only puts the quietus upon the wretched perversion of religion, but also awakens a glorious hope for the future of Christianity."

Already there has been formed "The Open and Institutional Church League," consisting of representatives of such churches in several Eastern cities. *The Interior* gives the following account of the organization:

"The league makes no account of denominational differences, its members cooperating for 'fellowship in common service.' It seeks to 'render service through the press, the pulpit, and personal activities, that will assist in bringing believers, of every name, to a deepened consciousness that the churches should be more filled and moved by a Christ-ministering love that will make them the center of redemptive influences, within the life of the communities in which they stand, on all days and on every side. In this service our unity in Christ brings us into close and effective relations, where we can take counsel together and both encourage and aid plans of cooperation and federation that give promise of great and important service at the present time in advancing the interests of the kingdom of God.'"

FOREIGN TOPICS.

BOER TREATMENT OF THE BLACKS.

EVEN among the partizans of the Boers there are those who openly deplore and condemn the treatment given by the latter to the blacks. While the denial is stoutly made by such authorities as J. A. Hobson, James Bryce, and Fred. C. Selous that the treatment the blacks receive from the "Uitlanders" in Johannesburg, Rhodesia, and Kimberley is much if any better than that received from the Boers, yet two wrongs do not make a right, and Olive Schreiner's pictures of brutality, in "Trooper Peter Halket," lose none of their power from the fact that her sympathies are with the two republics in the present war.

A Frenchman who has lived many years in South Africa, M. Villarais, breasts the tide of public opinion in France by publishing an article in the *Bibliothèque Universelle et Revue Suisse* in which he condemns in strong terms the attitude of the Boers toward the indigenes. He professes to derive from public records and documents all the information he sets forth. He writes:

"The constitution of the Transvaal declares that there can not exist or be admitted any equality in church or state between whites and those who have among their ancestors, even the fourth generation, one who was not white.

"On August, 26, 1898, the Volksraad rejected a motion to release native pastors and teachers from wearing on their arm a metal badge (which the native dwellers in cities must carry) to show that they are in the service of a white man; in default of which the black is imprisoned for vagabondage.

"The black has no legal rights. The magistrate is at liberty to admit or reject the complaint or testimony of a native as he sees best. This explains why, in the month of June last, *à propos* of a discussion upon a law on the deprivation of civil rights, the attorney-general spoke thus of the murder of a black: 'Not every sentence for murder is necessarily degrading. Supposing, for instance, a man is condemned to prison for six months for having beaten his native servant to death, it is evident on the fact of it that that would be no reason for depriving him of his rights as a citizen and voter.'

"The black can neither rent nor own land. At his good pleasure the Boer allows the native to live in a corner of his farm, in return for which the native must render such service as his master demands.

"As, in order to escape such servitude, the blacks crowd to the mines and missions, the 'plakkerswet' was adopted. This law limits to five the number of native families allowed on the same estate or holding. The *Pretoria Press* (September 30, 1899) reported a meeting of the Volksraad, at which energetic execution of this law was demanded.

"The natives who do not work in mines and who are not apprenticed to Boers are confined on lands from which they can at any time be expelled after three months' warning."

The Boer, we are told, who owns no farm pays but \$2 a year tax; the owner of a farm, but 90 cents; whereas the black who can be nothing but a laborer is taxed \$13. Last year the natives of certain districts were called upon to pay \$50 a head—the taxes of the current year, as well as for preceding famine years during which it had not been possible to squeeze anything out of them. M. Villarais continues:

"The state commissioners who receive salaries varying from \$1,500 to \$2,000, plus 5 per cent. of the taxes taken by them, do a flourishing business. Their *modus operandi* is as follows: 'When a black can not pay his tax, he is sent to work in the mines. Recently a band of 400 such was conducted by the police to Johannesburg. Now the companies which are short of help pay from £1 to £2 per head to the recruiter who brings them workmen. The commissioner acts as recruiting sergeant, and pockets the bonus. During the session of September 25, 1899, a member of the Volksraad declared that he was acquainted with a commissioner who made \$50,000 a year in this way!'

"When a semi-independent tribe, pushed to the wall, refuses to pay, it is attacked, its villages burned, and harvest and cattle

carried off; the men of the tribe being shared among the 'braves' who made the campaign, whom they must serve for five years without payment. If they show any signs of thinking of flight, they are killed without mercy. This was done in 1894 in the south of Zoutpansberg, and in 1895 in the north of that district."

M. Villarais concludes:

"Such is the legislation and such has been the practise of the Boers. There is but one name for such a *régime*—feudalism. The comparison is perfect. The owners of the land are the lords; the blacks are serfs attached to the soil, not allowed to hold land; taxable and exposed to forced labor at the whim of their masters. The commissioners are the bailiffs who used to oppress and crush the people in the name of the sovereign."—*Translation made for THE LITERARY DIGEST.*

INTERNATIONAL INTEREST IN OUR COMING ELECTIONS.

THE beginning of our presidential campaign is watched abroad with as much interest as in 1896; but for very different reasons. While the "battle of the standards" was then noticed chiefly in business circles, the coming election receives widespread attention as likely to have an important bearing on international politics. Throughout Europe the pro-British sentiment of our present Administration is regarded as indisputable, and those who see in this a disturbing factor sympathize with the Democrats. In England the impression seems to be gaining ground that the sympathies of a numerical majority in the United States are not with Great Britain. *The St. James's Gazette* (London) says:

"Of what is meant by a presidential election we understand over here very little. We read with pleasure the sane criticisms of educated Americans in the magazines, and imagine that in the United States, as in England, these are the voices to which the nation listens. But it in no sense represents the opinions of the vast majority of the American nation—that is to say, of the American voters. The majority of the thinkers of the American nation do not find their *milieu* in politics. But the tail-twister does, and the better knot he manages to tie the more loudly his hearers applaud his ingenuity. In the state of mind induced by the fever of an election much is said which in saner moments would be regretted. But it is sometimes the scum on the surface which shows the character of the current beneath; and that this current shall not be diverted from its present fairly safe channels must be the task, during the next few months, not only of British diplomatists, but of all British citizens who know the American people."

The Spectator remarks that "by a rather odd series of circumstances it happens that the pivot of the next election will be the relations of the United States to England," and it feels sorry for President McKinley, who is placed in rather a difficult position. It asserts that Lord Salisbury assisted him "when the whole continent of Europe was anxious to spring at his throat," and says further:

"He does not want to irritate the Irish, the Germans, who for some unknown reason are for the moment anti-English, or those among the Catholics who share the continental impression that if England were weaker the papacy would be indefinitely stronger—an impression much more strongly operative in the politics of the hour than is as yet fully perceived. . . . We must, however, possess our souls in patience and receive American censure with the dogged stolidity with which we receive censure from the remainder of the world. The electoral campaign will come to an end, and with it most of the attacks upon Great Britain. The better opinion of the United States, including, we believe, a considerable majority of their population, is, upon the whole, friendly to us, aware that this war is at worst only one of the inevitable wars between clashing civilizations encamped on the same ground, and fully convinced that all the world over, and especially in Asia, British and American interests are the same."

The Saturday Review thinks that the "correctness of Presi-

dent McKinley's attitude regarding South Africa depends entirely not on his sentiments, but on the success of Lord Roberts."

The Speaker is firmly convinced that the Republicans mean to win on the "prosperity" cry. It says:

"The Republican Party is the party of organized capital, concentrated in a way unknown before in the annals of the world, and administered with great sagacity and ruthless energy. Such a party is, on the face of it, suspected by all who are not inside the combinations it represents—i.e., by nine out of ten of the people. Hence it must raise a cry which will attract these, and which will endeavor to bind up popular interests with the interests of millionaires. Now it is obvious that Senator Hanna, who admittedly 'runs' Mr. McKinley, and who lifted him from a country store to sit among princes, has his cry ready and will use it with effect among all persons who are timid, thoughtless, and either politically indifferent or irrationally attached to Mr. Hanna's party. That cry will be 'national prosperity!' . . . the people will, of course, not be told that this prosperity began before the Spanish war; they will not be told that the enormous output of iron and steel would have taken place if the Philippines had never been heard of; they will not be told that all this prosperity is due to the magnificent internal resources of the United States, plus the intelligence and energy of the people. They will be so played upon by artful campaign orators that they will easily connect in their minds the production of pig iron and steel rails with Dewey's destruction of the Spanish fleet, and so the vote for a continuance of prosperity will be construed into a vote for the furtherance of Mr. McKinley's jingoism."

Canadian opinion as regards the effect of the Boer war upon our elections may be summarized by a remark in the *Toronto Telegram*, which says:

"American sympathy for the Boers will not get outside the platforms of the Republican or Democratic parties, and the stump speeches of the orators of one or both sides. . . 'Moral support' will do the Boer government very little good. There is still a strong probability that Lord Roberts will have so far completed his work before the conventions meet that the Boers will have ceased to be objects of interest to patriotic Americans."

On the continent of Europe the prevalent opinion is that sympathy with the Boer cause is founded upon American patriotic sentiment, and, therefore, much stronger than most Englishmen are willing to admit. *The Independance Belge* (Brussels) says:

"The British cabinet all along hoped to reap some advantages from the extinction of Spain as a colonial power. All these expectations were in vain. The United States never thought of England when she annexed the Philippines, and Mr. Chamberlain's imprudent 'alliance' speech was greeted with hearty laughter. . . The Americans notice certain analogies between the struggle carried on by the Afrikanders and their own fight for liberty against the same power. The Democrats are not slow in making use of this, and though international complications may not follow, the South African war is certain to influence the elections."

The Temps (Paris) admits that many Americans of English descent retain a filial affection for the mother country; but it also credits these men with a sense of justice too strong for blind support of England in the present war. In common with continental papers, the *Temps* believes that the American people to-day do not credit the story that European powers were prevented by Great Britain from interfering in the Spanish-American war, as not the slightest proof of this assertion was ever offered. *The Handelsblad* (Amsterdam) says:

"The earnest protests of conscientious Republicans warn McKinley that he has made mistakes, and that Bryan's chances are far from hopeless. England's unjust war reduces McKinley's chances, and his planned alliance with England is far from being popular. He sees the coming danger, and for some weeks he has shown greater sympathy with the republics which are fighting for their lives. He has been warned by his friends that his reelection is impossible if he supports the oppressor. There is no doubt of it: the South African war may arouse such passion in

the United States that McKinley and the advocates of an Anglo-Saxon alliance will be removed from power."

The Journal (Paris) says:

"The influence of such men as Webster Davis must not be underrated. Already it is feared in London that, considering the coming election campaign, the McKinley cabinet will be forced to intervene in the South African war. In such a case, the United States would have the support of all or most European powers. It is not improbable that the President will be forced to give up his unpopular pro-British attitude."

On the other hand, it is thought that McKinley has little to fear if he strikes the right chord in his foreign policy. *The Deutsche Warte* says:

"Mr. McKinley's reelection may be regarded as pretty certain, unless the South African question and his leaning toward Chamberlain's policy of brutal force fill the sails of the Democratic party. 'Algerism' has been forgotten long since, and the majority of the American people undoubtedly are for the retention of the Philippines. Considering the headway which the Republicans have made in the state elections, it may be assumed that they will obtain as many votes as in 1896."—*Translations made for THE LITERARY DIGEST.*

ADVANCE OF BRITISH TROOPS THROUGH PORTUGUESE TERRITORY.

MUCH satisfaction has been expressed in England with the fact that Portugal has consented to permit the landing of British troops at Beira, ostensibly for the purpose of "maintaining order" in Rhodesia, but in reality, it is charged, to attack the Boers in the rear. Continental critics declare that this is an open breach of neutrality on the part of Portugal, as the treaty upon which the privilege now conferred upon England is based makes no mention of such a contingency as the transporting of an armed force through Portuguese territory. Some English Liberal papers advise caution in using the privilege granted their government. *The Westminster Gazette* says:

"The Government must, of course, decide for themselves how far it is judicious to make use of the Beira route, even though a good formal case can be made out for so doing. It is not desirable to risk complications for the sake of a trifling advantage, as we risked them in the case of the *Bundesrath*. But, assuming the coast to be clear, we can only be thankful for our part, and we should have thought Europe would be thankful, too, that any steps should be taken to shorten the conflict. The end is inevitable, whether it comes sooner or later, and the best we can hope is to compel surrender by strategy rather than by killing. An advance on the Transvaal from the north as well as from the south and west ought to contribute to this end."

Many English papers assert that a strong force is needed in Rhodesia to intercept the "international sweepings" coming from various countries to join the Boer forces. *The Outlook* (London) says:

"In pursuance of his desire to 'stagger humanity,' Mr. Kruger and his lieutenant, Dr. Leyds, have been importing into the Transvaal these many months past some three hundred head a week of the riff-raff of Europe—men at odds with the world and its settled order. When the war is over, these, to the number of some thousands, with not a few Boers, who like President Steyn have by their deeds forfeited the consideration of all decent men, may be expected to attempt to seek asylum in the vast empty regions to the north, where the Chartered Company have been laboring to plant an industrial civilization. If this work is not to be undone, if Rhodesia is not to be turned into an Alsatia, some strong-handed sentinel must be stationed at the drifts of the Limpopo to cry 'Halt!' to the lawless hordes who will presently try to pass that way. . . Portugal suffers from a Republican opposition which is pleased to be virulently anti-British; yet the Portuguese would do well to remember that if they have a parliamentary arena of their own in which to disport themselves,

it is solely owing to these treaties and to the protection of England which they enjoy thereunder."

Portugal's action has aroused intense indignation in Russia. The leading papers suggest an international protest, if not active intervention, to stop the alleged outrage. It is denounced as a wanton disregard of the law of nations, a dangerous precedent which may plague the leading continental powers hereafter. Portugal is not blamed. She is believed to have yielded to threats of coercion; but for the British Government there is held to be no excuse and no extenuation.

The St. Petersburg *Novoye Vremya* has this to say:

"It should not be forgotten that the alleged treaties under which the right is conceded were intended to afford protection of the territory from the savage native tribes. The curbing and control of the Matabeles and Bechuanese was necessary to the peace of the neighboring Portuguese colonial possessions; hence Portugal's consent to the movement of British troops through them. But matters have now assumed a totally different turn. The British troops are to be used in operations against a civilized nation at war with England, and for this reason Portugal's action constitutes a violation of neutrality. No government can enter into obligations that are directly opposed to international law, illuminated by a whole series of treaties.

"In the present instance Europe has not only a moral right, but a legal one, to impose a *veto* on Portugal's concession. If this is not done, the civilized world will commit a crime against the South African Republic."

The *Novoye Vremya* is bitterly anti-British, but the same view is even more strongly expressed by the liberal *Novosti*, an admirer of British civilization. It says:

"How is this arbitrary act to be accounted for? Evidently they have reached the conclusion in London that, no matter what gross injustice is done to the Transvaal and Orange Free State, the European powers will remain passive and will not dare to interfere. But such overconfidence is not always justified by the event. England may depend upon neutralities being maintained so long as she herself respects the rights of neutrals. When she ventures to depart from the law of nations, all governments will have the right to change their attitudes in view of the new condition of affairs. . . .

"A new element of impudent assertion of brute force has been imparted into the situation against which all Europe must protest. Does England wish to forfeit entirely the respect of the enlightened world? Has she lost sight of the fact that the elementary rules of international law are as binding upon her as upon the Boers?"

In another editorial *Novosti* says: "If England is a member of the international union, she is *obliged* to abide by the law of nations, and great powers are *obliged* to call her to account for her violation of it."

The *Vossische Zeitung* (Berlin) declares that an explosion of popular discontent is not impossible in Portugal, where the peo-

ple, impoverished by British financial manipulations, sympathize entirely with the Boers. The paper adds:

"Their sympathy, coupled with the unpopularity of the royal house, may lead to grave complications. That hated England should be allowed to attack the Boers through Portuguese territory may well influence Portuguese internal politics; but that will not help the Boers, and a protest on the part of the powers is not to be expected."

The *Frankfurter Zeitung* says:

"Even if Portugal fulfils the terms of an agreement with Great Britain, she gives up her neutrality as far as the Boers are concerned. The whole matter illustrates vividly the unfairness of British dealings. What would England have said if Portugal had construed her treaties with the Transvaal in such a way that war material could be imported *via* Delagoa Bay?"

The *Epoca* (Madrid) deplores the fact that "Portugal is thus

forced to assist in the destruction of a civilized and Christian people," but recognizes that the little country is powerless. Beyond a platonic protest on the part of the French shareholders of the Beira railroad, nothing will be placed in the way of the British. The march of British troops from Beira is, however, of little importance from a military point of view. The northern parts of the Transvaal offer excellent positions to the defenders. The

THE POLICY OF NON-INTERFERENCE.

—Amsterdammer.

climate is not very good, and the sober, hardened Boers, whose health is insured by simple fare, are in no danger during the approaching winter season, the British soldiers will find the march anything but pleasant.

The difficulties of the march are described in the *Neue Freie Presse* (Vienna):

"It was intended last year to convert the Salisbury-Beira road from narrow gage to broad gage. How far this work has progressed is not certain. Finished it is not; hence delays are unavoidable. There was also a plan to connect Buluwayo with Salisbury, but this road is certainly not ready for use. For the relief of Mafeking the troops under Carrington will be of little use. An attack upon the northern frontier of Transvaal will also be extremely difficult. From Salisbury to that frontier is 300 miles in a straight line, from there to Pretoria another 300 miles. The difficulties of transport through this wild region will be enormous, except for a very small force. But the Boers can easily spare the few hundred men needed to stop the advance of only a few thousand British."

Hope is expressed in England that Portugal will regard any violation of her frontier on the part of the Boers as a declaration of war, and that this may lead to the use of Delagoa Bay by the British. The *Spectator* (London) says:

"It is stated that the Boers have sent a note to Portugal declaring that they consider the use of the Beira railway by our troops a hostile act on the part of Portugal. The Portuguese can, of course, if they like, treat this as a declaration of war. It might, indeed, from their point of view be wise for them to do so, as we

should then, of course, be in active alliance with Portugal, and should be obliged to consider her claims in the final settlement. But tho it would be useful, no doubt, to move a column by the Delagoa Bay route, we are by no means anxious to see Portugal drawn into the war. The fewer elements to be considered in the final settlement the better, and we can manage to get to Pretoria quite well without using the Delagoa Bay railway."—*Translations made for THE LITERARY DIGEST.*

AMERICA AND THE OPEN DOOR IN CHINA.

THE British journals express lively satisfaction with the policy of the "open door" as set forth in the correspondence between the United States Government and the governments of the great powers. The United States is welcomed as an ally in the work of developing China. "With American assistance we shall probably be able to accomplish the regeneration of China, which we would scarcely have done alone," remarks *The Daily Chronicle* (London). *The Times* says:

"The Government and people of the United States are to be congratulated upon the successful achievement of a considerable service to the world. The diplomatic correspondence between Mr. Hay and the powers interested in the future of China published yesterday at Washington shows that Mr. McKinley's Secretary of State has obtained a general assent from all the nations concerned to the policy of 'the open door.' The credit of having formulated that broad and just principle of international dealing in the Celestial empire belongs to this country. But the honor of winning for it the formal acceptance of Germany, France, Russia, Japan, and Italy has fallen to our kinsmen across the Atlantic. Nowhere out of the United States will this signal success of American diplomacy be welcomed so gladly as in this country."

It is clear, however, that many English papers hope for the cooperation of the United States in a somewhat aggressive policy. *The Daily Mail* holds that "the United States has pledged itself to take a leading part in the greatest task of the coming century, the reform of the Chinese empire." *The Morning Post* says:

"It will be the duty of the Foreign Office to realize clearly where our interest lies, to see what ventures should be left to themselves, and what supported, and to back up the pioneers whose efforts are really part and parcel of British expansion. The policy of spheres is held by many to be more or less a contradiction of this policy. The Americans, by the anxiety which underlies their new despatch, show that they share this view. It would, therefore, be well that while we should give spheres of interest the respect they deserve, we should go straight for our own interest, which is the obtaining from the Chinese Government of full rights and full freedom for our own enterprise wherever it shows itself able to acquire and control profitable undertakings. Our fear is that this great object may be neglected. The American protest, coming from a wideawake nation, shows how necessary it is that we should keep it always before our minds."

The Overland China Mail (Hongkong) complains that England is not aggressive enough in China, and that she seems content with trade. It adds:

"There are questions in the realm of higher politics, however, such as *points d'appui*, strategical frontiers, ice-free and ice-bound ports, spheres of concession and spheres of influence; and it is well not to forget this fact when referring to the presence of a British diplomat in Peking. Those who have the best opportunities of studying Sir Claude Macdonald's work close at hand are not satisfied with it. . . . We can only hope that as soon as Great Britain is free from her complications in South Africa her statesmen will adopt a radical change of policy toward China."

The *Kobe Herald* points to Russia as China's worst enemy, and declares that it is impossible to come to an amicable understanding with the Bear. It says further:

"The steady descent of the Muscovite toward the Persian Gulf and India on the one side, and toward Korea and North China on the other, is a distinct menace to the peace of the world, and all the assurances and protestations of Russian officers that their Government aims at nothing more than the preservation of an

'open door' are as misleading and futile as they are insincere and immoral."

Yet it is evident that the English residents of the far East do not welcome the appearance of the United States in that quarter as warmly as do Englishmen at home. *The Japan Gazette* (Yokohama), commenting upon the opinion of Mr. Barrett, formerly United States Minister to Siam, that "the United States is the paramount power of the Pacific," says:

"She [the United States] may be of the American coast portion; but Japan, Germany, and Great Britain all hold greater interests in the Japanese and Chinese waters, to say nothing of their interests in the Southern Pacific. . . . In alliance with Great Britain she may succeed in keeping 'the open door' and securing a certain commercial sphere of influence up the Yangtze River valley; but she can never hope for free trade, or even for commerce under the favored-nation clause, in those portions of China already actually occupied and dominated by the other powers; all of whom with the exception of Great Britain, are protectionists."

The Japan Mail asserts that the friendship of Japan for the United States "will be considerably chilled" by the restrictions enforced in American territory against Japanese immigration and coasting vessels, especially in Hawaii.

The Tageblatt (Berlin) points out that Germany wants nothing better than free trade, which she has granted in her own sphere of interest, and which is much safer in her keeping than with countries whose industry is declining. But the majority of German papers object to the appearance of other nations' ships for purposes of demonstration in Shantung. *The Post* (Berlin) says:

"There have been many rumors of combined action on the part of the powers for the purpose of protecting native Christians in China. For the present, this is unnecessary. It may be assumed that the Chinese Government is still able to keep order; and a combined naval demonstration would be more likely to arouse the temper of the Chinese than to allay it. No doubt the powers will interfere if necessary; but as yet no agreement on this point exists."

The Weser Zeitung (Bremen) says:

"It is very doubtful that Germany will permit the province of Shantung to be made the base for demonstrations on the part of other nations. Thus when recently the United States Government decided to send a war-ship to Kiau-Chau because American missionaries were threatened, the German Government informed the United States that a German port is not exactly the best place for a demonstration against Chinese authorities. As a consequence the port of Taku was chosen."

The French papers admit that free trade in China is manifestly to the advantage of France, and the step taken by the United States is heartily welcomed. It is doubted, however, that the United States aspires only to assist England in making another Egypt of what is left of China. On the other hand, it is admitted that the example of the United States may have a beneficial effect in allaying the suspicions of the other powers, as we have no established interests as yet, and may be trusted to mean what we say when our Government asks for free competition only. *The Journal des Débats* (Paris) expresses itself in the main as follows:

The "yellow" press of the United States, with their omnivorous and naive jingoism, have been responsible for much spilling of ink by the assertion that a mysterious intervention in China is intended. Luckily it is officially announced that the United States will not really indulge in the dangerous pastime of meddling with the delicate mechanism of far-Eastern equilibrium. In spite of the efforts of a certain power to make the United States her satellite, the Americans will be content with whatever practical advantages they can obtain. It must be admitted that Mr. Hay has been very successful, and that a real service has been rendered to all nations by defining the policy of the "open door." Quarrels will be averted, not precipitated thereby. It hits us in our weak spot, for we have a predilection for protectionism; but the action of the United States may compel us to follow the German example by making Kwang Chou Wan a free port like Kiau-Chau. As to the integrity of China, we certainly agree with the Americans. Our ally, Russia, seems to have got all she desired, and we are glad to see that the United States wish to preserve the rest for free competition, rather than let it fall into the hands of a single power, and that power England. Finally, we wish to point out that Mr. Chamberlain was quite right when he spoke of "common interests and sentiment" as a bond between nations. Sentiment is not wanting in our relations to the United States, and our interests in the far East are analogous.—*Translations made for THE LITERARY DIGEST.*

PERSONALS.

GENERAL FORREST IN A NEW RÔLE.—The latest biographer of General Forrest, the great Confederate cavalry leader, defends his hero against the charges of bloodthirstiness that have been made against him. Once in the midst of one of his campaigns, he relates, a captured Federal chaplain was brought to his headquarters. The man showed the deepest anxiety and depression, for stories of General Forrest's severity were rife in the Union camp. A little later supper was announced, and Forrest, to the chaplain's surprise, invited him to share it; but his surprise grew to amazement when the general turned to him reverentially and said: "Parson, will you please ask the blessing?"

The next morning Forrest courteously gave him an escort through the Confederate lines, for he wished no non-combatants for prisoners, and bade him good-by with the remark: "I would keep you here to preach for me if you weren't needed so much more by the sinners on the other side."—*Littell's Weekly*.

AMONG the many amusing stories that are gathered around the name of John Ruskin, the following from *The Public Ledger* (Boston) shows that after all, famous men are only human, and sometimes have the spark of temper as well as of genius:

Ten years ago Mr. Ruskin wrote to a well-known firm of iron and bell founders in London making some inquiries about their bell metal, and expressing a wish to inspect their works. Now, it is notorious that the author of "The Stones of Venice" wrote a hand only to be deciphered after long and patient study. It was therefore pardonable that the manager of the firm should have addressed his reply to "J. Rucker, Esq." The answer was to the effect that if Mr. "Rucker" meant "bona-fide business" he could inspect the works with pleasure, to-morrow if he liked. In addition to miscalling his correspondent, this gentleman committed three other heinous sins. He omitted to date his letter, he did not cross his t's, and he forgot to place the accent upon the last letter of the word bona. Upon receipt of this com-

"They also serve who only stand and wait."

Ice Cream Without Labor

Delicious, smooth ice cream is made without the old-fashioned, back-breaking crank turning, by using the

"XXth Century" Freezer.

The bucket is made of *indurated fibre*, a perfect non-conductor, which holds the cold. Simplicity is its salient feature. No separate parts to break or get out of order. Can be thoroughly

cleansed in a few moments. It will keep the cream frozen three times as long as any other freezer, and it is impossible for any salt to reach the cream. The

"XXth CENTURY" FREEZER

freezes ice cream, sherbets, ices, etc., better, cheaper and easier than any other freezer. It is the lowest priced freezer on the market, as the following prices show:

No. 2, Equal in capacity to a 2 quart dash freezer, \$1.50			
No. 3,	"	3	1.75
No. 4,	"	4	2.00
No. 6,	"	6	3.00
No. 8,	"	8	4.00

GUARANTEE OFFER

Ask your dealer for the "XXth Century" Freezer. If he does not keep it, write us—we will send you one upon receipt of price. Use it for 10 days, and if it is not all you hoped for or expected, return it at our expense and we will immediately refund the full purchase price—no questions asked.

"Ice Dainty and Novel," an illustrated book giving 30 new recipes for creams, ices, sherbets, etc., by Mrs. Janet M. Hill, of the Boston Cooking School and Ladies' Home Journal, will be mailed on receipt of 10 cents in stamps.

CORDLEY & HAYES, 171 Duane St., New York.

Gluten and Starch

The two chief constituents of wheat are gluten and starch. The nutritive value of wheat lies in the gluten, starch being of small food value.

Cream of Wheat

is made of wheat grown in the northwest, which is very largely gluten. It has most of the starch washed out in process of preparation and is distinctly muscle-building food.

We issue a series of very beautiful gravures, without advertising marks of any kind, any one of which you can have by purchasing two packages of Cream of Wheat. Your grocer has them.

Cream of Wheat Co., Minneapolis, Minn.

munition Mr. Ruskin "went for" that devoted manager. Here is a copy of his letter, registered, written in pencil, and—be it noted—undated: "Messrs. — & Co.—Gentlemen: Have the goodness to copy the enclosed envelope in your best business hand, with all the t's crossed, like that. I'll cross yours for you in my way. And date your letter, as your 'to-morrow' without a date may be next year, and is now. Here is your 'bona-fide business.' I care no more for your blasted foundry than about any other foundry; but I do care to know if your bell metal is good alloy or not; and I'll know whether it is or not without any further trouble of yours. If you choose to send me some to test—well; if not, I'll break up the bells you have sent to Mr. —, and let you know the quality of it; and let the public know, too. John Ruskin. Learn, if you mean to have any more 'bona-fide business,' my business signature."

The envelope enclosed in Mr. Ruskin's letter bore the following Kyriele of titles and dignities: "Professor Ruskin, D.C.L., LL.D., F.G.S., Hon. Student of Christ Church, Oxford; Hon. Fellow of Corpus Christi College, Oxford; and member of the Academy of Venice, Royal Kent Hotel, Sandgate, Kent." The registered envelope which enclosed these communications was, perhaps even more extraordinary. It was addressed: "Messrs. — & Sons, Bell Founders (2), Bell Hangers (2) London, E. C. (2), or W. C. (2), S. W. (2), or S. E. (2), Middlesex (2)."

MORE OR LESS PUNGENT.

Making the Most of It.—PUBLISHER: "There is one bad break in your novel. You tell of a tremendous snow-storm that your hero encountered in the tropics. As a matter of fact, they never have any snow there."

WRITER: "Yes; that is the reason I made so much of the circumstance, don't you see?"—*London Transcript.*

The Effect of War on Supply.—MILITARY: "And—ah—what entries have you, waiter?"

WAITER (with military salute): "We've beef's head and Kruger sauce, kopies & la dundum, sortied & ladysmith, Croquet on toast, Maxims and howitzers & la Melawen; but I think the lyddites and shrapnells are off, sir."—*Fun.*

Insult to Injury.—STIVEN: "Here's a nice letter for a man to receive! The scoundrel who wrote it calls me a dishonest dog!"

TEETLE: "What's his name?"

STIVEN: "That's just what I'd like to find out; but there's no signature."

TEETLE: "Don't you recognize the writing? It must be somebody who knows you."—*Life.*

Mistaken.—WIFE (with a determined air): "I want to see that letter."

HUSBAND: "What letter?"

WIFE: "That one you just opened. I know by the handwriting that it is from a woman, and you turned pale when you read it. I will see it. Give it to me, sir."

HUSBAND: "Here it is. It's your milliner's bill."—*Christian Advocate.*

Current Events.

Foreign.

SOUTH AFRICA.

April 14.—Lord Roberts sends the Eleventh Division, with two cavalry brigades, to the assistance of General Buller.

General Carrington's force is the only one going to the relief of Mafeking.

The Transvaal Government asks Lord Roberts to be allowed to send a clergyman to St. Helena.

Fighting is reported near Dewet's Berg.

April 14.—A general movement of Lord Roberts's troops to clear the southwestern part of the Free State is in progress.

One line of Boer retreat is cut off by General Maxwell at Kruissig.

A Boer attack on Colonel Dalgetty's position at Wepener is repulsed.

April 15.—The relief of the British forces at Wepener, Orange Free State, is effected.

General Roberts reports movement of various British columns east of Bloemfontein.

April 16.—Reports are received of the budding fight between the burghers retreating from the southern portion of Orange Free State and General French's horsemen.

April 17.—Lord Roberts reports that Generals French and Hamilton joined forces at Tzaneba and engaged the Boer force.

General Warren is appointed military governor of Bechuanaland.

April 18.—The British will continue to hold Tzaneba.

The Boer peace delegates will sail for America Thursday next.

OTHER FOREIGN NEWS.

April 21.—The Sultan has issued an order permitting the rebuilding of the property belonging to missionaries.

The famine in Calcutta increases.

The bubonic plague spreads in Australia.

Viceroy Li Hung Chang legalizes big lotteries at Canton by licensing them.

April 24.—The monopoly enjoyed by the Berlin Street Railway Company has been extended to the year 1916.

A Sad Disappointment.

Wouldn't it make you feel blue if your neighbor invested in one of the lots in Westleigh (Parkside Park), New York City, at the great reduced prices and you did not, and in a little while he sold his lot at a large profit? Real estate never depreciates in value in New York City. See Golden Opportunity, page 2.

Play Whist?

When You Will Be Interested in This Table.

It is intended for Duplicate Whist. In the illustration, the large dot is the table set up for one. The small dot is the pocket for holding the cards. It is fastened to the bottom of the table and revolves. The dot on the margin shows the spring which controls it. As the dot is the table folded. The pocket holds sixteen decks of cards. There are sixteen hands and each player has four leads. After playing a hand, cards are returned to the pockets, and by touching the spring, a new hand is before each player. The advantages over other games are no lost cards, no errors and a place on which to play. The table is made in oak or mahogany and is a handsome, substantial piece of furniture. Price of each \$10.00, f.o.b. cars, Green Bay, Wis.

Successful Fruit Growing.

The address delivered by the superintendent of the Leonard Sprayer Company, of Pittsfield, Mass., before the Lenox Horticultural Society at Lenox, Mass., mention of which we made in previous issues, was such a popular success that the company have been obliged to change the plan of distribution. The address is almost a college education to fruit growers, fruit dealers, and in fact to anybody eating fruit or even having but few fruit trees, or in any way concerned. It was an admirable address, is quite lengthy, about an hour's talk. It is said that had it been placed on the market in book form it might have yielded the speaker a fortune; it no doubt would have sold at a good price. All rights were reserved, however. The full address, profusely illustrated, in pamphlet form, was intended to be sent to fruit growers and owners of estates, free for the asking, but requests for it came from all sorts of people. Dressmakers, school boys and girls, clerks, leaders of clubs, young lawyers, college boys, and many who never owned a fruit tree or even a bush under the sun, sent for it. The company had to draw a line at this point, as it was never intended for these classes of people. To prevent imposition, the address will only be sent to people interested in fruit culture, and a fee of 50c. in postage will be charged. This book exclusively treats of the interests of owners of fruit and shade trees, the kind of pumps in orchard work or in parks to be used, with comments upon the "home-made" Bordeaux, made on a barn floor by Mike—or Jim—with a hoe in hand, and its failure. Published on good paper, easy reading, plain in language, free from technicalities. We believe this book to be a good investment for owners of country seats or fruit growers. We have one on our table. The book is all right. Send for the lecture to the Lenox Sprayer Co., 30 West Street, Pittsfield, Mass. "Cut this out before you forget."

So simple any child can use it.

at any time, day or night, summer or winter, fire or no fire, if you have a Humphrey Crescent Instantaneous Water Heater. It is a comfort the more appreciated the longer enjoyed, a convenience which no well-appointed household can do without. An inexhaustible supply of hot water instantly, costing one cent a tubful. An ornament to any bathroom. Guaranteed perfect in every detail. No complicated piping—simply set up and connected with gas and water. You can not afford to be without this great home convenience and luxury. Write to-day for free illustrated price-list and booklet.

HUMPHREY MFG. & PLATING CO., KALAMAZOO, MICH.

PRICES \$1 TO \$12, EXPRESS OR FREIGHT PREPAID.

Racine Cabinet

For Turkish Baths

THE RACINE CABINET is a strong double-walled room, rubber-coated inside and outside and fitted with a door. When ready for use, the walls are rigid, yet by merely tipping the cabinet you fold it in a second into a 6-inch space.

A patent alcohol stove heats the cabinet to 150 degrees in three minutes. For a vapor bath, pour a pint of water into the vaporizer. For medicated baths, put the proper drugs in the water. We send 35 formulas with the cabinet.

The Racine cabinet places in your home all the benefits of the best Turkish bath rooms. Not an essential feature is lacking. You save breathing hot air, save the risk of exposure afterward, save time and expense. The cost is but 3 cents per bath.

For the cure of rheumatism, kidney and blood diseases, no other treatment can approach it. The hot-air bath forces the impurities that cause the disease out from five million pores at once. In all sanitariums the Turkish bath is the most important treatment. All who value cleanliness, complexion and health will eventually own one of these cabinets. The quieting, refreshing, invigorating effects of the bath are the pleasantest sensations possible. One bath will always stop a cold.

The Racine Cabinet is guaranteed to be the best one on the market. Not in any way similar to the worthless affairs now advertised for this purpose. We sell an approval, to be returned at our expense if not satisfactory. Sold direct to users at from \$5 to \$12, express or freight prepaid; alcohol stove, vaporizer and face steaming attachment included. Send today for handsome illustrated catalogue, and order from that.

HEART DISEASE.

Some Facts Regarding the Rapid Increase of Heart Troubles.

Heart trouble, at least among the Americans, is certainly increasing and while this may be largely due to the excitement and worry of American business life, it is more often the result of weak stomachs, of poor digestion.

Real organic disease is incurable; but not one case in a hundred of heart trouble is organic.

The close relation between heart trouble and poor digestion is because both organs are controlled by the same great nerves, the Sympathetic and the Pneumogastric.

In another way also the heart is affected by the form of poor digestion, which causes gas and fermentation from half digested food. There is a feeling of oppression and heaviness in the chest caused by pressure of the distended stomach on the heart and lungs, interfering with their action; hence arises palpitation and short breath.

Poor digestion also poisons the blood, making it thin and watery, which irritates and weakens the heart.

The most sensible treatment for heart trouble is to improve the digestion and to insure the prompt assimilation of food.

This can be done by the regular use after meals of some safe, pleasant and effective digestive preparation, like Stuart's Dyspepsia Tablets, which may be found at drug stores, and which contain valuable, harmless digestive elements in a pleasant, convenient form.

It is safe to say that the regular, persistent use of Stuart's Dyspepsia Tablets at meal time will cure any form of stomach trouble except cancer of the stomach.

Letters copied while writing.

No press; no water; no brush; no work. Any ink; any pen; any paper. Our Pen-Carbon never smudges, and will hold paper firm. Write with any of the famous, and our Pen-Carbon Letter Book produces a perfect copy. For letters, bills, etc. Can be used anywhere. If your stationer does not keep it, write for free sample. Pillsbury's Wonderful Feat.

Harry Pillsbury, the Champion of America, gave a blindfold exhibition in the Franklin Chess-Club on Saturday, April 28. Twenty of Philadelphia's strongest players made the moves against the single player. Think of it; one man playing simultaneously and *against* twenty men! This is the greatest performance in the annals of Chess. The play began at 3 P.M., and continued until 6:30; and in the evening from 8 to 11. Pillsbury won 14 games, lost 1, and drew 5.

The Four-Mover Tourney.

The British Chess Magazine Four-mover Problem-Tourney was a very decided success. Fifty-two problems were submitted. There are comparatively few persons who have the time, ability, or patience to attempt to solve a four-mover, but for those who desire to study something difficult and beautiful we give the First-Prize Problem. This composition received 70 marks out of a possible 100.

(BY KAREL TRASLER.)

VOL. XX., No. 19

NEW YORK, MAY 12, 1900.

WHOLE NUMBER, 525

Published Weekly by
PUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent address.

TOPICS OF THE DAY.

IN THE PHILIPPINES—WAR OR BRIGANDAGE?

THE reports that came from the Philippines last week were of such divergent character that both the expansionist and the anti-expansionist press found fresh opportunity for renewing their contentions—the one, that the war is practically over; the other, that it is not. Five despatches from Manila, one from Washington, and an article by ex-Consul Wildman contain these contradictory views. The first despatch was a special to the New York *Sun* giving an interview which its Manila correspondent had had with General Otis Tuesday evening of last week, in which the general said that he had "held the opinion for some time that the thing is entirely over," and proceeded to give proofs that the "guerillas" would no longer be able to "accomplish anything serious." Another despatch from Manila on the same day (May 3), through the Associated Press, reported that nothing has been heard of Aguinaldo since December, and that the belief prevails in Manila that he has been killed by the Igorottis, a native tribe hostile to him. A third despatch from Manila, last Monday, still further reinforced the view that the war is over by telling of the capture of Gen. Pantelon Garcia, the insurgent officer standing next to Aguinaldo in rank, and commanding all the native forces in central Luzon.

The rest of the reports referred to above, however, tend to support the opposite view. A despatch from Manila on Thursday of last week told of an insurgent attack on the little American garrison of thirty men at Catubig, island of Samar, in which twenty of the Americans were killed in a heroic five days' fight, and the remaining ten were saved by the opportune arrival of a

relief force. "This fight," says the Associated Press correspondent, "has encouraged the Filipinos, who are now acting in an aggressive manner and threatening that section of the coast, particularly the town of Catarman, whence the garrison will probably be withdrawn to Laoan." An Associated Press despatch from Washington, of the same date, told of a new plan of the Filipinos by which they will organize into mounted bands of about one hundred men each, scatter throughout the islands, but remain in daily communication with each other, and "harass the American forces wherever possible." On the next day (May 4), another Manila despatch (Associated Press) told of a desperate fight at Leambanao, in the center of the island of Panay, in which a party of the Twenty-sixth infantry were so hard pressed by the insurgents that they had to leave four dead and sixteen wounded on the field. The remainder, says the correspondent, "had a narrow escape." The war, says the *Liberal*, the organ of the Filipinos, as quoted in the despatch, far from being over, is really more vigorous than ever before.

Mr. Wildman, formerly United States consul-general in Hong-kong, says in an article entitled "A Reign of Terror in the Philippines," which appears in *Lester's Weekly*:

"Altho General Otis would have us believe that the war in the Philippines is over, I learn from private sources of information of the highest authority that there exists a veritable reign of terror in most parts of the archipelago within gunshot from our army posts. Either General Otis is blind to the situation or is keeping the real facts from the American people. Aguinaldo's forces have scattered into marauding bands, and, leaguely themselves with the mountain Tulisanes and Ladrones, terrorize the country and effectually check the cultivation of crops and the sale of marketable products. . . .

"If we ever hope to put an end to this Indian warfare we must send additional forces to the islands. Our present corps is totally inadequate to cope with the situation and bring the war to a close. The islands, commercially or otherwise, will be utterly useless until life and property are made safe."

The Army and Navy Journal (New York) holds, however, that all this military activity on the part of the natives is merely bushwhacking brigandage. It says:

"That there are none so blind as those who will not see is shown by the determination of a noisy band in the United States to magnify and throw out of all proportion the incidents taking place in Luzon, and not to accept the statement that the war as a war is ended in the Philippines until there is out there an American regiment for every square mile of territory. It will be a long time, no doubt, before marauding is entirely done away with, since it can not be expected that thousands of soldiers, originally held together by the loosest discipline, will go back to their old pursuits without availing themselves of the opportunity of practising pillage and plunder on their own account, especially when they can throw the mantle of 'patriotic reprisals' over the robbery of natives who had peacefully welcomed the Americans."

The interview with General Otis, briefly referred to above, contains many valuable facts and opinions on the Philippine situation. He says:

"I can not see where it is possible for the guerrillas to effect any reorganization, concentrate in any force, or accomplish anything serious. We have one hundred and sixteen posts north of Manila, and ninety-four south of the city. Everywhere the people are giving valuable information, and are almost daily dis-

closing hidden arms and other insurgent property. In the last batch captured we discovered Aguinaldo's property, which was scattered when he was fleeing from Tarlac. This includes valuable papers. The Filipinos who want peace are beginning to appreciate the power of the Americans to protect them, and are giving effective cooperation. The remnants of the guerrilla bands are thoroughly scattered and they are unable to remain for any time in any place."

Then he gave the interviewer some information that has an important bearing on the anti-expansionist contention that Aguinaldo did not wish war, but that it was forced upon him by General Otis. General Otis says:

"It [the insurrection] was inevitable from the start. When Aguinaldo left Hongkong and came to Cavite it was with the intention of fighting the Americans. Independence was the Junta's scheme even then. Recently we have come into possession of proof that when Aguinaldo went to Hongkong from Singapore the whole subject was discussed at a big meeting of the Junta. They planned that Aguinaldo should come to Manila with American assistance, make a show of cooperation until the Spaniards were expelled, and then drive the Americans out."

"Aguinaldo was unwilling to pursue such a course because it would be dishonorable. Sandico, who was minister of the interior in Mabini's cabinet, made a speech which carried the meeting. He declared that everything would be fair considering the object that was to be achieved. Aguinaldo yielded, and his entire subsequent course in the Philippines has been in complete consonance with the scheme. The Junta was then prepared and instructions were given, and subsequently, in the middle of January, 1899, they warned their friends in Manila to leave, saying that the time was near at hand. We have many documents in Aguinaldo's handwriting, including his plans for a rising in Manila last October, when he detailed the methods to be employed in assassinating the Americans. He is a mediocre man, with the knack of outwardly appearing honest and honorable. His strongest point was his ability to keep the discordant elements together."

The anti-expansionist press show no satisfaction over the recent native successes, but are roused by these reports of continued fighting to exclaim again against the uselessness and barbarity of it all. The *Indianapolis Sentinel* (Dem.) says that the struggle "seems to have degenerated into a process of savage massacre on both sides," and the *Baltimore Sun* (Ind.) observes:

"The remarkable thing is the little impression that all these horrors and this useless bloodshed seem to make upon the public mind. Even the religious conscience of the country seems to be asleep upon the subject of the wickedness of war—of such war as

we are waging upon a helpless people 7,000 miles from our shores, who never did us harm, and whose only fault is that Mr. McKinley, for \$20,000,000, bought them, their country, their liberty, and their independence from Spain."

"Even from the Ecumenical Conference—the great gathering of missionaries and of persons especially interested in the cause of missions, now assembled in New York—we have not heard one word of protest in the name of Christianity or humanity against the horrors of the wars which are being waged to-day by the two great branches of the English-speaking race on both sides of the globe. Good men talk of establishing missions in the Philippines—creating dioceses and building cathedrals there—but meanwhile hold their peace while the wretched Filipinos are being slaughtered."

The *Salt Lake Herald* (Dem.) says:

"Every American hero sacrificed on the altar of conquest is worth 10,000 Tagals. Every American boy whose life was bartered away last week for Oriental trade was worth more to this country and to his home than are all the cheap coolie laborers of Luzon. But these sacrifices can be stopped any day by giving the Filipinos the same assurances of self-government that Congress has given the Cubans. And this wholesale slaughter of 'benighted beings,' who are naturally distrustful and resentful after three centuries of Caucasian abuse and deception, may be ended thus at once and without shedding another drop of blood."

THE MINING DISASTER IN UTAH.

THE explosion in the coal-mine near Scofield, Utah, about ninety miles southeast of Salt Lake, last week, in which more than 200, perhaps 250, men lost their lives, seems to be the worst accident in the history of American coal-mining. The cause of the explosion is not definitely known, as nearly every man in the vicinity of the explosion was killed; but the most generally accepted explanation is the one outlined as follows by the *Philadelphia Ledger*:

"All the evidence published thus far in connection with the terrible mine disaster in Utah goes to confirm the theory that the explosion was caused by the ignition of a quantity of giant powder, intensified by the firing of the dust in the mine. There appears to have been a great quantity of the latter suspended in the air. There would be, naturally, in a mine of bituminous coal, above water-level and therefore dry, while the coal was constantly broken up and agitated by the picks and shovels of hundreds of workmen. In such a condition the dust would be almost as inflammable as the powder, and when ignited by the explosion of

CARTOON VIEWS OF OUR EASTERN PROBLEM.

the latter the whole atmosphere of the mine would be set ablaze almost instantly, while the oxygen being burned out of it, the result would be the deadly choke-damp. The men who were not burned to death in the explosion were quickly suffocated by this, and hence there was no chance for anyone not within immediate reach of the open air to escape alive. It is not necessary to doubt the statement that the mine was well ventilated and free from fire-damp, but these are not the only things to be looked after in order to make the workings safe. If the theory just stated is correct, there was gross carelessness somewhere in connection with the powder."

The *Pittsburg Dispatch*, published in the midst of the Pennsylvania mining region, says:

"Like the explosions which have occurred in Pennsylvania mines, it is difficult to determine the immediate responsibility. But like the similar disasters of this State, it may be assumed that lack of proper precautions is at the bottom of it and probably insufficient legal safeguards. Whether the mine was imperfectly ventilated or whether some incompetent or reckless miner took liberties with doors or lamps is matter for the Utah authorities to determine. Yet there remains for all the lesson that mining laws should go beyond the requirement of perfunctory examination of workings to secure the safety of human life. The requirements regarding ventilation and safety appliances should be of the strictest. In addition, the qualifications of miners should be fixed by law. Irresponsible persons ought not to be permitted to jeopardize the lives of their fellows."

"It is only by comparison," says the *Chicago Evening Post*, "that one can gain a comprehension of the terrible nature of the disaster." It continues:

"The accident at Pittston, Pa., June 28, 1896, was deemed a horrible one at the time, but only ninety lives were lost there. At Newcastle, Colo., February 18, 1896, there was a loss of sixty lives, and at Red Canyon, Wyo., March 21, 1895, the loss was sixty-eight. These were considered appalling—and they were—but they are not in the same class with the Scofield disaster. The fatalities of that are not unprecedented, of course, but they are doubtless greater than have been occasioned by any similar accidents in this country. In the Welsh collieries they are not so uncommon. There have been several such disasters in Wales in which the loss of life has approximated or even exceeded this new record for the United States. At the Albion colliery in Wales, for instance, 286 lives were lost June 23, 1894, and at the Park Slip colliery, in the same country, 116 out of 151 miners went to their death with hardly a moment's warning. There was a loss of 176 in the Llanerch colliery in England in 1890 also, but these are all exceptional cases. Accidents in mines are frequent, and very destructive on occasions, but a loss of over 200 souls is so unusual as to seem terrible even for them."

The *Salt Lake Herald* says:

"There is something for the world to learn from such calamities. Those who use coal should reflect and give the man who mines it his due. He is entitled to more consideration than he gets. And the widows and orphans are entitled to the sympathy and assistance of thoughtful people here and elsewhere."

The *Salt Lake Tribune* says:

"The calamity at Scofield grows in horror the more it is contemplated. Our country has been in war for two years past. In no battle have there been so many killed and so few wounded. Some who had faced death in battle repeatedly and come out unscathed, went down to death in a moment in that terrible pit. Men stand benumbed in the presence of such a catastrophe. . . .

"We have all read of such calamities in foreign mines. We have read when the fishing fleets of New England come home in the autumn and report the number of the lost, what the sorrow is, but these have seemed far-away calamities to us, such as could not afflict Utah. But these dead and this sorrow are at our very doors; the truth is forced upon us that Utah is not exempt; that she must bear her part in the world's industrial tragedies. It ought to soften all our hearts toward our fellow men; it ought to cause the whole State to draw its arms around the stricken ones who are left, with a tenderness that will be as a balm to the hearts that are breaking and to the eyes that have grown weary with weeping."

THE MOST EXPENSIVE CITY IN THE WORLD.

NEW YORK'S is the most expensive municipal government in the world. Last year, according to Controller Coler, the city received and paid out again, for all purposes, more than \$200,000,000. The great city of London, with a million more inhabitants, was run at an expense of \$20,000,000 less than New York, and Paris, with its vast and varied municipal services, pertaining to education, cleanliness, health, charity, banking, and its almost paternal care for its citizens, far in advance of the American metropolis in this respect, cost \$15,000,000 less than New York last year. Indeed, the combined expenses of Boston, Chicago, and Philadelphia in 1899 were only \$1,000,000 more than those of New York. The city's expenses amounted to \$19.36 per capita on the estimated population of 3,500,000.

Mr. Coler, who gives these interesting facts in *Appleton's Popular Science Monthly* (May), says that "the combined annual expenditures of the six largest States in the Union are less than those of the city of New York, and the financial transactions of the latter are equal in amount to one seventh of those of the national government."

In spite of these enormous expenditures, however, the credit of the city is second only to that of the federal government. About \$15,000,000, Mr. Coler reckons, is paid every year for the gratification of a sentiment, the sentiment that demanded the consolidation of ninety or more municipalities into a "Greater New York." He says:

"The municipality, by taking in the extra territory and population, doubled its debt, added less than one fourth to its tangible assets, and increased the cost of local government \$15,000,000 a year. This added cost is the price paid by the taxpayers for a sentiment and for haste and carelessness in the work of completing consolidation. The cost of government for the enlarged city was in 1899 approximately \$15,000,000 more than the combined expenditures of the various municipalities for the last year of their separate existence. This increase was excessive and altogether unnecessary to the maintenance of thorough and progressive government. . . . They are paying now \$15,000,000 a year for the sentiment that demanded a city great in all save honesty and political wisdom."

By the charter of the greater city, Mr. Coler explains, "the salary of almost every officer and employee, from the mayor to the doormen of the police stations, is fixed by act of the state legislature," and as the representatives from New York City are in the minority in that body, the city has to submit to having the salaries of its employees regulated by those who do not have to share the taxation. The legislature also has so many other ways of getting at the city treasury that Mr. Coler says:

"It is going to be a difficult matter to make even an appreciable beginning in economy so long as the state legislature is permitted to exercise practically unlimited power to regulate the financial affairs of the municipality. Persons and corporations, be they honest or corrupt, when they seek to obtain money from the city treasury for any purpose, are going to proceed along the

CONTROLLER BIRD S. COLER.

line of least resistance, and the smooth and open way has long been the legislature at Albany. Every session of that body adds something to the expenses of the city, and it is a short and dull one that does not add many thousands of dollars to the burden of the New York taxpayers."

Another source of loss is seen in the immensely valuable franchises granted years ago to private corporations. They yield barely \$300,000 a year where they ought to yield, Mr. Coler thinks, more than \$5,000,000. Finally, the raids upon the city treasury by corrupt officials cause a loss of perhaps \$1,000,000 or more every year. "The methods of the Tweed ring have long been out of date in the city of New York," says Mr. Coler, "and fraud upon the public treasury has become a respectable calling." In conclusion he says:

"The possibilities of the future are greater than the dreams of to-day, but new policies and new methods must and will prevail. The development of Greater New York must not be hampered by a financial system antiquated and imperfect. The city should have power to develop its material resources into revenue-yielding improvements, and then, with honest and intelligent government, the burden of taxation will be reduced to a minimum, and the ideal of the grandest municipality in the world will have been achieved."

A VICTORY FOR THE NICARAGUA CANAL.

THE decisive majority of 225 to 35, by which the House of Representatives passed the Hepburn bill for the construction of the Nicaragua canal, is believed by many papers not only to show an overwhelming sentiment in Congress in favor of the proposed waterway, but, as the *New York Journal of Commerce* says, to represent "the sentiment of the American people." The *Boston Herald* (Ind.) says that "it was felt by many members, especially by those from the Western section, that a vote against the bill would be resented by their constituents, and might be punished at the polls." The bill directs the Secretary of War to construct "such provisions for defense as may be necessary for the safety and protection of said canal and harbors," so that it does not necessarily at this point conflict with the Clayton-Bulwer or the Hay-Pauncefote treaty; yet, as some papers point out, it can be made to authorize any amount of fortification that may be thought desirable. It seems to be pretty generally believed that the Senate will not pass the bill, and a considerable number of papers think that many Representatives voted for it with the understanding that it would not go any further. "They never would have passed this bill at this time," says the *New York Commercial Advertiser* (Rep.), "without a plain understanding that the Senate should stop it." The same paper goes on: "It was a godsend to members standing for election to be able to vote for what the people want, to defy corrupting corporations, and repudiate European meddling in American affairs in one act, without incurring responsibility for embarrassing the country in its foreign relations or committing it prematurely to choice of a route, and it was really very obliging of Senators to relieve them of this responsibility by promising that the bill should go no farther." The *New York Tribune* (Rep.) says that the vote "is to be regarded as an expression of opinion rather than as an act of legislation," and the *Chicago Evening Post* (Ind. Rep.) calls the action of the House "childish and purposeless." The *New York Evening Post* (Ind.) says:

"There is no doubt that the President—that is to say, Senator Hanna—decided that it would be 'good politics' to pass this bill through the House, thereafter to be strangled, and gave the necessary orders to the party cattle. The action is intended for campaign purposes alone. But how can we expect foreigners to understand this? How can we explain to them that Mr. McKinley is only playful in pretending to approve a bill which violates our most solemn national obligations? To defend him by pointing out that he will see to it that the bill never becomes law, is

merely to double his disgrace—to say that he is not only reckless but insincere."

The *New York Journal* (Dem.) has begun to call on the Senate to pass the bill. It says:

"Senators can not excuse their failure to act on the canal bill on the ground that they have not yet acted on the Hay-Pauncefote Treaty when nobody is responsible for their failure to act on the treaty but themselves. Why do they not take it up and dispose of it? Why do they not vote on the Davis amendment, and give Secretary Hay a chance to exercise his diplomatic abilities by inducing England to accept it? The same men who are in the Senate now will be there next winter. Why should it be any easier for them to vote then than now?"

"There are only two theories that fit the case. One is that the Senate intends to take some action after election which it does not dare to take before—presumably in the direction of surrendering the control of the canal to England. The other is that it does not desire to take any action at all, and is merely playing out the endless game of procrastination by which the railroads have disappointed the hopes of the people for a generation. The only way in which the Senate can keep the people from adopting one or the other of these hypotheses is by going to work in good faith at once."

In addition to the provisions for the defense of the canal, quoted above, the bill as passed by the House authorizes the President to acquire from Costa Rica and Nicaragua the control of such territory as may be necessary for the construction, operation, and protection of the canal, and for this purpose appropriates "such sum as may be necessary"; authorizes the President to direct the Secretary of War to construct a canal from a point near Greytown by way of Lake Nicaragua to a point near Breto, the canal to be deep enough to accommodate the largest vessels now in use; authorizes the President to guarantee the use of the canal to Costa Rica and Nicaragua; appropriates \$10,000,000 to begin the work, and provides that the final cost shall not exceed \$140,000,000.

It seems to be generally believed that no further action will be taken until the short session of Congress, next winter, when it is expected that the Isthmian Canal Commission will bring in its report and a new bill will be framed and passed.

SECRETARY ROOT, THE DANISH ISLANDS, AND THE STANDARD OIL COMPANY.

SOME lively speculation has been started by an utterance of a strangely foreboding sort made by Secretary of War Root, in a speech at the Grant anniversary dinner in New York. "The hour is coming," said the Secretary, "and coming before many years, when we, the American people, will be forced either to abandon the Monroe doctrine or fight for it"; and, he added, "we may have to fight for it, but we can never abandon it." These ominous words evoked comment in all parts of the country, and, to some extent even in Europe. The state of our relations with almost every important country on the globe was carefully reviewed by the press. As no probable break in these relations seemed to be discoverable, however, many papers finally came around to the view expressed by the *Philadelphia Inquirer* (Rep.) that "Mr. Root, if a slang expression may be permitted, was talking through his hat." The *Washington Times* (Dem.) called it "a case of political rooting"; the *Philadelphia Record* (Ind. Dem.) said that the Secretary was merely "rattling the saber" in the interest of his army reorganization bill; and the *Brooklyn Eagle* (Ind.) explained it by saying that the speech came "at the alcoholic stage of a public dinner." In the meantime, Mr. Root himself had been asked to explain the real meaning of his words, and he replied that they were merely "of an academic nature." The spirit of colonization and commercial conquest and political aggrandizement, he said, is certain, sooner

or later, to come into conflict with the Monroe doctrine: "it may not be for ten or twenty or fifty years," but when it does come "the United States should be ready for it."

This statement might have allayed all fears if it had not been followed immediately by the publication in the *New York Times* (Ind.) of what purported to be the real explanation of the whole matter. According to this story, we were at the time on the brink of war with Germany and perhaps with Russia too. Negotiations have been pending for a long time, it has been supposed, looking to the sale of Denmark's West India islands to the United States; but a report has lately been current that the negotiations have been broken off. This formed the basis of *The Times's* story. It appeared from this narrative that Captain Christmas, whom the Danish Government sent over here to negotiate the sale, was approached by Mr. H. H. Rogers, of the Standard Oil Company, who asserted that his company owned and controlled twenty-six United States Senators, and that the sale could not be effected unless a commission of about \$300,000 was paid him as the representative of the company. This proposition Captain Christmas indignantly refused to consider, and when he saw that the negotiations were likely to fail, he concluded that Mr. Rogers's claim was true, and returned to Denmark. The Danish Government, *The Times's* story went on, concluded that since we had declined to buy the islands, we could not consistently forbid their sale to some other power. Denmark, therefore, purposed to exchange the islands with Germany for northern Schleswig, formerly a part of Denmark and still dear to the Danish heart. This, however, would give Germany an important foothold near our coast and near the Nicaragua Canal, and Secretary Root's stirring words, avowed the writer in *The Times*, referred to a coming war with Germany over this encroachment on the Monroe doctrine. Another article in *The Times*, on the day following, hinted that Russia was also in the deal and would try to gain a foothold here.

Of course, Mr. Rogers and the government officials in Washington were immediately besieged by reporters to investigate the truth of the story, and all concerned immediately denied that there was any truth in the sensational charges the story contained. Many papers think it is a "good story," but nothing more. The *Springfield Republican* (Ind.) calls it a "big yarn." The *Brooklyn Eagle* (Ind. Dem.) says: "If the story had been told a little later when the weather was warmer and news of greater importance less common it would have attracted more attention." The *Boston Advertiser* (Rep.) thinks it likely that some "nimble-witted faker of sensational newspaper yarns" sold the story to *The Times* "at the highest gold brick rates." The

New York Sun (Rep.) calls it "moonshine," and *The Evening Post* (Ind.) says:

"As an able-bodied story, the account in to-day's *Times* of the Standard Oil Company, with twenty-six United States Senators in its pocket, undertaking to sell the Danish West Indies to the United States, or else to Germany, charmingly leads off the march of fancy appropriate to this budding springtime. We have not the heart to pick flaws in it. Such masterpieces of invention come along too seldom to be mutilated by rash hands. There are Danish islands; the United States is the largest dealer in islands now known to the trade; the Standard Oil Company—no *ectopus vulgaris*—is capable of anything, as Voltaire said of Habakkuk. Those are the unquestioned facts, and why not let all the rest follow on as naturally and convincingly as it seems to in the imagination of *The Times* reporter? The happy May-time, with the sap mounting, is the fit mother of such joyous idylls."

CHICAGO'S LABOR WAR.

THE month of May has been marked by a pronounced activity on the part of the working classes throughout the country. Labor parades have been held in the large cities, and several thousands of workmen, most of them in the building and cigar-making trades, have gone out on strike. Of these symptoms of labor's unrest, the strike among the building trades in Chicago has attracted most attention. The labor troubles there are of long duration, and have arisen largely from the employment of non-union labor by the contractors and city authorities. The situation in Chicago is thus summarized by the *Philadelphia Press* (Rep.)

"Last year a war began between the Building Trades Councils, representing the workmen, and the Building Contractors' Council, representing the employers, which has put almost an entire stop to building in that city. It was believed that the disagreement had been arranged and a settlement reached before January 1, but these hopes were disappointed and the trouble has continued with a constant tendency to increase. Allied trades have been drawn into the vortex until hardly any branch of business is free from the effects of the strike. How great the

MCKINLEY: "Go back! Don't come here until after election!"
—*The St. Louis Republic*.

LOOKING FOR INFORMATION.
RUSSIA: "Just thought I'd call around and find out who I'm going to fight to-morrow."
—*The St. Paul Pioneer Press*.

CURRENT CARTOONS.

attendant loss is can be judged from the following estimate made by the *Chicago Tribune*:

Number of men out of work in Chicago	100,000
Number of men outside Chicago unemployed because of strike here	50,000
Number of people in families of unemployed	750,000
Capital of contractors tied up	\$25,000,000
Contractors made idle	700
Loss in wages to workmen for each day	\$100,000
Loss to contractors a day	\$400,000

"The street-railway companies and the department stores and small shops are reporting large losses as a result of the strike, and many children are being withdrawn from the schools. These, however, are not the worst features of the strike. Hardly a day passes without riots and violence in which men on one or both sides are injured. The courts have been compelled to take cognizance of the situation, and the city officials and municipal organizations have sought in vain to end the trouble."

Almost all the Chicago newspapers claim that Mayor Harrison has been too lenient in dealing with the strikers. Says *The Times-Herald* (Rep.):

"Unless Mayor Harrison is singularly obtuse to the sentiments and comments of all intelligent citizens outside the ranks of the most violent labor agitators, he must be aware that he is held responsible for the unprovoked and brutal assaults made by alleged union workmen on non-unionists. . . . His instruction to the police to take no part in the struggle between strikers and the non-union men who took their places has paralyzed the police force. It permitted the impression to go abroad that non-union men went about their work at their own peril, and has resulted in scores of instances where peaceful workmen have been assaulted with impunity."

The *Chicago Chronicle* (Dem.) also declares that "the arm of the police force has not been nerved and strengthened by such unequivocal, determined, and fearless declaration on Mayor Harrison's part as would overawe the abettors and perpetrators of outrages upon peaceable toilers." On the other hand, the *Chicago Journal* (Ind.) says that "no doubt a great deal too much has been made of these assaults." It maintains that the haughty attitude of the Building Contractors' Council, which declares that there is "nothing to arbitrate," has been largely responsible for the continuance of the labor troubles.

In the country at large, much indignation has been expressed over the accounts of the riots in Chicago. The *New York Sun* (Rep.) says: "The men killed in Chicago are many, and the wounded are many, many more. It seems that when a man joins a labor union, either through perversion or cowardice or the cheating of his own conscience, he becomes incapable of ever questioning or criticizing the vicious influences that usually gain control." The *Indianapolis News* (Ind.) adds: "Men in this country must be free to do as they please, as long as they violate no law. And if union men attempt to abridge their liberty, they themselves will, in the end, be the chief sufferers." The *New York Evening Post* (Ind.) affirms that the present labor disturbances are due to the increased cost of living and to the fact that labor's wages have not risen in proportion to the general prosperity of the country. With this view the *New York Journal* (Dem.) concurs. The *New York People* (Socialist) claims that the Chicago labor troubles "prove two things":

"First, that we live in a very rotten state of society, where men must fight for the chance to work, where they can expect to save themselves from want only by taking away other men's chances of living; and

"Second, that the policemen—from Mike Cronin of the Twenty-first precinct up to President McKinley himself—are employed only to protect the interests of those who do no work at all, but who live and grow fat upon the fruit of other men's labor, and who laugh in their sleeves at the sight of those others fighting for the chance to pile up profits for the masters in order to earn a bare living for themselves."

WHERE CRIME FLOURISHES MOST.

THE rapid increase of crime in the United States—so rapid that the clogging of the courts and the crowded condition of the prisons are themselves becoming serious problems—makes it important to ask what part of the country has the inenviable distinction of standing first in the production of crimes and criminals. It may surprise some to learn that crime in this country is on the increase; but that such is the fact is shown by August Drähms, chaplain of the California state prison at San Quentin in his new book on "The Criminal," a work that has the hearty enforcement of Prof. Cesare Lombroso, the famous criminologist. The swelling tide of crime may be realized by a glance at the following table from Mr. Drähms's book, giving a summary of the prisoners in the United States from 1850 to 1890:

Sex, Color, Nativity.	NUMBER OF PRISONERS					RATIOS TO 1,000,000 POPULATION.				
	1850.	1860.	1870.	1880.	1890.	1850.	1860.	1870.	1880.	1890.
Total	5,737	16,085	26,001	52,002	52,399	290	607	853	1,164	1,115
Male	5,737	16,085	26,001	52,002	52,399	290	607	853	1,164	1,115
Female	—	—	—	5,000	6,400	—	—	—	200	410
Native born	4,305	10,145	14,173	45,802	45,000	207	374	513	1,034	1,033
Foreign born	1,432	5,940	11,828	6,200	7,399	73	233	340	130	82
White	5,737	16,085	26,001	52,002	52,399	290	607	853	1,164	1,115
Colored	—	—	—	5,000	6,400	—	—	—	200	410

* gay nativity unknown not included.

The one encouraging feature of this table seems to be its revelation of the fact that a smaller percentage of our foreign-born population is inclined to evil than formerly. The variation is so slight that the percentage of foreigners who enter our prisons might be said to remain stationary; but it is at least not following the lead of the "native-born" column.

As to the geographical distribution of our criminals, Mr. Drähms presents another table which seems to give the Western States the undesirable honor of leading the country, not only in the high percentage of criminals, but in the increase in the decade before the last census. Here is the table:

Geographical Divisions.	RATIOS TO 1,000,000 INHABITANTS.		In-crease.	De-crease.
	1880.	1890.		
The United States	709	722	13	—
North Atlantic	708	832	64	—
South Atlantic	704	730	26	—
North Central	510	401	—	109
South Central	891	840	—	51
Western	1,268	1,341	73	—

It is of considerable interest to note, too, the favorite habitat of the various specific crimes, such as larceny, burglary, homicide, etc., and here, also, Mr. Drähms is compelled to give his section of the country first place. He says:

"In the United States, as elsewhere, larceny, as the leading crime, is also the most fluctuating locally and periodically, depending upon climatic as well as upon industrial and economic conditions for support. Thus, its lowest ratio (24 per 100,000) is found in the North Central (agricultural) group of States, doubling as it merges into the South Central, and reaching its climax in the Western cluster of States where property and custom are perhaps less strongly protected than in the older and steadier communities. Burglary, as the more aggressive form of crime, is very nearly even in the North and South Central divisions, but pushes abruptly from 11.5 per 100,000 in the latter up to 37.6 in the Western division. Robbery is quite uniform, asserting itself in the Western division with similar forcefulness; while sexual offenses, usually attributed to warmer climates, appear to be most pronounced in the North Atlantic and the South Central States. Forgery keeps well apace with, and merges into, its twin brother, robbery, in the North and South Central divisions, to double in the Western. Homicide reaches its minimum in the North Atlantic (5.8 per 100,000), doubles (11.1) in the South

Atlantic, again doubles (22.7) in the South Central, and reaches its highest (27.3) in the Western division."

Looking over the whole field, however, Mr. Drühms reaches the encouraging conclusion that "while petty offenders and general misdemeanants are on the whole on the increase, perhaps somewhat in advance of the growth of population, serious crimes do not share in any appreciable degree in this onward movement."

TOLSTOY'S OPINION OF MODERN CRIMINAL PROCEDURE.

ABRAHAM LINCOLN'S belief that "hanging a man is the worst use you can put him to," is shared by Count Tolstoy, who goes still further in his latest novel and preaches against imprisonment for crime. The whole of "The Resurrection," in fact, is a scathing arraignment of the Russian judicial system, and Count Tolstoy argues that imprisoning a man is not only a frightfully bad "use to put him to," but that the moral character of every judge, policeman, or other officer who has to do with the administration of justice becomes bent and weakened by having to punish people who are often more innocent than the officers of justice themselves. And even if guilty, argues Tolstoy, many of the poor creatures are the victims of their environment, and we are to blame for their environment; so that if any one is to be haled into court, we are the ones to go. He illustrates this by the case of a lad of twenty years who stole some worthless mats while drunk. Nekhlúdorff, the principal character of the book, is on the jury, and after hearing the testimony he reflects sadly on the causes of crime, and the "awful and horrid tomfoolery" of judicial procedure with which we try to cure it:

"Even supposing [ponders Nekhlúdorff] that this boy is the most danger-ous of all that are here in the court, what should be done from a common-sense point of view when he has been caught? It is clear that he is not an exceptional evil-doer, but a most ordinary boy; every one sees it—and that he has become what he is simply because he got into circumstances that create such characters; and, therefore, to prevent such a boy from going wrong, the circumstances that create these unfortunate beings must be done away with.

"But what do we do? We seize one such lad who happens to get caught, knowing well that there are thousands like him whom we have not caught, and send him to prison, where idleness, or most unwholesome, useless labor is forced upon him, in company of others weakened and ensnared by the lives they have led. And then we send him, at the public expense, from the Moscow to the Irkutsk government, in company with the most depraved of men.

"But we do nothing to destroy the conditions in which people like these are produced; on the contrary, we support the establishments where they are formed. These establishments are well known: factories, mills, workshops, public-houses, gin-shops, brothels. And we do not destroy these places; but, looking at them as necessary, we support and regulate them. We educate in this way not one, but millions of people, and then catch one of them and imagine that we have done something, that we have guarded ourselves, and nothing more can be expected of us. Have we not sent him from the Moscow to the Irkutsk government?" Thus thought Nekhlúdorff with unusual clearness and vividness, sitting in his high-backed chair next to the colonel, and listening to the different intonations of the advocates', prosecutor's, and president's voices, and looking at their self-confident gestures. 'And how much and what hard effort this pretense requires,' continued Nekhlúdorff in his mind, glancing around the enormous room, the portraits, lamps, armchairs, uniforms, the thick walls, and large windows; and picturing to himself the tremendous size of the building, and the still more ponderous dimensions of the whole of this organization, with its army of officials, scribes, watchmen, messengers, not only in this place, but all over Russia, who receive wages for carrying on this comedy which no one needs. 'Supposing we spent one hun-

dredth of these efforts helping these castaways, whom we now only regard as hands and bodies, required by us for our own peace and comfort. Had some one chanced to take pity on him and given some help at the time when poverty made them send him to town, it might have been sufficient,' Nekhlúdorff thought, looking at the boy's piteous face. 'Or even later, when, after twelve hours' work at the factory, he was going to the public-house, led away by his companions, had some one then come and said, "Don't go, Vania; it is not right," he would not have gone, not got into bad ways, and would not have done any wrong.

"But no; no one who would have taken pity on him came across this apprentice in the years he lived like a poor little animal in the town, and with his hair cut close so as not to breed vermin, and ran errands for the workmen. No, all he heard and saw, from the older workmen and his companions, since he came to live in town, was that he who cheats, drinks, swears, who gives another a thrashing, who goes on the loose, is a fine fellow. Ill, his constitution undermined by unhealthy labor, drink, and debauchery—bewildered as in a dream, knocking aimlessly about town, he gets into some sort of a shed, and takes from there some old mats, which nobody needs—and here we, all of us educated people, rich or comfortably off, meet together, dressed in good clothes and fine uniforms, in a splendid apartment, to mock this unfortunate brother of ours whom we ourselves have ruined.

"Terrible! It is difficult to say whether the cruelty or the absurdity is greater, but the one and the other seem to reach their climax."

TOPICS IN BRIEF.

THE plum-tree will never look quite the same to Mr. Quay again.—*The Milwaukee Sentinel*.

THE rebels are reported to have won in Colombia. This makes them patriots.—*The New York World*.

If the Sultan thinks he can switch us into a discussion of the century question he is mistaken.—*The Baltimore American*.

If it is true that the Boers are looking to Bryan for help, the arrangement is an exceedingly reciprocal one.—*The Detroit News*.

OUR manifest destiny seems to be the destiny which can be hitched up to the largest number of political land-wagons.—*The Detroit Journal*.

MR. QUAY will not cry over spilt milk. But he will probably have a long memory for the man who pushed the can over.—*The Washington Star*.

If Secretary Hay can make the Sultan pay up he can get several other bills against him to collect on liberal commissions.—*The Chicago Record*.

No doubt Mr. Carnegie is right in saying trusts are good things for the poor, but comparatively few poor persons are able to get one.—*The Detroit Adver.*

POSSIBLY Admiral Dewey feels that it is more nautical and appropriate to leave the public at sea concerning his political opinions.—*The Washington Star*.

ADMIRAL DEWEY is beginning to find out that to sink a hostile fleet is but a minor achievement in the career of a presidential candidate.—*The Baltimore American*.

SULLA VESTIGIA RETRORSUM.—We shall not falter even tho our new responsibilities confront us with problems to stagger a commencement orator.—*The Detroit Journal*.

"Is it true that you Filipinos are making secret visits to Manila?" "Well," answered the native, "we've got to get into Manila once in a while so as to get the news from the sympathizers in America and find out how the war is getting on."—*The Washington Star*.

"WHAT is an island?" asked the teacher, addressing her interrogation to the class in geography. "An island, ma'am," replied Johnny Broadhead, a sardonic lad who had Porto Rico in mind, "is a body of land entirely surrounded by politics."—*Puck*.

MORSEY: "What would you do if you had a million dollars a year?" Mudge: "The assessor, of course." From the foregoing, the casual reader may learn that in America, where even the lowest has a chance to rise, the great middle class is fully alive to and able to assume the plain duties inherent in the possession of wealth.—*The Indianapolis Press*.

THE Philadelphia *Press* summarizes the Republican and Democratic platforms up to date thus:

We indorse—	We repudiate—
We rejoice—	We mourn—
We glory—	We decry—
We are proud—	We are ashamed—
We heartily support—	We condemn—
We entrust—	We denounce—
We commend—	We disavow—

It is scarcely necessary to say which is which.—*The Boston Herald*.

LETTERS AND ART.

THE AMERICAN DRAMA OF TO-DAY AND TO-MORROW.

IN letters, painting, sculpture, architecture, and music it is commonly conceded that the past ten years have been a period of movement, and for the most part of substantial progress. Can the same be said of the stage? Mr. Charles Henry Meltzer, the dramatic critic and translator of Hauptmann, thinks it can not. In the first number of the new monthly *Criterion* (April), he says:

"Men to whom, ten years ago, we looked with hope for the development of a national drama, have not made good. It may or may not be the fault of the managers, or of the 'stars,' or of our social scheme, that playwrights of parts, like Mr. Augustus Thomas, Mr. Clyde Fitch, and Mr. Henry Guy Carleton, have advanced so little since their first successes. The fact remains. And it is distressing.

"Even more disheartening is it to note that authors like Mr. Bronson Howard, and others, lately in the enjoyment of unquestionable popularity, have either lost interest in their art or have found it advisable to rest on their laurels. More painful than all is the extinction, for the time being, of the ambition which once prompted Mr. James A. Herne, an original and curious dramatist, to give us those possibly imperfect but assuredly admirable and interesting works, 'Margaret Fleming' and 'Shore Acres.' The failure of his 'Griffith Davenport' has discouraged Mr. Herne. He is no longer young. He has lost faith, both in his mission and in the public.

"If our playgoers took art a little more seriously than they do; if our managers were less narrowly practical; if our critics were more ready to detect new talent; if our playwrights thought less of their royalties and more of fame—

"If, in a word, America were not America, but France or Germany or Norway—a land striving after idealities rather than materialities, and setting art upon a lofty pedestal—things might be different. Some day—some day—we too may have our Hauptmanns and our Sudermanns, our Björnsons and our Maeterlincks. 'But we must make money or we perish,' cry the playwrights. 'We are in the business to grow rich,' exclaim the managers. 'And we are doing what we are paid to do,' add the critics.

"Yes. That is the misery of it. That is the pity. That is the curse. Drama, to most Americans, is not, as it should and no doubt will be, a matter of art. It is a matter of business."

And yet, despite this sad outlook, Mr. Meltzer owns that he is "a shameless and impenitent optimist"; for he believes in the future of the American drama as firmly as he disbelieves in its present. Public taste is slowly, yet perceptibly, improving. Henry de Mille, Sardou, Hoyt, "The Old Homestead," and "The County Fair"—favorites of ten years ago—have lost much of their potency, we are told. In their place we have Bisson, Feydeau, Pinero, Grundy, and Rostand. Mr. Meltzer is not among those who would confine the drama to ideals of the Sunday-school and the young ladies' seminary:

"Turning to comedy, in the strict sense of the word, and to drama, we may find comfort in the fast-spreading appreciation of the surely vital facts that the more nearly plays approximate to the essential truths of life, the greater their sincerity, their logic, and their insight into the strange complexities of human nature, the more worthy are they of our admiration and the more valuable are they as contributions to stage literature. Since the time when 'The Wife,' 'The Charity Ball,' and 'Men and Women' passed muster as models of stagecraft, we have gone far on the road to realism. Some, shrinking from the crude portraiture of human frailty in 'Sapho,' and from the grossness of 'smart' comedies like 'The Degenerates,' may think that we have gone too far. I do not agree with them. We should beware of confounding the true realism with the false. No one has been more outspoken in dealing with the atrocities, the brutalities, and the obscenities of life than Shakespeare. But (and this makes all the difference between impurity and purity) Shakespeare treated even the most shocking themes with the rare

grace and charm of art. 'Sapho,' handled by a Dumas, might have had something, at least, of the deep pathos which attracts us in 'Camille.' The chief reproach that I should bring against the powerful story of Alphonse Daudet which Mr. Fitch has dramatized is, not that it shows us the bad, seamy side of womanhood (Shakespeare's women are not all virtuous), but that it teaches us to set more store on prudence—selfish, vulgar, heartless prudence—than on the foolish, reckless, wretched, but at least unselfish honesty of love.

"And here I shall perhaps be pardoned if I go out of my way for a few moments to tell you what Daudet himself thought of 'Sapho.' In days gone by I saw much of the French novelist. For months, while he was writing this novel which has caused such an upheaval of indignation here, I visited him frequently at his home, near the gardens of the Luxembourg in Paris. I had translated one of his stories for him, 'l'Évangéliste,' and he had asked me, in a general way, to translate the others. When he had completed 'Sapho' (of which I knew nothing but the title) it occurred to him that the story would not commend itself to American and English readers. He wrote to me at once a few frank lines (I treasure them among my autographs) expressing his opinion of the books: '*Il est vif, très-vif, et quoique d'une grande retenue d'expression il touche à des choses terribles.*' ('It cuts deep, very deep, and, tho most reserved in expression, it deals with terrible subjects.') I do not discuss the book.

"The theme of the 'Sapho' of Mr. Clyde Fitch has some resemblance to that of Mr. Pinero's remarkable drama, 'The Second Mrs. Tanqueray.' But the art, the incisive irony, the dexterity, the tact, which distinguished the latter play are sadly missing in the American effort. Mr. Fitch has hardly been 'reserved in expression.' He has painted his pictures and his characters so coarsely that they offend, I will not say morality, but taste. Between his 'Sapho' and the original story, between his drama and 'The Second Mrs. Tanqueray,' is the distance dividing the nude in art from the naked in nature. In judging the American work, it would, no doubt, be proper to condemn the want of delicacy. But to denounce it as a common piece of pruriency seems harsh, and just the least bit ignorant."

In drama it is taste, nicety of touch, and discretion that form the necessary equipment of the real artist; and in these, says Mr. Meltzer, American playwrights have not yet proved themselves equal to the leading modern European dramatists—Pinero, Meilhac, Rostand, Ibsen, Hauptmann, Sudermann, Giacosa—who are only beginning to be appreciated by a portion of the public. The grim and earnest meaning attached to realism abroad is not understood here; still less is symbolism. Yet there is still hope for the American people if they will persevere:

"In time, maybe, much that at present seems mysterious, odd, and laughable will become clear to us. We are no duller than other nations, if we have had less intercourse with art. We have inherited the germs of many tastes, of many forms of art, from all the races who have overrun the land. We are the heirs of all the ages. Wait and see. The coming century may work a mighty change. In twenty years we have learned much of music. We have acquired notions, and possibly more than notions, of what constitutes good architecture, good painting, and good sculpture. Soon we may reach a point at which we shall look to the theater not only for brief relaxation from our business cares, but for the emotional delight, the intellectual relief, the spiritual uplift, which shall convert it from a mere playhouse into a temple of art. Then, and not till then, shall we know the full beauty and the power of drama."

The Cowper Centenary.—The one hundredth anniversary of Cowper's death was celebrated at Olney, England, on April 25. The Cowper Museum, which forms a part of Cowper's house—lately presented to the town by Mr. Collingridge—was formally opened. Mr. Clement Shorter, Dr. Robertson Nicoll, and Dean Farrar took part in the ceremonies. *The Westminster Gazette*, apropos of the announcement that Cowper's hymns were to be sung in churches and chapels all over England on the Sunday preceding the centenary, says:

"It is probably by such well-known hymns as 'God moves in a

mysterious way' and 'Hark, my soul, it is the Lord,' that the poet now most truly lives on the lips of the people—by the hymns and by 'John Gilpin.' There are, however, other pieces still popular—the 'Loss of the Royal George,' the 'Ode to Alexander Selkirk,' the lines on his mother's portrait. Fashions pass in poetry, as in other things, and Mr. Birrell has reminded us that in Miss Austen's day the reading aloud of Cowper was accepted as a test of a lover's sensibility. 'Nay, mamma, if he is not to be animated by Cowper!' exclaimed Marianne Dashwood in disdain of her sister's lover. In his day Mr. Birrell says the test was 'The Blessed Damosel.' Perhaps to-day it is 'The Absent-minded Beggar.' But, fashions apart, Cowper can never lose the affection of the lovers of English literature. If at first Cowper's Letters were read for the sake of his poetry, henceforth Cowper's poems must always be read for love of Cowper the letter-writer. A complete edition of Cowper's Letters is, by the way, one of the promised services of Mr. Wright. Southey is incomplete, Grimshaw is worse than incomplete, and Cowper's Letters are among the rare things in literature of which it is difficult to have too much."

KIPLING'S EVIL INFLUENCE ON ANGLO-SAXON CHARACTER.

MME. BLANC ("Th. Bentzon"), the French critic, does not consider that Kipling is having a wholesome effect upon the British mind. She goes so far as to assert that his writings appeal to the worst instincts of the Anglo-Saxon, and their evil effect extends to America. She writes in the *Revue des Deux Mondes* (April 1) that while Kipling is adored by soldier and sailor alike, he misrepresents them at times, and he presents in his writings a very unusual admixture of elements. She writes:

"Many ingredients heterogeneous in appearance are dragged into his composition; the most brutal realism, the slang of the outskirts of London, are put side by side with the marvelous exoticism of the jungle; the perfume of the rose and of the sandal-wood mingles with the odor of the gutters; symbolism and the reportorial method exist on an equal footing."

Mme. Blanc recognizes in Kipling a man who searches for impressions in the midst of all peril, and in the most unhealthy climates; one who has quick insight and a powerful faculty for assimilating. Whatever comes within his grasp he makes use of to the best advantage. He is a born journalist and has the dominant quality of the journalist—aptness, opportuneness. But he makes unguarded use of the bad and seems to court the vulgar. She calls "The Recessional" "a pretended religious chant," which "will remain a monument of measureless blunders." In it Kipling pretends to pray to the Lord of Hosts for humility in triumph, but the poem rings with a boastful pride.

Further on, after reviewing some of Kipling's work, especially that dealing with the army and "Soldiers Three," Mme. Blanc writes that if the religion of Kipling appears to be doubtful, there is no doubt about his fanaticism when war and imperialism are in play; she says that he has blown this double trumpet without stopping an instant. Again she writes that everything appears equally good to Kipling; he upholds human butchery and coarseness, and excites Anglo-Saxon animalism. She continues:

"An excellent review, of a very religious character, printed in *The Outlook*, gave some very vivid reflections upon English politics and the theories of Kipling. By what right does this pagan, this pirate, pose as a director of consciences, as a composer of sacred songs? He gives no pledges which ought, by their very nature, to show that his hymns are addressed to the God of Justice. What! an admirer of Cecil Rhodes! . . . Must we then conclude that an empire can not be founded by honest men? Mr. Rhodes's arms, there is no doubt, are the same that served Jameson; his duplicity is only equalled by his cynicism; he believes that all men are to be sold; he is the administrator of corruption and of iniquity. His god, if he has one, resembles very much a union of all devils—blind to all good for the empire, and having a thirst for gold, a lust for territory. This question of the god of Mr. Rhodes and of Mr. Kipling has importance, be-

cause England and America, to-day, are in great peril of adoring the same god."

Mme. Blanc further writes:

"We repeat it: upon the final victory of England in a struggle that has but just begun will depend very much the future popularity of the views Kipling takes of the army, the navy, the education of men, colonial extension, and the interesting problem of the government of different races united upon one soil. But, whatever happens, he will remain the one writer, original and modern among all others, who has known how to seize the element of beauty in our practical life—to transform the hissing of steam into music."—*Translation made for THE LITERARY DIGEST.*

THE SECRET OF WOMAN'S SUCCESS IN FICTION.

MRS. HUMPHRY WARD, in her introductions to the different volumes of the Hawarth edition of Charlotte Brontë's works, gives a kindly estimate of Charlotte and her sisters, Emily and Anne. Incidentally, also, she touches upon the general subject of woman's success in fiction. The Brontë books live, she tells us, because the Brontë sisters live, just as Byron and Voltaire live, not for what they wrote, but for what they were. "Charlotte Brontë," says Mrs. Ward, "is Jane Eyre and Lucy Snowe, the two chief heroines of her books. She can not be thought of apart from what she has written, and everything that she wrote has the challenging quality of personal emotion or of passion, moving in a narrow range among very concrete things, and intimately fused throughout with the incidents and feelings of one small, intense experience."

In an analysis of "Jane Eyre," Mrs. Ward speaks of the weakness of its plot, the grotesqueness of its scenes, and the poor quality of its satire and fun; yet "Jane Eyre" persists, and Charlotte Brontë is with the immortals. And the reason? Mrs. Ward answers:

"Simply, one might say, Charlotte Brontë herself. Literature, says Joubert, has been called the expression of society; and no doubt it is, looked at as a whole. In the single writer, however, it appears rather as the expression of studies or temper or personality. 'And this last is the best. There are books so fine that literature in them is but the expression of those that write them.' In other words, there are books where the writer seems to be everything, the material employed, the environment, almost nothing. The main secret of the charm that clings to Charlotte Brontë's books is and always will be the contact they give us with her own fresh, indomitable, surprising personality—surprising above all."

The power and charm of her personality, we are told, are due to the fact that Charlotte Brontë was first and foremost an *Irish woman*, and that her genius is at bottom a Celtic genius. This fact has never, Mrs. Ward thinks, been sufficiently recognized by critics. Charlotte Brontë's father came from an Irish cabin in County Down, her mother was a Cornish woman. Her own characteristics are disinterestedness, melancholy, wildness, wayward force and passion, forever wooed by sounds and sights to which other natures are insensible—by murmurs from the earth, by colors in the sky, by tones and accents of the soul, that speak to the Celtic sense as to no other. The Celtic qualities in her were responsible for her shyness and her endurance, but they were also responsible for perhaps half the defects in her books, such as exuberance, extravagance, and roughness amounting to vulgarity. But this Celtic genius was crossed with a hard Yorkshire realism and self-control that gave to the work of the Brontë sisters, whether in their daily life or their books, its stability and value—a Celtic imagination shot to the core by an English practicality.

In the pure play of the imagination, Mrs. Ward thinks that Charlotte was inferior to Emily:

"Emily knew less of men personally than Charlotte. But she

had no illusions about them, and Charlotte had many. Emily is the true creator, using the most limited material in the puissant, detached, impersonal way that belongs only to the highest gifts—the way of Shakespeare. Charlotte is often parochial, womanish, and morbid in her imagination of men and their relations to women; Emily, who has known two men only, her father and her brother, and derives all other knowledge of the sex from books, from Tabby's talk in the kitchen, from the forms and features she passes in the village streets or on the moors—Emily can create a *Heathcliff*, a *Hariton Earnshaw*, a *Joseph*, an *Edgar Linton*, with equal force, passion, and indifference. All of them, up to a certain point, owing to the fact that she knows nothing of certain ground truths of life, are equally false; but beyond that point all have the same magnificent, careless truth of imagination."

Mrs. Ward proceeds to express her views of women as makers of fiction. "In other fields of art," she says, "they are still relatively amateurs, or their performance, however good, awakens a kindly surprise. Their position is hardly assured; they are still on sufferance. Whereas in fiction the great names of the past, within their own sphere, are the equals of all the world, accepted, discussed, analyzed, by the masculine critic, with precisely the same keenness and under the same canons as he applies to Thackeray or Stevenson, to Balzac or Loti." She thinks the reason of their comparative failure in the other arts and success in fiction is to be found in the fact of woman's ignorance of the methods and traditions of all other arts, and in her knowledge of the art of speech. She has practised the latter for generations and contributed largely to its development. The arts of society and letter-writing pass naturally into the art of the novel. In the case of poetry, one might imagine a similar process going on, but it is not so far advanced. It will, however, come in proportion as woman has widened her contact with the manifold world.

Altho woman's range of material is necessarily limited, on account of the hundreds of subjects and experiences from which her sex debar her, yet in the one subject of love between man and woman, which is of interest to all the world, she is eternally at home. "But it is love as the woman understands it. And here again is her second strength. Her peculiar vision, her omissions quite as much as her assertions, make her welcome." Tenderness, faith, treason, lonesomeness, parting, yearning, the fusion of heart with heart and soul with soul, the ineffable illumination that love can give to common things and humble lives, these, after all, are perennially interesting things in life; and here the woman-novelist is at no disadvantage. Her knowledge is of the center; it is adequate, and it is her own. So it is in this way that Charlotte Brontë affects the world and will live in its memory.

MENTAL BREAKDOWN OF ROSTAND, AUTHOR OF "CYRANO."

WHETHER or not the reports sent from Paris of M. Edmond Rostand's alleged "madness" are exaggerated, they have been received as true by some of his friends in America. Mr. A. M. Palmer, who originally brought out "Cyrano de Bergerac," and who spent last summer at the home of the French playwright, contributes an article to the *New York World* (April 22) on the mental collapse of his friend. The list of writers who have at least temporarily lapsed from reason to a state of mental weakness is a rather formidable one and includes such names as those of Ruskin, Cowper, Emerson, Swift, Tasso, Pascal, Schopenhauer, Heine, Poe, Baudelaire, De Maupassant, and Gérard de Nerval. Mr. Palmer thinks that there is some connection between certain forms of extreme literary endeavor and cerebral disorder. He writes:

"'Cyrano de Bergerac' began the destruction of the intellect that created it; 'L'Aiglon' completed the wreck. Rostand's first play lifted him in the night from lowliness to Parnassus.

Idolatry, excitement, exhaustion—who can tell the cause?—disturbed the balance of his reason. There was a time when Sarah Bernhardt feared that he would never finish 'L'Aiglon.' But he did. His intellect rallied to the task. All his nervous force was squeezed into the second work. It was the crisis of his life. The fate of 'Cyrano' had been as nothing compared to it, for in those happy days of obscurity he had nothing at stake. 'L'Aiglon' meant everything. His friends knew that 'L'Aiglon' was written with his heart's blood. Mme. Bernhardt knew it. The very prompter and stage hands knew it. They read it in the author's burning eyes, in his hands through which one saw the light, in the twitching of the muscles about his mouth.

"Theophile Gautier observed that literature had ever been, for the genuine artist, a 'Via Dolorosa.' As if divining how to the bitter end his disciple—De Maupassant—would verify his words, he said, speaking of these modern times, when 'every sensation is the subject of an analysis': 'If the artist can not find another corpse he will stretch himself on the dissecting-table and plunge the knife into his own heart.' Rostand, unlike De Maupassant, wove into his art no trace of the morbid. His plays were as wholesome as the sunshine. He did not share De Maupassant's pessimism nor his gloomy speculations about the unknown. The two men resembled one another only in their prodigious capacity for work."

CONTEMPORARY LITERATURE IN AUSTRALIA.

THE imperial idea, which continues to dominate British politics, may perhaps have a wide extension also in British literature in the ensuing century, for the colonies not only already send their contingent of men and guns for the defense of the mother country in war, but are beginning to furnish a respectable contingent to the ranks of English men of letters. We are all familiar with the Canadian contingent, both in war and literature. A less known group of writers is that composed of the Australian authors of to-day; yet Mr. Frederick Dolman, writing in *Cassell's Magazine* (April), says they easily take the first place in the literature of the colonies.

Besides Adam Lindsay Gordon, "the poet of the Bush"; Henry Clarence Kendall, "the Australian Swinburne"; and Marcus Clarke, the author of "For the Term of His Natural Life," pronounced by Lord Rosebery "one of the most thrilling stories in the language"—all of whom belonged to a past generation, Australia can to-day claim at least half a dozen authors known in both hemispheres. Of these, Mr. Dolman speaks particularly concerning Mrs. G. F. Cross ("Ada Cambridge") and Mr. T. A. Browne ("Rolf Boldrewood"), of Melbourne; Mrs. H. R. Curlew ("Ethel Turner"), of Sydney; Mr. James Brunton Stephens, of Brisbane; and Mrs. Campbell Praed, of Queensland. Concerning Mrs. Praed, who is perhaps the best known and most typical of these, Mr. Dolman writes:

"Mrs. Campbell Praed is the novelist of Queensland, to which she has given the pseudonym of Ljecharde's Land in honor of the great explorer. She is the daughter of a well-known Queensland politician, Mr. T. L. Murray Prior, who was more than once a member of the Queensland government, and thus acquired in her girlhood a first-hand knowledge of political life in the colonies, which has been turned to good account in several of her books. Born in 1851 at Bromalton, on the Logan River, the novelist's earliest years were spent on a lonely sheep 'run,' and after her marriage, at the age of twenty-one, she had for two years another experience of the same kind on Curtis Island, near the town of Gladstone. Her husband, a son of Bulkeley Praed, the Fleet Street banker, and a relative of W. M. Praed, the poet, had gone out to Queensland for sport and adventure, and on wedding one of its fair daughters turned sheep farmer himself for a time.

"The conventional life of London has not taken off the edge of Mrs. Campbell Praed's recollections of the Queensland bush in the 'sixties. 'I still walk warily in the long grass'—to quote her own words—'lest a death adder should be lying close to my feet. I have not ceased to dream that I am on an out-station, besieged by blacks; and during many a night do I fly through the endless

forests and hide in stone gullies, pursued by my aboriginal as ruthlessly as was ever De Quincey by his Malay."

"Bush fires, the revels of Queensland aborigines, their ferocious outbreaks against the white settlers—Mrs. Campbell Praed has described such things with matchless realism in 'The Romance of a Station,' 'Policy and Passion,' and half a dozen other novels, simply because she has, so to speak, seen them with her own eyes. When she was a little girl, for instance, the nearest neighbors to her father's station—a large family—were murdered by the blacks, and a night or two before this occurrence she had been taken by a little black boy to see, from a secure hiding-place, the guilty tribe dance the 'corroboree.' Yet Mrs. Campbell Praed never thought of giving literary form to her vivid impressions of colonial life until she had been resident a year or two in London, 'An Australian Heroine,' her first novel, being published in 1880."

Hallam Lord Tennyson, who has lately arrived at Adelaide as governor of South Australia, in his first post-prandial speech was beguiled into praising some of the verse-writers of South Australia, which he declared to be "the colony of song." From the Australian letter of *Literature* (London, March 31), we learn that this gubernatorial distinction of certain poets by name, while certain of the dimmer austral lights were unmentioned, aroused a fierce ire, which indicates that the poetic mind in the antipodes is not unlike that of other lands as to sensitiveness. Lord and Lady Tennyson were compelled to flee to a remote corner of this gigantic province to escape the wrath of these neglected sons of Euterpe.

AMERICAN AND EUROPEAN LITERATURE OF THE PAST TWO DECADES.

THE Chicago *Dial*, which has just published its twentieth anniversary number, takes advantage of the occasion to summarize the literary movements and changes that have occurred within this closing period of the century. With respect to transatlantic literature, Mr. William Morton Payne, who treats of this part of the subject, thinks that the historian of the future will see in these two decades "a period more noticeable than others of equal length for the rapidity of its literary development and the pronounced character of the changes it has witnessed." He writes:

"One of its most marked characteristics will be seen to have been the great losses which it has sustained in the death of its most forceful writers, without any corresponding compensation in the appearance of others capable of filling the vacant places. How true this is of American literature will be seen from the special article upon that subject which is to follow. That it is equally true of English literature, using the term in its narrow sense, will appear evident upon a moment's reflection. In the case of both branches of literature in the English language, the losses of the last twenty years have been so many and so great, the new writers of real force so few and far between, that we may well ask the question: Whom have we left to present to the century upon the threshold of which we are now standing? Cleverness and technical mastery are indeed offered us in many forms by our newer writers; the cleverness is almost preternatural at times, and the technic would put many of the older masters to blush. But the soul of literature does not live by these qualities alone, and, whatever momentary admiration they may arouse, they are not ultimately satisfactory. Nothing but genius gives lasting satisfaction, and to that we freely pardon those minor defects upon which pedagogs are wont to frown. Genius, however, is coming every year to be a rarer commodity in English literature, and the deficiency appears startling when we contrast the conditions of to-day with those of the 'sixties and the 'seventies."

On the Continent the outlook is not so dark, he thinks, as in England. The strong resurgence of national feeling among nearly all the European races has resulted in a strong stimulus to literary activity.

In Spain, "a distinctively modern school of fiction" has arisen "which has justly challenged the admiration of the reading world." Mr. Payne mentions Alarcon, Galdos, Valera, Valdés, Señora Bazan, and Echegaray as the marks of this transition of Spanish literature. In Italy, despite the "unhealthful phase" illustrated by D'Annunzio, we have also the "sane developments" represented by De Amicis, Fogazzaro, and Verga, tho Carducci remains "the one great Italian poet of our time." Jokai in Hungary, Maeterlinck in Belgium, Couperus the Dutch novelist, "Maartens," "practically an English novelist," receive honorable mention from Mr. Payne. Sienkiewicz is referred to as "the most remarkable genius who has appeared in continental literature" during the period under review. The one great name in Russia since Turgeneff's death is Tolstoy, and he stands the shadow of a great name ("*stat magni nominis umbra*") since he began his erratic strays in the morass of didacticism. The widening of Ibsen's fame is, of course, the important literary event in Scandinavia.

With regard to German literature, Mr. Payne says:

"Herr Hauptmann now occupies the most conspicuous place in German letters. For some years the race was close between him and Herr Sudermann, but at present he seems to have outdistanced his only serious competitor. The prominence of these two writers, who are distinctly the most serious representatives of the Young Germany of letters, is important not only because of the intrinsic value of their writing, but also because they have given a new impulse to that form of the drama which is both *bühnen-mässig* [theatrical] and literary. This modern rehabilitation of the acting drama as a form of literary art has been going on in several countries, but in no other, not even in France, as noticeably as in Germany. The respect with which the playhouse and its associations are treated in that country represents one of the most important things that Germany is now doing for literature. But in spite of all we may say in behalf of recent German literature, the fact must be recognized that the empire has not, in the thirty years of its existence, accomplished as much as might reasonably have been expected. The output has been enormous, but mediocrity has characterized the greater part of it."

French literature, in the last two decades, has lost Hugo, Paul Verlaine, the younger Dumas, Renan, Feuillet, Daudet, Maupassant, Cherbuliez, and several other great names. Yet there are gains to offset some of the losses:

"To set off against the name of Hugo we have the name of MM. Sully-Prudhomme and Coppée. Against the names of the older dramatists we have those of MM. Sardou and Rostand. To take the place of the lost novelists we have M. Zola, whose present notoriety will not avail to save his literary reputation, M. 'Loti,' M. Bourget, M. Rod, and a host of other excellent second-rate men. We have also, indeed, M. Anatole France, that well-nigh impeccable *prosauteur*, but even his name can not go far toward restoring the lost balance. The French literature of the past twenty years has been as prolific as ever, as far as the main departments of *belles-lettres* are concerned, but very few works in any of these departments command our attention by their preeminent excellence. There has been a noteworthy movement in poetry, in the direction of what is vaguely known as 'symbolism,' much discussed by those who affect the cult, but not to be considered very seriously by those who are concerned for the higher interests of French literature."

Turning now to British literature, Mr. Payne says:

"... The capital fact confronts us that in 1880 there were six great English poets among the living, and that in 1900 there remains but one. During the twenty years Tennyson and Browning, Rossetti and Morris and Arnold have all passed away, leaving Mr. Swinburne in exalted isolation, the only great poet of the nineteenth century whom we may hope will live to carry on into the twentieth its glorious literary tradition. Our age of gold has to all seeming reached an end, and Mr. Stedman, who a quarter of a century ago recognized in the years of the Victorian reign a distinct literary period, which even then showed signs of drawing to a close, must himself be a little surprised at the completeness with which his prediction has been borne out by the

event. In the place of our major poets we have now only minor ones, and the fact that we have them in larger numbers than ever before offers us no consolation for the loss of the great departed. Aside from Mr. Swinburne, we are compelled to point, when questioned concerning our living poets, to Mr. Aubrey De Vere, Mr. George Meredith, Mr. Theodore Watts-Dunton, Mr. Robert Bridges, Mr. William Watson, Mr. Stephen Phillips, Mr. W. B. Yeats, and Mr. Rudyard Kipling. We hold these men in esteem, it is true, but however we may admire the delicate art of Mr. Bridges, for example, or the resonant virility of Mr. Kipling, our sense of proportion does not permit us to set these men upon anything like the plane occupied by the great poets who have died since 1880. And, with but few exceptions, our living poets seem to be no more than 'little sonnet-men.'

'Who fashion, in a shrewd, mechanic way,
Songs without souls that flicker for a day,
To vanish in irrevocable night.'

Prose fiction of some sort or other we have always with us, and the names of Mr. Meredith and Mr. Hardy would lend distinction to any period; but the great age of the Victorian novelists ended with the death of 'George Eliot' in 1881. Altho frequently compared with that woman of genius, Mrs. Ward may hardly be said to fill her place. Since her death we have also lost Lord Beaconsfield, Trollope, Black, Blackmore, and Stevenson. When we turn to the great writers of prose, the contrast between the living and the dead is seen to be almost as pronounced as in the case of the poets. Within twenty years, Carlyle and Ruskin, by far the greatest *prose-writers* of our time, have ceased to appeal to us with the living voice. . . . The two most conspicuous cases of personal success achieved in English authorship during the past twenty years have been those of Stevenson and Mr. Kipling. Both afford striking illustrations of the 'craze' in literature. A few years ago we were told by many enthusiastic readers that in Stevenson the great masters of our fiction had found a worthy successor. More recently we have been assured that Mr. Kipling is a great poet, and the ill-considered laudations of his admirers have been dinned into our ears. Such outbursts of uncritical applause always make the judicious grieve, but their effect soon wears away, and the men who occasion them come to be viewed in the proper perspective. Stevenson has already taken his place as an entertaining novelist of the second or third class, and his singularly lovable personality is not now mistaken for literary genius by any great number of persons. Mr. Kipling, likewise, is fast coming to be viewed as a member of the considerable company of the minor poets of to-day, and his essential message, the more closely we examine it, is found to make much of its appeal to the more vulgar tastes and the baser instincts of human nature. Mr. Stephen Phillips is the latest of the 'new poets' who are discovered and exploited now and then by English critics, and there is no reason thus far apparent why his case should not parallel that of all the others. He has, no doubt, an exceptional gift of refined poetic expression, but there is no distinctively new note in his song; there is merely a new blending of the notes which are already familiar to us."

In a succeeding article, Prof. William F. Trent deals with American literature of the past twenty years. After a necrological list which shows how completely here, as in England, one literary era has been closed and a new one begun, the writer notes an important change in the shifting of the literary center. "New England is still influential," he remarks, "but does not dominate our literature as formerly."

Mr. Trent shows that American novelists since 1880 have developed still more fully the tendency then evident of portraying limited classes and areas. Bret Harte and Mark Twain have been followed by Cable, Miss Murfree, James Lane Allen, Joel Chandler Harris, Miss Wilkins, and Stephen Crane. But some of our writers have aimed at wider work, and have taken Balzac, the great student of society as a whole, for their master:

"A small group of realists is treating New York in the manner if not with the success that Balzac treated Paris. The influence of Turgeneff and of Tolstoy has also been felt by them, and they have done work distinctive in character and far-reaching in its effects. . . . With the exception of the numerous and excellent

short stories, an admirable form of fiction in which Americans have succeeded since the days of Irving, Poe, and Hawthorne, and in which the period just closing has probably done more than merely hold its own, is not the work of the realists the most typical product of the period?"

As for what Mr. Trent terms "the sacred realm of poetry," while the great spirits have passed away, there are some shafts of light to be seen in the sky. Two facts, he says, are interesting. One is that even in the most out-of-the-way localities young poets of distinct ability are serving the Muse, in spite of public neglect; the other is that our two most original poets—Poe and Walt Whitman—are at last fully coming to their kingdom. But yet the contrast between the new and the old is great: "With the deaths of the great New England poets and of Whitman we have been left with a few true and fairly distinguished poets and with many minor ones of varying excellence, but with no great ones, even in the limited sense in which 'great' can be applied to any American poet."

MR. GEORGE MOORE AND THE NEW CELTIC DRAMA.

MR. GEORGE MOORE, who, after lately shaking the dust of England from his feet, has been saying severe things of the state of the English drama and English literature, has expressed the hope that even if there were a general downfall of British literature, art, and drama, a new light would rise for the world from the group of Irish poets and dramatists now gathered in Dublin. Not every one, however, takes so hopeful a view of Ireland. Indeed, Mr. William Archer, the most highly esteemed dramatic critic in England, is so unfeeling as to announce that he fails to see "one trace of original dramatic or poetic impulse" in the present Irish movement, and particularly in Mr. Moore. He calls the latter "a clever man, saturated with the esthetic doctrines of a particular school." But not thus are great dramas created:

"The dramatist makes his play in obedience to the demon within him, and leaves it to the critic to fit his work as best he may into a historic movement or an esthetic scheme. Æschylus and Sophocles were not inspired by Aristotle's 'general ideas'; on the contrary, Aristotle generalized his ideas (more or less successfully) from preexistent masterpieces. Shakespeare did not say to himself, 'Go to, we have thrashed the Armada, and founded the British empire; it is high time for Art to make its appearance in England; therefore I will write "Hamlet" and "Lear." ' Ibsen did not get around him a body of friends to discuss 'the art history of the world,' and find in it reasons for writing 'Brand' and 'Peter Gynt,' 'Ghosts,' and 'The Wild Duck.' He left his country; he cut himself adrift from all his friends; he shut himself up in his own proud, indignant soul, and produced masterpiece upon masterpiece, on no principle whatever, but simply because he could not help it. Even M. Maeterlinck's 'general ideas' upon the drama are generalized from the methods which his executant genius led him to adopt; only in a secondary and unimportant sense are his methods founded on his general ideas. Reflection, in a word, has never made a great dramatist, and never will. . . . Mr. Moore, in the present stage of his development, can do nothing without a generalization to prompt and guide him."

In Mr. Moore's new play, "The Bending of the Bough," his two fundamental principles—that Ibsen and Maeterlinck are the greatest of modern dramatists, and that a new efflorescence of the drama may be looked for in Ireland—are constantly to be observed. Mr. Archer, as we have seen, does not think very highly of the latter theory. Never, he says, has any great dramatist been the self-conscious mouthpiece of a school; "If Ireland is ever to find her O'Shakespeare or M'Ibsen, he will surely arise without, not within, the concentric circles of the Irish Literary Theater and the Celtic Renaissance."

SCIENCE AND INVENTION.

NEW ELECTRICAL TREATMENT OF TUBERCULOSIS.

THE daily press has recently had a good deal to say about an experiment in the treatment of consumptives now being tried in St. Luke's Hospital, New York. The system used is one devised by Francisque Crôtte, a Frenchman who is not a physician, but who has devoted much time to the study of medicine and chemistry. Crôtte's plan is to introduce antiseptic medicines into diseased tissue by means of static electricity, sponge electrodes being saturated with the medicine. The use of electricity in this manner is not new, but Mr. Crôtte seems to have made advances in its practical application, particularly to consump-

FIG. 1.—Crôtte's Electrical Treatment of Tuberculosis.—Motor-Driven Static Machine and Method of Treatment.

tion. Of course such an experiment is always treated sensationally by a certain class of papers, but the fact that it is taking place in a reputable and conservative institution is a guaranty against mere quackery. The following results of an interview with the inventor are given in *The Western Electrician* (April 21):

"Referring to the illustrations, Fig. 1 shows the Crôtte static machine and the method of treatment in the early stages of tuberculosis of the lungs. Fig. 2 shows the application of the formaldehyde by means of static electricity and sponge electrodes applied to the chest. At the same time other medicaments are inhaled. Fig. 3 represents the treatment of a patient in an advanced stage of the disease, who is said to have been cured. Mr. Crôtte is shown at the right in this picture. His statement is, substantially, as follows:

"For several months the Francisque Crôtte electrical method of treating consumption has been the subject of official test at St. Luke's Hospital. Nine physicians have been appointed as a committee to watch and test the results of the experiment. The Board of Health of the City of New York occupies the position of referee in the matter, for, to avoid the possibility of error, all the microscopic examinations that are necessary are made in duplicate, one at the hospital and one in the laboratories of the Department of Health.

"The Crôtte method of treating consumption secures entrance to a cavity in the body hitherto closed to medicaments. A powerful germ-killing drug is placed upon the patient's chest, and, by the power of electricity, is driven through the skin, flesh, and bone of the chest-walls, and so into the diseased structure of the lungs.

"Consumption depends for its existence upon the presence of living germs or microbes in the lungs. If these germs can be

killed, or if they die, the lung will spontaneously heal and the patient is said to be cured of consumption. That cure takes place quite frequently in nature. Men whose business it is to make autopsies say that in 50 per cent. of the cases that come under their hands there is proof in the lung tissue that at some time or other the subject under their hands had consumption, and had it badly. Nevertheless, nature had effected a cure, and it is the knowledge of this fact that has encouraged physicians always to regard consumption as a curable disease.

"It was Pasteur who first discovered that consumption, or tuberculosis, as it is called scientifically, was caused by the ravages of a specific microbe or bacillus. This bacillus is a short, rod-shaped organism, sometimes slightly curved. It is always present in the matter expectorated by a person suffering from consumption, and is found in quantities in the diseased cavities of the lungs.

"The discovery of the specific bacillus of consumption was the first great step toward its cure. The recognition of the fact that it was a contagious disease was the second. The third step is yet to come. It is to be hoped that the third step may mean the recognition of a certain method of cure."

Nearly every method of treatment heretofore attempted, we are told, either was an inoculation treatment, or an attempt to convey drugs to the diseased cavities in the lungs by inhalation. The Crôtte treatment differs from both of these methods. It has been demonstrated that the germs of consumption are destroyed by formaldehyde gas, and it has long been known to scientists that if some method could be found of bringing this gas into contact with the lungs it would at once kill the bacilli. Unfortunately, the gas can not be breathed, because it causes severe coughing, which is dangerous in the case of a consumptive. To quote again:

"Professor Crôtte, in his investigations into tuberculosis, became familiar with formaldehyde gas, but, unlike other investigators, he was not deterred by the difficulty of using it.

Certain discoveries which had been made in the realm of electricity occurred to him. He knew that a large French manufacturing establishment was driving waterproof material into wood by means of electricity. It occurred to him that what electricity could accomplish in the case of vegetable fiber it could possibly do for the muscular fiber of the human body, and he tried the experiment. The result was success and the establishment of the Crôtte method of treating consumption by means of formaldehyde gas.

"Professor Crôtte says his treatment will cure every case of consumption in the first stages of the disease, 75 per cent. in the second stage, and 30 per cent. in the third, or so-called 'hopeless' stage. Professor Crôtte has been conducting a clinic in Paris for the past five years, and it is a matter of record that he has cured consumptives in about the percentages mentioned. His discovery of a system by means of which formaldehyde gas can be actually forced into the lung cells by means of electricity is the result of many years of experiment. . . .

"As a measure of precaution Professor Crôtte used static or

FIG. 2.—Crôtte's Electrical Treatment of Tuberculosis.—Electrical Application and Inhalation.

natural electricity, rather than dynamic, because of the danger to the patient from the use of the latter current. There is nothing secret about the operation. Professor Crôte devised electrical machines for administering the currents properly, sponges saturated with formaldehyde being applied to the patient's back or chest and attached to the poles of the apparatus.

"In applying the treatment the patient is stripped to the waist, and, after being placed on a couch or operating-table, is carried near to the machine. Then a sponge filled with formaldehyde is attached to one pole of the electric machine and placed on the sufferer's body. In some cases another sponge, similarly charged with the gas, is held close to the mouth of the patient and connected with the battery, and the gas is inhaled in deep inspira-

tions, while in some cases the second sponge is placed against the patient's chest.

"Then the electric machine is started and the static electricity flows in a steady current through the sponges and into the body of the patient, carrying the formaldehyde with it and destroying all germs with which the gas comes in contact. One of the experiments in connection with the treatment consists in an examination of the matter expectorated by the patient just before the current is applied. The germs are found by the thousand, alive and moving. Immediately after the operation another ex-

FIG. 3.—Crôte's Electrical Treatment of Tuberculosis.—Manner of Treating Patient in Advanced Stage of the Disease.

amination is made. Usually all the germs discovered are dead.

"Day after day this process is repeated, the lungs gradually healing as the germs are killed and the searching gas goes deeper and deeper into the cells, searching out the cavities containing the bacilli, until at last all have been killed by the deadly formaldehyde. Then the patient is cured.

"The machine used by Professor Crôte to obtain the powerful force he uses is of his own invention. The machine is composed of eight cylinders of ebonite, of great surface, placed one within the other, but turning in opposite directions. The machine is operated by a one-horse-power motor. The full details of his machine are at present guarded by Professor Crôte, as his patent protection in this country is not yet perfect, but he claims for it the power of producing a voltage considerably over the million mark, while at the same time the amperage is very low. The static flow is very long and powerful."

Warm Water to Determine Sensitiveness to Heat.

—Since it has been discovered that the nerves of temperature are distinct from those that transmit ordinary tactile sensations, many tests of the sensitiveness of these nerves in different parts of the body have been made by physiologists. It is important, of course, to make these tests in such a way that an ordinary sensation of touch shall not be confounded with a sensation of heat or cold. Two French experimenters, Messrs. Toulouse and Vaschide, have recently constructed what they name a "thermoesthesiometer," in which drops of warm water are employed to test the sensitiveness of the body to heat. An account of this instrument was read on January 21 before the Paris Academy of Sciences. Says *Cosmos* (February 3) in its report: "A good thermoesthesiometer should be practically without weight, should be able to test small surfaces for the determination of hot and cold points, and should be inoffensive. Warm water, in the form of drops, fulfils all these conditions. When we let fall from an average height of one centimeter [about half an inch] on a point of the skin, a drop of distilled water weighing less than one tenth of a gram [$1\frac{1}{2}$ grains] and heated to a temperature near that of the subject's skin, the latter will feel no sensation of

contact. Consequently, if a drop of water of the same weight, but hotter or colder, is felt by the subject, it must be on account of its thermic qualities alone. Boiling water can not be hotter than 100° C. Now, a drop of water one-tenth gram in weight, taken from a mass of boiling water, gives a sharp sensation of pain, but does no injury whatever. It is on these principles that Messrs. E. Toulouse and N. Vaschide have made a thermoesthesiometer, composed essentially of a drop-counting bottle filled with distilled water and furnished with a thermometer."—*Translation made for THE LITERARY DIGEST.*

A NEW X-RAY DISCOVERY.

AN interesting discovery which may not only aid in throwing light on the nature of the Roentgen ray, but is practically valuable, has been made by Prof. Francis E. Nipher, of Washington University, St. Louis. This discovery, in the words of a brief report in *Science*, is as follows:

"Professor Nipher has discovered that when photographic plates are exposed to the light of an ordinary room for a few days, they may still be used for taking x-ray pictures. If while the Crookes tube is acting on the plates they are still exposed to the ordinary light of a room, they develop as positives. The shadows are dark. If they are in a plate-holder when exposed to the x-ray, the pictures are like those formed in the ordinary way, and they are apparently as clearly defined.

"The advantage of the method is that the plates may be developed by the light of a lamp. The developer (hydrokinone) being weak and cool, the process may go on for an hour if desired, and all the details may be studied as they appear. In this way, details which are sometimes obscured by overdevelopment may be seen as they appear, altho they might not show in the fixed negative.

"The development of such plates in darkness is liable to fog the plates. If plates do fog, they may be cleared up by taking them nearer to the lamp."

An article on the subject in *The Daily Globe-Democrat* (St. Louis, April 19) runs, in part, as follows:

"Of the value of the discovery and its practicability, however, there is not the slightest doubt in Professor Nipher's mind, and local scientific men who have investigated the matter agree with him perfectly.

"Professor Nipher's discovery, which was made while working in the laboratories at Washington University, involved nothing less than the developing of x-ray photographs without resorting to the 'dark rooms,' thereby enabling the operator to study the details of the photograph as they appear. In order to secure this advantage it is necessary to expose the sensitized plates to the light of an ordinary room for several days before using them. The plates do not become black from this exposure, but assume a somewhat darker hue, of course, than before the exposure. Then the photograph is taken on the specially prepared plate, and, instead of being developed in a perfectly dark room, with only the light which sifts through a thick red glass to guide the operator's hands, these x-ray pictures can be developed by the light of an ordinary lamp."

Professor Nipher is reported as saying:

"I have been working on the matter for four or five years, and finally hit upon the discovery in the course of experimentation. You see, we never know what we are going to run upon in a course of investigation, and some of the most important discoveries in the scientific world have been made quite by accident. If any other x-ray experimenter has hit upon the same discovery I have never heard of it. He certainly has not published the fact extensively if he has."

Motor-Vehicles for Heavy Traffic.—The official report of an exhaustive trial of such vehicles, which took place last summer in Liverpool, England, has just been issued. From a notice in *The Engineering News* (April 12), we learn that the jury state that the vehicles tested have reached such degrees of mechanical excellence that their use will be attended with suc-

cess and economy, as compared with horse traction. On paved streets the speed is double that of horses with equal loads, and the motor wagon overcomes the present difficulty of ascending and descending hills. "They will compete advantageously with horses," the report goes on to say, "for the transport of loads of four to six and one-half tons over distances up to forty miles, for this distance a working day of twelve hours should be sufficient for collection, transport and delivery." Four tons carried on three tons of dead weight at five miles per hour is the maximum satisfactory performance to this time; but a load of seven tons can be carried if a single trailer be used. The judges strongly hold that the requirements of trade in large manufacturing and distributing centers can not be met with a load limit of four tons; to satisfy existing conditions six and ten tons must be carried on one platform.

ACHIEVEMENTS OF ELECTRICITY IN HUMAN PROGRESS.

WHY has the nineteenth century added more to science than all preceding time? An attempt to answer this question is made by George Iles in a recent book, entitled "Flame, Electricity, and the Camera" (New York, 1900). Mr. Iles discerns "the promise of the wireless telegraph in the first blaze kindled by a savage," and his book thus becomes a history of human progress. In the development of electricity now taking place, we may observe, says Mr. Iles, just such an impetus to human intelligence and power as when fire was first subdued to the purposes of man. But whereas the subjugation of fire was accomplished only by "ages of weary and uncertain experiment," the mastery of electricity is being gained in comparatively few years. Why is this? As we examine electricity in its fruitage, says Mr. Iles in answer to this question, we shall find that it "bears the unfailing mark of every other decisive factor of human advance; its mastery is no mere addition to the resources of the race, but a multiplier of them." The case is not as when an explorer discovers a plant hitherto unknown, or a prospector comes upon a new metal. Almost infinitely higher is the benefit wrought when energy in its most useful phase is for the first time subjected to the will of man. "It begins at once to marry the resources of the mechanic and the chemist, the engineer and the artist, with issue attested by all its own fertility, while its rays reveal province after province undreamed of, and indeed unexisting, before its advent." Mr. Iles says further:

"As we trace a few of the unending interlacings of electrical science and art with other sciences and arts, and study their mutually stimulating effects, we shall be reminded of a series of permutations when the latest of the factors, because latest, multiplies all prior factors in an unexampled degree. We shall find reason to believe that this is not merely a suggestive analogy, but really true as a tendency, not only with regard to man's gains by the conquest of electricity, but also with respect to every other signal victory which has brought him to his present pinnacle of discernment and rule. If this permutative principle in former advances lay undetected, it stands forth clearly in that latest accession to skill and interpretation which has been ushered in by Franklin and Volta, Faraday and Henry."

In announcing thus the "permutative" force of each latest accession to the means of human progress, and illustrating it by means of our advance in the use of flame, electricity, and the camera, the author has made a real contribution to the theory of evolution. Another fact that he bids us note is what he calls the occurrence of leaps in progress. Growth, he says, may be slow, but efflorescence is rapid. The arts of fire were elaborated slowly till the crucible and the still appeared, and then suddenly we possessed pure metals, glass, and corrosive acids. "These were combined in an hour by Volta to build his cell, and in that hour began a new era for human faculty and thought." The author's recital of the steady series of triumphs won by man in the field

of science, with the underlying contrast between what he calls minor and supreme accessions, is most significant. It is more than all else a narrative of the achievements of electricity, and a history of how in the end it is supplanting the very force (fire) that made possible its own discovery and development.

FOOD VALUE OF MEAT OF DIFFERENT KINDS.

THE food value of the eggs consumed in a great city is nearly as great as that of the beef eaten in the same city. This is a startling statement, but it is supported by the evidence of statistics taken by the Paris city-tax authorities. Unless the Parisians are for some reason unusually large consumers of eggs, the proportion will presumably hold good elsewhere. These and the other facts given below are from a paper read to the Paris Academy of Sciences by M. Balland, who has endeavored, by new and exhaustive analyses, to correct the data given by previous workers in this line. M. Balland has taken great pains to use pieces of meat that presented, as nearly as possible, the habitual conditions of culinary usage. Says *Cosmos*, in an account of his results (April 7):

"The flesh of the fore and hind quarters of the principal mammals used for food (beef, veal, rabbit, mutton, pork, ass, horse, and mule) gives, when the fatty layers have been removed, 70 to 75 per cent. of water; 0.5 to 1.25 per cent. of mineral matter; 1.4 to 11.3 per cent. of fat, and 3 to 3.5 per cent. of nitrogen.

"The heart, the liver, and the lungs contain the same quantities of water and nitrogen as lean meat; the fat remains below 5 per cent. and the mineral matter between 1 and 1.7 per cent. There are traces of manganese in the lungs.

"In the blood of beef, veal, mutton, and pork, there is about 83 per cent. of water, less than 0.5 per cent. of mineral matter, traces of fat and about the same quantity of nitrogen as in the meat of the fore and hind quarters, which contain less water than the blood.

"Broiled or roast meat contains, when dry, about the same quantities of nitrogen, fat, and saline matter as raw meat in the same condition; but as, after cooking, the proportion of water falls to 64 or even to 42 per cent. according to the thickness of the piece and the time of cooking, the result is that, for equal weight, broiled or roasted meat is richer in nutritive principles than when raw.

"Boiled meat, such as is served in the Parisian eating-houses, loses not only water during cooking, but also soluble nitrogenous matter, fat, and mineral matter, which passes into the bouillon, but for equal weight it still is more nourishing than the raw meat, which contains a larger amount of water.

"The flesh of birds (ducks, goose, chicken) contains the same nutritive elements found in the flesh of mammals, but in slightly greater proportion, for the percentage of water in the former approaches 70. The diminution of water, outside of the facts noted above, for butcher's meat, would seem also to be connected with the mode of feeding; in roast fowl it approaches 52 per cent.

"Hens' eggs merit special mention. The white and the yolk, taken separately, are of very different composition; the first contains 86 per cent. of water with 12 of albumin and 0.5 of mineral matter; the second, 51 per cent. of water, with 15 of nitrogenous matter, twice as much fat, and 1.5 per cent. of mineral matter. The egg as a whole is 75 per cent. water, and therefore furnishes 25 per cent. of nutriment. Two eggs, without the shells, weigh, on an average, 100 grams [1,543 grains], so that 20 eggs represent quite exactly the food value of 1 kilogram [2.2 pounds] of meat. A fowl, in a few days, thus furnishes her own weight of food substance; she is a veritable manufactory of edible products, and the breeding of the best-laying varieties of fowls can not be too highly commended. In 1898 there were declared at the Paris *octroi* [city tax offices] 538,299,120 eggs, representing (allowing 50 grams to the egg) 26,914,956 kilograms [about 27,000 tons] of food-substance, equivalent to the quantity of beef (without the bones) furnished by 168,200 oxen of 400 kilograms [880 pounds] each, or two thirds the number of oxen entered at Paris in 1898."—*Translation made for THE LITERARY DIGEST.*

MEASUREMENT OF THE ACUTENESS OF HEARING.

INSTRUMENTS for measuring the acuteness of the ear for sounds, known as acoumeters, have been used in investigation for some time, but have not been altogether satisfactory. They are generally in the form of tuning-forks, or of vibrating rods. But the material and form of vibrating bodies can not be clearly defined, so that it is difficult to make forks or rods of precisely equal sonority, and, besides this, the actuating force, such as electricity or mechanical blows, is equally difficult to measure and regulate. In a recent investigation, Messrs. Toulouze and Vaschide, two French physicists, use drops of water falling from a known height on a vibrating-plate. The principle had been used before, but the falling bodies had usually been solid balls of metal, or the like, which could not be made to drop regularly at sufficiently short intervals. The substitution of dropping water seems to have brought about a satisfactory solution of the problem. We translate a description of the new method from *Cosmos*, (Paris, March 31). Says the writer of a notice in that magazine:

"The method consists in causing the person experimented upon to listen, at a fixed distance, to noises of progressive intensity, determined by drops of distilled water of constant weight, falling from constantly increasing heights on a definite metallic body. Thus the conditions of the phenomena are exactly determinate, and the measurements taken by different observers are comparable.

"This acoumeter is composed of a flask filled with distilled water, giving, by means of a properly regulated faucet, drops, each of which weighs 0.1 gram [1.5 grains], the height of the water above the faucet, which determines the pressure, remaining constant during the experiment. The drops fall on the center of an aluminum disk, one centimeter [0.4 inch] in diameter and 0.1 millimeter [0.04 inch] in thickness. This metal does not rust, and is sufficiently sonorous.

"In order that the drops shall not, by accumulating, diminish the sound of the vibration, the disk is kept at an inclination of 20°. This vibrating-plate, for a drop of water falling from a height varying from 0.1 to 1 meter [4 to 40 inches], 40 simple vibrations a second, as may be verified by inscribing them directly on a registering cylinder.

"The experiment is performed in silence. The subject has his eyes blindfolded, and his ear is placed exactly 0.2 meter [8 inches] from the center of the vibrating-plate. The faucet being open, the drops are allowed to fall from a height of 0.01 meter [0.4 inch]. At this distance they cause no perceptible sound. The length of the fall is increased slowly, by raising the movable reservoir, until the subject has an auditive sensation, and the experiment is repeated ten times, in order that an average of the results may be taken.

"The sound may be stopped by receiving the drop on a sponge when it is desired to find out whether the subject thinks or says that he hears a sound, when he really does not."—*Translation made for THE LITERARY DIGEST.*

Longevity in the Tropics.—In striking contrast to those who maintain that Northern races can not live in tropical countries, Dr. Below, who has practised medicine for years in Guatemala and Mexico, counsels Europeans who wish for a long life to settle in the tropics. The stories of longevity in those regions contributed by him to the *Tagliche Rundschau*, go to show that the sun is the best of all doctors. "Northerners go toward the South," says *The Humanitarian*, summarizing Dr. Below's contributions to the German magazine, "for more light and more warmth—that is to say, for more sunshine. They will find what they want in the tropics, tho with two serious drawbacks; one is malaria, the other is alcoholism. He contends, however, that 'the first of these evils is only dangerous for those who play with the second.' The man who wishes to live long in the tropics ought to be an abstainer from alcohol. The number of 'tropical nonagenarians' is, the doctor further points out, surprising, even after a few years have been deducted from some of the old men and women, who take a pride in exaggerating their age. Out of

the 1,300,000 inhabitants of Guatemala, says he, more than a fifth have attained to the age of between forty and one hundred years. Those who age early are invariably great drinkers. Men and women who have passed their seventieth year are often remarkable for their mental and bodily vigor. He mentions an old gentleman of ninety-eight who has lately married a fifth time, and is rejoicing in the birth of a son."

Poisonous Illuminating Gas.—The change in the composition of illuminating gas during recent years, it is believed by *The Hospital*, should create anxiety in regard to its influence on public health because of the considerable amount of carbonic oxide which is now so often mixed with it. "Gas," as it is called," says this paper, "has always been more or less poisonous, but only by virtue of one constituent, namely, carbonic oxide, which in old days, when gas was the unadulterated product of the distillation of coal, was present in only small proportions, say about 7 per cent. Nowadays, however, gas companies do not hesitate in an emergency to mix very large quantities of this poisonous compound with their coal gas, and to send it out to their customers without a word of warning, while some companies habitually send out a compound containing over 50 per cent. of carbonic oxide. So far we have not much proof of many deaths having been caused by this compound in England, but in America, where they have a longer experience of its use, the danger has been shown to be very considerable. In a paper on the subject, read by Dr. Haldane before the Society of Medical Officers of Health, he puts the matter in a somewhat striking form when he says that 'the total death-rate from poisoning of every kind in this country, whether by gases, liquids, or solids, and whether accidental or suicidal, is only about half the average death-rate from water-gas poisoning alone in Boston, New York, San Francisco, and Washington.' We do not think, however, that the evil consequences arising from the inhalation of water gas ought to be measured exclusively by deaths; even in non-fatal doses carbonic oxide is definitely deleterious to health, and not improbably, considering the leaky condition of many gas pipes, is the active cause of many mysterious maladies which are only relieved by change of air."

SCIENCE BREVITIES.

THE LARGEST CRYSTAL.—At Acworth and Grafton, N. H., very large crystals of beryl have been found. One from Grafton weighed 2,900 pounds, and another from the same locality was 25 by 24 inches and weighed by calculation about 2½ tons. In Utah crystals of gypsum, sulfate of lime, over 4 feet long have been found. What is probably, however, the largest crystal yet recorded, says *The Engineering and Mining Journal*, was mentioned in a paper by E. O. Hovey on the Harney Peak District, S. Dak., read before the New York Academy of Science. This was a crystal of spodumene, lithium-aluminum silicate, which, by actual measurement, was 30 feet in length.

MOUNTAIN TOOTHACHE.—Mr. Hafner, of Zurich, according to *Die Natur*, finds that all the engineers and workmen on the Jungfrau Railway who are obliged to remain a considerable time at altitudes of about 2,600 metres above the sea-level are liable to a disagreeable complaint. "After eight or ten days they are seized with violent pains in several teeth on one side of the jaw, the gums and cheek on the same side becoming swollen. The teeth are very sensitive to pressure, so that mastication is extremely painful. These symptoms increase in severity for three days, and then gradually and entirely disappear. It seems to be purely a phenomenon of acclimatization, for all newcomers go through the complaint, and it appears never to recur.

In a recent address on "The Growth of Science" Sir Michael Foster thus strikingly set forth, as quoted in *The Lancet* (September 16), the degree to which modern ideas had been influenced by the chemical discoveries of the past century. He said: "To-day the children in our schools know that the air which wraps round the globe is not a single thing, but is made up of two things, oxygen and nitrogen, mingled together. They know, again, that water is not a single thing, but the product of two things, oxygen and hydrogen, joined together. They know that when the air makes the fire burn and gives the animal life it is the oxygen in it which does the work. They know that all round them things are undergoing that union with oxygen which we call oxidation, and that oxidation is the ordinary source of heat and light. Let me ask you to picture to yourself what confusion there would be to-morrow, not only in the discussions at the sectional meetings of our Association, but in the world at large, if it should happen that in the coming night some destroying touch should wither up certain tender structures in all our brains and wipe out from our memories all traces of the ideas which cluster in our mind around the verbal tokens, oxygen and oxidation. How could any of us, not the so-called man of science alone, but even the man of business and the man of pleasure, go about his ways lacking those ideas? Yet those ideas were in 1799 lacking to all but a few."

THE RELIGIOUS WORLD.

THE RELIGIOUS PRESS ON THE MISSIONARY CONFERENCE.

THE final days of the great Ecumenical Conference confirmed the opinion commonly accepted during the earlier days of the session—namely, that it would prove the most widely attended and most important missionary gathering of the century. About 2,800 delegates were present, representing 150 missionary societies, drawn from over sixty different countries and from about forty religious denominations. The daily average attendance at the conference—not counting the overflow meetings—was estimated at 15,000.

Among the features most commented upon, aside from the greatness and harmony of the gathering, was the general desire apparent on the part of the delegates to leave doctrinal differences in abeyance, and even to minimize the importance of creeds. One delegate, Dr. Behrends, of Brooklyn, who announced that he would gladly sign any creed that permitted him to sign all creeds, and who later said that what is most needed is "the power to put all creeds in a pile and set fire to them and burn up the dross," was frequently interrupted by applause, although some of the delegates are said to have been astonished at this new way of announcing the gospel. In general, also, the press reports call attention to the general disposition shown to give predominance to measures of physical and medical relief, and to bring into play the culture and uplifting forces of civilization, as a primary aim of missions.

The religious press is for the most part warm in its appreciation of the work of the Conference. *The Watchman* (Baptist, April 25) says:

"Perhaps as marked advantage as any that will accrue from this Conference will be found in the personal acquaintance and association of the men and women who are giving themselves to the work. It is twelve years since the last Conference was held in London. In that time many of those who were our leaders have fallen. To go no further than the officers of our own Missionary Union, Murdock, Duncan, and McKenzie are with us no more. A new generation is coming on the stage. The torch is passing from the strong hands that carried it to new hands. A meeting like this brings the tradition, the impulse, and the devotion of an older day into relation with new minds and hearts. It does what the printing-press can not do. It brings personality into touch with personality. It bears on from soul to soul the sacred fire of self-devotion to the highest and noblest ends."

The Northwestern Christian Advocate (Meth. Episc., April 25) says:

"This convention is opportune. The world never has been in a more receptive mood than now. Railways, steamships, telegraphs, telephones, newspapers, and all manner of devices for human communications seem just about complete. Ordinary people of all nations are interested in like people of other nations as never before. Men are running to and fro and knowledge increases under conditions more promising than ever. It is said that the Arabs of northern Africa get news about the progress of the war in South Africa almost as soon as the mails can carry it to others. Their system of signaling is wonderful, even tho its present motives are sinister with respect to Christian civilization. As sinister as it may be, it yet proves that their interest is alive and suggests that better motives may cleave their minds when Christianity lifts her voice and Christ is preached by missionaries like those now gathered in New York. The world has seemed to be staggering somewhat and even the church has been more or less uncertain. We believe that the doubt is apparent only, just as an army may appear to bunch itself and waver, in order to change its direction. The rally will come. When we have gathered all our arguments to account for some recent depressing aspects of church growth and enthusiasm, it may appear that God has been offended, because the home church has done too

little for the very regions in which these godly missionaries are working.

"When they return to their distant fields, after telling us what God already hath wrought, we pray that they may take home with them more of our devoted hearts and supreme enthusiasms than ever."

The Evangelist (Presb., April 26) says:

"The outstanding fact about the Conference is precisely that which was expected: the inspiration which it is giving. The utterances of the opening meetings will long thrill through thousands of minds and warm to enthusiasm thousands of Christian hearts. And the inspiration will be all the more lasting in that it has simply raised to a higher power a deeply felt conviction of the importance of missions and the incalculable privilege of sharing in mission work, whether by personal service or by financial support.

"For it is unquestionably true, as was said a day or two ago in the *Philadelphia Press*, that interest in missions is not decreasing, but is becoming not only greater in volume, but more intelligent. Nothing can be more just than the statement of this writer that 'the unfounded impression that what are known as liberal views in theology would decrease interest in missions should be dissipated by the evidence furnished by the present missionary Conference.' This evidence is overwhelming and irrefragable."

The Living Church (High-Church Prot. Episc., April 21) says:

"We do not desire to attack any one. But if our opinion be asked of this Ecumenical Conference, we give it. We regard the name *Ecumenical*, as used in this connection, as absurd. That word has a definite historical meaning which is utterly inapplicable to this gathering. We are interested in the proceedings of this body. We are glad to have missionary problems discussed, and missionary information disseminated; but we are truly sorry that churchmen have identified themselves with it, and thus have confused the minds of many. We hope that nothing of the kind will occur again."

On the other hand, *The Churchman* (conservative Prot. Episc., April 25) says:

"There are some who dread lest this 'Ecumenical Conference' should be made a precedent, forgetting that the precedent was made by the Good Samaritan. There are those who think that if such a 'disaster' should occur as cooperation with those who are seeking to make Christ known to the world the church will step in and order her missionaries to the right-about. For our part, we are not satisfied to say that we have no condemnation for those who may preach the gospel. We have a consciousness of fellowship with them. We would begin the world-embracing process by coming nearer to our brethren in Christ, and surely such gatherings as those that Carnegie Hall has seen in these last days are such as to widen the heart of the most inveterate 'episcopal politician' or ultra-Calvinist. Is it not a heartening and soul-inspiring thing to think of the pulses that are going out from our metropolitan city to the farthest India, to the islands of the sea, to the missionaries from the Arctic to Cape Horn, carrying with them words of cheer, of promise, and of prayer?"

The Sacred Heart Review (Rom. Cath., April 28) says:

"In all the speeches made at this Protestant mission conference there was not a single allusion to the missionary labors of the church. The church has been carrying on this work for nearly two thousand years, and every nation that is Christian to-day received its Christianity from that church. Protestants entered on the work about one hundred years ago; in the meantime it has expended many millions of money, employed many thousands of men and women, but it has failed to convert even one nation to Christianity. Even the church is hindered and crossed at every step, and she fails as a consequence to gather the full fruits of her missionary labors."

The Jewish Exponent (April 27), referring to the great pecuniary expenditures for Christian missions, says:

"That the results that flow from this great expenditure of energy and money are large in volume and important in character need hardly be said. That great good has flown from it in

many ways is equally clear. Light has been brought into the dark places of the earth. Civilization has entered with Christianity in lands hitherto enwrapped in savagery and superstition.

"There is, however, an obverse side to this shield, that in the enthusiasm and triumph celebrated at great assemblages is not apt to be seen, but which the careful and impartial observer can not ignore. The missionary spirit is essentially militant, it is engaged in spiritual conquests, and its aim is victory over its foes. In its methods it partakes of the character of a warlike enterprise. Nay, it not infrequently happens that it encourages actual warfare in order to secure its purposes. The church militant marches shoulder to shoulder with imperialism in the state and in the name of religion and civilization imposes its sway upon subject nations.

"Yet he that preacheth peace can not hope to thrive by the sword. Liberty and the rights of man can not be secured to distant nations by conquest and subjugation. The triumph of truth can not be gained by the weapons of violence or unrighteous intrigue. What evils the missionary spirit is capable of producing are testified to by the Crusades, the massacres of Jews and the tortures of the Spanish Inquisition during the Middle Ages. It is shown in the persecution of the Jews in Russia to-day, and in the unscrupulous devices employed against the Jews everywhere where Christianity comes in conflict with it."

THE "HIGHER CRITICISM" AND METHODISM.

AMONG the questions which seem certain to come up for discussion in the General Conference of the Methodist Episcopal Church now in session are two of pressing importance: the relation of the church to certain amusements, such as dancing and card-playing, now condemned in its "Book of Discipline"; and the church's attitude toward the new school of Biblical study known as "the higher criticism." Discussion of the latter has been precipitated by the recent troubles in the Boston University School of Theology, when Professor Mitchell, after being accused of heresy by eleven of his students, was acquitted by the faculty and board of trustees. In *Zion's Herald* (Meth. Episc., April 18), the Rev. Marcus D. Buell, dean of this theological school, gives some striking information as to the nature and results of the higher criticism, especially in its influence upon the young ministers who have been under his charge. First, he asks, what is the "higher criticism"? He replies:

"To the man in the street, who has nothing to guide him but the two words, what can 'higher criticism' be if not the infidel's blasphemous way of finding fault with God's flawless Word, his arrogant way of setting up his own warped and wicked judgment as superior to divine inspiration? Our friend in the street obviously needs just now more than ever a plain definition. Let it, therefore, be reiterated once more, that 'higher criticism' in itself is nothing more nor less than a method of Bible study—a method which makes severe and exhaustive research in the various books of the sacred Word for facts which cast light on the date, authorship, and aim of each several book.

"Now it is plain that such research may be prosecuted from wrong and wicked motives, from a wish, for instance, to discredit some portion of the Scriptures as a trustworthy record of divine revelation. Destructive criticism of this sort may be appropriately characterized, in the language of the recent Episcopal address, as that 'which attacks the Bible itself, denying its supernatural character and divine authority.' But 'higher criticism' may also be prosecuted from motives as holy as those of the prophets who searched diligently what the Spirit did testify, and with mind as open and devout as was that of the Christian disciples at Berea. Assuredly no man and no age of men can safely assume to know, in advance of faithful investigation, in what divers manners or through what anticipated media it may have pleased God to reveal Himself in His Word. Until rigorous examination has been made into the actual facts, no man can say, on mere *a priori* grounds, whether the documentary hypothesis concerning the composition of the Pentateuch, or the alleged duality of the book of Isaiah, rests on fact or on mere fancy. Especially will no short and easy method, which seeks to settle

the question once for all by an appeal to Christ's formula of citation, satisfy the mind of conscientious Christian scholars.

"Suppose, then, that prayerful study has made it seem highly probable to a lover of the Bible that its first five books were compiled from earlier documents, as we know Tatian's 'Diatessaron' was woven together out of our four Gospels into one homogeneous document. Suppose again that a conscientious and reverent critic of the Scriptures should at last become convinced that the book of Isaiah was the work of two inspired prophets of God rather than of one, in the same way in which our learned and lamented Dr. Harman, as we learn from his 'Introduction' (a volume in our course of study for preachers), reached the conclusion that the book of Job was written in post-Mosaic time, and that the Epistle to the Hebrews was not the work of the Apostle Paul. Would such conclusions necessarily imperil the faith of such a Biblical student in the inspiration of the Pentateuch and of Isaiah?"

In answer to this question, Dr. Buell points to the well-known lectures of Prof. George Adam Smith, of Glasgow, which were delivered at various educational centers in this country, and were found "deeply spiritual and edifying" by so eminent an evangelist as the late Mr. Dwight L. Moody, who invited Professor Smith to lecture at the Northfield Conference last year. Yet Professor Smith simply took for granted many of the results of the "higher criticism." Further, Dr. Buell says:

"The writer, having heard much confident, and even passionate assertion, to the effect that the newer historical and analytical methods of Bible study were actually undermining the faith and chilling the evangelistic zeal of our younger ministry, resolved to make an investigation which might yield some exact and reliable information on the subject. Having at hand the addresses of upward of four hundred Methodist preachers who, as graduates and former students of Boston University School of Theology, have become familiar with the methods and results of the so-called 'higher criticism,' he sent them, on the first day of March last, a circular requesting each one to report the number of conversions which had taken place under his ministry during the eighteen months preceding, and also during the six months preceding. Replies from about two hundred and ten preachers had been received and placed on file when this article was begun. The returns furnished by the first two hundred preachers, taken just as they came, are herewith submitted in tabular form:

CONVERSIONS OCTOBER, 1899, TO MARCH, 1900.				
15	preachers report	1,151	conversions, average,	158.5
20	"	2,418	"	120.9
30	"	3,703	"	77.6
100	"	5,134	"	51.3
200	"	5,021	"	25.1

CONVERSIONS SEPTEMBER, 1898, TO MARCH, 1900.				
10	preachers report	2,005	conversions, average,	266.5
20	"	4,032	"	201.6
30	"	5,778	"	142.3
100	"	3,062	"	91.89
200	"	12,399	"	61.99

"After deducting from the last table the figures reported by the 35 preachers who were in the school at Concord or Boston prior to the year 1885, the writer found that the remaining 162 had been pupils of Professor Mitchell, the present professor of Hebrew and Old-Testament exegesis. These 162 preachers report for the 18 months ending March, 1900, 9,650 conversions, or an average for each preacher of 59.6.

"In the face of the depressing decrease of no less than 21,731 in the membership of our church as reported for the year 1900, the returns tabulated above are as gratifying as they are instructive. They seem to confirm what not a few had long suspected, viz., that the teaching of a reverent and believing 'higher criticism' in our schools has nothing to do with the humiliating decline in the evangelistic success of our church as a whole. Nay, rather, the figures point the other way. The actual fact is that the very preachers for whom modern methods of Bible study have clothed the Old-Testament record with the historical reality of the New-Testament Gospels, are found in the very front rank of successful evangelists.

"To followers of John Wesley there is, of course, nothing anomalous in this union of scientific study of the Scriptures with

aggressive evangelism. It was Wesley who on the one hand said to his preachers, "You have nothing to do but save souls," and on the other hand said, "As to all opinions that do not strike at the root of Christianity, we think and let think." The root of Christianity he defined in the context to be the believer's personal attitude toward the divine Christ who is the Savior of souls. It was John Wesley, the incomparably successful evangelist, who had drunk so deeply of the foremost German Biblical criticism of his day, as embodied in the works of his contemporary, Johann Albrecht Bengel, of Tübingen, that he frankly prefaced his own 'Notes on the New Testament' with the statement that he believed he could better serve the interests of religion by translating from the 'Gnomon' than by writing volumes of his own notes."

THE SCIENTIFIC METHOD IN THEOLOGY.

DR. F. S. HOFFMAN, professor of philosophy in Union College, regards the recent controversy between the late Prof. St. George Mivart and Cardinal Vaughan as marking a most significant epoch in the history of religious thought. Its most striking lesson, he says, is that one can no longer serve the cause of true religion by ignoring the methods of physical science. In constructing a theology, he remarks, we employ the same finite powers of mind as in forming a science of botany or physics; there is no difference in the kind of knowledge we have of each, only in the class of objects involved. Professor Hoffman writes (in *The North American Review*, April):

"Theology, properly understood, is the science which seeks to account for the universe from the standpoint of God. It attempts to put all the known facts together into a system around this idea. It does not draw its material from any alleged revelation alone, altho the revelation, if true, will furnish some of its most important data. But it gathers its material from every realm of knowledge. Every new fact discovered in any quarter of the universe increases its material, and every old supposed fact exploded diminishes it.

"Now, all the facts that any man can possibly know may best be divided, for our present purpose, into two classes, internal facts and external facts. By internal facts we mean the facts of one's own consciousness, and by external facts all else that can be mentioned. The former are certain to one, the latter merely probable. Every man who constructs a botany, or a geology, or any other science, makes it out of probable facts only. Every man who writes a history states and explains nothing of which he can be more than probably certain. How evident it is, then, that he who seeks to give unity to all the sciences, to explain the universe in which the great mass of the facts are only probable, can never attain to more than a probable solution of the problem, and can never justly ask another to accept his conclusions on any other ground than the high degree of their probability. Great thinkers, from Thales, Plato, and Moses, have had their theologies—their explanations of the origin and nature of the universe, as they understood it, and many of these explanations have been of extraordinary merit; but even St. Paul himself could never have been certain that his explanation was more than a probably true one."

Take, for instance, the statement of the Apostles' Creed concerning the nature and mission of Jesus: "Who was conceived by the Holy Ghost, born of the Virgin Mary, suffered under Pontius Pilate, was crucified, dead, and buried";

"Whether there ever existed on the earth such a person as Jesus, and what He experienced, are purely matters of historical evidence. And as everything that is a matter of evidence is a matter of probability, this must be also. We can never be absolutely certain that those who wrote His history were really acquainted with the facts of His life, or have honestly represented them, or that their testimony, after being once recorded, has not been so frequently and radically altered as to give us to-day, in some respects, an erroneous conception of the truth. Even if we regard the record as it stands as veritable history, the doctrine of the actual divinity of Jesus, that He is in reality Son of God as well as Son of Man, is an induction from certain alleged facts, and can, therefore, never be established beyond all possible doubt.

"The creed closes with the affirmation: 'I believe in the Holy Ghost; the Holy Catholic Church; the communion of saints; the forgiveness of sins; the resurrection of the body; and the life everlasting.' The writer of this passage, from the data that he had before him, simply drew the conclusion that the arguments in favor of these propositions were far stronger than those against them; and, accordingly, he was ready to say concerning them, as he does say in the statement itself, 'I believe'—not 'I am absolutely certain of their truthfulness.'"

"We ask that every student of theology take up the subject precisely as he would any other science; that he begin with doubt, and carefully weigh the arguments for every doctrine, accepting or rejecting each assertion according as the balance of probabilities is for or against it. We demand that he thoroughly 'test all things,' and thus learn how to 'hold fast that which is good.' We believe that even the teachings of Jesus should be viewed from this standpoint, and should be accepted or rejected on the ground of their inherent reasonableness. But we also firmly believe that the probabilities that He spoke the truth are so high that they can never be made any higher; that, when His doctrines concerning God and man and nature are correctly apprehended, it will clearly be seen that they fully satisfy the demands of the intellect and the cravings of the heart. And we do not regard it as at all likely that any theology of the future will have much influence over the minds of the thoughtful, that does not draw its chief and most important data from that source. . . . In fact, the one pre-eminent demand of the present hour is a truly scientific theology—not a Chinese nor a Roman nor an Anglican theology, not a Baptist nor a Methodist nor a Presbyterian theology, not a Mosaic nor exclusively a Pauline theology, but a theology so cautiously constructed as to exclude all fiction, and so profound and comprehensive in its teachings as to include all the facts."

AN ANTI-PROTESTANT CRUSADE IN FRANCE.

AMONG the most aggressive and bitter agitations of the day is the propaganda in France directed against the Protestants, which has become a fixed and persistent fact in the religious thought of the republic. *The Christliche Welt* (Leipzig, No. 14) contains from the pen of Eugene Lachenmann an interesting collection of data on this subject, presented, of course, from a Protestant point of view.

The attacks we are told, are increasing in intensity and number. Especially is the "Bonne Presse" of the Assumptionists busy with this propaganda, and the various "Croix" or church newspapers published throughout the provinces make it a point to keep the people aroused on the subject. In this controversy, Protestants, Freethinkers, Freemasons, and Jews are all put into one class, the leading charge being that of treachery to the country and an alliance with the Protestant nations, especially Germany. The type of opposition is much like that at one time displayed against the Huguenots, and this name has even been revived as a term of reproach and suspicion against the Protestants.

The origin of this agitation is interesting. Two years ago, Ernst Renaud, the editor of a provincial and local paper in Cher published a pamphlet entitled "Le Péril Protestant," which aroused a great deal of excitement. It has been followed by a solid volume of 369 pages on the same subject by the same author, with the special purpose of pointing out that Protestantism is the great danger to the religion, politics, and social order of the country. The character of this massive work can probably best be given by quoting Renaud's own words:

"The Republican Party is the Protestant party, and as the Protestant party it is the English and the German party in France. . . . The Huguenots go hand-in-hand with the traitors of the fatherland and with the foreign foes of France, just as their religious fellows did in the year 1870. . . . The Protestants force their way into the houses of the French people, ostensibly to sell Bibles, but in truth to spy out where the honest peasant has hidden his savings. They are picking out quarters for the army of the invasion. Therefore we must keep a watch over

these imbeciles and force them to leave our towns. If France once becomes Protestant, then she will be little more than a vassal of England. These pious gospel messengers do not propose so much to make converts to Protestantism as to demoralize our good people and to lay plans for facilitating the proposed invasion of our country. We appeal to the peasants to become new crusaders in the interests of the good cause."

One of the noteworthy features of the book is the fact that it gives the address of the leading representatives of Protestantism throughout France.

The example of Renauld has been followed by others. "*Le Complot Protestant*" ("The Protestant Conspiracy") is the most recent and sensational contribution to this crusade. This conspiracy consists in this, that Queen Victoria yearly contributes twenty-five million francs to the support of the Protestant religion and to the struggle against France. This is done on the basis of an agreement made between England and Prussia in 1757. Accordingly each and all work undertaken by the Protestants in France has but the one aim, namely, that of advancing this conspiracy. Two other Anti-Protestant pamphlets are very popular in France; one is entitled "*La Trahison Protestante*" ("The Treachery of Protestantism"), and the other "*L'Ossature de la Trahison*" ("The Structure of Treachery"). These are brought out with a grinning skull and a black background on the title-page. Among the views given in them are these:

"As the Jew is a born money-maker, so the Huguenot is a born traitor. A Catholic will die for his faith; a Jew, to save his money; but a Protestant knows no martyrdom. . . . The claim of the innocence of Dreyfus was simply a specimen of Protestant treachery in order to make it possible for England to occupy Fashoda and for William II. to make his journey to Jerusalem. All the defenders of Dreyfus are open or secret Protestants, and the whole affair was conducted after the manner of the Protestants, who are not by their faith compelled to implicit obedience to their superiors, but subject everything to free investigation."

Another noteworthy production of this crusade is "*Le Conquête Protestante*" ("The Conquest of Protestantism"), with the subtitle, "A Plea for Social Peace and National Reconciliation." This work is based on the well-known fact that so many of the leading offices and high state positions in France are filled by Protestants. The author says:

"The Catholics are too scrupulous. Nobody can bake an omelet without breaking some eggs. No revolution can be achieved without advancing over dead bodies. Do you think it would be a crime to condemn and to put to death such men as Zadok Kahn, Reinach, Scheurer-Kestner, Picquart, Zola, Brisson, Yves Guyot, Jaurès, Clemenceau, Monod, and Ranc, because they have organized the Dreyfus conspiracy? I confess openly that I would have no hesitancy to vote for the death of this Reinach, etc., and such pastors as Monod, etc."

The Protestants are alarmed and are agitating counter movements. The most promising agent in this regard is the "Commission d'action protestante évangélique," appointed at the great "Fraternal Conference" of Protestants, held in Lyons in November of last year.

In the mean while the Protestant cause, according to the *Christliche Welt*, is progressing in the country as never before for centuries. An interesting account of this movement is furnished by the well-known author and lawyer, Eugène Réveillard, in a series of "Los von Rom" ("Away from Rome") pamphlets in Munich. There are at present two homes for priests who have joined the Protestant church, and the organ of this movement among the younger Catholic clergy, *Le Chrétien Français* (*The French Christian*), is now appearing as a weekly, side by side with a monthly called *Le Prêtre Converti* (*The Converted Priest*). The editor of the former journal, the Abbé Bourrier, was recently compelled to appeal to the law for protection against attacks in public.—*Translations made for THE LITERARY DIGEST.*

AFTER ORTHODOXY—WHAT?

THE Rev. Minot J. Savage, pastor of the (Unitarian) Church of the Messiah, New York, believes that orthodox Christianity has received its deathblow from the now assured results of research in the fields of physical science, linguistics, history, and Biblical criticism; and that this interpretation of Christianity will very shortly disappear. Yet he does not believe that religion itself will be weakened, but rather reinforced, by this putting away of what he regards as the "childish things" of religion—the conceptions of life fitted perhaps for an early stage of human development, but no longer fitted for the period of the world's maturity. In *The North American Review* (April) he writes:

"The essential features of the orthodox theory of religion have been discredited by the modern knowledge of the modern world. Since a similar thing has happened over and over in the past, it ought not to seem strange that it should happen again in a growing universe. The foundation stone of orthodoxy has always been the dogma of the Fall of Man and the consequent lost and ruined condition of the race. In accordance with this theory, the one great work of religion has been to 'save' men from this 'ruin.' That has been the theory of the Fall—and in the light of it all the wrong and sorrow, the vice and crime of the world have been explained. But study of Jewish thought and life has shown that this whole Eden story was a late importation from a pagan people. The older prophets know nothing of it. And even Jesus, who is said to have been supernaturally sent to save us from the effects of the Fall, never makes the slightest allusion to it. Besides this, science has demonstrated that man has steadily risen from the first, and it makes all stories of original perfection impossible of belief, on the part of all free and intelligent people. And thus we are now able to explain the world's evil, vice, crime, suffering, and death in the light of theories much more honorable to God and more helpful for man. Since orthodoxy is inextricably bound up with these theories, since she has committed herself to the assertion that they have been infallibly revealed, she must cease to be orthodox (*i.e.*, the 'right opinion') now that these beliefs are passing away."

"The only thing that is happening, then, is that the world is growing wiser and better. And this should seem to be cause for rejoicing rather than of lamentation; unless people really hold the opinion of the old Scotch lady who said: 'Some persons think everybody is going to be saved; but, for my part, I hope for better things.'"

Dr. Savage ranges himself, not with the Scotch lady, but with the optimists. He thinks that the world is going to be a happier and better place when the older theological conceptions of Christianity disappear: "The loss is only for the sake of larger and finer gain. We lose the pessimistic theories of a wicked creation, a ruined race, total depravity, an angry God, blight, curse, endless and hopeless pain—that is all." Religion will remain, says Dr. Savage; the conception of God will remain; so also will the belief in the higher man, the Christ within:

"For the first time in the history of human thought, we have a conception of man that is worthy, inspiring, and hopeful. A race once perfect in innocence, but now fallen and ruined; a race become morally incapable of all good; a race doomed to endless despair, except in the case of 'the few that be saved,' an 'elect' company chosen to illustrate God's grace; a race living in age-long rejection of divine truth and goodness, and so drifting down the hopeless rapids to the abyss; such is the picture presented to us in all the old creeds. But now what? A race starting, indeed, on the border line of the animal world, but with what a history and what an outlook! Along a pathway of struggle and tears and blood, ever up and on, sloughing off the animal, climbing to brain and heart and conscience, until figures like Buddha and Jesus stand up out of the darkness! Legislators and singers and artists and discoverers and inventors and scientists and teachers and martyrs and witnesses, a long line of the great and the good, increasing with every age, testify not the fall, but the magnificent ascent of the race! From what low beginnings come, until we have at last the right to cry: 'Now are we sons of God; and it does not yet appear what we shall be!' In face of a history like this, I do not envy the man who can sneer at Darwinism as

irreligious and find more 'piety' in a theory that makes us all 'children of hell.' With a past like this behind us, what is there we may not aspire to in the future? A perfect 'kingdom of God' becomes a perfectly reasonable dream. Every new truth discovered is just so much more known of God; and every new and higher adjustment of the individual or social life to the higher truths is one more step in the eternal ascent of religion toward God."

THE NEW "CENTRAL CHURCH PARTY" IN ENGLAND.

THE recent controversy over points of ritual in the English Church—particularly over incense—has impressed many churchmen with the conviction that too much stress has been laid upon questions of mere form by both the Kensingtons and the High Churchmen. The Rev. Dr. Cobb, until lately an official of the English Church Union (the advanced High-Church organization of England), has, like a good many other adherents of that body, resigned his membership, and is now secretary of the Churchmen's Union. His energies are devoted to forwarding the interests of this new society, which is to be the organ of the new "Central Church Party." In a recent article, quoted by the London correspondent of *The Church Standard* (Prot. Episc., April 7), he eschews the term "moderate churchmen" frequently in use hitherto, and substitutes "central" as the distinguishing adjective of the new type of churchmanship. He thus explains his position:

"Because Central Churchmen are in the middle, it does not follow that they have no enthusiasm and no definite convictions. They will die for a principle. They scorn to make the use or disuse of incense an article of a standing or a falling church. They are content with their prayer-book, and think its old-fashioned spirituality sufficient for their needs. They have tested their Bible and not found it wanting, so they will not fear what criticism can do unto it, but welcome any new light, if such there be, arising from such criticism as the Lambeth encyclical encouraged. . . . The creeds are a sufficient statement of their beliefs, and all they ask is that they be not treated as philosophic formulæ, but as the vehicles through which an historical religion reproduces itself in the individual soul."

The English correspondent already quoted adds this further description of the new party:

"Soberness, loyalty to such truth as is revealed, self-restraint in the presence of the unrevealed mysteries of God, peaceableness toward the brotherhood, a readiness to believe the best and not the worst, an aversion from heresy-hunting, a due, practical balance between the classics of the individual and the authority of the body, such are some of their more prominent marks. Dr. Cobb describes the national church as 'too long the victim of well-meaning but narrow-minded fanatics, who attach a quite disproportionate value to a posture, an ornament, an interpretation, and archeological survival.' He affirms that his (Central) party 'have far more important matters on hand, connected not indirectly but directly with man's salvation, his duty to his fellows,' etc. The Bishop and the Dean of Ripon, Professor Cheyne, the Archdeacon of Manchester, and the Dean of Canterbury have joined the union."

As Archdeacon Wilson of Manchester is a Christian Socialist and Professor Cheyne of Oxford (editor of the new "Encyclopedia Biblica") is the foremost English exponent of the Higher Criticism, the new party is seemingly to form a meeting-ground for men hitherto of varied party affiliations.

MR. HENRY FRANK, of the Metropolitan Independent Church, New York, is shortly to publish two new books, one entitled "The Doom of Dogma and the Dawn of Truth," the other "Meditation at the Shrine of Silence." Both are in support of radical thought and the "New School of Metaphysics."

ATTENTION has been called to the infelicity of the tablet lately set up in the Fifth Avenue Presbyterian Church, New York, in memory of Dr. John Hall. It merely gives the dates of his birth and death, says that he was "pastor of this church from November 3, 1867, to September 17, 1895," and then ends with this singular text: "There remaineth, therefore, a rest for the people of God."

FOREIGN TOPICS.

COMMENTS ON THE PARIS EXHIBITION.

THE opening of the Paris Exposition according to program, on April 14, despite the fact that it was rather less ready for such a ceremony than any preceding world's fair has been, is attributed to the fear of the French Government lest any delay would give certain restless elements in France an additional chance to carry on political agitation. For France is too much interested in her great fair, once it has been opened, to bother about party politics, and even interest in the Boer war is now flagging. *The Journal des Débats* (Paris) says:

"The Exposition certainly has a *bonne presse* abroad. Europe is less interested in our internal troubles. The foreigners now consider that France's chief business is to amuse her visitors. Maybe it will be noticed, too, that Frenchmen are not all gay fops or fierce jingoes as some of our neighbors seem to suppose. It will be a surprise to many to find that there is a France which works, a tranquil, reasoning France, proud of its past and determined to create a prosperous future. It will be impressed upon many that our political restlessness, our ministerial crises, do not touch the solid foundation of the nation; that the bellicose declamations of our press are for the sole purpose of amusing the reader. It may appear that some of our industries have not progressed quite as rapidly in France as in some other countries; but it will be evident that we work faithfully and earnestly, and that revolution is not eternally clamoring at our portals."

It is of some international importance that Germany is officially represented at this Exposition. *The Kölnische Zeitung* (Cologne) says:

"For the first time since the Franco-German war is Germany officially represented at a Paris Exposition. It proves that the two nations are on better terms, yet it is doubtful that the chasm can ever be entirely bridged. The Germans have not failed to hold out the hand of friendship, but the French never were able to let bygones be bygones, tho it must be admitted that their proverbial politeness prevented them from rudely repelling our advances. However, they have invited us, and the German exhibit has been carefully chosen to represent natural character. Altho we wish to impress our neighbors with our progress, ostentatious display of luxury and wealth has been avoided by the Emperor, who is personally responsible for this exhibit of solid middle-class life."

The Spectator (London) does not agree with the many English papers which advise Britons to stay away from the Exhibition "to punish the French." The paper has for some time past reiterated that sympathy with the Boers is in France as elsewhere due to that meanest of human traits, envy; but even this, thinks *The Spectator*, will not make life unpleasant for Englishmen during the Exposition. It says:

"That English visitors to the great show will be insulted we entirely disbelieve. Not to mention that Frenchmen even when raging never quite forget business, and that no French trader insults his customers, the Parisians just now are in high good humor. . . . To be Romans may be what they wish, but they are pleased to be even Athenians, and when pleased who is pleasanter, brighter, or more courteous than the true Parisian? Englishmen may go to the show without the slightest fear of being unwelcome, and will, we hope, bring back with them impressions so kindly that even the vitriol which M. Rochefort mistakes for wine will be unable to dissolve them. Paris and London have warred for at least six hundred years, and neither has been able to check the other's growth by one street or square. They may be compelled to fight again, tho we hope better things, but that is no reason why when Paris has a great thing to show London should not go to see it. Who knows? She may discover what is the antidote to the last new explosive, decomposed water, said to be eighteen times as strong as that 'triumph of always beneficent science,' dynamite."

The Westminster Gazette remarks that the American building

is by far the most monumental of the foreign buildings. The *Epoca* (Madrid) sadly remarks: "Cuba, Porto Rico, and the Philippines are for the first time not represented, for they form no longer part of our dominions." This paper relates that the reason for opening the Exhibition in April is a very prosaic one:

"It had been suggested to defer the opening to June, in order to gain time for completion. But the owners of the various restaurants within the grounds, who have to pay rent, threatened to sue the Government if the opening were delayed a single day. Thus the Republican Government, which resisted firmly the British claims in China, ingloriously succumbed to the demands of a handful of traders and publicans."

The Russian papers congratulate France upon her present international position. The *Nirakhenya Vedomosti* says:

"Every Russian must notice with pleasure that France is richer and more powerful to-day than during the Exposition of 1867, when she had not yet passed through her great trials. France may well be in a mood to bridge the gulf which divides her from her great neighbor. It is a matter of pleasure to note that Germany participates in the present festivities, and that the ideas expressed at The Hague Conference receive some support in this way."

The *Handelsblad's* Paris correspondent says:

"Nothing is finished in the Exposition, not even the 'attractions.' Should any of my readers intend to visit Paris, I must warn them that they will be disappointed unless they wait at least another month. The fault lies with the directors of the Exposition, whatever M. Millerand and M. Loubet may say. As Meline thought he could stem the tide by saying, 'There is no Dreyfus case,' so Picard thought he could do away with facts by saying: 'The Exposition is ready.' It will be ready after a while, but thanks to individual efforts only."—*Translations made for THE LITERARY DIGEST.*

THE ITALIAN PARLIAMENT.

THE Italian parliament has lately been the scene of those noisy demonstrations which during the last twenty years have occurred so frequently in legislative bodies. According to their own showing, the minority began a regular campaign of obstruction "to uphold the rights of the minority." The means employed were of the usual kind, such as speeches of enormous length to prevent division, discussion of applications for leave of absence, and the pounding of tables to make members of the majority unheard. The Government, therefore, suggested new rules for the conducting of business in the Chamber of Deputies. This roused the minority to new fury; the speaker resigned to test the standing of the cabinet, was reelected by a handsome majority, and parliament was adjourned. On the whole, the Italian press censures the obstructionists as "low politicians." The *Tribuna* (Rome) says:

"The Extreme Left, by its continual obstruction, renders parliamentary business almost impossible. Credits must be voted on and minor questions legally relegated to parliament must be settled. But the almost brutal obstruction of the Extreme Left neutralizes the legitimate work of the Chamber, and furnishes a legitimate excuse for gag laws."

The *Giorno*, which favors Republicanism, protests, but not very vehemently, against the majority rule. It says:

"The majority is trying to stifle the voice of the minority throughout the country. The Extreme Left merely wish to preserve those constitutional guaranties which for fifty years have been established. If the Pelloux cabinet and the traitor Somino gag the minority, they are responsible for the consequences."

Throughout Europe the acts of the opposition are represented as a kind of "bunco" game. All the Roman correspondents unite in saying that the politicians who form the obstructionist minority are, for the most part, enemies of the movement for political

purity, which is continually gaining ground in Italy. The *Politische Correspondenz* (Vienna) says:

"Speculations about the possible fall of the present Italian ministry through parliamentary obstruction are entirely unnecessary. The Government does not dream of submitting to the minority, and it is the reverse of flattering to the Italian people to think that their administration has so little backbone. The Pelloux cabinet took over the reins under the most trying circumstances. It is not merely defending itself, but is fighting the battle for orderly parliamentary rules."

The *Vossische Zeitung* (Berlin) says:

"There is no doubt that the Pelloux cabinet is putting pressure upon the opposition. But the people are very calm under this 'tyranny,' for the parliament and parliamentary institutions have gradually become objects of contempt. This inability to do the necessary work, this want of discipline, this absence of healthy, strong aims, has gradually made the parliament despised by all, and the nation does not care what happens at the Monte Citorio. The political clubs endeavor to preserve appearances, and the Radical papers shriek, but the people do not care what happens to the legislators."—*Translations made for THE LITERARY DIGEST.*

DEATH OF A ONCE FAMOUS DIPLOMAT.

A DIPLOMAT whose name was once in everybody's mouth died March 25 in Paris, and his remains were sent to his home without official ceremonies. It was Count Benedetti, Napoleon III.'s last ambassador to the Court of Prussia. Pitted against Bismarck, he failed to hold his own, and he was, much against his will, according to his own declaration, used by the war party in France to provoke the struggle which ended in the downfall of his master and the unity of Germany. The *St. James's Gazette* (London) says:

"He was past middle life before fame came to him, and had spent many years in an uneventful career as a French diplomatist. But in 1864, when Europe was on the eve of great events of which Berlin was to be the center, Benedetti was sent as ambassador to represent Napoleon III. in the Prussian capital. When the 'Seven Weeks' War' broke out two years later, he failed in his attempts to prevent the aggrandizement of Prussia. It is now well known how Bismarck set himself immediately afterward to prepare for the struggle with France, which he knew had been made inevitable by the crushing defeat of Austria. He found no difficulty in making a tool of Napoleon's ambassador. He induced him to make a proposal for the annexation of Belgium by France. This document was pigeonholed by Bismarck as a rod in pickle for the French Emperor when the right time came. He published it in the summer of 1870, and thus exhibited the French Government to Europe as bent on territorial aggrandizement. Benedetti subsequently published a statement that the proposal was Bismarck's own. This was most likely true, but it did not excuse Benedetti's folly in placing such a weapon in the Prussian Chancellor's hands, and it was the famous scene in the gardens at Ems, when King William was supposed to have put an affront on Benedetti, that directly led to the declaration of war."

Benedetti has never been held by the Germans personally responsible for the war. The *Frankfurter Zeitung* says, in substance:

"It was only after Benedetti's third attempt to obtain King William's written declaration that no Hohenzollern prince would be permitted to accept the crown of Spain that the king informed the ambassador, through his adjutant, that 'His Majesty had nothing further to communicate on the subject.' Benedetti did not regard this as an insult; but the French newspapers published a telegram from Ems to the effect that France had been insulted by the King of Prussia in the person of her ambassador. Then followed the cry of 'A Berlin!' in the streets of Paris. In the French Parliament, the opposition in vain asked for the original text of Benedetti's despatches. Ollivier declared that he 'accepted the responsibility of the war with a light heart,' Le

Bœuf said the army was more than ready (*archiprêt*), and war was declared. The war was inevitable. In France it had been said for years that a united Germany could not be tolerated, and the machinations of the Catholic Church, which used the Empress Eugénie as its tool, did the rest."

The assertion that Bismarck dictated to Benedetti the proposition to divide Belgium is denied in Germany, and the document, it is declared, is a duly authenticated French official document.—*Translations made for THE LITERARY DIGEST.*

THE CAREER OF VILLEBOIS-MAREUIL.

THE death of Colonel de Villebois-Mareuil, who fell fighting on the Boers' side, is regarded by many Frenchmen as a great loss to France. *The Liberté* (Paris) says:

"It was for France that he went out to South Africa, where twenty-five years ago the blood of a Bonaparte, betrayed by his English comrades, was poured out. . . . If the colonel exposed himself more than a leader should, it was to train the Boers to make those attacks without which no effective victories are possible. His sole regret must have been that his last look could not rest upon the tricolor. But France was with him in spirit. France closed his eyes, since the pious hand of his aged mother, his young daughter and his brother could not fulfil that duty. For all France mourns for Colonel de Villebois-Mareuil, who has revived the generous traditions of Lafayette. To her who was wounded in 1870 he has brought the tribute of a little glory."

The Siècle (which passed into English hands more than a year ago) is the only French paper that does not pay a tribute to his memory. Many English papers realize that De Villebois-Mareuil's death may have a lasting influence in France. "His death and that of the Frenchmen with him," says *The St. James Gazette*, "was but the penalty they deliberately risked when they took up arms against us, and resigned their commissions in the French army in order to take service with the Boers. The French, however, are not likely to look at the matter in this way, and we await developments with interest."

The Paris correspondent of the *London Outlook* writes:

"Colonel de Villebois-Mareuil was an ardent Nationalist—an intense anti-Dreyfusard—and his dream, his ideal, was the Restoration; his devouring passion was the love of France and of French glory. To restore the prestige of his country—to bring her back once more to the first rank—that was his fixed idea; and when he saw that the revenge was no longer the political feature of the future, his soul burned within him to force upon the attention of the world, by some individual effort, the sacrifice that a man can give. And so it came about that when the Transvaal war offered, he seized his chance—relying upon the possibility of his death to awaken his country from the torpor which, in his view, was dragging her down to insignificance. He knew his countrymen, and who shall say he has not succeeded? All France rings to-day with his name. A monument to be erected, a subscription for a great funeral service, a street in Paris to be renamed."

The Free Press (Ottawa) compares him to Don Quixote:

"There is but one step from the sublime to the ridiculous, and the chivalrous knight-errant of romance going forth to right the wrong, champion the helpless, and protect the weak, when compared with the modern soldier of fortune and adventurer of the Villebois, Albrecht, and Schiel type, proves how short the step is. 'Labby' [Labouchere] says that the spirit of Villebois-Mareuil was 'so little in harmony with modern conditions that he might almost be deemed an alien.' Cervantes is said to have dealt 'chivalry' its deathblow. But it seems that Don Quixote was a much-wronged man, and that some new satirist is needed to hold up the modern soldier of fortune to ridicule as great as that hurled at the Knight of La Mancha."

The Neue Freie Presse (Vienna) says:

"Villebois well deserved to be called the South African Lafayette. He was not a mere fighter, but a well-trained tactician,

whose talents were of special use to the Boers in organizing field fortifications. Evidently he intended to place such fortifications near Fourteen Streams when death overtook him. His loss is to be deplored from the Boer point of view, yet they do not seem to be in want of able leaders. As we know, Colonel Villebois did not think the cautious Joubert quite fitted for the chief command; he expressed a hope, at the time of the battle of Colenso, that General Botha, whom he regarded as the only really talented commander, would be appointed."—*Translations made for THE LITERARY DIGEST.*

THE AUSTRIAN EMPEROR'S VISIT TO GERMANY.

THE visit of the Emperor of Austria to the capital of the German empire is regarded as a sign that the relations between Austria-Hungary and Germany are more cordial than ever; but since King Humbert will not be present at the meeting the Triple Alliance is once again described as being in jeopardy. *The Tribuna* (Rome) expresses itself to the following effect:

"It has been given out that the emperors will discuss matters which interest Germany and the Dual Monarchy only; but the political situation is such that Italy should be included in the counsels of her friends. It is not pleasant to note that the alliance with Italy is mentioned at Vienna with much less respect than that with Germany. If Italy could afford to make her peace with Austria for the sake of Germany, Austria can not do less than show due appreciation of Italy as well."

The Tageblatt (Berlin) thinks that, "where two of the allied sovereigns meet, the third will be present in spirit"; but, on the whole, the tone of the German and Austrian press is less hearty toward Italy. It has been noticed that many Italians lately show a decided leaning toward France. *The Messagero* advocates a Latin alliance; the *Corriere della Sera* argues that Italy has profited little or nothing by the Triple Alliance, and says:

"The exalted hopes which were raised from an economical point of view are shattered. Italian exports to Germany are less even than to Switzerland and Austria. The fault lies, of course, with the German Agrarians, who selfishly oppose the importation of agricultural produce. But the German Government also is to blame for its weakness in dealing with the Agrarians. Trade and politics can not be altogether severed, and many people will ask themselves, Why should we adhere to the Triple Alliance? It has only forced us into ruinous armaments and estranged us from France."

The German papers declare that the visit of the Austrian Emperor is not, in the first place, a political one. *The Neuesten Nachrichten* (Berlin) says:

"The rumor that Austria fears Russian intrigue against her Balkan interests is groundless. Naturally, however, the emperors will have other topics of conversation than the state of the weather. The general political situation in the world is such to-day that the monarchs would act unnaturally were they to avoid political subjects. For the same reason, it is only proper that Francis Joseph of Austria should be accompanied by his trusted foreign minister. But in the main, the meeting of the emperors is a family affair. The age of the Emperor of Austria has been mentioned as proof that he would not journey far without exceptional inducements. He is only seventy, and Wilhelm I. was seventy-three when he took the field against France in 1870. It is neither polite nor wise to describe Kaiser Franz as a decrepit old man who can not be induced to make the comfortable trip from Vienna to Paris unless in cases of extreme necessity."

Both in London and Paris remarks are made which seem intended to prick Austrian vanity. *The Morning Post* remembers that a war between Austria and Prussia was but narrowly averted in 1851, and wonders whether Emperor Francis Joseph will not muse upon what might have been had he taken the opportunity to crush Prussia then. *The Temps* (Paris) regards the position of the aged Austrian emperor as that of a vassal to his

younger ally. The *Journal des Débats*, however, believes that such remarks will not disturb the Austrians. It says, in effect:

"The cordial relations between the emperors will be a cause for astonishment to all who thought that Austria was about to be divided among her neighbors. We believe that Austria is much more solid than most people imagine. Her many nationalities quarrel, but self-interest binds them together. Cracow is not likely to sigh for the privilege of becoming a part of Russian Poland, and Vienna can not be ambitious to occupy second place in a state in which Berlin is the metropolis. Moreover, the different nationalities do not live in clearly separated provinces. A power annexing a province mainly inhabited by people of its own race would also be forced to take over a minority of bitter enemies. Germany certainly does not seem to be in a hurry to annex any part of Austria. Over-enthusiastic Pan-Germanists in Bohemia speak of a union with Germany, but neither William II. nor the German press encourage them. Francis Joseph knows that the separatist movement finds no encouragement in Germany, and he can well afford to express friendship for the young German emperor."

The *Indépendance Belge* is certain that the supposed machinations of Russia in the Balkans are the real cause of Francis Joseph's visit, as Austria is anxious to preserve the *status quo*. The *Novosti* (St. Petersburg) ridicules this view, and asserts that the strengthening of the bonds between Germany and the Dual Monarchy is the main object. It says:

"The Triple Alliance undoubtedly has lost much of its importance. To give it its former influence, the antagonism between Austria and Russia would have to be revived, and a new economical conflict between Italy and France would have to arise. At present, these conditions are not fulfilled, and the Triple Alliance is allowed to decay, especially as the relations between France and Germany are much improved. The Berlin meeting can not alter this, but it is very likely that a closer union between the empires whose rulers meet will be the result."—*Translations made for THE LITERARY DIGEST.*

THE WELLAND CANAL MYSTERY.

"**D**ASTARDLY Attempt by Yankees." "Are They Fenians?" "Battalions on the Border in Readiness." These and other similar sensational headlines in Canadian papers have disturbed the minds of their readers since the attempt, in the last week of April, to destroy Lock No. 24 of the Welland Canal at Thorold. The damage done is comparatively slight, but a little more success on the part of the conspirators would have resulted in carrying away seven locks and the inundation of the town of Merritt. Three men, reported to be Americans, were arrested, and the opinion seems to prevail that a Fenian attack, which has been threatening Canada, was thus inaugurated. But there is as yet no certainty. The affair has called forth from some Canadian papers some vehement comment. *Saturday Night* (Toronto) says:

"In Buffalo, where without much doubt this whole business was hatched, De Barry, the most offensive official that could be selected by the United States, has made perpetual war upon Canadians entering United States territory in order to pursue, as civilized and reasonable and peaceable people, their ordinary vocations. Buffalo sentiment has been taught that war upon Canadians is a proper and exceedingly smart thing. If the grain shovelers who are at variance with their employers endeavored to wreck the Welland Canal, so as to make business so rushing in their own city as to make it impossible for transportation men to refuse their demands, we have only to thank Uncle Sam's industrial policy toward Canada and Buffalo sentiment for their villainous plot and the criminal readiness with which they turned their bloodshot eyes on this country. So it does not really matter whether the thing was pro-Boer or Fenian, or the outcome of an industrial dispute, inasmuch as we have had a taste of what

the United States has in its stewpan for this country whenever an opportunity offers to give us a dose of it."

The Monetary Times (Toronto) says:

"Fenian threats had been made, as we all know, and pro-Boer feeling, in some parts of the republic, runs high. This is all that is known, and in the mean time we must suspend judgment: when the facts are known, conclusions can be drawn with some assurance of certainty. The conviction of the men now in custody may or may not lead up to the secret which thus far shrouds the origin of the attempt. To complete disclosure, the shortest way would be confession of one of the culprits. It is not at all certain, however, that the tools used in the diabolical act were taken into close confidence by their employers. Two of them at least may have been merely hired bandits, whose feelings were known to be strongly anti-British, and who would readily enter into any scheme which fed their hatred and insured pay. But for the disclosure of the real facts we must wait."

Many papers point out that the canal locks are points of some strategic value, and should, therefore, be carefully guarded. *Events* (Ottawa) says:

"Mr. McCleary, member for Welland, drew the attention of the house on Tuesday to a rather curious state of affairs existing along the Niagara frontier. When the St. Catharines company was called out to protect lock 25 on the Welland Canal, after the attempt made to blow up lock 24, not a rifle cartridge could be found in the armory. He was told also that not a shell was available for the splendid new guns of the Welland field battery, nor even for the artillery at London, Hamilton, or Toronto. This would be a nice condition for Canada to be caught in in case of a raid, such as was threatened by the Fenians, being made across the border at that point, and we have nothing to show that things are in any better condition at any other point along the frontier."

CORRESPONDENTS' CORNER.

The Moral Teachings of Freemasonry.

Editor of THE LITERARY DIGEST: Having given circulation to the articles of the Rev. Charles Coppens, S. J., which appear in *The American Ecclesiastical Review*, so that through your columns his statements have reached a different class of readers than those to whom he directly addressed himself, I ask a few lines, in the interest of "fair play," for a reply.

I was an Episcopal clergyman and a Knight Templar for over twenty years. Since I became a Catholic, fifteen years ago, I do not claim to be a Freemason and have not entered a lodge.

As to the existence of Mr. Pike's work, "Morals and Dogma of the Ancient and Accepted Scottish Rite of Freemasonry," I know only from the articles of Father Coppens. It is from his deduction that Mr. Pike's views are representative of the teaching of Freemasonry, that I enter a protest on the ground of its being illogical.

Freemasonry, strictly speaking, is confined to the three degrees constituting the Blue Lodge, and is based on the religion revealed in the Old Testament. Knight Templarism is based on the New Testament. Not a word of its ritual and lectures, up to and including Templarism, is not in harmony with the teachings of the Old and the New Testaments. The Crucifixion and the Resurrection of Jesus Christ is an important part of the illustrations in Templarism. In short, every Templar is sworn to defend the Christian religion. Not every one may live up to its morals nor to its doctrines, any more than every Protestant clergyman in his life and teachings is recognized as a faithful living example of what is known as the Protestant religion. There are those claiming to be good exponents of Protestantism who are considered by the great majority as denying the essential teachings of the New Testament.

As a Catholic, I would be doing an injustice to Protestantism to assert that these heretics are fair representatives of Protestant teachings and tendencies. I call no names. But in your issue for March 10 you give circulation to the condemnation by various ecclesiastical courts of appeal, including the highest civil judge, the Emperor of Germany, of one who denied the resurrection of the body of Jesus Christ.

While I am not writing in defense of Freemasonry, I claim that it is unjust to Freemasonry to hold it responsible for a book written by one who was a Mason, but in the interest of a Scottish Rite; when there is no evidence that the Scottish Rite, much less Freemasonry proper, is in any sense responsible for what Mr. Pike published.

His statements, as quoted by Father Coppens, are wild vagaries, when judged by the teachings of the ritual and lectures of what is known as legitimate Freemasonry and of the sole lights as far as Templarism goes. His statements, in my opinion, as an individual and as a Christian, are blasphemous. In accordance with my custom of signing with my name whatever I offer to the public, I am, respectfully,

CROWELL COSS.

CHARLES COLLARD ADAMS.

Reduced Prices on Suits and Skirts.

IN order to reduce our stock of Spring and Summer materials we will make to order (on demand) suits and skirts, at great reductions from former prices. One-third has been cut off the price of nearly every suit and skirt in our line, and every woman suit and skirt has been reduced to one-half of former prices, but the quality of materials and workmanship is right up to our usual standard—just as good as if you paid double the money. Order from the Reduced Price Sale as freely as you wish, and back nothing you don't like and we will refund your money.

Tailor-Made Suits, \$10; reduced to \$6.67.

\$15 Suits reduced to \$10. \$20 Suits reduced to \$13.34.

Separate All-Wool Skirts; former price \$6; reduced to \$4. \$7 Skirts reduced to \$4.67.

Handsome Wash Suits, former price \$4; reduced to \$2. \$5 Wash Suits reduced to \$2.50. \$6 Wash Suits reduced to \$3.

Wash Skirts, former price \$3; reduced to \$1.50. \$4 Wash Skirts reduced to \$2. \$5 Wash Skirts reduced to \$2.50.

Reduced prices on Bicycle Suits, Separate Bicycle Skirts, Rainy-day Suits and Skirts.

We tell you about hundreds of reduced-price garments in our Summer Catalogue, which will be sent FREE, together with samples of materials, to any lady who wishes them. Write to-day for Catalogue and samples; don't delay—the choicest goods will be sold first.

THE NATIONAL CLOAK COMPANY,
119 and 121 West 23d St., New York.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

In his consular report of December 25, 1899, Hamilton King writes from Bangkok of the industrial development in Siam. He says:

"Rice cultivation is the principal industry of Siam. There are twenty-six steam rice-mills in Bangkok, and, altho the first one in the country was started by an American, none are owned by Americans to-day. Four are European and the rest are owned or managed by Chinese. Some of the Chinese firms have very large capital. Seven of the mills have their own electric-light plants, one of which was furnished by an American house; all the other supplies and the rice-milling machinery used here have come from England and Scotland. A few years ago the paddy or rice husk, which is used for fuel, was so cheap that much waste was permitted in its consumption; now, however, the rapidly increasing price of fuel has created a good market for this husk, and efforts are being made to economize by introducing more improved methods of combustion. Teak wood is the next most important industry of the country, and there are ten large steam sawmills and many smaller handmills in the city for the manufacture of teak lumber. Three of the mills have their own electric-light plants, and all of them get their machinery and supplies from Great Britain.

"There are four large machine shops and four, dries in Bangkok," continues Mr. King, "also the shops of the two railroad systems, supplies for which likewise come from Europe. The large electric-lighting plant for the city and the two power-houses for the electric tram-car system obtained their equipment in Europe and the United States.

"There are in the city twelve printing-establishments in which English type is used and twenty-four in which Siamese printing is done. These include in their output three daily papers, periodicals, and books of all descriptions, besides many lesser publications and much job work. The printing supplies for the city, for the most part, come from Europe. The United States is now furnishing a portion, however, and American paper has within the last year made a decided hit and is just now increasing in favor."

Discussing the city of Bangkok and its possibilities, Mr. King continues:

"As a result of the gradual improvement of the streets of the city during the last ten years, very many vehicles of all descriptions are used. The extent of the city makes travel by carriage almost a necessity; hence Bangkok is probably a long way ahead of any other city in the far East in the use of wheeled vehicles. The demand was at first supplied principally from outside sources; but of late a local industry has been springing up, and 90 per cent. of the carriages in use are now manufactured in Bangkok. Without exception, however, they strike the American as unnecessarily heavy and clumsy. The streets of the city are perfectly level, no point for miles around being more than three feet above high-water mark, and, being built of brick or macadam, are most adaptable to the use of light-running vehicles of all kinds. Moreover, the native ponies, which have proved themselves best fitted to stand the trying climate, are very small, weighing only from 80 to 100 pounds, and hardly suitable for the heavy vehicles. But these little animals are used so exclusively that there are not more than thirty full-sized horses in the city. In view of these conditions, it would seem that the different styles of light-running American vehicles would prove very desirable if once introduced. The workmanship and material must be first-class to meet the climate, which changes very quickly from extremely wet to hot and dry; but if well made, there is no doubt that our vehicles would wear quite as well as the cumbersome ones now in use, while their greater lightness and beauty would win for them a place in this market.

"American paints, oils, and varnishes are still unknown here; but, in view of the amount of building now in progress in the city, including the construction of docks and shipyards as well as the rapidly growing carriage industry, there is no doubt that there is an opening here for American trade in this line of goods.

"The greatest obstacle is the cost of freight, due to the repeated transshipments en route. A through line of steamers from New York to Manila, with regular sailings, would be a great assistance, necessitating but one transshipment at Singapore, and placing American goods on an equal footing for the most part with goods from Europe. There is but one line of steamers from this port direct to Europe—the East Asiatic line, from Copenhagen to Bangkok. The service consists of one steamer each way every three months."

A Lady Living in a Pleasant Locality wishes to receive an invalid and her nurse as permanent boarders. Quiet and refined surroundings. Highest references given and required.
Address: F. R. H. 28 Lafayette Place, New York.

BEST & CO

White Pique Coat

Results Make Reputation.

Singer Machines, either lock-stitch or chain-stitch, are the successful result of long experience and constant improvements in the endeavor to make nothing but the best sewing-machines for family use. The accomplishment of this result requires six of the largest, best-equipped factories in the world, and the best inventive talent of the age. Twelve thousand workmen are employed in these factories. Experience counts with THE SINGER MANUFACTURING COMPANY. The average term of employment among these workmen exceeds a decade.

Sold on instalments.

Old machines taken in exchange.

PERSONALS.

THOSE who think that John Ruskin was only an art critic and a theorist will find themselves slightly mistaken, when they read the following, taken from the Newark, N. J., *Apex*: It may not be generally known that Ruskin once kept a tea shop. It was established on Paddington Street, W., "to supply the poor in that neighborhood with pure tea in packets as small as they choose to buy, without making a profit on the subdivision." The result of the experiment was, to quote Ruskin's own words, "my ascertaining that the poor only liked to buy their tea where it is brilliantly lighted and eloquently ticketed; and as I resolutely refuse to compete with my neighboring tradesmen either in gas or rhetoric, the patient subdivision of my parcels by the two old servants of my mother's who manage the business for me hitherto passes little recognized as an advantage by my uncalculating public." The business, sad to relate, languished, and the rent and taxes absorbed the profits and something more.

HOUSEKEEPING IN WAR-TIME.—One of the latest communications from besieged Mafeking said: "Provisions have risen to fivefold their original value, the Colonel Baden-Powell threatened with severe punishment all who charge more than ante-siege prices." Even before the siege provisions were apt to cost a pretty penny around Mafeking as in other regions of South Africa. Milk, a couple of years ago, at Mafeking, sold at 1s. a bottle, and was more expensive than whisky. A similar state of affairs existed in Bulawayo in respect to ink during the famine in that community in 1897; a one-pound loaf of bread cost 2s. 6d., and a pound of butter could not be had under 5s. (at Johannesburg it was quoted at 7s. 6d.

A pencil can be a great annoyance or a comfort. The breaking of the lead when you are in a hurry, or at any time, is an exasperating experience.

To have your pencil sharpen to a fine point and wear off in use, instead of breaking, is what a pencil should do.

DIXON'S AMERICAN GRAPHITE PENCILS

are made of the finest even-grade cedar, with smooth, durable leads. Their grades never vary, and you will get the maximum use out of every one. Ask for them at your dealer's; if not obtainable, mention *Literary Digest* and send 16 cents for samples worth double.

H. RICE, Green Bay, Wis.

The Best Summer Books.

Dickens' and Thackeray's Works.

THE OLD AND THE NEW.

Pocket Size Standard Novels.

The NEW CENTURY LIBRARY is a radical departure in the art of bookmaking. Each novel is published unabridged in a single volume which is so small that it is equally suitable for the pocket or satchel, and consequently invaluable for summer reading and traveling. As a library edition it is handsome in the extreme. The size is only 4 1/4 by 6 1/4 inches, and not thicker than a monthly magazine. India paper, the thinnest printing paper in the world, is used in making these books. Notwithstanding this the paper is very strong and remarkably opaque. The type is as large and as easily read as that you are now reading.

The volumes are published monthly in three bindings: Cloth, \$1.00 per vol.; Leather, limp, \$1.25; Leather, boards, \$1.50. Already published: *Dickens*—"The Pickwick Papers," "Nicholas Nickleby," "Oliver Twist," and "Sketches by Boz," "Old Curiosity Shop," "Martin Chuzzlewit." *Thackeray*—"Vanity Fair," "The Newcomes," "Pendennis," "Henry Esmond." For sale by all booksellers. Sample page and prospectus mailed free on request.

THOMAS NELSON & SONS, Publishers, 37 East 18th St., New York

about the same time; salt from 12. to 12.6d; a pound gives a good idea of what necessities cost; and eggs, to quote yet another item, seem to be a decided luxury at 22. apiece. At Bulawayo the official market list of prices current for the week ending November 24, 1896, stated that oysters fetched 4s. 6d. per dozen; kippered herrings 2s. 6d. each, and candles 4s. for a sixteen-ounce box.

At the present moment the ordinary quotations for drinkables in Cape Colony are 2s. 6d. for a whisky and soda, 1s. per bottle for lager beer, soda and milk 1s. 6d., and a bottle of whisky 3s. What the current prices must be "up-country" it is hard to conjecture, but it is interesting to note that in time of peace a glass of cognac at Johannesburg fetched 2s., lager beer (costing 2d. in Berlin) 1s. a bottle, the cheapest claret and hocks 10s. a bottle, and the commonest sparkling Moselle one guinea.—*Collier's Weekly*.

WOMEN COMMANDERS.—Young Queen Wilhelmina's joy knew no bounds not long ago when the Kaiser appointed her colonel of the Fifteenth Hussars, too it was not her first command. Shortly after coming to power she conducted a review of twenty-thousand troops in right royal fashion. Being an intrepid horsewoman, and interested in the different movements, her reviews always pass off without a single hitch. Her mother can also lead a regiment on the field, but she much prefers following her daughter in a comfortable victoria. The Queen of Saxony is highly popular with her soldiers, and often displays her gorgeous uniform at the monthly drills of her corps, the Second Royal Saxon Queen's Hussars. The Queen of Greece gets much satisfaction and a fair amount of glory from being the only lady-general in the world. Alexander III. was always extremely fond of his young relative, and, knowing her Majesty's passion for the sea, gave her ships instead of troops.—*Vassar News*.

THE BEGINNING OF A CAREER.—Mr. Archibald Forbes's entrance upon the career of war correspondent was, it is stated, decided by fate. His first step was to enter a cigar-shop at the bottom of Ludgate-hill, where he bought a cigar, and threw the names of the four or five principal

IVERS & POND PIANOS.

None made so well. Sent freight prepaid on trial wherever you live if no dealer sells them. 250 purchased by New England Conservatory of Music, Boston. Old pianos taken in exchange.

daily newspapers in London into his hat before drawing lots to decide which of them he should first approach. The name that he drew out was that of *The Daily News*. Without delay he sought out Mr. (now Sir J. R.) Robinson, whom he then met for the first time, was promptly engaged, and in the Franco-German and other wars did yeoman service for that journal.—*Westminster Gazette*.

FIVE TIMES HIT IN ONE ENGAGEMENT.—Mr. Treves, consulting surgeon with the forces, sends to *The British Medical Journal* particulars of the case of an officer in the present war whose experience in the way of wounds must be unique: He was shot in an engagement and fell. He rose and tried to walk toward a fellow officer. He was again shot and fell. He got up and made a second attempt to move, when he was shot a third time. He could move no more, and when lying on the ground was shot a fourth time. In due course the stretcher-bearers arrived, and as he was being carried down he was shot a fifth time, and one of his bearers was shot at the same moment, so that his stretcher was dropped to the ground. Of the five injuries four involved the limbs and back. It is interesting to learn that altho there was no operation, the officer made an excellent recovery, thanks largely to his pluck and fine health and the care of his surgeon.—*Westminster Gazette*.

MORE OR LESS PUNGENT.

No Danger.—"He sat on my joke." "That was safe." "Safe?" "Yes. There wasn't any point to it."—*Harlem Life*.

A Measure of Time.—"Have you lived very long in the suburbs?" "Not so very long; only about fourteen cooks."—*Brooklyn Life*.

From Experience.—**PANKE:** "They say a horse has every disease that a human being has. Do you believe it?"

JANE: "I know it. I bought one from a friend recently."—*Life*.

Self-Betrayal.—**DE TANQUE:** "Sheen anysing o' my fren' Jaggson lash few minitsh?"

BARTENDER: "He was here about half an hour ago."

DE TANQUE: "Alone, or was I wish 'im?"—*Exchange*.

A Matter of Course.—"Now," said Mr. Meekton, as he got into his overcoat and pulled on his mittens, "I must go home and explain to Henrietta." "Is she demanding an explanation?" "Certainly." "What about?" "My dear sir, how do I know? I haven't been home yet."—*Washington Star*.

Tommy Carries His Point.—"Tommy Tucker?" "Yes, ma'am." "In this sentence, 'Esau, go to your seat,' parse 'Esau.'" "Esau's a proper noun, masculine gender, third person singular."

How to Grow Good Fruit.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticulture Society, at Lenox, Mass. The address bore chiefly upon spraying and general culture of orchard and field crops, how to do it, do it cheaply and good, and how to obtain the most profit from your labor in the easiest manner. The address is quite lengthy, about an hour's talk. It will not be sent to the disinterested. Owners of fruit trees, stating if at all interested in fruit culture, will get this book. Had this address been placed on the market in book form it no doubt would have sold at a good price. The full address, profusely illustrated, in pamphlet form was intended to be sent to fruit growers and owners of estates, free for the asking, but to prevent imposition by the curious and disinterested, the book will be sent to fruit growers, or owners of estates, enclosing fifty cents, to the Lenox Sprayer Company, 30 West Street, Pittsfield, Mass.

Built to order for George P. Jones, Findlay, Ohio.

McCray REFRIGERATORS

Built to Order

For Residences, Clubs,
Hotels, Public Institutions,
Markets, Grocers, etc.

The illustration shows a refrigerator built to order for George P. Jones, Findlay, Ohio. One department is arranged with meat racks, one with bottle racks, and the remaining three compartments with shelves for fruits, vegetables, butter and milk. It has an ice door in the rear to be iced from outside of house.

McCRAY REFRIGERATORS ARE NOT LINED WITH ZINC AS REFRIGERATORS LINED WITH ZINC ARE DANGEROUS.

The corroding zinc and imperfect circulation of air generates poisons which are absorbed by the foods and cause disease. Milk and Butter are especially susceptible to odors and poisonous gases.

The McCray Zinc Lined Perfect Ventilating Refrigerators are made to order in all sizes, from the smallest to the largest, and for any purpose required. A complete line of stock size Refrigerators also.

ALL WORK GUARANTEED ABSOLUTELY SATISFACTORY.

HALF the trouble people have with paint, nowadays, is because they hurry the painter. If you want the old-fashioned kind of painting—the kind that lasts—employ a competent painter and see that he uses Pure "old Dutch process" White Lead [these in margin are genuine brands] and allow time enough between coats for the paint to dry.

FREE For colors use National Lead Company's Pure White Lead Tinting Colors. Any shade desired is readily obtained. Pamphlet giving full information and showing samples of colors, also pamphlet entitled "Uncle Sam's Experience With Paints" forwarded upon application.

National Lead Co., 100 William Street, New York.

Rheumatism Completely Cured.

DR. J. G. CONNOR, Ionia, Mich., writes:

DEAR SIR:—An old friend of mine handed me a couple of small vials of your TARTARLITHINE some time ago and I tried it on myself, having suffered from rheumatism for several years. I assure you I was so pleased with its effects that I procured a full sized bottle, and since taking it I have been entirely free from rheumatism during the past year. I also observed that it is not surpassed by any other preparation as a purger and efficient diuretic; besides it is pleasant to administer. Please send me a few bottles for use among my patients afflicted with Rheumatism.

Tartarlithine is supplied in bottles containing 50 doses at \$1.00 and can be obtained of all druggists or post-free by mail. Pamphlets with Testimonials sent FREE.

Problem 470.

By H. VON GOTTSCHELL.

First Prize, Fifth American Chess-Congress
Tourney.

(Contributed by J. R. Warn.)

Black—Ten Pieces.

White—Six Pieces.

White mates in three moves.

The Composite Game.

We started this game with four moves:

White.	Black.
1 P-K4	P-K4
2 Kt-KB3	Kt-QB3
3 B-Kt5	Kt-KB3
4 Castles	Kt x P

This is, we believe, the best defence to the Roy Lopez attack. We have received only two moves: F. C. Mulkey, Los Angeles, White 3, P-Q4; K. A. Johnson, Idaho Falls, Idaho, Black 3, P-Q4. This last move is a departure from the play adopted by the students of the Spanish Opening, and we believe is very weak, as it permits White to force the center. B-K5 is, probably, the best move.

Several names have been received since the game was started. We will give the late comers an opportunity to play in this game or in another.

Splendid Chess.

(From "Modern Chess-Brilliances.")

Vienna Opening.

FALKBERG.	ANDERSEN.	FALKBERG.	ANDERSEN.
White.	Black.	White.	Black.
1 P-K4	P-Kt4	17 Kt-KB3	Kt-KB3
2 Kt-QB3	P-KB4 (a)	18 Q-R4	B-KKt4
3 P x P	Kt-KB3	19 Kt x KP	B-KR4
4 P-KKt4	B-QB4	20 B-B3	B-KKt5

6 P x Kt	Q x P	22 Q x B	Kt-Q4
7 Q-B3	B-Kt3	23 R x Kt (d)	R x Q
8 P-Q3	P-QB3	24 R-Q3	Q-B sq
9 Kt-K4	Q-R2	25 Kt-K5 ch	R x Kt
10 B-Q2	P-Q4	26 R x KKtP	R-KB6
11 P-B6	Q-QB2	27 B-K5	Q-KB sq
12 Castles (c)	P x Kt	28 R-KB7	R-Kt sq
13 Q x P	R x P		dis. ch
14 B-B4 ch	K-R sq	29 R x R dis.	K-R4
15 Q-R5	Kt-Q2		ch
16 P-KB4	R-KB sq	30 R x Q and wins (e)	

Notes.

(a) Weak play!

(b) The game is now resolved into a Muzo Gambit; White, however having the move, and his Q Kt being in play, which makes all the difference.

(c) Grandly played. And against such an opponent!

(d) Another splendid sacrifice! If 23... P x Kt, 24 Kt-Kt5 ch, wins the Black Queen.

(e) One of the finest games on record.

Has the name "Krementz" stamped on the back, showing quality, whether solid or plate, as our plate outwards some solid buttons. Beware of imitations. You get a new one without charge in case a genuine Krementz button is damaged from any cause. Special styles for Ladies' Shirt Waists and Children's Dresses. Sold by all jewelers. The Story of a Collar Button free on request.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$1.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and they are broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

TOPICS OF THE DAY.

THE LITERARY DIGEST is in receipt of the following contributions to the India Famine Fund:

\$100

The above list contains only those contributions received prior to May 14. They have been forwarded to Messrs. Brown Brothers & Company, 59 Wall Street, New York, who are custodians of the fund received by the Committee of One Hundred.

LORD ROBERTS'S ADVANCE.

THE middle of June is the date now set by the London war critics for the capture of Pretoria. Lord Roberts's successful advance, contested for the most part only by the Boer rear guard, has taken him more than half-way from Bloemfontein to the Transvaal capital, and his overwhelming force is thought by many papers to be able to overcome any resistance the Boers can offer. "The war is practically over," says the *London Daily Chronicle's* correspondent at the front, telegraphing from Kroon-

stad, the Boer stronghold which Lord Roberts entered almost without opposition on Saturday of last week; and the other British correspondents with the advancing army seem to be equally optimistic. One feature of the advance that has called out considerable remark is the small loss sustained by either side, a result attributed to Lord Roberts's wide flanking movements, made possible by his large force of cavalry. The orderly retreat of the Boers leads the *London Times* to observe: "The signs point to military breakdown on the part of the Boers, but, after experience of the past, we can not accept the reports of demoralization without reserve. The game of war must be strictly played out to the end."

The British tactics are described and commented upon as follows by the *Baltimore Sun*:

"General Roberts's present steady advance illustrates what almost any commander with some 15,000 cavalry and 30,000 infantry under his immediate command can do against opponents not a fourth as strong, however mobile, and aided by the nature of the country. On approaching a defensive position, held strongly, the method of Roberts, it appears, is to send forward cavalry and artillery, first to locate the Boer forces and then to pass around their flanks. The Boer answer to this is to extend their line, seizing kopjes that enable a few riflemen to withstand ten times their number. But by successive extensions the Boer line becomes so weakened that it is easily broken through and the line of retreat is threatened. From east to west the British front covers some thirty-five miles, and it seems impossible for the Boers with but 10,000 or 15,000 men in this field to withstand them everywhere. Infantry, it appears, are no longer used by the British in the front line; their function is to support the cavalry and artillery, and hold what these arms gain. Only on rare occasions are they required to charge—Methuen's plan of 'straight at 'em' being discarded. In view of General Roberts's success in his last advance hopeful Anglophiles predict his arrival before Pretoria 'within six weeks.' But the Boers have a way of spoiling fine programs."

As to the Boer tactics the *Chicago Inter Ocean* says:

"General Botha is retreating, just as General Johnston retreated before Sherman in the Atlanta campaign, skilfully, deliberately, but avoiding battle. He can not fight as he did at Colenso, nor as Cronje did at Magersfontein, because the British front is so extended as to envelop him wherever he cares to give battle south of the Vaal. When the time comes for battle it may be taken for granted that he will display the same spirit that he did at Spion Kop."

It now is admitted on all sides that the two Boer republics have but a short time more to exist. The *New York Press* thinks that the benefit to Great Britain, however, amply atones for this loss. It says:

"The war, in spite of early disappointments, really has continued the national life of the British empire by a century at least. It has recalled the obligations of nationality to colonies that were drifting far from the motherland. It has called the attention of her rulers to lax methods in army regulation and to an ancient armament the continuance of which might have meant disaster in a contest with a foe numerically greater. It has cemented the empire, and in the accomplishment of that the price paid fades into insignificance."

Yet, says the *St. Louis Republic*:

"The final act of the crushing of the two Boer republics and the establishment of British sovereignty throughout South Africa will be full of pathos. The Transvaal and Orange Free State

have appealed in vain to the world's civilized nations for help in their extremity. All that is left them now is to die fighting. The promised spectacle should be viewed with humiliation by the 'Christian powers.' It will reflect no credit upon Christianity or civilization."

THE ICE TRUST IN NEW YORK.

THE advance in the price of ice in New York City, from thirty cents a hundred pounds to sixty cents, has aroused a crusade against the American Ice Company, which controls the ice trade in the metropolis, a crusade that has been made still more furious by the announcement that the company will sell no more five-cent cakes. The *Philadelphia Ledger* calls the trust's operations "a veritable crime against humanity," and the *Boston Transcript* says that the increased price "is like a tax on bread and water and air." Michael C. Murphy, president of the New York Board of Health, says: "Ice or no ice for the poor in

THE "PEOPLE'S FRIEND" IS RIGHT IN IT.
—The New York Tribune.

the summer time in New York is life or death for thousands of them. The proposition to increase the price of this necessity of life is one of the most menacing that could be taken, in so far as it concerns the health of the poor and the middle classes of people." The *New York World* says:

"Ice is an indispensable article to the people of New York during the summer months. Inability to buy it means an incalculable increase in sickness and suffering among the poor. The advance of 100 per cent. in the price of ice decreed by the trust also means an increase in the death-rate in every crowded district in the city where that exorbitant price can not be paid.

"The facts and figures collected by *The World* and printed in its news columns clearly establish two things:

"1. The ice trust's price, 60 cents per 100 pounds, is almost double the price charged in other large cities. And this fact alone raises the strong presumption that the ice trust comes within the legal definition of 'unlawful combinations to prevent competition and control prices to the injury of the public,' for which federal and state statutes are supposed to provide a remedy.

"2. The ice trust's extortionate operations in New York are aided and abetted by and are in fact based upon the connivance of men high in the councils of Tammany Hall and potent, either officially or unofficially, in the city government. It plainly appears, indeed, that but for the action of the Dock Department in refusing to lease docks to small competing ice companies and individual ice-dealers, the ice trust could not maintain its monopoly.

"The practical question presents itself in the old form—What are we going to do about it? Good lawyers assure *The World* that under the existing anti-trust laws this monstrous monopoly can be successfully attacked. The machinery of the law must be set in motion at once."

The machinery of the law has been set in motion by the *New York Journal*, which is proceeding against the Ice Company, under the state anti-trust law, to have its charter revoked. The charge made in the comment quoted above that the Tammany Hall organization is interested in the ice trust seems to be believed by all the New York papers, including *The Journal* (Dem.), which favored Tammany in the last election. The *New York Tribune* (Rep.) says: "Tammany has been wanting to make a campaign issue of trusts, and it looks as if it might succeed far beyond its desires." The *Brooklyn Eagle* (Ind. Dem.) observes that Tammany's efforts to make money have usually been directed at "people who could stand the gaff," and that "this ice trust, if Tammany is in it, is the first case in which that organization has descended to squeezing the slender pockets of tenement-house people." If the masses get the idea that the Tammany leaders are back of the trust, continues the same paper, "they will be consigned by popular wrath to a region where ice is even scarcer than in New York." Figures collected by the *New York Times* (Ind. Dem.) and other papers show that while ice is selling in New York at 60 cents a hundred pounds, it is selling in Kansas City at 40 cents, in St. Louis, Milwaukee, and Cincinnati at 35, in Chicago and Indianapolis at 30, in Buffalo and Washington at 25, and in New Orleans at 20.

THE CUBAN POSTAL SCANDAL.

THE arrest of Col. Charles F. W. Neely, chief financial agent of the Cuban post-office department, on a charge of embezzling \$36,000 of government money, and the reported suspension of Estevan G. Rathbone, director-general of the Cuban posts, marks the first serious blot on the American administration in Cuba. Large sums have been missing for many months past, and it is assumed by the officials now investigating the matter that the defalcations were made possible by the fact that an issue of postage-stamps ordered destroyed was sold in place of new stamps.

Much indignation is expressed by American papers over this official dishonesty. Says the *New York Evening Post* (Ind.):

"The President should take warning from this revelation of rottenness in Havana. Such things hurt him and his party more than it would to refuse the demands of twenty political bosses. Worse than that, they fill Americans with shame. Let Mr. McKinley take the lesson to heart, and determine hereafter to live up to his professions and promises in the matter of enforcing civil-service checks and regulations in the choice of colonial officers. Only in that way can be prevent our eager political exploiters of the islands from heaping failure upon failure and robbery upon robbery, until the stench of American maladministration becomes as offensive as was that of Spain's."

The *Indianapolis News* (Ind.) declares that the only cure for such corruption as this lies in the "separation of the administration of our dependencies from our national politics." The *Philadelphia Public Ledger* (Ind. Rep.) presents the same argument, and points to Great Britain's colonial government as a model in this respect.

The *Springfield Republican* (Ind.) thus frankly comments on the situation:

"A group of political adventurers seems to have been in control of the post-office department of Cuba. Neely, the embezzler, has now been traced back to Assistant Postmaster-General Perry Heath, whose fine sense of the proprieties may be inferred from the notorious fact that, while holding a high administrative office of the Government, he continues to act as chairman of the literary bureau of the Republican national committee. . . . Major Rathbone, the head of the Cuban postal service, was trained in the delectable school of the politics of plunder. He had served in one administration as a fourth assistant postmaster-general, the official whose special business it was to decapitate the country postmasters of opposite political faith. It

is only necessary to say further that the major is an Ohio man, and has been a lieutenant of Mark Hanna in the politics of that State. The Cuban post-office scandal, by these facts, is easily connected with the school of politics of which Hanna, Heath, and Rathbone are the illustrious exponents. . . .

"How will this scandal read in the Philippines? If this sort of thing can happen under the country's very nose, what is not possible 10,000 miles away?"

TWO POPULIST CONVENTIONS.

THE national conventions of the two wings of the Populist Party were held last week at Sioux Falls and Cincinnati. The "Fusionists," as was expected, nominated Bryan for President by acclamation. On the question of Vice-Presidency, there was not the same unanimity, as some of the leaders wished to

leave this nomination open until the assembling of the Democratic convention at Kansas City. It was finally decided, however, to nominate Charles A. Towne, of Minnesota, for Vice-President. The "Middle-of-the-Road" Populists, who met at Cincinnati, nominated Wharton Barker for President and Ignatius Donnelly for Vice-President. The platform adopted by them is a radical one, declaring for the initiative and referendum, public ownership of all public utilities, and a fiat paper currency representing the aggregate wealth of the nation.

The Republican papers are very hostile to what they describe as the "populist insanity." Says the *Baltimore American*:

"The fatuousness of such documents as those which emanated from Cincinnati is apparent. They subserve no good end; they merely disturb the even tenor of the world by detracting from legitimate pursuits and intelligent thought a certain number of men whose energies, if directed in other channels, would make

for the betterment of existing conditions. This energy has no appreciable effect upon the world so long as it manifests itself according to the Cincinnati plan, since the logically disposed portion of the human race regards it as the idle vaporing of a superlative degree of crankism."

The *Minneapolis Journal* (Rep.) declares:

"These two Populist conventions represent the fate of a movement which was inaugurated to effect a revolution which would if successful have arrested the progress of this country for some years. It began with a justifiable revolt against exorbitant railway rates and expanded so as to cover every impractical fad which home and imported socialism

WHARTON BARKER, OF PHILADELPHIA.
Nominated by the "Middle-of-the-Road" Populists for President of the United States.

could crowd into a platform. The disintegration of the party entered upon a serious phase in 1896 when it fused with the Democratic Party and went down to defeat with that silver-plated organization. It flourished in a time of business and industrial depression, and as soon as its food-stuff began to fail, it showed signs of heart failure. It has succeeded in demoralizing the Democratic Party to an extent which has insured the rejection of Democratic control of the government indefinitely. If the Republican Party fails to justify its existence by lapsing from its constructive and beneficent principles, it will only be succeeded by a new party which will embody its progressive and achieving spirit."

The St. Louis *Globe-Democrat* (Rep.) points out that "every party claimed by Bryan is at war within itself" and the Cleveland *Leader* (Rep.) says that "the Populist Party is fast sinking into the weakness and decay which have overtaken so many similar organizations in the United States." On the other hand the *Boston Advertiser* (Rep.) declares:

"A political movement which, even under the most favorable circumstances, can command the votes of more than 1,000,000 American citizens is not to be despised. However wrong it may be, even absurd and ridiculous, it can not be contemptible: for nothing is contemptible which possesses power in relation to a great interest of human life. Certainly the government of the republic is such an interest."

IGNATIUS DONNELLY, OF MINNESOTA.
Nominated by the "Middle-of-the-Road" Populists for Vice-President.

CHARLES A. TOWNE, OF MINNESOTA.
Nominated by the "Fusion" Populists for Vice-President, to run with Mr. Bryan.

UNCORKED!

—The New York Tribune.

Curiously enough, the Socialists join hands with the Republicans in declaring that Populism is a dying issue. The *Cleveland Citizen* scoffs at the Populist demands and maintains that they emanate from a middle class that is passing out of existence. The *New York People* affirms that Populism is "dead and buried" and that its intelligent advocates are joining the Socialist ranks.

The Democratic press, while naturally favorable to the Sioux Falls convention, severely criticizes the action of the "Middle-of-the-Roaders." Says the *New York Journal* (Bryan Dem.):

"The 'Middle-of-the-Road' Populists at Cincinnati have adopted a platform which, with the exception of the financial plank, is really admirable. . . . It is a pity that the authors of this platform could not see that almost everything in it was attainable through the agency of the Democratic Party, and should prefer to make themselves a 'crank' side-show rather than a part of a great national advance."

In a long editorial deprecating the action of the two conventions, the *Cincinnati Enquirer* (Dem.) says:

"Are we to be guided by cries for 'initiative and referendum,' election of Senators by the people, government ownership of everything and the reform of all the ills that flesh and intellect are heirs to by statutory enactment and tinkering of constitutions; or are we to stick to the good old Democratic doctrine that that which governs the least is the best government? . . . Democrats are tired of defection and division. They are tired of being the catch-basin for irregular, impure, impertinent, and indefensible streams in politics? They want to get together on a platform that all can stand on consistently and decently. Whether their standard bearer shall be William Jennings Bryan or some other Democrat distinguished for intellect and honesty, they want to preserve the Democratic Party as one of dignity—as one that shall be a leader of political forces, and not a follower and trimmer."

The Boer Envoys.—Much speculation is indulged in by the American press as to the mission of the three Boer envoys. Some of the Republican papers go so far as to say that their arrival at this time is a "Bryanite scheme," and the *Washington Star* (Rep.) declares that they "are coming only to urge us to run our campaign in the interests of the Transvaal." While many of the Republican papers are less violent in their comment, it seems to be the opinion of the press of both parties that the Boer commissioners can accomplish nothing tangible at this time. Says the *Baltimore American* (Rep.):

"It is a conspicuous fact, in spite of statements to the contrary, that our Government has not turned a deaf ear to the Boers' appeal. This fact should be borne in mind. At the request of Presidents Kruger and Steyn, this nation offered its friendly offices to England in an effort to bring about peace. This is as far as we are permitted to go by the rules of international comity, unless we throw such rules to the four winds and embroil ourselves in a war with which we have no official connection. Much as we sympathize with the Boers, we can not afford to take such a step. For our own sake we dare not allow our hearts to run away with our heads. When we made our proposition to England, her reply was a virtual warning to all nations to keep hands off. We dare not disregard that warning unless we are ready to involve ourselves in a war with England for the sole purpose of giving a practical demonstration of the existence among us of a certain sentiment. The sober sense of the nation will accord with this opinion, and the coming Boer delegates should recognize it and give it due consideration."

The *Chicago Chronicle* (Dem.) says:

"It is hardly necessary to say that the Boer representatives can see nothing in what the Administration is doing in the Philippines to inspire in their breasts the faintest hope that the McKinley Administration will lift a finger in their behalf."

MR. WANAMAKER'S CHARGES AGAINST PHILADELPHIA OFFICIALS.

MR. JOHN WANAMAKER'S startling charge against two Philadelphia city officials, which he made public last week, has stirred up some tremendously indignant comment in Philadelphia, and has brought out in the press of other cities considerable moralizing on official methods of replying to newspaper criticisms in the City of Brotherly Love. Briefly stated, Mr. Wanamaker's charge is that on Thursday morning of last week Abraham L. English, the director of public safety of Philadelphia, and George G. Pierie, the superintendent of city property, called at Mr. Wanamaker's office and threatened that unless he would consent to stop the criticisms of the mayor that have been appearing in *The North American* (a paper owned by Mr. Wanamaker's son), these two city officials would make public evidence damaging to his character. According to Mr. Wanamaker's report of the conversation, he explained that the paper does not belong to him; but when Director English persisted in overlooking this point and demanding that the attacks on Mayor Ashbridge be discontinued, Mr. Wanamaker said: "I will not permit you as director of public safety, or the mayor himself, even if he were President of the United States, to dictate to me on a question like this." Director English, according to the report, replied:

"Very well. Then I want to give you notice that for eight months we have been looking up your personal record from the time you were Postmaster-General. We have followed you throughout Washington, Philadelphia, New York, and even in Europe, and we have fortified ourselves with affidavits against you, and since you have been attacking other people we will now take our turn on you."

Mr. Wanamaker replied by expressing his opinion of their conduct in strong terms, and ordering them to leave his office, which they did. The next day he gave an account of the affair to the press, prefacing the narrative by saying:

"Under ordinary circumstances there possibly could be no excuse made for the intrusion of such a private matter on the public attention; but when a powerful city official, the chief counselor of the mayor, controlling the police force of a municipality, threatens a citizen with a deliberately concocted and scandalous attack on his character, unless he silences the criticisms of a newspaper upon the acts of public officials, the occurrence is more than a private grievance—it is an incident of far-reaching and menacing import. No more insidious and terrorizing form of blackmail could be devised. The threat of the chief of police of a great city, speaking for a mayor and municipal administration, is no idle boast; it is a monstrous and audacious attempt to intimidate and coerce by an unlawful and revolting abuse of power. To be silent under such circumstances would be an encouragement to lawless and truculent officials, vested with authority with which they can harass and oppress. It would embolden the perpetrators of such practices, and put weak men at their mercy."

The *Philadelphia Press* (Rep.) says: "This revival of Dick Turpin's methods in the city of William Penn will hardly go down." The *Philadelphia Record* (Ind. Dem.) says of Director English: "That insolent official, who undertook to muzzle the press by a threat of assault upon private character, is a despicable ruffian. He neither understands his duty as a public servant nor the enormity of his offense against public right. He ought to be instantly abated." The *Philadelphia Times* (Ind. Rep.) says that "this act of high, responsible, and powerful officials in the city government will appal the community."

The attacks that were made by *The North American* and other Philadelphia papers upon Mayor Ashbridge accuse him of partiality in signing a franchise grant to the Keystone Telephone Company. The *Philadelphia Record* says of this franchise:

"The franchise granted by the city to the Keystone Telephone Company is in nowise limited or restricted so as to give protec-

tion or compensation to the public. The company can sell out, or go on, or stand still, as it pleases. It has been given the use of costly properties without pay, and of the most valuable privileges without any surety that they will be exercised for the public benefit. The mayor's attention was called to these defects and omissions and to the necessity of safeguarding the interests of the city, by the press and by the spoken protests of citizens and of organizations deeply interested in securing better telephonic facilities. He has no answer to make except that the incorporators are fine fellows, and have plenty of money, and have assured him that they mean well."

The North American said on the morning after Mr. Wanamaker gave out the report quoted above: "This journal is quite beyond the reach of any influence which frightened and angry and compromised officials can bring to bear upon it. . . . In the sure confidence that a time is soon coming when we shall have an end of the Quays and Stones and Penroses and Durhams and Salters and Ashbridges and Englishes, *The North American* will continue to do its chosen work of appealing to the intelligence and moral sense and patriotism of the people of State and city to rouse themselves and restore American government in this robbed and disgraced commonwealth."

SOUTHERN OPINIONS ON NEGRO SUFFRAGE.

THE race conference at Montgomery, Ala., last week, and the vigorous campaign in North Carolina for a constitutional amendment that will practically disfranchise the negroes in that State are stirring up the Southern press to a renewed discussion of negro suffrage. Three States, Mississippi, Louisiana, and South Carolina, have amended their state constitutions so as to bar (by means of educational and property qualifications) nearly all the negroes from the polls; North Carolina is about to vote on a similar amendment, Virginia and Alabama are considering the step, while Georgia has decided to let the negro retain his ballot.

The campaign in North Carolina for the constitutional amendment is becoming very earnest. A speech delivered by Prof. W. E. Abernathy, of Rutherford College, before the White Supremacy Club in Charlotte, N. C., has been printed and is being used as a campaign circular. In this speech Professor Abernathy refers to the enfranchisement of the negro as "the most foul, most damnable wrong ever forced upon a free sovereign State," and says of the terms of the proposed amendment: "They are plain and simple. We disfranchise no white man. We disfranchise only ignorant and incompetent negroes. We must pass the amendment. We shall pass it." *The Raleigh (N. C.) News and Observer* (Dem.) says: "Does anybody suppose that the white men of North Carolina are fools enough and cowards enough to stand still and submit to negro domination, when all the rest of the world is governing the negro? Manhood demands the adoption of our constitutional amendment." *The Wilmington (N. C.) Morning Star* (Dem.) declares that the Fifteenth Amendment to the Constitution of the United States was ratified with the assistance of the votes of twelve Southern States, when their legislatures were controlled by "scalawags and carpetbaggers, when thousands of white men were disfranchised and the negroes voted to enfranchise themselves, one of the most outrageous proceedings ever enacted in this or in any other country, a proceeding so outrageous that its leading advocates did not have the hardihood to defend it as constitutional"; and, the same paper adds, "promises made under duress or under intimidation are not binding in law, honor, or morals, and it was under such conditions that negro suffrage was forced upon the Southern States."

The *Washington Bee* (Afro-American) fears that when the negroes of North Carolina go to the polls to vote upon the pro-

posed amendment, "the whites will combine, and by force of arms and their bloody and dastardly methods prevent negroes from voting," and it gives the North Carolina negroes the following counsel:

"Force is to be detested when exercised in a contest where conscience, patriotism, and eloquence should be the controlling forces. Yet the sense of manly independence and self-preservation dictates that brute force be met by a like force when other forces become useless. God forbid that the tragic scenes about Wilmington be reenacted this year, but should such be attempted manliness, justice, and self-respect demand that the negroes shall defend their helpless sisters, wives, and daughters against unholy slaughter by gangs of bloodthirsty and heartless brutes.

"We trust that the thinking class of whites in North Carolina will not be led into schemes of gross injustice and crime by unprincipled and designing demagogues and grasping politicians.

"Above all it is the duty of all intelligent and manly colored people to watch and be prepared for the worst and not fall with their backs toward the enemy."

Several speakers at the Montgomery conference spoke strongly on the suffrage question. A. M. Waddell, ex-mayor of Wilmington, N. C., who led the armed movement against negro domination in Wilmington in November, 1898, said, among other things:

"Unrestricted negro suffrage in the Southern States, if the right be fully and freely exercised, means the most ignorant, corrupt, and evil government ever known in a free country. It means more than this, for there can be no social security where it prevails. Among white men, political party ascendancies are never utilized to affect social order. Social disorder invariably follows negro political ascendancy. The negro has had nearly forty years of freedom and citizenship and opportunity for education, and yet, with many honorable exceptions, he is quite as incapable of understanding the meaning of true liberty and of intelligently exercising political rights as he was when first emancipated. . . . White supremacy is absolutely essential to his welfare, because it means the salvation of those things upon which his every interest depends. It is madness in him, and cruelty in those who so advise him, to resist it."

Hilary A. Herbert, of Alabama, President Cleveland's Secretary of the Navy, who also spoke before the Montgomery conference, said of the negro and the ballot-box:

"There is no country in the world where elections were purer than they were in the Southern States in 1860. If since that time we have departed from the teachings of our fathers, it was necessity that taught us—the necessity of preserving our civilization. It was not a desire to get rid of negro domination that prompted the new constitution of Mississippi or the new constitution of Louisiana. The white men already were dominant in both States; they were simply taking steps in the direction of pure elections. It is just one step from defrauding the negro to defrauding the white man, and we know that as long as matters remain as they now are we can never have, as we ought to have, and wish to have, two respectable parties in these Southern States.

"It will probably be agreed upon by the majority of those in this conference that most of our Southern States need changes in their fundamental laws to adapt them to present conditions; but, while I concur in this necessity for amendments, it must also be borne in mind that no changes merely as to suffrage that could be made in state or federal constitution could of themselves meet the demand of the hour. We need better and more harmonious relations between the races. Race friction, race hatred, beget such crimes as malicious mischief, arson, and assassination. It prevents cooperation for the prevention or discovery of crime, and is the prolific mother of distrust and perjury. Lynch law but adds to race hatred; it begets the feeling that injustice has been done, because a trial is denied."

Ex-Governor William A. McCorkle, of West Virginia, advocated "an honest and inflexible educational and property basis" for the suffrage, "administered fairly for black and white"; but, he added, the time is rapidly coming when the South will need every vote it can get to sustain its commercial politics, and "the

South most certainly will be ultimately insistent that the negro vote be counted." Bourke Cockran, in a speech that was received with great favor by the audience, advocated the repeal of the Fifteenth Amendment to the federal Constitution, by which the negro was enfranchised.

GERMAN-AMERICAN COMMENT ON SECRETARY ROOT'S WARNING.

THE German-American papers, even those that uphold the present Administration, are emphatic in what they call the jingo-hetze of Anglo-Saxons—*hetze* being an untranslatable term—the character and action of a lot of hoodlums. The warning recently given by Secretary Root, in his reference to the probability that we should have to fight ere long to uphold the Monroe doctrine, is taken by the German-American editors to refer to Germany and her reputed intentions in South America, and as such is strongly resented. Says the *Westliche Post* (Rep., St. Louis):

"Mr. Root may rattle a sheet of tin to produce theatrical thunder, but it will hardly produce an echo. . . . A couple of years ago the danger was much greater. Then the 'Anglo-Saxon cousins' thought themselves strong enough to tread on the toes of everybody. But since then our expansionist policy has proved to be such bad business, and England has shown in the Boer war such impotence that the danger has lessened considerably. . . . The more our careless war minister threatens, the greater the majority for the German navy bill. Moreover, the interpretation of the Monroe doctrine to mean that we are masters of South America is the doctrine's worst foe. Our methods in Porto Rico, Cuba, and the Philippines have hurt it more than all Europe's powers."

The New York *Staats-Zeitung* says that the Germans can not understand why our highest officials indulge in threats. Such threats mean actual war, and it hopes that our officials "will learn better manners." The *Illinois Staats-Zeitung* (Rep., Chicago), thinks that this *hetzen* against Germany keeps away the best German emigrants, who prefer to go to parts where they are less disturbed. The *Wächter und Anzeiger* (Cleveland) quotes from L. M. Habererom's Washington correspondence to show that the whole disturbance is English-made, and is intend-

ed to rob the Germans of their colonies. The *Freie Presse* (Chicago), in a series of articles, expresses itself as follows:

Until lately Germany thought she could do with nineteen battle-ships and thirty cruisers. Since then the Germans have learned better. They have seen that McKinley and Salisbury tried to provoke a war in the Samoan incident. Naturally they are arming. We have proven ourselves to be bandits in our dealings with Spain. Is it a wonder that the German Government and people buy arms when robbers are abroad? When it rains, people get umbrellas. We have claimed hegemony over the entire American continent. Very well; we should have stayed there. The right to expand we must logically admit to be in the possession of other nations. The German voters should take care to examine into this latest phase of international politics. It is clear that McKinley, if reelected, will do his best to cause a war with Germany as he did with Spain. He is the humble servant of England. He and his cabinet act as if they were all in the pay of England.—*Translations made for THE LITERARY DIGEST*

LORD SALISBURY AND HOME RULE FOR IRELAND.

THE British Premier's remarkable speech before the Primrose League in London on Wednesday of last week seems to have created almost as much surprise in this country as in England. The paragraph that caused the most astonishment was this one:

"Apart, however, from the fate of former struggles, I am still assured that there is no hope of the predominant partner ever consenting to give Ireland practical independence. We have learned something from the South African war—how a disloyal government, in spite of warnings, can accumulate armaments against a most powerful combatant, and thus secure a terrible advantage. We now know better than we did ten years ago what a risk it would be if we gave a disloyal government in Ireland the power of accumulating forces against this country."

Such references to Ireland after the Queen's recent visit, and at the very time when Irish generals and Irish troops are doing so much for England in South Africa, the *London Chronicle* (so the cable reports) thinks particularly inapt and tactless. The *London Daily Mail* declares that Lord Salisbury does not voice English sentiment in this matter, for from John o' Groat's to Land's End the British are one people in their admiration and gratitude to their cousins across the Channel; and the *London Daily Express* observes that Lord Salisbury is guilty of one of

CARTOON GLIMPSES OF THE COMING CAMPAIGN.

those indiscretions that may be apologized for, but can never be explained.

The New York *Sun* remarks that "Lord Salisbury seems to have struck the idea of imperial federation a blow between the eyes," and the Philadelphia *Ledger* calls the speech "frightfully ill-timed." The Philadelphia *Times* says:

"Whichever way it is looked at, the stupidity of thus associating the Irish and the Boers is past comprehension. It is a reassertion of the old hostility in the most truculent and offensive way and can have no influence but to chill the good feeling which the Queen has been trying to foster, and certainly to chill any Irish enthusiasm in the South African war. It is not strange that the London papers have taken Lord Salisbury sharply to task. The freshest American official scarcely would be guilty of a blunder so indefensible."

The New York *World* finds in the speech a point against British imperialism:

"The Boers have taught England, according to Salisbury, that all the way round the world, from Ireland to the Transvaal, freedom is folly and force the only wisdom."

"Gladstone 'in an evil moment' thought that the empire could be based on the consent of conciliated peoples. Salisbury has discovered that its foundations must be laid by conquering armies and cemented with the blood of slaughtered patriots."

"He does not seem to see that the abandonment of the Gladstone ideas—peace and justice abroad, justice and progress at home—has any connection with the world-wide manifestation of ill-will toward his country."

WHY ENGLAND SHOULD STOP THE WAR.

JEAN DE BLOCH, author of "The Future of War," thinks that the time has now come when England will find her own interests best served by halting her armies and making peace with the Boers. This surprising recommendation gains interest from the partial confirmation that events in South Africa have given to M. Bloch's still more surprising ideas, set forth in his book, to the effect that the superior advantages of the defense in modern warfare have already made war practically impossible. He says (writing in *The North American Review* for May):

"I say nothing now of the future necessity of the two races living side by side in South Africa on the principle of 'give and take.' I pass over in silence the powerful argument against the war which the comparative statistics of births and deaths in the Transvaal supply, whence it appears that the future is to the more prolific race of the Boers. I rely solely on the fact that weak as the Boers are numerically, they are enabled by the most modern weapons to hold their own while defending their country against invasion, and they will do so with such results as to render the entire upshot of the war utterly indecisive. If that be true, do not the material interests of England, no less than the ethical mission which Great Britain is accomplishing in the world, point to the necessity of sheathing the sword? . . ."

"From the moment the invasion of the Transvaal proper begins, and European troops venture into the heart of the South African Switzerland, every hill and hollow of which may be transformed into an impregnable fortress, the fortune of war will necessarily change once more, and the gloomy outlook of last December and January will dash high hopes and evoke dread fears anew. This is not prophecy but logic; not clairvoyance but insight. Smokeless powder, quick-firing rifles and artillery, and the scientific construction of entrenchments can be utilized by a clever people to such purpose that a determined force of defenders may successfully hold its own against an invading army eight times larger than itself."

If the Boers continue to display the sagacity they have shown thus far, thinks M. Bloch, "it is absolutely true that the Boers can render the invasion of their country abortive."

So much for military considerations. Political considerations only reinforce the same view. The British empire, M. Bloch notes with admiration, is "cemented by morality, instead of be-

ing held together by the fear of fire and sword." Is it well, then, he asks, to return to the specious maxims of George the Third? "Is it wise, even politically, to drive unwilling subjects into the political penfold at the point of the sword and to create an Ireland in South Africa?" And as for moral considerations:

"Nor should we forget the moral effect, as widespread as it would be intense, which the peaceful solution of the struggle, even at this stage, would produce upon the world at large and the Boers in particular. It would be the death-knell of Chauvinism throughout the globe and of many of the worst social evils engendered by Chauvinism and its allies—militarism, the 'rage of numbers,' and the lavishing of labor and money on unproductive undertakings, which, in times of peace as in times of war, constitute the most effectual barriers ever yet raised against the advance of civilization."

LETTERS AND ART.

MUNKACSY AND AMERICA.

THE death of Mihaly Munkacsy on May 1 in an asylum at Bonn, Germany, recalls the interest which Americans have felt in the great Hungarian painter since his celebrated canvas, "Christ before Pilate," was exhibited in this country about ten years ago. It is pleasant to remember that Munkacsy, perhaps the most famous of modern popular painters, owed his success in a large measure to American appreciation.

It was not until 1868, when Munkacsy was twenty-four, that he first attracted much attention, after many years of labor and

THE LATE MIHALY MUNKACSY.

struggle which seem to be the necessary novitiate of most artists. At Düsseldorf in that year an American gave him a commission to execute a picture, and this resulted in "The Last Day of a Condemned Man," painted on a huge panel of wood which the artist had himself prepared. It was afterward sent to the Paris Salon of 1870, and made Munkacsy's name known throughout Europe. Thereafter he was a frequent exhibitor at the Salon, and one great picture followed another, the series culminating in 1878 in his "Milton Dictating 'Paradise Lost'"—afterward bought by the Lenox Library in New York—and his greatest picture, "Christ before Pilate," in 1881. "Ecce Homo" was his latest painting, and was shortly followed by the artist's virtual death to the world, due to a paralytic shock, in 1896, which necessitated his removal to an asylum.

In the New York *Press* (May 6) Mr. William M. Chase, the well-known American artist, who knew Munkacsy well, gives

some particulars of his early struggles and his later madness. Mr. Chase says:

"Born a Hungarian, his real name was Michael Loeb. He took his art-name from Munkacs, the little village in which he was born—a very common habit among European artists. His first and perhaps his greatest picture was 'The Last Day of the Condemned,' and it is pleasant to know that it was an American who enabled him to complete the picture. He was living at the time in a garret in the city of Düsseldorf, when he was brought to the notice of John R. Hay, of Baltimore. Mr. Hay found Munkacsy penniless, wrapped in a shabby ulster, and working at his great picture without either food or fuel in the room. He at once lent the artist money, and when the picture was finished it was bought and sent to Paris, where it secured for him both fame and fortune. He made his home in Paris, and his studio became one of the sights of the city.

"Munkacsy's madness must have had some unknown origin. In his youth he was a cabinet-maker, and it is said that when confined in the asylum he returned to his early trade. His skill as an artist entirely deserted him. This would indicate that the cause of his insanity was not his art, but perhaps some physical defect of the brain. It rarely occurs that a painter finds his way to a madhouse. Our profession imposes a tremendous strain sometimes in the effort to attain a result, but it is a stimulating rather than a depressing strain. The greater the genius the greater the madness is a common saying. But the artistic temperament permits larger scope for individuality than almost any other. If Mr. Whistler, for instance, were anything but an artist, I presume he would have been locked up long ago. He is not in the slightest degree insane, but his scorn of conventionalities would in any other calling have persuaded people that he was out of his mind."

ALEXANDER PETÖFI: THE HUNGARIAN BYRON.

OF the trio of Hungarian liberators—Louis Kossuth, Maurus Jókai, and Alexander Petöfi—the latter is perhaps the least known outside his own country. Yet there he is honored as one of the country's chief heroes. In *The Critic* (May), Mr. Alexander Hegedus, Jr., tells the story of Petöfi's life, which in both its literary and its political activities suggests that of Byron. Petöfi, who was born in 1823 in Central Hungary, early became aware of his poetical genius, and before he was twenty his first volume of poems, which stirred the whole nation, was published. Mr. Hegedus writes:

"'Love and Liberty—I need both during my life: for liberty I sacrifice my life, and for love my liberty!' Such was Petöfi's motto, the influence of which hovered around his path from his birth until the day of the battle in which he disappeared. One of the greatest poets of this century, he had also one of the noblest hearts that ever beat. There can hardly be related a more interesting and eventful story than that of Petöfi's life. Its romance and mystery render it almost incredible. Pursued by an unmerciful fate, his life was full of misery—a few years of glory leading toward an abrupt and untimely end, and a heroic death. In five words I could write his biography: he lived, loved, and died."

"On the 8th of September, 1846, he first met Julia Hendrei, who became his wife the next year. They spent their honeymoon in the castle of Kolt's. These were Petöfi's only peaceful hours between the two periods of his struggle for life and against the enemy. There in the castle of Kolt's he wrote his masterpieces, glorifying love and nature. His best poems were also composed there in the society of the woman he loved so ardently and who, after the poet's death, forgot him and married again. Petöfi wrote to her, in one of his masterpieces: 'If you would throw away your widow's veil, put it upon the cross of my grave, and I shall come out in the midnight to take it back, binding with it the wounds of my heart, which even then shall love you, and love forever.'"

"Petöfi could not long remain peacefully absorbed by his love; for the changing events abroad foretold the coming revolution. . . . The outbreak of the French Revolution gave the initiative

to the Hungarian revolt. With feverish zeal Petöfi took part in the great movement which threw the nation into the whirl of rebellion. Upon the first day that liberty dawned upon Hungary Petöfi was the man who, standing on the steps of the National Museum in the middle of the park, before the assembled people, recited Hungary's first battle-song, the well-known 'Up, Magyars!' This poem became the war-song of the soldiers and sounded through the land with a stirring power:

Arise, O Magyars, the country calls!
Now is the time, now or never,
Shall we be slaves or free?
That is the question—choose,
We swear by the God of Magyars,
We swear to be slaves no longer!

"The poem was immediately printed, as the first publication of the 'free press,' and distributed among the people. A few days after this scene, the guns thundered through the country. Petöfi rushed from battle to battle, stirring up the people with his wonderful songs and kindling enthusiasm wherever he appeared. At the beginning of the war the Hungarian army fought with astonishing success against the Austrians. Kossuth, Petöfi, and Jókai had done everything for their country, struggling with pen, fighting with sword and tongue, and freedom was nearly won when the Russians invaded the country with two million soldiers. Two million Russians against four hundred thousand Hungarians! With irresistible passion Petöfi roamed through the country calling everybody to arms—even the women—for the 'holy war'—but in vain. The power of the nation was exhausted by the two years' struggle. Tired and hopeless, yearning for death, Petöfi wrote the poem beginning 'There is only one thought which troubles me.' In it he explained the death he craved. 'No,' he wrote, 'not a lingering death in a soft bed, but to die quickly, like a tree struck by the lightning. I would fall on the battle-field, fighting for "Holy Liberty," and upon my body let the horses trample, crushing me. . . . Let my body be buried in the common grave with the unknown heroes who die for liberty.' A few days after he finished this poem what he desired happened. On the battle-field of Segesvár, on the 31st of July, 1849, he disappeared. Nobody knows how he died or where he is buried. His is a grave 'with the unknown heroes.' Not until several days had elapsed did his friends become aware of his disappearance."

Of Petöfi's poetical writings Mr. Hegedus says:

"His whole life, his poems, his yearning for love and liberty, can only be likened to Byron's. No wonder, then, that he is called 'the Hungarian Byron.' He wrote both lyrics and epics and excelled in both. Petöfi understood the peasants' 'folk songs' and gave them poetic setting. These songs of his are the pearls of Hungarian song-literature. His epic poems are filled with real Hungarian humor, which only one who had lived with the peasants in the 'punta' (the Hungarian prairie) could well grasp. There upon the breast of nature he wrote the songs which are known, as well as prayers, wherever the Hungarian tongue is spoken. But to translate them is as difficult as would be the translation of Rudyard Kipling's 'Seven Seas.' Petöfi knew his own greatness, and in one of the verses he wrote to his mother he expressed it by saying: 'Mother, the fame of your boy will live for a long time—forever.'"

Sympathy of English Litterateurs in the Present War.—The South African conflict has had a depressing effect upon British literature and a divisive effect upon British *litterateurs*. Sales of everything except war literature have greatly fallen off, altho four of the great sixpenny weeklies have doubled their circulation. Indeed, altho with improved news from the front the spring announcements are attracting more attention, literary conditions during the winter have been so depressed as to warrant the holding over of several important new books.

Mr. J. M. Bullock, writing from London to *The Book Buyer* (May), calls attention to the fact that the war has curiously split up literary people in England, and has even separated some families. He writes:

"Miss Olive Schreiner—whose husband has had some risky ex-

periences in trying to convene 'pro-Boer' meetings in the English provinces—has touched the top note of hysteria against the war; her brother, the Cape Premier, has maintained a dignified (official) neutrality; while her sister has called God to witness that England is in the right and that the Boers ought to be suppressed. But then, the anti-war party assure us that the author of 'The Story of an African Farm' is a woman of genius, and that her sister is a woman of no importance. In London, the Boers have many sympathizers among literary people, altho by a strange anomaly not among the religious-literary circle, for the church as a whole has bid England God-speed in the struggle, to such an extent indeed that the literary agnostics have pointed to the fact as a proof of the powerlessness of Christianity. If I were called on to make a division of literary opinion on the whole question, I should say that the real creators (like Mr. Kipling) are all for England, and that the mere critics and analytical writers are against her. The war has called forth some excellent verse by Mr. W. E. Henley, Mr. Thomas Hardy, Mr. Austin Dobson, and Mr. Gilbert Parker. Mr. Frederic Harrison and his fellow Comtists have denounced the war, in which they foresee the beginning of England's end. On the other hand, a literary socialist like Mr. Bernard Shaw applauds it. The Rev. Stopford Brooke thinks it better for South Africa to be ruled by the Briton than the Boer. And so the divergences of opinion go on, until one is almost inclined to believe with Mr. Auberon Herbert, the high priest of individualism, that literature should not touch the subject except in the spirit of the merest laymen. It need scarcely be added that the theory of government-by-reprisal makes the 'Celtic circle' pro-Boer almost to a man—and woman."

THE DEVELOPMENT OF HAUPTMANN'S GENIUS.

FEW writers have in the course of so short a life made so extensive a change in their literary ideals as has Gerhart Hauptmann. Beginning as a follower of Ibsen and Holz and as an upholder of the modern German naturalistic drama, he is already, at the early age of thirty-seven, the foremost of the dramatic mystics. A writer in *The Quarterly Review* (April) traces Hauptmann's evolution from the time of his social dramas—"Lonely Lives" and "The Weavers"—to "Hannele" and "The Sunken Bell," in which a mystic symbolism is seen in its full blossom. Referring to the somber nature of Hauptmann's earlier studies in sociological drama, the writer says:

"Hauptmann's painful ascent from this sordid valley of the shadow was made on the staff of mysticism. 'Hannele,' or 'Hannele's Assumption,' to give the full German title, was published and played at the end of 1893. It had the honor of attracting the notice of at least three kings. The chaplain was despatched from the palace at Potsdam to report on its value as Christian evidence—we believe with satisfactory results. The Court Theater in Vienna was specially licensed for its production, and the playwright was granted an audience in the royal box at Stuttgart. The professional critics, tho not unanimously favorable, combined to pay the drama the compliment of keen debate, which spread from the borders of Germany across the Vosges and the Atlantic."

"Hannele" indeed aroused so much criticism in New York that the mayor of the city forbade any one but an adult actress to appear in the title rôle. "The Sunken Bell," which appeared three years later, convulsed the literary circles of Germany with conflicting sentiments. It was the intellectual wonder of the season, and its attributes were canvassed in clubs and drawing-rooms. The critic of *The Quarterly Review* thinks that this play, which has been brought out this year in New York both in English and German, proves that Hauptmann is a genuine poet:

"He takes us—like Arnold Böcklin, the painter—back to the Teutonic *Urwald*. Wood-nymphs, fauns, goblins, and water-gods are as vivid as the schoolmaster or the priest, and each portion of the drama is successfully wrought. Take the first temptation of Heinrich, when he awakes in enchanted ground:

How sweet thou art!
Stay, for my hand is innocent as thou.

Already I have seen thee—where, ah, where?
I serv'd for thee through hard, long years—how long?
Thy voice to prison in a cage of bells,
To wed it to the Sabbath-day's delights,
This was my labor, and therein I fail'd.

How lovely is 't! How strange and full of awe.
The dark, mysterious branches of the pine
Are raised, and droop; how solemnly they bow
Their antic heads. O, woodland fey and fable,
Thy secret whisper trembles in my ears,
Stirs in the leaf, and rustles in the grass.
Thou art the fey and fable! Kiss me, fey.

"The contrast between the fascinating wood-sprite, Rautendelein, half fairy, half woman, and the old witch-wife, Wit-

GERHART HAUPTMANN.

tichen, with her weird and racy dialect, is that between the glamour and the weirdness of the forest, between the beauty and the horror of the superstitions that haunt its inhabitants. . . . Sometimes, as we renew the enduring pleasure of this poem, as we follow the peasant-poet through the charmed country of his fancy, sitting with the water-sprite by his spring, and listening to his immemorial wisdom, watching the elf-dance by moonlight and scenting the satyr among his goats, as Rautendelein proffers her secret to the weary searchers after truth—sometimes we, too, are tempted to exclaim—

Great God! I'd rather be
A pagan suckled in a creed outworn,—
So might I, standing on this pleasant lea,
Have glimpses that would make me less forlorn;
Have sight of Proteus rising from the sea,
Or hear old Triton blow his wreathed horn.

For that Hauptmann has had such glimpses in his home in the hills no reader of 'The Sunken Bell' can doubt. More doubtful is it if a 'creed outworn' is the most desirable possession for a poet who reached Berlin from the provinces barely ten years ago, and who is not yet forty years of age. Prophecy is the critic's pitfall. We should never have conjectured 'The Sunken Bell' from the author of 'Before Sunrise,' and we hesitate, therefore, to pronounce on the future of Hauptmann's genius. Still, we close perforce on this note of partial disappointment. We can only hope that of him, too, it will not be said—he was called but was not chosen; he was a German poet, but he was not the national poet of modern Germany."

THOMAS NELSON PAGE will soon appear as a dramatist, for he is now at work on "Red Rock," which will be staged next fall.

MILTON'S "POETICAL WORKSHOP."

THIS is the descriptive phrase applied by Mr. Edmund Gosse to the collection of Milton manuscripts owned by Trinity College, Cambridge, England. To all lovers of literature, says Mr. Gosse, this collection "is a relic of inestimable value," while to those who are practically interested in the art of verse, it reads "a more pregnant lesson than any other similar document in the world." The value of the collection consists in the fact that it reveals to us the great poet intimately engaged in fashioning and polishing his compositions, giving us his first rough drafts, his alterations, omissions, interlineations. It is his note-book for a period of five years—his blossoming period. Says Mr. Gosse (in *The Atlantic Monthly*, May):

"With the exception of 'L'Allegro' and 'Il Penseroso,' which have accidentally dropped from the unbound volume, or else were hewn roughly out of the marble elsewhere, these pages form Milton's poetical workshop. Moreover, the collection is, with those exceptions, complete. Between the 'Song on May Morning,' written at Cambridge in the spring of 1631, and the Latin and Italian pieces composed in Italy in 1639, there does not seem to exist another copy of Milton's verses which does not occur in the Trinity manuscript."

In the collection, moreover, there is no trace of a single abandoned work. "Milton attempted nothing which he failed to carry through, and the examination of these leaves gives us good reason to believe that he started no poem, not even a sonnet or a song, without being quite sure beforehand that he would be able to complete it in perfection."

The first part of the note-book was written in 1633, and begins with "Arcades." Next follows "At a Solemn Music," the manuscript of which is badly mutilated. Mr. Gosse writes:

"Here Milton is seen to be greatly perplexed with contending plans, and the entire poem is twice canceled, with strong cross pen-lines, and a third time written. We examine the two canceled forms of the ode with particular curiosity, since Milton's failures are more than most men's successes. Here are two lost lines:

"While all the starry round, and arches blue,
Resound and echo, Hallelu!"

and, lower down, the 'melodious noise' was originally succeeded by the line,

"By leaving out those harsh chromatic jars,"

which Milton's ear instinctively felt was discordant.

"As an instance of the extreme and punctilious care the poet took to make his expression exactly suit his thought and his music, it may be worth the notice and analysis of the reader that he tried 'ever-endless light,' 'ever-glorious,' 'unecipsed,' 'where day dwells without night,' 'endless morn of light,' 'in cloudless birth of light,' 'in never-parting light,' before finally returning to the fifth (and certainly the best) of these seven variants.

"We then come to the 'Letter to a Friend,' twice drafted, and with innumerable small corrections, proving, in the most interesting way, the extreme importance of the crisis in Milton's life of which this epistle, with its enclosed sonnet, is the memorable record."

Of the manuscript of "Comus" Mr. Gosse says:

"This is Milton's own writing, again, and the interlinings and canceled readings are so numerous that we are able to follow the poet in the act of composition. As in 'Arcades,' he makes a false start, and the first twenty lines are stormily struck through.

"Who has ever lived, but Milton, that was rich enough to throw away such beauties as,

"on whose banks
Eternal roses grow and hyacinths,"

or,

"I doubt me, gentle mortal, these may seem
Strange distances to hear and unknown climes?"

"As we proceed, the main interest is to note the unfailing skill

of Milton. He alters frequently, and in altering he invariably improves. Never was there an artist in language of so sure a hand."

ARTISTIC INFLUENCE OF JAPAN.

IN the eighteenth century Chinese art exercised a great influence in Europe, producing the erratic rococo style; to-day the Western world is going to school to the Japanese. Such is the view of a writer in a recent issue of the *Journal der Gemäldeskunst* (Leipzig). The Japanese artist, he thinks, is the finest observer of nature, and the most conscientious copyist of whatever he sees. We formerly called his reproductions odd; but the instantaneous photograph has proved that they are really as he sees them. The writer continues:

"For thirty years, English taste has been in sympathy with that of the Japanese, and English artists have tried to embody it, not, however, with perfect success, for they have been too much under classical influence. Thus arose the 'English style,' which has produced but little impression on the art of other lands, and which has utterly failed to touch German artists or the German public. Somewhat later, Germany fell under the influence of Japan, but German artists were no happier than their English *confrères* had been. Their exaggerated attempts resulted in the overdrawn 'youthful style.' They felt the beauty of Japanese art, but did not understand its spirit. By many artists and connoisseurs, Chinese and Japanese art are confounded, altho so distinct to the critical eye.

"The Japanese is a born lover of nature. Whatever he produces, from the most painstaking work of art to the simplest household utensil, is after natural models. In the representation of figures and scenes the Japanese display a perception which is astonishing. With a couple of strokes of the brush, they reproduce what they see with a truth to life which is almost incredible.

"Geniality and originality, it can not be denied, are possessed by the Chinese style, which is much older than the Japanese. But the Japanese, at the comparatively recent foundation of their state, had the advantage of learning from their neighbors what *not* to do."

That the Japanese are anything but frivolous, the writer continues, is shown by their artistic appreciation of the nude. Japan, he thinks, can look forward to a great artistic future. When we have been thoroughly educated in the spirit of Japanese art, we shall know better than to attempt to make faithful copies of their figures, plants, birds, etc. We shall seek to reproduce our own fauna and flora, and to depict as faithfully the life and customs of our own land, as the Japanese depict theirs.—*Translation made for THE LITERARY DIGEST.*

An Unpublished Work of Balzac.—After the rather laughable *faux pas* of Mr. Home Gordon last summer in announcing with flourish of trumpets the "discovery" of a new work by the elder Dumas, which, as it subsequently turned out, had been in print in French, Spanish, and English for thirty or more years, one feels inclined to put on a critical and cautious air when one hears of a new marvel of this description. This time it is an unpublished work by Honoré Balzac. *The Westminster Gazette* (April 17) says of it:

"Strange as it may appear, there exists a work of Balzac's in manuscript which has never seen the light, and on which he built extravagant hopes of fame and millions. This is a play originally called 'La Première Demoiselle,' afterward renamed 'L'École des Ménages.' In 1833 he wrote to Mme. Hanska, afterward his wife: 'Yesterday I wanted to write to you, but was overcome with the inspiration of a comedy, "La Première Demoiselle." George Sand predicts for it the most brilliant success. It is one of three schemes for making my fortune.' The non-success of the piece did not in the very least abate his dra-

matic ardor. Elsewhere he wrote to the same correspondent: 'The stage [that is to say, his plays, if successful] would be worth 200,000 francs a year to me.' Vainly did his friend Heine proffer golden counsel. 'Yesterday,' we find him again writing to Egeria: 'I had a talk with Heine about my plays. "Take care," was his reply. "The Brestois [inhabitant of Brest] can not make himself at home at Toulon. Stick to your trade."' For years Balzac was busy upon his 'Illusions Perdues.' A more poignant history of disillusion is that of his own writing for the stage. It was the will-o'-the-wisp, the *ignis fatuus* perpetually enticing him from tangibilities and the true bent of his genius. And the best of his plays, 'Mercadet,' was never more than a qualified success, nor is it likely to be reproduced."

Grand Opera Season of 1900-1901.—The arrangements for next year's opera season are now nearly complete. Mr. Maurice Grau has engaged about two hundred and thirty-five artists, including, according to *The Music Trade Journal*, Mmes. Melba, Eames, Nordica, Ternina, Scheff, Gadsby, Bauermeister, Suzanne Adams, Susan Strong, Louise Homes, Carrie Bridewell, Olitska, and MM. Pringle, Jean and Edouard de Reszke, Plançon, Difel, Mühlmann, Campanari, Imbart de la Tour, De Lucia, Bertram, O'Mara, Scotti, Giliibert, and Journet. The French and Italian operas will be conducted by Mancinelli, and the Wagnerian operas by Damrosch or von Schuch. The public will regret to hear that Calvé will not return to America until 1901, having signed an engagement for the Opera Comique, Paris, for the coming season, where she is to create two rôles, one in a Wagner opera, the other in Zola and Bruneau's opera of "L'Ouragan."

The Maurice Grau Opera Company will sail from Europe on October 20, proceeding directly to San Francisco by special train, where they will open the opera season at the Grand Opera House on November 12 with an engagement of three weeks. Thence brief engagements will be played in Sacramento, Los Angeles, Salt Lake City, Denver, Kansas City, Lincoln, St. Paul, and Minneapolis. The New York opera season will open on December 15. The arrangements for the new English opera in New York have not yet been made fully public.

NOTES.

MR. WILLIAM SAGE, whose novel "Robert Tournay" is now in its fourth thousand at the end of the second week, is a son of Mrs. Abby Sage Richardson, widely known as a writer and lecturer on English literature. *The Book Buyer*, which prints a favorable review of Mr. Sage's story, says that his interest in American and French history has always been great, and that the present semi-historical novel is the result of his studies in the history and literature of the French Revolution.

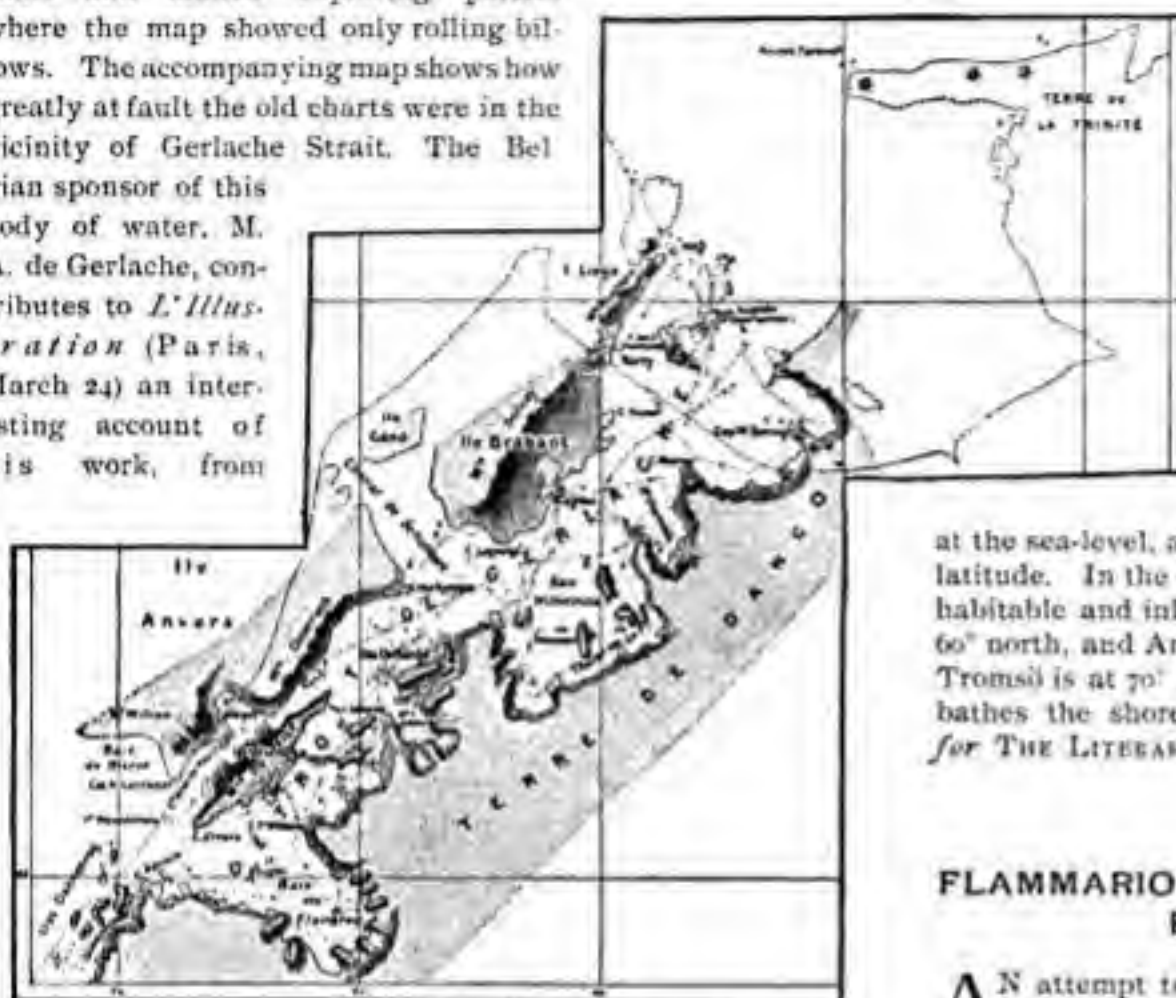

WITH the exception of Mr. Winston Spencer-Churchill, no writer has shown to better advantage as a critic of the South African war than Mr. Spencer Wilkinson, his home colleague on *The Morning Post*. From an almost unknown civilian he has developed into the leading military critic of London, and his morning summary of the situation in *The Pot*—the predictions of which are constantly verified—is read by millions each day. He was born at Manchester nearly fifty years ago, and had a distinguished Oxford career. He was afterward called to the bar, but later turned to journalism, writing the leaders in the *Manchester Guardian* for ten years. He was an ardent member of the Volunteers, and published his first book, "Citizen Soldiers," in 1894.

THE Shakespeare Festival this year at Stratford-on-Avon was celebrated by a large number of visitors and by the principal residents of the town. After a banquet at the town hall, the party proceeded to Trinity Church, where, after an address by the vicar, many wreaths and garlands were placed on Shakespeare's grave. Miss Marie Corelli, who for the past two years has been a resident of Stratford, laid upon the grave a wreath gathered from Dante's garden in Italy. The town was gay with flags and bunting and the grammar school which the bard attended was profusely decorated. At a meeting of the Memorial Association several gifts were announced, including seven valuable paintings by old masters for the gallery. The *London Standard* mentions the interesting fact that among the literary pilgrims was a delegation from the Shakespeare Club of the University of North Dakota, who had come almost six thousand miles to pay their tribute of homage to the illustrious poet.

SCIENCE AND INVENTION.

NEW DISCOVERIES IN ANTARTIC LANDS.

THE recent Belgian Antarctic expedition succeeded in altering the map of the world considerably in the neighborhood of the South Pole. That map, so far as the Antarctic regions are concerned, is still largely pure guesswork. The *Belgica*, we are told, sailed over dry land—or what was so represented on the chart—and landed exploring parties where the map showed only rolling billows. The accompanying map shows how greatly at fault the old charts were in the vicinity of Gerlache Strait. The Belgian sponsor of this body of water, M. A. de Gerlache, contributes to *L'Illustration* (Paris, March 24) an interesting account of his work, from

DISCOVERIES OF THE BELGIAN EXPEDITION IN GRAHAM LAND.
(Coast line of hitherto accepted charts is shown by the dotted line.)

which we translate the following paragraphs. Says the explorer:

"English or American sealers, who follow their profession in the Shetlands, have pushed further south in quest of the fur seal, which has been almost exterminated in those islands. They saw land and ice-clad mountain tops, and they saw, or thought they saw, that these lands continued in such or such a direction; they then guessed at the distance separating two points. Returning to their port, they related what they had seen, and from these vague data, geographers prepared approximate maps and baptized new lands. How many names were thus given to phantom islands, to clouds that resembled mountain ranges, or to fields of ice that looked like coasts!

"Other expeditions, more scientific, were not able to make a sufficiently large number of landings. Now every one knows how differently objects appear according as they are seen from a near or a distant standpoint. If our own itinerary had not followed so closely all the outlines of the coast, we should not have been able to trace the exact and almost precise contours of our chart, which is so different from the preceding ones."

Of some of the features of these newly mapped Southern regions, M. de Gerlache speaks as follows:

"The weather was wonderful. On [January] 25th it was so warm that one of us was prostrated with sunstroke. On the 27th we penetrated into the strait of which the false Hughes Bay was only the entrance. On this day we experienced the peculiar joy and emotion that navigators feel when their prows are cleaving virgin seas. We could not gaze long enough at the lofty cliffs descending into the sea, the bays bordered with glaciers, the peaks pointing toward heaven. All was savage, sterile, bare; nevertheless they were riches for us, since they were our discoveries.

"The panorama unfolded to our eyes, and never contemplated by man before, was of gloomy grandeur. Half-way up the black, gray, or red cliffs, vertical and with clearly defined clefts, floated clouds; at their feet was the ice, brilliantly white, with blue cracks at the sea-level. Here and there floated icebergs eaten away by the waves; some had vast caves, whose roofs were of dazzling azure. We often saw sunsets of unspeakable magnificence. The only things needed to complete our happiness were volcanoes.

"The water was peopled with cetacea, balneoptera, and megoptera. On the floating ice seals assembled. On the land we found rookeries or colonies of penguins, which did not disperse at our approach; they had never seen men before. These rookeries were often on beds of guano that looked like soil, but underneath was solid rock. Other birds innumerable nested or perched on the cliffs; sea-swallows, petrels, Cape pigeons, cormorants, etc.

"It is difficult to give an idea of the desolation of the Antarctic regions. Take the highest Alps, suppose an unheard-of deluge that raises the water level to the limit of eternal snow; regard the summits that rise above it—and you will get an idea of Brabant Island, of Antwerp Island, of Danco Land, etc. There the snow line is at the sea-level, and nevertheless we are only at 64° or 65° South latitude. In the northern hemisphere at 65° we have Iceland, a habitable and inhabited country; in Russia St. Petersburg is at 60° north, and Archangel is within the polar circle; in Norway, Tromsø is at 70° and Hammerfest at 71°. But no Gulf Stream bathes the shores visited by the *Belgica*."—Translation made for THE LITERARY DIGEST.

FLAMMARION'S EXPLANATION OF OBSCURE PSYCHIC PHENOMENA.

AN attempt to explain certain obscure psychic phenomena is made in a recent work entitled "The Unknown," by Camille Flammarion, well known as a popular writer on astronomy and as a dabbler in occultism. M. Flammarion advances no particularly new theories, but bases his explanations on the often advanced hypothesis of a thought-wave or brain-ray, which he attempts to treat in accordance with modern notions of energy. The ether, according to received physical doctrine, transmits light, heat, and perhaps attraction to considerable distances. Why may we not suppose, asks the French writer, that as it vibrates through our brains it also transmits to a distance conditions that depend on the state of our minds?

M. Flammarion believes that there are many proofs that the ideas and opinions of persons who exercise a so-called "magnetic" influence over others can be perceived by their patients or subjects. It is, he asserts, a proof of ignorance to suppose that the only phenomena around us are those which we can perceive directly; we know that there are colors, electric currents, sounds, and magnetic attractions and repulsions which are wholly imperceptible to us, and yet can be detected by means of delicate instruments. Our knowledge of science authorizes us to consider that all the bodies surrounding us are in infinite and constant relation one with the other, in accordance with the well-known laws of energy. We ought, therefore, to consider ourselves also as permeated by all these reciprocal calorific, electric, and attractive actions, not to speak of influences derived from forces the existence of which we do not even suspect; in a word, as permeated by dynamic actions of which we only perceive the most gross as they come into play around us.

M. Flammarion concludes that there can be no doubt of the transmission of thought, mental suggestion, the action of one mind upon another, altho most authorities are of a different opinion. He explains these phenomena by supposing that either a

wave or a current of some sort issues from one brain and strikes another brain, thereby conveying to it a sudden excitement which is translated into a sensation of hearing or sight. The nerves at such times, he believes, receive a shock in some specific direction. He is uncertain whether these waves or rays come from the action of the physical brain or from some possible inner center of the mind. He does not attempt to discover what form they take, but he suggests that as there is electricity in the human body, the action may be due to it, as there is plenty of evidence that projected psychic forces can be transformed into physical, electrical, and mechanical effects. Finally, he says, if thought is not a secretion of matter, but a form of energy, death of the body can not destroy it.

All this is necessarily somewhat crude, but it satisfies a popular demand, and an explanation of clairvoyance and telepathy based on the admitted properties of energy is certainly better than one that ignores those properties.

OUR SOLDIERS IN THE TROPICS.

THE fact that the Northern soldier fighting in tropical lands needs different clothing, food, and care from his brother in the temperate zone is continually brought to our notice by writers on military hygiene. A noteworthy article on the subject and one that introduces us to some new points of view is contributed to the *Philadelphia Medical Journal* (April 7) by Capt. Charles E. Woodruff, assistant surgeon United States army. Dr. Woodruff asserts that it is not enough to treat our troops in the tropics as it would be proper to treat the natives of the countries where they are fighting; the fact that they were born and brought up in a Northern climate must have consideration as well as their present situation. He asserts also that much of the criticism of our soldiers' tropical rations is the result of ignorance. For instance, says Dr. Woodruff:

"In condemning canned beef one officer is said to have reported that it was devoid of nutritive properties and worthless as food, because all the real essence of the beef was boiled out and converted into beef-extract, and that nothing was left in the beef but the dry muscular fiber. Such a gross error is laughable to a physician, because the veriest medical tyro knows that the nutriment in the meat is the fiber and that boiling coagulates certain parts of the fiber, but that it is impossible to boil out more than two per cent. of the albuminous nutrients. This officer had been influenced by the vicious advertisements of beef-extract, each teaspoonful of which is boldly said to contain all the nutriment of one pound of lean meat. Like the vast majority of men he believed these absurd advertisements, and does not know the difference between the nutriment of the fiber and the stimulating substances in the beef-extract. When he eats boiled meat or canned meat and does not experience the same stimulation as after eating broiled beefsteak, he is somewhat confirmed in his opinion of the worthlessness of canned beef."

Coarse food and primitive cooking are necessities of war, the writer says; an army can not take a hotel chef with it; neither can soldier-cooks be adepts at making cream puffs. Yet Dr. Woodruff commends the recent law authorizing the enlistment of special cooks, which he says is "probably the most beneficent change in the management of the ration, in the history of the army." In general, the present ration is the result of development and should not be altered unless we are sure that a change would be for the better. Dr. Woodruff devotes much space to an analysis and discussion of the ration, and concludes that its only weak point is in the selection of articles for field use. Canned goods can not be properly inspected, and the Government should erect and operate its own canneries. Says the writer:

"Our Ordnance Department has shown that it is fully able to look after every detail of the manufacture, inspection, and test-

ing of every article it furnishes, and it has over fifty ordnance officers to do the work. What a contrast is our Commissary Department, expected to buy and inspect and test immensely greater quantities of stuff, and yet it has only twenty-two officers to do the work. Until Congress increases this department so that it can do its work of inspection of all articles, then we must stick to a rigid rule that nothing is to be supplied unless it can be inspected at any time before it is issued to the soldier. We would not dream of waiting until the soldier pulls the trigger to find out whether the powder is good, nor should we wait until the hungry soldier opens his can of meat to find out whether the contractor has been honest."

The opinion that the American soldier is the best fed in the world is erroneous, according to Dr. Woodruff. He says:

"After taking in all the circumstances, the national dietaries, the money allowances, whisky and wine allowances, increases in war, climate, and work, the conclusion was inevitable that our ration was and is one of the least liberal rations among civilized nations, if not *the least* liberal. It has been a common thing to increase our ration in war, only to reduce it again at the end of the war, compelling company commanders to resort to all sorts of schemes to get money to buy badly needed variety. . . .

"I am firmly convinced that each company should receive a trifle per day for each man, with which to buy extras whenever he can. Many companies of volunteers did this with private funds. . . . The chief use of such funds would of course be for the purchase of green vegetables and fresh fruits. As a rule, the company commanders can buy these articles in small lots, when it would be entirely out of the question for the commissary department to handle them."

Dr. Woodruff's views on the use of alcohol in the tropics are unusual and radical. He says:

"The use of alcohol by soldiers is an old evil, and its excessive use was at one time so common that old soldier and drunkard were almost synonymous words. Part of this drinking in former generations was a result of the habits of the times when every man was expected to get drunk occasionally like a gentleman. Nevertheless, much of it has been laid to the sameness and insufficiency of the ration. The enormous consumption of whisky during the Civil War was partly due to this natural craving of a depressed nervous system. It made no difference in the tropics to tell every one that alcohol was dangerous, and it must be confessed that we saw more drinking in the Philippines than we had seen for a long time—not drunkenness, but a steady daily consumption. It seemed inevitable."

The author goes on to state his belief that a certain amount of alcohol is necessary in the tropics, owing to the terrible nervous exhaustion that results from long exposure to heat and moisture. He says:

"We have exhaustion, physical and mental, and particularly the exhaustion of nervous tissue, the basis of neurasthenia, nervous prostration, and other numerous conditions known to physicians, in all of which there is apt to be an instinctive desire for a stimulant, tea, coffee, cocaine, or alcohol. It is a temporary acquired craving precisely similar to that of many periodic or chronic drunkards or to the craving of certain degenerates among tramps, beggars, and criminals, who are in a condition of congenital nervous exhaustion unfitting them for work, and whose periodic orgies are proverbial. In every case the nervous system cries out for something to lift it out of its depression or inertia. . . .

"Tho I am not quite ready to recommend a daily ration of wine or whisky such as all the Mediterranean nations use, it seems reasonable. . . . I look upon alcohol in moderation as an extremely valuable food in the tropics to counteract the excessive oxidation which in three weeks will make a man lose forty pounds in weight. Tho many men refuse to acknowledge any such doctrine, they can not escape the conclusion that the conditions produced by tropical heat make it necessary to have a liberal diet to counteract the increased wastes, and the more work that is done the greater still must be the amount of food."

Among "exploded fetishes" regarding tropical living, Dr.

Woodruff mentions the opinions that overeating puts a strain on the liver, and that abdominal bandages are of special value. The tropics, however, he believes, will always be unsanitary for white men. White colonists in the tropics always degenerate—a statement that has been strongly controverted of late, but is supported by the writer with statistics of brain-capacity in different races and climates. To quote further:

"From all that has been said we are safe in concluding that the white race, raised in cold countries, will always rule the earth. The tropics left to themselves always revert to savagery as in Haiti, or semi-barbarism as in Central America. As we need and must have the productions of the tropics—tea, coffee, tobacco, hemp, etc., we must go there for them, for the native savage will never be able to develop the resources of his own country, nor govern it. Those countries must always be under the rule of men raised in cold climates. It is the white man's burden which will never grow less. There does not seem to be any reason to doubt that our present immense force in the Philippines could neither have been foreseen, nor prevented if it had been foreseen before war occurred. It is our share of the white man's burden, which must be taken up until our statesmen settle it. This means a large force there for a long time, and in calling attention to medical facts we have but one purpose, and that is, increasing with a lavish hand the soldier's comforts and delicacies. It can not be too often repeated that at home the possession of a large company fund derived from canteen profits is considered a necessity, and to be in the field subsisting on the ration without money to buy has always been a hardship; therefore in the tropics a company fund supplied by the commissary is a necessity, as in every civilized nation in the world."

In conclusion Dr. Woodruff says:

"The white man's burden is heavy enough, as it is even with the best of food—so let us not think for one instant of reducing the ration in the least item, but to increase it, if need be, to the point of extravagance. England with all her care, plays for her Eastern trade in the health of the families of her servants in India. Kipling talks of it in his stories, and it is already an old story with us. Some of our regiments which have not left the country are said to have already over two hundred and thirty pension applications on file—who can guess the future record of the regiments from Manila?"

"Whether or not it is wise for us to keep our share of the white man's burden, does not concern us here in the least. That is a question to be decided after we have weighed all the advantages and disadvantages. If we keep it, a way will soon be found of making the natives govern themselves in local affairs, and native troops in place of our own will be the chief means of lightening our work. At present our white man's burden means the burden of the soldier of the regular army. Let us make it as light as possible."

Life Under Other Conditions.—According to some recent writers, organic life and vital processes depend on the existence of an element whose compounds are in critical equilibrium at the temperatures at which life exists. According to Geoffrey Martin, who writes on the subject in *Science* for March, carbon is the fundamental element in our animal organism, but, according to Dr. F. J. Allen, who has been studying along the same line, nitrogen plays an all-important part in determining vital phenomena. "Mr. Martin suggests," says *Nature*, "that at the higher temperatures which may exist on other celestial bodies, or which may have existed at one time on our earth, silicon may give rise to a series of compounds analogous in their complexity and instability to our 'organic' carbon compounds, and under such conditions what we may call 'silicon life' may exist. In connection with this view it is somewhat interesting to notice that the power of secreting silica is now possessed by what we regard as among the lowest types of vegetable and animal life, diatoms and sponges. But of course there is a wide difference between the temperatures required for carbon life, or, as Dr. Allen calls it, nitrogen life, and Mr. Martin's hypothetical silicon life."

PERAMBULATING COCOONS.

CERTAIN caterpillars are born, live, and die in their cocoons, which they thus use as a snail uses his shell. Some of these protective coverings are extremely curious in form and color. An article about them is contributed to *La Nature* (Paris, April 21) by M. A. A. Fauvel, part of whose description we translate below. Says this writer:

"Walking one day in the summer of 1884 on the banks of the Yang-tze-Kiang, in the environs of Hankow, in Central China, I was astonished to see on the willows whose roots were bathed by the waters of the 'Son of the Ocean,' fruits that I had never seen before on any of the trees of the willow family. My astonishment increased when, on my nearer approach, I saw these fruits moving about among the branches. Having

picked some, I saw that I had been the victim of an optical illusion. The gray, elongated olives that I held in my hand were only silk-cocoons covered here and there with fragments of leaves or little splinters of wood. Contrary to what is the case with the majority of cocoons, they were open at the two ends. At the largest orifice, the black head of a caterpillar soon showed itself. This proved that we had not found a cocoon, properly speaking, for cocoons contain only a chrysalis. In this shelter, on the contrary, first the worm and afterward the pupa are protected. Even the perfect insect, if it is a female, does not often leave it, and she lays her eggs in its vicinity. The young larva forms a protective covering with the silk of the maternal envelope, and as it grows it increases the thickness and length of its habitation, which it drags after it like the

snail its shell. The result of this is that the thread of the cocoon is not continuous and can not be reeled off. The silk may be utilized by carding it, but the Chinese disdain to do this, having at their disposal the beautiful and rich cocoons of the mulberry silkworm. At the moment when it changes into a chrysalis, the worm fixes the cocoon on a branch by means of a band of silk, and then reverses its position in its protecting covering. Its moving life is now ended. At the end of a few months the butterfly is formed. If it is a male it flies off; if it is a female its life is generally passed, as we have said, in its protecting covering. . . .

"The study of the Psychids reveals coverings even more curious than those observed at Hankow. The largest of all belongs to a species found in New South Wales, Australia. It is 16 centimeters [6¼ inches] long and 3 centimeters [1¼ inches] wide, and is partially covered with splinters of wood arranged in parallel rows, lengthwise, separated by spaces of 2 to 3 millimeters [1⁄8 to 3⁄16 inch].

"These bits of wood belong to the trees (*Melaleuca* and *Leptospermum*) on which the worm (*Oiketicus*) feeds. Other species of the same region make cocoons like fruit or like pine-apples, while others resemble small fish, the splinters simulating fins. Westwood reproduces one 4 centimeters [1½ inches] long, perfectly cylindrical and entirely covered with splinters of regular size; two bands of silk encircling it near the ends give it the

PERAMBULATING COCOONS.—1, Cocoon of *Eumeta Moddermanni* (Delagoa Bay). 2, Cocoon of *Antimela Sumatrensis*. 3, Cocoon of *Eumeta Layardi* (Ceylon). 4, Cocoon of *Psycha quadrangularis* (Algeria). 5, Cocoon of *Psycha Albida* (France). 6, Cocoon of *Psycha Neficella* (Pyrenees). 7, Cocoon of *Apterona crenellata* (environs of France). 8, Cocoon of *Psycha horvutella* (environs of Paris). 9, Cocoon of *Eumeta Nitidella* (environs of Paris).

exact appearance of a licitor's fasces without the ax, or, if the simile be preferred, of a bundle of knitting-needles. It comes from Ceylon.

"We have also seen cocoons that are so exactly like a small cigarette as to deceive the very elect. They are made at Sumatra by *Animula Sumatrensis*. On the other hand, *Eumeta Lajardi* makes cocoons of the shape and color of a small Manila cigar.

"The most curious and ingeniously constructed cocoon is probably that of *Psyche quadrangularis*, of Algeria and Persia. It has the form of a truncated pyramid . . . and in its construction recalls the geometric sense of the bee."—*Translation made for THE LITERARY DIGEST.*

AN ELECTRIC PHONOGRAPH.

THE action of the phonograph in the various forms at present in use is entirely mechanical, altho the motions involved are extremely minute. A Danish inventor, Valdemar Paulsen, has recently devised a very ingenious instrument in which electromagnetism is used to produce and preserve the record. His "telegraphone," as he calls it, may be described as a telephone in which the voice may be magnetically "bottled up" and kept as long as desired. It is thus described in *The Electrical World and Engineer* (April 21) by T. C. Steenberg. Says this writer:

"The new and important feature embodied in this phonograph is that instead of the Edison wax cylinder for receiving and reproducing speech, Mr. Paulsen substitutes a steel band or steel wire. Moreover, this type of phonograph is intended to be used only in connection with a telephone.

"The steel band referred to passes between the poles of a small electromagnet, the coil of which is connected with a telephone. The pulsations of the current caused by speaking into the telephone varies the strength of the electromagnet, which in turn affects the magnetism of the steel band. The band is thus variably magnetized at different portions of its length, corresponding to the variations of the speech current, and will keep in this state for a long period. When again passed between the poles of the same or similar electromagnet, it reproduces the initial variations of current, and the speech is again heard through the telephone. In this way the steel band can be used to reproduce the message a great number of times.

"When it is desired to use the telegraphone to receive a new message, all that is necessary is to pass the band between the poles of a strong electromagnet or to send an electric current through it. Then all the magnetism of the steel band will disappear and it will be again ready for use."

The practical use of the invention, we are informed, was at first hindered by the fact that to receive a speech of any length a very long steel band was required. This drawback was over-

come by Mr. Paulsen's assistant engineer, Mr. Petersen, who invented a device for recording several messages on the same steel band without confusion in reproduction. The telegraphone reproduces speech and singing very distinctly and with-

FIG. 1.—FIRST FORM OF TELEGRAPHONE.

out alteration of tone. To quote further:

"The illustrations are photographic reproductions of two of the first instruments made. Fig. 1 shows a steel band wound around one of two wheels. In running from one wheel to another, it comes in relation with the electromagnet on top of the frame and is acted upon by it. The band is then drawn back upon the first wheel, and is now able, by duplicating the original motion, to reproduce the speech in the telephone, and to do so as often as is required. Fig. 2 shows another form of instrument, more in ap-

pearance like the Edison phonograph. The electromagnet is here shown traveling along a steel or nickel wire wound in a spiral around a drum.

"It is proposed to use the instrument in connection with telephone central stations and it is already thus used in several places in Denmark.

As an example of this application, the case will be considered of a telephone subscriber, A, who leaves his office, after having adjusted his instrument to receive messages during his absence, and also answer any inquiries concerning the time he will be back. B, another

FIG. 2.—ANOTHER FORM OF TELEGRAPHONE.

subscriber, rings him up. The telegraphone is put into action by the ringing up, and tells that A is not in, but that it will be pleased to receive the message for him. When this is received, B rings off and the telegraphone goes out of action. This can be repeated a number of times, and the messages then read by A when he returns. Such an arrangement has been introduced at Copenhagen, and is said to work satisfactorily."

SCIENCE BREVITIES.

"MISS WARD writes from Brazil," says *Omega*, "that the whole country is perpetually in a state of semi-intoxication on coffee—men, women, and children alike, and to babies in arms it is fed from a spoon. It is brought to your bedside the instant you awake in the morning and just before you are expected to drop off in sleep at night, at meals and between meals. The effect is plainly apparent in trembling hands, twitching eyelids, mummy-dried skin, and a chronic state of excitability worse than that produced by whisky."

A *mocking-bird* with military tastes is described by a correspondent of *The Daily Chronicle*, London, writing from Ladysmith during the siege. He says: "While Puffing Billy was firing I tried to get sight of a small mocking-bird, which has learned to imitate the warning whistle of the sentries. In the Gordons the Hindu Parbhos-Singh, from Benares, stands on a huge heap of sacks under an umbrella all day and screams when he sees the big gun flash. But in the other camps, as I have mentioned, a sentry gives warning by blowing a whistle. The mocking-bird now sounds that whistle at all times of the day, and what is even more perplexing, he is learning to imitate the scream and buzzing of the shell through the air."

It has been proposed to employ the phonograph as an aid in learning foreign languages. In learning a language it is necessary first of all to have the ear trained to catch and recognize the sounds, and the only way to accomplish this is to listen to the continual repetition of the sounds until the ear becomes familiar with them. Many persons have to learn a foreign language without any aid from a teacher that can speak that language correctly, and even those that are so fortunate as to have a competent teacher can not constantly have the teacher at hand. Now it is proposed to have phonographic records of language lessons; then the student can have the machine repeat the lesson over and over again, until he is perfectly familiar with it."

"ELECTRICITY in some of its forms and under certain processes of application has unquestionably been of therapeutic value," says *The Electrical Review*. "Electrotherapeutics to-day is a subject for investigation at the hands of numerous earnest, scientific, and truthful men who are working with a genuine desire for the furtherance of knowledge and the relief of suffering. But the sins that have been committed in its name are too many to catalog even if one could patiently undertake to tell the story of deceit and robbery, of deception and imposition upon the afflicted that is involved in it. It is fair to assume that any electrical remedy or any alleged electrical treatment largely advertised is what is called, commonly, a 'fake.' The genuine electrotherapist is bound by the traditions and ethics of the medical profession, and does not use such methods to attract patients."

"ONE of the innovations in military transportation," says *The Electrical World*, "which was brought about and developed largely through our war with Spain, is the use of the automobile. The signal corps of the American army has recently been supplied with electric automobile wagons for use in the Philippines. These wagons are of two kinds, one to carry the instruments and materials and the other to carry the personnel. The first is built like a covered ambulance, with rubber-tired wheels, and contains a storage-battery capable of running the vehicle for thirty hours on one charge when carrying 1,500 pounds of load. There are two 3½ horse-power motors, one in each rear wheel. The maximum speed is about ten miles an hour. The other wagon is constructed like a high cart, and is in no other respects similar to the first. Both wagons are fitted with electric side-lights, and the first also has electric lights in the interior. Other military applications of the automobile have been considered by the military world, but this is the first actual introduction."

THE RELIGIOUS WORLD.

SOME SECULAR VIEWS OF THE METHODIST GENERAL CONFERENCE.

ALTHO some six Methodist bodies are holding their general conferences this month, it is the General Conference of the Methodist Episcopal Church of the Northern United States, now in session in Chicago, that is attracting national attention. Altho this church, unlike some of the other Wesleyan bodies, shows a numerical loss in membership during the past year, it is nevertheless the most numerous Protestant body in the country, having, according to Dr. Carroll's latest statistics, a membership of 2,698,810—larger by a million than the next most numerous denomination—the Regular Baptist Church, South.

Besides the question of declining membership the most important matters coming before the Conference are the position of laymen in the legislative councils of the church, the election of several new bishops, the adoption of a new constitution, the place of the "higher criticism" in Biblical study, the question of amusements such as dancing and card-playing, now condemned by the Book of Discipline, and the five years' "time limit" of pastorates. At the very opening of the Conference the first of these questions was decided by a unanimous vote, and laymen were granted equal representation with the clergy. By a subsequent vote on May 8, however, the Conference refused to allow laymen a voice in the annual conferences of the church. These important bodies are to be still, as heretofore, attended only by the "traveling preachers."

Secular comment on what is termed "the victory of the laymen" is favorable to the new rule, as it is also, in the main, to greater freedom in relation to amusements. The *Buffalo Express* (May 5), thinks that the increased representation of laymen will give the General Conference "a broader and more democratic basis and probably will add to the vitality of this great church."

The *Philadelphia Times* (May 6) says:

"With laity and clergy working hand in hand in this way the progress of this, the most numerous Protestant body in this country, should be greater in the future than it has been in the past. The progress of every religious body depends as much upon the zealous, harmonious cooperation of the laity as upon the ability and zeal of the preachers, and of this cooperation the Methodist Church is now fully assured."

The *Baltimore American* (May 4) does not believe that this equal division of power between clergy and laity will mean greater liberalism. It says:

"The Methodist laity is faithful to the teachings of Wesley, proud of the rich heritage it has received from the founder of the church, and not prone to stray far away from the precepts laid down in the Book of Discipline. There have been changes in church methods to suit the changed conditions of modern life, but little or nothing has been lost of those fundamental principles which called Methodism into existence and made it such a mighty force in the religious world. No danger need be apprehended that the laymen will seek to use the new power given them to turn the church into courses that might entail loss of influence or of prestige, or that this equal representation will mean friction between the pulpit and the pews. On the contrary, it is certain to be followed by greater and more united effort on the part of both elements for the upbuilding of the religion in which they believe."

Referring to the attitude toward amusements assumed by Dr. Buckley, editor of *The Christian Advocate*, the most influential organ of Methodism, the *Chicago Tribune* (April 30) says:

"*The Advocate* clearly shows that the contest now is between those who think that the general rules are sufficiently explicit and those who think that special mention of certain forbidden

things adds authority to the voice of the church. In the mean while it is not disputed that many members of the church do play cards and dance and go to the theater, justifying themselves under the general rules, and, as *The Advocate* says: 'As much as any may deplore the facts, it is deplorable also that there is no record of the trial or punishment in any degree of any member of our church who has transgressed the specific rules as they have stood in our Discipline for nearly thirty years.'

"After carefully weighing the arguments on both sides, *The Advocate* says the choice lies between expunging the special prohibitions and 'the retention of the special prohibitions and the abhorrent corpse of a law which now is and will remain a dead letter.' As between the two, it concisely states its position: 'We believe that the solemn tests of a good conscience laid down in the older and simpler general rule appeal more authoritatively than do any and all specifications which may be subject-matter for debate between a man and his brother. He who will disregard the rule will disregard the specifications. When a Christian is brought to the test in the presence of the Lord Christ, he is apt to be sincere and honest. Christ never meddles. Some who make specific tests for their human brethren may meddle.' There can be no doubt where *The Advocate* stands in this matter, and undoubtedly its pronouncement will have weight with the general Conference."

The *Philadelphia Press* (May 2) gives the following résumé of the question of amusements as treated in the Methodist formulas:

"This subject is treated in two separate places in the Book of Methodist Discipline. The 'General Rules' in specifying things from which members are to refrain include the 'taking of such diversions as cannot be used in the name of the Lord Jesus.' In another part of the same Book of Discipline a number of acts are particularized as 'imprudent and unchristian,' and among them are 'dancing, playing at games of chance, attending theaters, horse races, circuses, dancing-parties, or patronizing dancing-schools, or taking such other amusements as are obviously of misleading or questionable moral tendency.' The latter was inserted in 1872, and has caused much dissatisfaction since. Its repeal has been asked for by the New Jersey, New York, New York East, and New England Southern conferences, but the prospect of success is not bright. The sentiment against any change is strong in the West, and is likely to defeat the petition."

The *Indianapolis News* (May 1) says:

"A prohibition not successful in prohibiting is worse than none at all. Its tendency is to create a lack of confidence and respect from the outside toward the person who, secretly or openly, breaks the rule. The irreligious person who sees Methodist deacons and their families in theater boxes or conspicuous among the spectators at the circus, or who attends balls at the homes of these people and belongs to card clubs with them, may feel an honest scorn for the 'foolish rule,' but at the same time his respect is not increased for the church-member that violates the church rule."

"The Methodist Church, as a church, yielded long ago to the spirit of individual responsibility in such matters. To yield the letter as well as the spirit will be a step in advance which the church will never regret. It will be no concession to sin, but a righteous measure, legitimate in the eyes of many of its most thoughtful and spiritual members."

In the Episcopal address read at the Conference on May 3, the Methodist bishops, while not condemning specifically the iron-clad rule which forbids dancing, the theater, the circus, and card-playing, recommend a less strict policy which leaves the matter to the individual conscience. "It would be profitable," the address says, "to place among the special advices of the Discipline a brief but cogent statement of the perils which attach to many amusements, of the evils inseparable from others, and of the principles by which a Christian should regulate his choice among and his use of them."

The bishops also maintain that the time limit, which now confines the Methodist pastorate to five years, should be entirely abolished or reduced to three years.

THE BOSTON CONGRESS OF RELIGION.

AN event of considerable significance, but somewhat overshadowed by the great missionary meeting in New York, was the Congress of Religion held in Boston. The congress is designed to extend the idea first embodied in the world's Parliament of Religions at Chicago, and the speakers at Boston were drawn from many Oriental as well as Occidental religious bodies. *The Outlook* (non-denom., May 5) says:

"The Rev. R. Heber Newton, of New York, in the opening sermon struck the keynote of the Congress: 'Our age makes certain the unity of the human race; this carries with it the unity of the spiritual nature of man, which again holds in it the unity of religion.' The Hon. Samuel M. Jones, the mayor of Toledo, expressed the prevailing thought in a different way in saying: 'Up to a few years ago it had been my habit to think of life as something that could be separated into fragments, such as religion, business, and politics. I have now come to believe that all life is one.' Another pregnant sentence occurred in the address of welcome by Dr. Lewis G. Jones, of Cambridge: 'We are beginning to see that the chief object of life is not so much the intellectual as the practical solution of its problems. Religion is life itself.' In his interesting sociological discourse on 'The Curve of Progress' Prof. Edward Cummings, of Harvard University, described progress as an ascending line that branched out slowly from materialistic to spiritual things, and incidentally asserted that 'progress never comes from sacrificing the weak for the benefit of the strong, but always from the sacrifice of the strong for the sake of the weak.' Mr. Charles B. Spahr spoke on 'The Church and Social Unity,' the central thought of his address being that, while religion was the greatest factor making for social unity, a majority of the clergy, by reason of their social identification with the ruling classes, had always supported these classes in resisting the advances of democracy. The East was represented in the congress by the Swami Abhedananda, of India, and the Rev. Bipin Chandra Pal, an adherent of the well-known Brahmo-Somaj movement. Among the women speakers were Mrs. Frederick Nathan, of New York City, who spoke with earnestness and enthusiasm of the necessity of bringing religion into industry, and the Rev. Anna Garlin Spencer, of Providence, R. I., who discussed the problems that beset 'The Church in the Country.'"

The New York *Sun* (May 4) contrasts the New York and Boston conferences, which, it remarks, represented radically conflicting views and theories of religious policy and duty:

"The New York conference was held for the purpose of stimulating and methodizing efforts for the propagation of Christianity to replace other religions. The Boston congress proceeded on the theory that there is an essential harmony in the spirit of all religions, Christianity included. The New York conference represented Protestant missions only, even among the Christian. The Boston congress brought in and welcomed representatives of religions other than the Christian. At New York plans for setting apart specific 'spheres of influence' to particular Protestant churches were suggested. At Boston the title and sufficiency of religions not Christian to retain their present 'spheres of influence' were respectfully considered. For instance, a representative of Hinduism explained that so far from being an idolatrous religion it is essentially spiritual, and that the images represented to Christians as idols are simply symbols akin to those in use in Christianity and 'stand for certain abstract truths, as the material embodiment of ideals.' A minister of the Brahmo-Somaj at Calcutta pointed out the underlying spiritual harmony between Hinduism and Christianity, in spite of their seeming differences, and he spoke of Jesus as 'a Hindu of the Hindus.'"

"The breadth of the religious hospitality of the Boston congress was indicated practically by its selecting this last Hindu minister to offer the prayer at the opening of one of its sessions. Both of these Indian representatives spoke of the profound influence of their religion on the Hindus, one of them saying that 'Hindus live religion, eat religion, and drink religion. Art, politics, and society are all based on religion; it is not a thing apart, it is their whole existence.' Very much the same may be

said of the Mohammedans. They also carry their religion into the conduct of their daily lives even more than do Christians. The introduction of Christianity among the Hindus was even opposed by one of them writing in an English magazine a few years ago, on the remarkable ground that it tended to weaken the deep religious spirit, more especially of intellectual men affected by it, and to substitute the religious skepticism so rife in Christendom. It is true, probably, that the influence of the skeptical philosophy of the Occident has been even greater in Japan than that of the preaching of religious faith by Christian missionaries."

ROMAN CATHOLIC VIEWS OF THE FRENCH RELIGIOUS ORDERS.

M. SAINT-GENIX'S article on "Religious Orders in France" (see THE LITERARY DIGEST, April 21) in *The Contemporary Review* (March) has been followed in the April number by another, still more condemnatory in tone, on "The Sweating of Orphan Girls." The writer directs his attention to the alleged conditions prevailing in the convents where orphan girls are committed to the sisters for care and training. His conclusions reflect very severely on a large number of the female congregations or sisterhoods. The younger class of orphan girls, he says, rise at 5 in summer and 5:30 in winter, sew until 7, and after breakfast and mass they receive elementary instruction until 12. From 1 to 4, and from 4:30 to 7, they resume sewing. Their food, he says, is insufficient, and this is indicated in their anemic appearance. Girls over thirteen sew all day and from about 5 P.M. to 8, 10, or even 11, if orders are numerous. M. Saint-Genix's statements are sweeping in their condemnation. "The story of these orphanages is blood-curdling," he says. "It reads like the dream of a delirious fever patient, and seems too gruesome for belief." "Year after year we watch them [the children] shuffling along unsteadily, but silently and sorrowfully, moving away out of the domain of the sun without once basking in his genial rays, abandoning their blindly climbing hopes of childhood, their infantine delusions, and offering up their agonized little souls, their darkened minds, and their pain-fled bodies, just to fill the congregation's coffers with francs and centimes."

The Bishop of Nancy, in France, the writer says, some time ago reported the condition of the convents in his diocese to Rome in a Latin letter from which M. Saint-Genix quotes. This letter was printed in the Roman ecclesiastical paper *Analecta Ecclesiastica*. The bishop is quoted as saying that these girls, after earning much money for the sisters for ten or twenty years, are "torn out of doors without a situation," and left unprotected from "all kinds of danger to every species of seduction." M. Saint-Genix makes further voluminous quotations from *Aurore*, the *Sixième*, and other French journals of November and December, 1899. The *Croix*, however, defended the sisters, maintaining that the Bishop of Nancy had, in a moment of transient irritation, published accusations based on the testimony of "unconverted penitents who escaped as soon as they were of age, and had nothing more urgent to do than malign those who had taken them in and supported them many years." M. Saint-Genix concludes:

"To these facts there is nothing to add. They carry with them their own commentary. That the Vatican, whose watchfulness nothing ever escapes, should have seemed unaware of them for so long might appear extraordinary to the uninitiated, but only they and none others were surprised when it leaked out that Rome had heard of the horrors and of the golden harvest they were bringing in, and, having heard, resolved and ordered that nothing should be done to put an end to them. This is no mere assumption; it is an established fact. Cardinal Mazzella, the Jesuit, who drew up the formula which Mr. Mivart refused to sign, has left no doubt whatever on that subject. He wrote a

letter to the Bishop of Angers, who had defended the Sisters of the Good Shepherd. And this is Cardinal Mazzella's letter:

ROME, 10th December, 1899.

MONSEIGNEUR,

"I congratulate your grace on having written and published the excellent letter in favor of the Sisters of the Good Shepherd who are persecuted unjustly. It is also for me a very agreeable duty [*un devoir bien doux*] to thank your grace for having so cleverly and firmly taken upon yourself the defense of an institution which confers inestimable benefits in the five parts of the world and the protection of which the Holy Father entrusted to me.

C. CARDINAL MAZZELLA."

"The sweating and torture of infants were not to be hindered, nor anything done even for the rescue of their bodies from brothels and their souls from hell. Rome decided that the nuns were not to be obliged to pay these half-blind slaves a five-franc piece the day that they were turned out to face the world—not tho they had labored for a quarter of a century in the establishment and earned tens of thousands of francs for the nuns.

"And this is the Rome which asks to be heard with respect even by Protestants and Agnostics on labor questions! This is the Rome which encroaches upon the domain of science, art, and politics, on the pretext that she is the repository of truth, the guardian of morals, the protectress of the weak and helpless! This is the institution which, perpetuating the torture of little children in secret, exclaims in public, pointing to its schools and orphanages: 'Suffer the little children to come unto me.' The wolf and hyena feel as good a right to exist as the lamb—doubtless a much better right—but that is not a valid reason for helping them to set up as good shepherds. Of religious life more than of any other it is terribly true that fruit is seed, and the fruit of latter-day Catholicism is that of the upas-tree. The congregations in the contemporary church are a power to be reckoned with; their power far exceeds that of the bishops and cardinals. But it is the strength of yellow fever or typhus—it is a symptom of the disease of the greater body."

The severity of M. Saint-Genix's words, which Roman Catholics regard as due to extreme bias and a lack of judicial spirit, has called forth many protests from American Roman Catholics. *The Messenger of the Sacred Heart* (May) has printed a defense of the French congregations, which has been widely quoted. Replying to an editorial in the *New York Tribune*, which expressed strong condemnation of the religious orders in France and the Philippines, it says:

"We have no hesitation in impeaching the credit of a writer who makes the grave charges which M. Saint-Genix makes, in the first part of his article (pp. 137-142), against congregations which number 180,000 persons, without taking the trouble to give his proofs and authorities, or with the mere hearsay phrases, 'it is said,' 'if there is truth in the report,' 'if it be true,' or, as he does for his most serious charge, 'it is highly probable, this conviction grows.' . . . French Catholics have, during the year 1899 furnished primary education to upward of 2,000,000 children. They have given secondary education to 91,000. They have procured higher and professional instruction for more than 10,000 French youths. All this without a single cent of expense to the state. Furthermore, the state has received the taxes which are imposed on all the school-buildings needed for imparting these different grades of instruction. Reckoning the money which the state, the departments, and the municipalities expend for public instruction, the above support given by Catholics in behalf of their schools represents a saving of 130,000,000 francs yearly to the Government.

"As to their charities, during the same year 1899 the religious congregations have lodged and fed in their asylums, refuges, hospitals, homes, and other institutions about 250,000 poor, among whom were 60,000 orphans and 110,000 old people. Of these latter, the Little Sisters of the Poor alone take care of 2,000. It is calculated that these wonderful Sisters from the time of their foundation to the present time have passed fully 130,000,000 days on which they had to beg from door to door the wherewith to feed, keep warm, and clothe this immense multitude of miserable old people. According to the most moderate calculation based on the expenses of the laicized hospitals, if the religious congregations were to disappear from France, the state would

have to expend more than 110,000,000 francs a year to meet the expenses now assumed by the religious.

"To all this we should add that in 1898 the French Catholics have spent more than 6,000,000 francs in foreign schools and missions, and that the Society of St. Vincent de Paul alone, through its conferences throughout the world, has distributed among the poor upward of 13,000,000 francs last year."

The same paper, in its June issue, devotes many pages to an examination of M. Saint-Genix's second article. The editorial is too lengthy for us to do full justice to it; but students of religious conditions in France will find it the fullest recent presentation of the Roman Catholic argument. The editor quotes at length from a letter in vindication of the sisters by no less a man than M. Waldeck-Rousseau, President of the French Council, whose anti-clerical ministry is supposed to be in full sympathy with the present endeavor to laicize the institutions of France. M. Waldeck-Rousseau, in his report to the French Chamber of a searching investigation of the charges of the Bishop of Nancy, admits that "prior to 1896,"—when that prelate's letter appeared—these charges "seem sufficiently proved"; but, he adds, "it appears certain that the errors of the old system have been abandoned, and that more solicitude, more justice, and more charity are exercised to-day in the education and maintenance of the young girls who are brought up at the Good Shepherd." This testimony from a proposed anti-clerical is indicative. *The Messenger of the Sacred Heart* infers, of the exaggerations into which it believes M. Saint-Genix has been led in his other statements. The writer counsels Roman Catholics that they "should not take things second-hand," nor "allow themselves to be overawed by secular newspapers and magazines manifestly hostile to the church."

PRAYERS FOR THE DEAD AND SPIRITUALISM.

NOT only the national church, but the Free-church bodies in England have had the question of prayers for the dead brought forcibly to their attention by the present war. *The Christian World* (London, April 5) says:

"Here is theology in the roughest, its chiefest problem thrust on you in a fashion which brooks no shirking. What has really happened? Where or what is he who, a moment ago so near, is now at a remove to which our space computations offer no clew? We are all on-lookers to-day at tragedies of this sort, and the questions behind them press us with relentless force. Do our dead still think or love? Have we any sort of relation with them? Can we do aught for them or they for us?"

"But multitudes have not yet reached that problem. They are at the earlier one, of an after existence at all. Is death the *ultima linea verum*, or a new beginning? As they incessantly debate, and explore now one side and now the other, 'Yes' and 'No' sound alternately within them, and they are unable to reach a final vote.

"The Gospel is pledged to the hilt on the future life. The fulcrum of its lever is in the unseen; there is its storage of hope, aspiration, and motor power. Chief among its treasures are the sacred dead. In the early stage especially, Christianity might almost be described as a cult of the dead. And yet that would be a misnomer, for to the view of the church those who had passed were, in the intensest sense, the living. The student of the Catacombs, as he marks the signs and deciphers the inscriptions, finds them a prolongation, reaching through the centuries, of St. Paul's triumphant burst, 'O death, where is thy sting!'

"This early communion of the dead brings us to the question, What on this subject is the position of Protestant Christians to-day? Signs are abundant that the standpoint from which it is approached by non-conformists, not less than by conformists, is a somewhat different one from that held by the reformers and the Puritans.

"Thoughtful minds are now asking whether the sixteenth-century onslaught on Purgatory and priestcraft did not, in the rush, carry away with it some precious things that it is time now to restore. . . . It is worth remembering that such English di-

vines as Jeremy Taylor, Andrewes, Cosin, Ken, Heber, to whom we may add Dr. Johnson, and, if we mistake not, John Wesley, prayed for the dead, and that while the Puritans generally disallowed the practise, so strong a reformer as Zwingli admitted it.

"And why should we not pray for the dead? What is prayer, in the best conception of it, but the following of those we love with aspiration and affection, with desire for their highest good, with the whole best emotion of our soul? What barbarous infidelity has taught us that death interposes a limit to this outgoing? The notion that those who now rest in God are, because of that, beyond the reach or need of prayer is heathen, and not Christian. It is disloyal at once to God, to the departed themselves, and to our own best instincts. There is no position, not that of heaven's central point; there is no condition, not that of supremest blessedness, that is outside the range of love. In proportion as it is blessed, the soul, whether on earth or in heaven, is more and more open to love's approach; and both here and in heaven it is love that is the essence of prayer. . . .

"We have neglected our dead, and in so doing have weakened one of the most intimate of our links with the unseen. We have put up in our minds barriers that do not correspond with the reality, and so have obstructed the flow of some of the grandest of the human inspirations. The mind revolts against these limitations. Its prophetic instinct recognizes them as a mistake. The vagaries of Spiritualism are a rough protest against the policy of cutting the cable between here and the Beyond. And that other side protests also. Mystic hints and monitions such as Kant records of Swedenborg, and Madame Guyon of her departed friend Fouquet, remind us, on the best authority, that near to us, on the other side of a very thin veil, lies a great realm of life which has the closest connection with our own. What that connection is we at present only dimly discern. Our organs of perception seem only in the most rudimentary condition. It may be that our later indifference on this side has hindered their development. But develop they must, for they are among humanity's most priceless possessions. A stage will yet be reached when they will be a part of the soul's general apparatus, and when, not to a stray prophet here and there, but to the common man will it be given to stand with Bunyan's pilgrim on the Delectable Mountains and behold what was visible there."

Light (Spiritualistic, London, April 10) thinks this is a real, though belated, recognition of the essential truth of the Spiritualistic position. It says:

"Spiritualists have been severely criticized and ridiculed for affirming that the departed are frequently benefited by the advice, sympathy, and prayers of earth-dwellers. We have been denounced for teaching that progress after death, following upon repentance and effort, is possible for the ignorant and sinful dwellers on the threshold. . . .

"Think of it! Spiritualism is a 'protest against the policy of cutting the cable between here and the Beyond!' Aye, and evidently the protest has not failed, it has not been in vain. While the writer laments that 'our organs of perception [psychical, mediumistic perception, or "spiritual gifts"] seem only in the most rudimentary condition,' he suggests that indifference has 'hindered their development,' and he fully justifies us and our long struggle for recognition against, not only indifference, but prejudice, intolerance and active hostility, by affirming 'develop they must, for they are among humanity's most priceless possessions!'

"After this we shall assuredly have *The Christian World* founding a 'School of the Prophets' for the development and exercise of mediumship and psychical powers generally."

The Free Church Council in England.—The English Protestant religious bodies outside the Church of England no longer recognize the terms "non-conformist" or "dissenter" as a proper designation, but call themselves "Free Churchmen." Together they form the great majority of the English nation, for the members of the national church all told are not more than two millions. Of late years all the Free Church bodies of England, Wales, and Scotland have formed themselves into a federation for the purpose of mutual help in evangelical work. The National Council of the Free Churches of Great Britain this year was

held at Sheffield, and appears to have borne striking witness to a genuine spirit of union and fraternity among the various denominations. *The Interior* (Presb., April 26) says of it:

"The Council is composed of representatives from all the churches which are free from state aid or state control, and its purpose is to bring their united testimony and united strength to bear upon important common interests. In one sense it resembles a branch of the Evangelical Alliance, but its aims are more immediate and specific. The Council wishes first of all to show that the lines which divide the free churches are not stone walls with iron gates, but rather ornamental rails or perhaps blossoming hedges. It also brings together the evangelistic elements from all denominations and the first subject which engaged the attention of the Council this year was the proposed mission of 1901, which is to carry the gospel message direct to every home in Great Britain. Another subject in which the body took a deep interest is the proposed modification of the laws of the kingdom relating to the sale of liquors, a number of strong resolutions being passed with practically no opposition. The present system of education by aiding denominational schools was disapproved, and even the war in South Africa came in for no little criticism from the moral side of the question. An American reader of English exchanges to-day is more than astonished to see the political activity of the clergy of all churches in Great Britain, issues which in our country would be almost universally considered too remote to spiritual interests to come in for explicit treatment in the pulpit being freely handled abroad. 'The Tory government' was as roughly handled in the Council as it might be at the hustings, the reserve or even the euphemism so carefully observed in this country being wholly ignored by these plain-speaking parsons. Perhaps this is one of the reasons why the 'non-conformist conscience' has become such a power in Great Britain."

New Sermons of Origen.—The discovery of some lost sermons of Origen, the great Alexandrian theologian of the third century, is a find of particular interest at this time, when not a few of the tendencies which characterized his philosophy are showing signs of revival in Christian theology. Aside from his belief in universal salvation, Origen's most notable characteristic was his belief in a spiritual and mystic rather than a literal interpretation of the Scriptures, and this he carried so far as almost to cause him to be classed with the interesting early sect known as the Gnostics, and to place him beside three modern interpreters—Swedenborg; Robert Taylor, author of "The Devil's Pulpit"; and Edward Maitland, author of "The Perfect Way"—each of these, however, presenting points of great dissimilarity, but all uniting in thinking that "the letter killeth."

The Interior (Presb.), which notes the discovery, says of Origen:

"He was the first writer of a systematic theology, and the first great Christian commentator. In later years he preached many expository discourses, not a few of which were lost. Some have been saved in a Latin translation. And now a French scholar adds to these discourses through a happy discovery. Batiffol found recently in Orleans a Codex which contained twenty more discourses of Origen in the Latin version of Victorinus of Pettau, who lived in the century after Origen. He has just published them (Picard and Son, Paris, 1900). They treat of passages in Genesis, Exodus, Leviticus, Numbers, Joshua, 2 Kings, Isaiah, Ezekiel, Daniel, Zachariah, and the Acts. Among his curious remarks are these: 'The Jewish scribes came from the tribe of Simeon; in the time of anti-Christ the Lord's Supper will not be celebrated, because everything will be polluted'; 'Christ was more beautiful than beauty itself'; 'John was the forerunner of Christ in the lower world; the keeper of the inn in the parable of the Good Samaritan meant "the angel of the church"' (cf. Rev. ii. 3); 'Christian liberty knows no fear.'"

MRS. HELEN WILMANS, one of the leaders of the Mental Science Movement in the United States and editor of *Freedom*, has lately, with her husband, made a gift of \$200,000 to found a "Scientific, Philosophic, and Ethical School of Research" at Seabreeze, Fla. All branches of education will be taught, but the whole student life will be tempered from the viewpoint of those who believe in the unlimited powers of man's mind, in self-reliance, self-mastery, and development of psychic powers.

FOREIGN TOPICS.

THE INDIAN FAMINE.

SIR W. WEDDERBURN recently suggested in the British House of Commons an inquiry into the cause of the Indian famine, and an imperial grant to relieve the sufferings caused by it. Mr. S. Smith seconded the motion, asserting that overtaxation had something to do with the poverty of India. Sir L. Mc-Iver moved an amendment, that Parliament could safely trust the Government of India with these matters, and this amendment was carried. Little interest in the motion was shown by Parliament, only 227 members being present, of whom 155 voted against it. Beyond an appeal to private charity, the majority of the British papers do not think it wise to go. *The Daily News* (London) is one of those question that the wisdom of this attitude. It says:

"Private subscriptions are not a national act; a vote of the House of Commons is. Such a vote is a contribution from every taxpayer of the country. No doubt, as Lord George Hamilton said, this would be a 'somewhat startling precedent.' But the question is whether there would be any great harm in 'startling' the empire and the world at large by such an act of national charity."

The Standard is inclined to blame the people of India for their distress. It says:

"No doubt is thrown on the capacity of the Indian administration to provide subsistence for many months for a population of five millions, spread over a territory larger than a combination of great European states. This alone should be a conclusive testimonial to the worth of British rule. No native *regime* would ever have dreamt of adopting our ideal of famine policy—much less realized it in practise. It would be well, no doubt, if the agricultural population of to-day showed a greater power of getting through a period of agricultural distress in reliance on their own resources. But to attribute their poverty to the oppressive nature of our revenue system is, to those familiar with the life of the ryots, pure perversity. Indebtedness is a grievous evil; but all experience shows that the larger the share of interest in the outturn of the soil left to the cultivator, the greater is his tendency to get into the toils of the village money-lender."

Romesh C. Dutt, president of the last Indian National Congress, charges the British Government in India with a system of rackrenting, especially in the central provinces and in the province of Madras. He expresses himself in the *London Times* to the following effect:

During the last fifty years, England has carried on 110 big and little wars in India, at a cost of £100,000, which India has to pay. In many parts the Government is the actual owner of the soil. Of the expected yield, the Government claims forty to fifty per cent. In some districts even sixty per cent. is demanded, to which twelve and a half per cent. must be added for local taxation. As the owners never obtain the high income for which the land is assessed, the claim of the Government amounts in some cases practically to eighty and one hundred per cent. The consequence is that the land is not worked at all.

He asserts also that in Bengal and in portions of Northern India, where the rentals are moderate, the famines are comparatively mild and the people are able to help themselves to a great extent.

The continental papers point to what they term an undeniable fact that India, once the wealthiest country in the world, has become distressingly poor under British rule, while the people, they charge, are taxed enormously to enable British officials and pensioners to live in luxury. This charge, it will be noted, is denied by Professor Washburn, of Yale, in an article published in our columns, May 5. It is, however, supported by Mr. Alfred Webb, formerly a member of the House of Commons,

who writes as follows in *The British Friend*, a Quaker paper published in England:

"In charges for the Indian Office, recruiting, civil and military pensions, pay and allowance on furlough, preparations in England for the military establishment in India, private remittances and consignments, interest on Indian debt, and interest on railways and other works, there is annually drawn from India and spent in the United Kingdom a sum calculated at from £25,000,000 to £30,000,000 per annum. Alone for 'net expenditure' in England charged on the revenues of the year, with the exchange added, 'we find in the Indian Budget estimate for 1899-1900 set down no less a sum than £22,024,500. No nation could stand such a strain. Some of it is, of course, for interest on railways and other supposed reproductive works. Many of these have been made for strategic reasons, and many of the irrigation works have proved a failure. In any case there is between us and India little of the give and take, of the tendency to a balance, that there is in similar borrowings and lendings between other countries. The drain is steadily one way. We have only to ask ourselves what would be the influence upon the economic conditions of these countries if all principal officials, after short service, carried their pensions away with them, if most of them through their service spent a large proportion of their salaries upon their families living out of the country, if most of the interest on railways and loans were spent outside its shores, if the expense of military preparations, the building of ships, the casting of ordnance, the manufacture of small arms and military stores went likewise."

Moreover, says Mr. Webb, by the free-trade policy of Great Britain she has supplanted industries that formerly, in India, gave employment to tens of thousands.

BOER VIEWS FROM BOER SOURCES.

THE "news from Boer sources" which reaches Europe and America by cable is not altogether reliable as an index of Boer feeling. Not only is it subject to the British censor, but its trusted purveyors are Reuter's Agency and *The Times* correspondent at Lorenzo Marquez. It was impossible, however, to obtain any other account of the manner in which the Boers bore their severe defeat at Paardekaal until their periodicals for March had reached Europe. As far as we can discover, only four papers are still in the field among the Boers—the official *Staats Courant*, the *Volksstem*, the *Randpost*, and, for the benefit of the English-speaking section, the *Standard and Diggers' News*. The two last-named are published at Johannesburg, the *Staats Courant* and *Volksstem* at Pretoria. The Bloemfontein *Express* was promptly suppressed as soon as Lord Roberts reached the Free State capital, and its editor is in prison. The *Friend of the Free State*, which was allowed to carry on its pro-English agitation under Boer rule, is now an English official paper. The special war editions of the *Staats Courant* and *Volksstem* are printed in camp and contain little but ordinances, the lists of killed, wounded, and missing, and news of the movement of the troops. The Pretoria edition of *Volksstem* is filled chiefly with letters from the front, which our Amsterdam exchanges copy unabridged. We condense the following from a member of the Heidelberg commando, on the attempts to relieve Cronje:

February 18 we got within 4,000 yards of Cronje's position, storming Stinkfontein, where we took 10 prisoners. We were attacked, but held our own, tho only 500 strong, and managed to take all the oxen which the enemy had captured from Cronje. The next day we drove the enemy from their entrenchments, but on the 21st we were forced to retire. Our losses were 10 killed, wounded, and prisoners altogether 40. On the 25th we returned, getting within three miles of Cronje's laager. Here about 100 of the Winburg contingent were taken prisoners or killed. I can not understand why Cronje made no attempt to break through. Capt. D. Theron of the Scots went to him to tell him that we would support his attempts. The gallant captain returned unharmed. But altho Cronje promised, he made no attempt, and

dangerous extravagances of their politicians. In the same way the ultimate resort to a supreme imperial tribunal will maintain and render concrete a majestic ideal which otherwise would daily become more shadowy."

We have not at hand Australian papers commenting upon the matter. The *London Times* correspondent at Melbourne says, in cable despatches, that the Australian press rather favors the British imperialist's views. On the other hand, Mr. Walther Griffiths, a member of the South Australian parliament, in an interview expressed himself as follows:

"Australia's patience is worn threadbare on this federation proposition. We have spent too much time and thought and money perfecting the scheme and getting it indorsed by our people to tolerate any trifling at the hands of Downing Street or Westminster. We do not intend to permit our constitution to appear to sanction the false notion that it is necessary for Australia to nestle under the wing of England. . . . The slightest suggestion of compulsion will estrange our people from the empire beyond recall, with the result that a United States of Australia, a republic modeled on American lines, will be added to the independent powers of the earth. . . . No political organism embracing the scattered territories of the British empire ever can exist with Australia as an integral part of it. We are like the Americans—a dollar-loving, practical people. Some of our older citizens will follow sentiment to any length, but the younger generation is prepared to go only so far as the national interests justify. We can not permanently interweave our fate with that of England."

The Liberal papers in England warn Mr. Chamberlain that the trouble in South Africa is quite enough, and that it would be unwise to estrange the Australians. The *Manchester Guardian* (Radical) says:

"In spite of the optimistic prognostications of *The Times*, the Australian Premiers have made the only reply open to them to Mr. Chamberlain's despatch. In studiously moderate language they have declined to make themselves in any way responsible for any amendment which the imperial Government may introduce into the commonwealth bill. . . . We fancy that the imperialist spirit is very much the same, whether it has Australia or the Cape in view. It is ready enough to appeal to the Australian premiers when they are for overriding the wishes of Cape Colony; but when they claim the deciding voice upon their own affairs, it is another matter. The imperialist makes a great noise about the loyalty of the colonies, but he will leave it to Liberals to keep them loyal by the same Liberal policy which made them loyal. He has welcomed Australian federation because he pictured it as a step toward a closer imperial union, and he finds it rather a step toward the formation of an Australian nationality. Finding this, he is only true to himself in insisting on imperial unity and the control of the mother country as against the claims of self-government. Those to whom freedom is more than empire will also be true to their principles in leaving to the judgment of the colony that which concerns the colony itself. . . . It is by no means amiss that the Australians should realize betimes that the issue between self-government and imperial control may arise in other parts of the world than Cape Colony."

The Westminster Gazette (Liberal) warns against a policy which may offend the Australians. It suggests acceptance of the Australian commonwealth bill without amendment, but thinks a separate imperial act safeguarding imperial rights advisable. The Canadian papers regret that a discordant note should be raised at a time when the harmony of the British empire appeared perfect. *The Free Press* (Ottawa) says:

"It is to be regretted that there should be any friction in connection with the passage of the Australian federation bill, now being considered in London, and still more to be regretted that there should have been incorporated with the measure clauses which may be interpreted as being unduly dictatorial, autocratic, and independent. . . . At a moment when the bonds of empire are being tightened, and Australia has been foremost among the British possessions in showing that her people possess the spir-

it of loyalty to the death, it is a pity that the discordant tones of the professional demagog should mar the harmony or the efforts of the politician bar the way to the progress of a great measure."

Continental observers remark that there is little likelihood of genuine resistance on the part of the British Parliament to the Australian commonwealth bill. "Unconditional surrender" is one of the items in the bill of costs for the imperialist war in South Africa. *The Journal des Débats* (Paris) says:

"England had already consented to give the Australians perfect liberty with the exception of the royal prerogative embodied in the Privy Council amendment. If this tie is broken, the authority of the mother country will manifest itself merely by the presence of the governors, who will, indeed, exercise much social influence, but little actual power. Mr. Chamberlain flatters the colonial politicians as much as possible, and the creation of an imperial court, with colonial members holding life peerages, is certainly a tempting bait. . . . But it must be remembered that the bond of interests between Australia and Great Britain is very loose. The Australians have not, to strengthen their love for the mother country, that latent menace which the neighborhood of the United States forms for Canada. England certainly can afford to favor the jingoism of the Australians, who talk of a kind of 'Monroe doctrine' in the Pacific."

The *Handelsblad*, Amsterdam, does not doubt that the Australians will get their way. "England must pay up," remarks that paper. "The value of the military assistance rendered by the colonies may be doubtful, but it was accepted, and the cheapest way to pay for it is at present acquiescence in the commonwealth bill."—*Translations made for THE LITERARY DIGEST.*

THE IRISHMAN AT HOME.

IN his "Irish Life and Character," Mr. Michael MacDonagh, author of "The Book of Parliament," has essayed to do for Ireland what Dean Ramsay has done so well for Scotland, in his "Reminiscences of Scottish Life and Character"; and he finds his entertaining material in his own recollections and experiences mainly derived from an extended and active connection with Irish journalism. He expresses the hope that his work along this line may lead to a more just understanding of the characteristics of the Irish race, "to a wider appreciation of their good qualities, to a kinder tolerance of their faults and follies, which are mainly due to the checkered history of the people, to the wayward circumstances of their unhappy past."

Mr. MacDonagh begins by introducing us to the later Irish squire—the country gentleman, up from his estate in Galway, Kerry, or Kildare, familiar and conspicuous in his rough tweed suit, his leggings, and his bowler hat, with his ruddy features and his soft brogue. One meets him in Grafton Street, in company with his three or four daughters—tall, well set-up, healthy, and vivacious girls. And later, he is found at the Kildare Street Club, flicking his leggings with his riding-crop, or watching the "passing show" from the bow window on Nassau Street: a hearty, good-humored fellow, with a prodigal stock of animal spirits, who will have a cordial welcome for you when you come to crony with him in Clare, or Wexford, or Westmeath. But you will not find in him the rollicking and the restlessness of the "old squire," who went out in the great famine of 1847 and took with him his horse-play and his rough practical jokes, his chronic incapacity to pay his debts, and his unlimited capacity for whisky punch at night, his inordinate hospitalities, and his rapture of dueling. This new man has acquired something of English gravity of manner, and English sobriety of thought. He keeps accounts, and invests his money, which his grandfather never did:

"For money these gentry (of the old time) had to depend solely on their tenants. Investment of capital in securities was a thing

undreamed of; and there was, therefore, no source of income but the rents of the estates. And the tenants were as improvident as the landlords. Their feudal devotion to the 'ould shloock' was deep-seated and whole-hearted. Their cudgels were always at the service of the landlord . . . but the 'ould shloock,' the peasant's bank of deposit, was always empty. The tenant kept the landlord well supplied with whisky; for those were the days when poteen was manufactured in private stills on every hill-side, and French smugglers lay off the coast every night with cargoes of claret."

With all his reckless prodigality and excess, due to an exaggerated sense of hospitality, the old Irish squire is everywhere remembered as a thorough gentleman; a man of fine manners, positive intellectual culture, and a scrupulous regard for his personal "honor." It was this latter trait that made him an incorrigible duelist, ready to give or take a challenge on the slightest provocation.

No man who was not in Holy Orders could dare, if he had any regard for his place in society, to shelter himself behind law, morality, or religion, to evade a challenge. It would mean his instant expulsion from any club or "set" to which he might belong. Many a man faced the pistol in the hand of a "dead shot" for the most trivial cause. There were cases in which the challenged party was utterly unconscious of having given his adversary the slightest cause for offense. A Galway gentleman attended a county dinner, and was surprised to receive, the next morning, a challenge from a man he had met there. They fought, and the Galway man had the good luck to "wing" the other fellow. Going over to shake hands with his prostrate foe, as was the custom, he said, "I have no recollection of having offended you." "Oh, bedad!" said the other, "you're the wrong man, sir. The fellow I meant had only one eye."

An old Irish gentleman, who had been challenged, expressed his fine scorn for his adversary in a true Irish outburst: "Fight with him! I would go to my grave without a fight first."

Captain O'Grady called out the editor of the *Limerick Chronicle*, who, being very near-sighted, came on the field wearing the indispensable spectacles. The captain's second objected, on the ground that the glasses might give him an unfair advantage. "The glasses, is it?" said the editor. "Sure, I couldn't see to shoot me own father without them."

What the pistol was to the squire, the blackthorn shillelagh was to the gossoon at a later day. It was the arbiter in personal quarrels, family feuds, disputes about trespass, right of way, boundaries, and local contentions between baronies or parishes. Donnybrook Fair, which, in the early part of the century, was held near Dublin, was the popular theater for the exhibition of faction fights. "People came from all parts of the country, many to buy or to sell; but many more, 'feelin' blue mouldy intirely for want of a batin,' tripped to the fair with the sole object of participating in 'the discussion with sticks.'" Mr. MacDonagh continues:

"The excitable temperament of the people, their pugnacity, their dare-deviltry, were the main causes of faction fighting in Ireland. . . Little or no animosity lay behind these *mêlées*. They fought for the pure love of fighting, and to give vent to their feelings. . . A friend of mine, a barrister, was in Abbotfeale, County Limerick, attending Quarter Sessions, about fifteen years ago. . . 'There'll be ructions in the town to-night,' said the head constable. 'Why?' asked my friend. 'Oh, the Fl'garids are all drunk; and they're lookin' for the Moriartys.' 'And what have they agin the Moriartys?' 'The ould story,' said the policeman, 'for betrayin' the cause of Ireland.' In the sixteenth century the Moriartys, according to the local tradition, betrayed the great Earl of Desmond, the head of the Fitzgeralds, to the English; and ever since the Fitzgeralds 'have it in' for the Moriartys, in Limerick and Kerry!"

An Englishman, returning to London after spending a week in Ireland, assured his friends that he did not meet one real Irishman, meaning, of course, the sort of Irishman that the

English comic papers, English novels, and the English stage had made familiar to him—the Irishman in a swallow-tail frieze coat, knee breeches, and a battered *caubeen*, with a pipe stuck in the band of it; no nose to speak of, a wild shock of red hair, and a shillelagh. "I never met an Irishman with a pipe in the band of his hat," protests our indignant Mr. MacDonagh.

He admits that, to the contemplation of people of other nationalities the Irish are an incomprehensible race. "John Bull has not only lived beside Paddy, but has tried to govern him, for more than seven hundred years; and he does not understand him yet." The invented stories, current in English and American journals, which are supposed to illustrate Irish life and character, are silly, stupid, preposterous. They lack the Irish idiom, the Irish turn of words, the Irish address of thought, the Irish mind; hence, to an Irishman they are obviously bogus.

The Irishman, says Mr. MacDonagh, is the merry-andrew of the English-speaking world. The sole object for which he was created is to make the duller Anglo-Saxon laugh. We expect all Irishmen to be entertaining; and if, by chance, we meet a sober Celt, we feel a sense of personal wrong as if we had been cheated of our due.

In the complex Irish nature there are startling contrasts and contradictions. While they are the most jovial of the peoples, they are also at times the saddest. They are wild and reckless, sober and shrewd. An emotional race, they get more fun out of their pleasures, and more pain out of their troubles, than the more justly balanced Anglo-Saxons. The brogue is an accent, an intonation, leisurely, mellifluous, saucy; to convey it in print is beyond the power of man.

"It is the softest, the mellowest, the most musical thing, in the way of accents, outside of Paradise. . . The brogue, as it is heard in all parts of the country, has certain broad characteristics; but it has varying and delicate shades of intonation in the different provinces. A well-known Protestant clergyman in Cork was the possessor of a pronounced example of the sing-song brogue of that city. It came to his ears that some of his parishioners were making fun of this. . . He complained of the injustice done him, and asked a friend whether, in his opinion, any trace of the brogue was to be observed in his speech. 'As to that,' said his friend, 'if you wish to deny that you have a brogue, I would advise you to do so in writing.'"

Some Englishman rushes into an essay "On the Decay of Bulls in Ireland." It might well be regarded as an international misfortune, says Mr. MacDonagh, were the native wit and humor, and, above all, that grotesque confusion of thought, that delightful contradiction of sense, commonly called a "bull," to show signs of decay. So he proceeds in consternation to investigate, and is challenged on the threshold of his inquiry by a hairdresser in Kingstown, who tries to induce him to buy a bottle of hair-wash. "What sort of stuff is it?" inquires the customer. "Oh, it's grand stuff! It's a perfect *multum in parvo*; the less you take of it the better."

Two farmers sat on the promenade at Bray. A lady of very slender proportions passed. "Did you ever see so thin a woman?" said one. "Thin is it," said the other. "I seen a woman in Wexford as thin as two of her put together."

This raucy national characteristic has suffered through the inventions of clumsy foreign wits that are so commonly ascribed to Irishmen. The manufactured bull is often silly and always inept. A genuine bull is not an expression of stupidity. Mental confusion, of course, is responsible for it; but that very confusion often springs from nimbleness, eagerness, "previousness" of thought: the notion, the word, leaps before it looks.

When a Galway peasant was asked if he knew what an Irish bull was, he explained, "If you was dhruvin' along a road, and ye seen three cows lyin' down and wan av thim was standin' up—that wan is an Irish bull." Said Sydney Smith, "The stronger

the apparent connection, and the more complete the real disconnection of the ideas, the greater the surprise and the better the bull." But a bull and nonsense are not the same thing. The bull is a gift; and it is not confined to the uneducated classes. When Sir Richard Steele, who was born in Ireland, was asked by an English friend how it was that his countrymen were so addicted to bulls, he replied: "It must be something in the climate. Probably if an Englishman were a native of Ireland he would make bulls."

An Irish newspaper, describing a phenomenal shower of rain, declared that the drops varied in size from a shilling to eighteen pence. And a Kildare huntsman, who had ridden a restless colt to hounds, declared that "be the time we were over the crest of the ridge, the baste was that quiet a child might have milked him."

The normal state of mind of the average Irish peasant, says Mr. MacDonagh, is to be "again" the Government:

"Abstract principles do not appeal to him. Loyalty to an institution he is unable to understand; but his fidelity to his leader, to his neighbor, to his clan or community, is unequalled for its strength and endurance. . . . Some years ago the only clear conception he had of it [the Government] was that the police, the sheriffs, the tithe-proctors, the magistrates, the judges, were its agents; and these officials were associated in his mind with raids on farms, stocks and crops, evictions, arrests of 'poor bhoys,' fines, imprisonments, transportations, hangings."

Hence the intense sympathy entertained by the peasantry for those who are in the clutches of the law, accused of political or agrarian crimes; hence the strange fact that, as the criminal records disclose, some of the most appalling crimes have been committed by men of otherwise blameless lives. In a recent action for divorce, the question was put to a woman, "Did you call your husband's uncle 'Carey the Informer'?" "No," she replied, "I did not go so far as that. I only called him anti-Christ."

The informer is, nevertheless, a familiar figure in political and agrarian trials. "But in no case that I have been able to trace," says MacDonagh, "has the informer been tempted to divulge his terrible secret by the reward offered by the Government. It is the fear of death, or of penal servitude, that usually induces the superstitions and home-loving peasant to round upon his comrades. . . . It was this characteristic that led to the conviction of the Phoenix Park assassins."

Some of Mr. MacDonagh's examples of Irish wit and repartee are very happy. An Irish farmer had just sold a lot of young cattle at a fair. An English tourist inquired how much he had got for them. "Four pounds a head." "Only that?" said the Saxon. "Why, if you had brought them to my country, you would have got six pounds." "Maybe so, your honner. An' if I cud bring the lakes of Killarney to Purgatory, I'd get a pound a drop."

A polemical Protestant, thinking to chaff Father Healy, said, "Now, which would you rather go to, Father, hell or purgatory?" "To the latter on account of the climate; but to the former on account of the company. I'm so fond of Protestants."

"There, Pat!" said a gentleman to his thirsty car-driver, at a roadside inn, "doesn't that drink make another man of you?" "'Deed an' it do, sir; and begorra, *he's* dry too."

The Irish have not a distinct dialect, like the Scottish. They use many Celtic expressions, they employ, as rule, only English words, such as may be found in any English dictionary. But their speech abounds in poetic, graphic, and singularly expressive phrases, strange combinations of force and simplicity, unexpected blendings of the ridiculous with the pathetic, quaint English colloquial survivals, novel applications of the wrong word.

An orator in a national meeting declared, "The ways of Providence are unscrupulous!" and a County Clare woman complained to her doctor that she had lost her teeth, and "couldn't rightly domesticate her food."

THE GOOD SIDE OF THE TURK.

IN the case of the Turk, the saying that distance lends enchantment to the view seems to have been converted into the opposite sentiment. At any rate the strongest praise for him comes from those who have lived in his country, and generally from men who have held high official positions. Gen. Lew Wallace, Minister Straus, and men of that stripe have always a good word to say for the Osmanli. One of the most important opinions, not of the demerits but of the merits, of the Turk has recently been published by the German *sarant*, Richard Hermann, in a little book, entitled "Anatolische Landwirtschaft." The author has had exceptional opportunities to study both the land and the people, as he has for six years been the official representative of the Anatolian Railway, with the duty assigned of studying the agricultural and economic conditions of the districts through which the road runs, and of instructing the people there in better methods and manners. Hermann has become an enthusiastic friend of the average Ottoman, and from his report we glean the following particulars:

"When I was first sent out to do pioneer services in these districts, especially for better agricultural methods, I undertook the task with a heavy heart. My reading of the accounts of travelers had led me to fear that my life would not be safe. I went there six and more years ago and took with me a revolver. Since then I have traveled through the length and breadth of the land, and the same cartridges are still in the revolver which I put there before leaving Germany. Public safety in all of Asia Minor is on just as good a footing as anywhere in Europe. Indeed, things are better in this regard than in some places in the Occident, *e.g.*, in Italy.

"The average Turk is a man of excellent character and worth. The Anatolian peasant is an honest, upright, and brave man. He meets you with a polite salutation and is always willing to give you whatever information he can. His hospitality is unbounded, and his contented state is a model for the restless Westerner. In the Turkish house the man is the absolute master, and a quarrel between husband and wife practically never occurs, as the wife is taught to submit unreservedly to her husband. The Ottoman is an absolute fatalist. He sows his seed, and when he has performed his duty, he trusts everything to his god Allah, and if the latter sees fit to send rain, it is all right; if not, the Moslem submits to the inevitable without murmur. He is absolutely sure that Allah will not permit his Moslem worshiper to suffer. The Moslem in his general character and principles is vastly superior to the Armenian, whose moral qualities are anything but good.

"Those who expect that the Turkish empire will fall to decay because of its innate weakness are sorely and sadly mistaken. The sterling character of the Turkish nation does not make such a collapse a probable event. The 'sick man' has no illness unto death. When the present great Sultan, Abdul Hamid, once lost a piece of his territory, he exclaimed: 'I have lost my land, but not my people.' And this prediction proved true. Altho large districts of Turkish territory had been ceded to Christian rulers, the Turkish subjects in these places at once arranged to emigrate into Turkey. Tens of thousands have thus returned to the Sultan's dominions, and a similar migration is going on at present from Crete, notwithstanding all the friendly efforts of Prince George.

"The disagreeable side of the picture is presented by the Turkish Government and some of its measures, but not by the Turks as a people. Especially is the system of taxation unreasonable." — *Translation made for THE LITERARY DIGEST.*

"A PARTY of Frenchmen are to attempt to reach the Klondike in an automobile," says *The Scientific American*. "They are to take with them a Bollee carriage in which the rear driving-wheel is spiked and the front wheels are taken off and replaced by runners. We have already illustrated a Bollee carriage which has been metamorphosed in this way. The car will draw a sledge carrying 150 liters of petroleum spirits, and a motor tricycle which will be used for assisting the carriage when necessary. The usual means of transport to Vancouver, Skagway, and Lake Bennett will be used, from which point the horseless carriage journey will begin. It is very easy to prophesy the ultimate fate of the carriage."

PERSONALS.

WHEN HOMER SINGS—"To err is human," wrote the poet Pope in his famous paraphrase of the classic "errare humanum est." Unlike much of his poetry, this is a line containing more truth than literary polish. From Chaucer and Shakespeare down to the "Man with the Hoe," almost all the great makers of English literature have done their share toward exemplifying this maxim. Dryden's words are profoundly true in this regard:

"Errors like straws upon the surface flow:

He who would search for pearls must dive below."

Where lie Shakespeare's "coasts of Bohemia" upon which the bark of Antigonus touched, as we are told in Act III. of "The Winter's Tale"? Did Britons of the era of the Roman invasions boast striking cloaks, as in "Cymbeline"? Or could a courtier to the nephew of Cassivelaunus be dressed like Leonatus in the first act of the same play? In Pisanio's words, this ancient Briton

"did keep

The deck, with glove, or hat, or handkerchief,
Still waving."

The great Sir Walter Scott came to grief over the habits of the sun. In the "Antiquary" the setting sun is actually described as in the *western* heavens. More than one writer has taken similar liberties with the moon. So careful a writer as Robert Louis Stevenson in his "Prince Otto" has described the "crescent moon riding high in mid-heaven"—an astronomical feat that is affirmed to be impossible by scientists. Perhaps the most famous blunder on record relating to the moon is to be found in the lines of Charles Wolfe on "The Burial of Sir John Moore":

"We buried him darkly, at dead of night,
The sods with our bayonets turned,
By the struggling moonbeams' misty light,
And the lanterns dimly burning."

According to the Nautical Almanac, on that date there was a new moon.

The best of historical romancers have a way of falling into the pitfalls of anachronism. Thus Alexandre Dumas lets his "Chevalier d'Harmental" tell a lady that she paints like Greuze, at a time when that painter was not yet born. So, too, Victor Hugo in his "Aymaillat" puts into the mouth of Charlemagne the words, "You dream like a scholar of Sorbonne." This famous institution was founded in 1231, four centuries and a half after the days of Charlemagne. More glaring still are the liberties some authors take with the lives of their own characters. One of the most startling is that of Thackeray in his "Henry Esmond," when he lets his venerable Dean of Winchester write a letter in chapter ix, several months after his death had been announced in chapter vi.

Mr. Rider Haggard has similarly been caught napping in that charming story of the Boer War to which the ill-fated heroine, Jess, has given her name. A simple matter of arithmetic, upon the data supplied by the author, shows that a character in the novel has grown up and the father of a pair of babes before he was in his teens.—*Collier's Weekly*.

O'MALLEY'S HAVESACK.—During an advance in Manila recently one company had to lie down at the side of the road for shelter from the well-directed volleys of the insurgents. One of the privates had dropped his haversack in the middle of the road away back, and, after the company had lain down, he calmly stood up and walked down the road toward the lost haversack. He made a fine target for the insurgents, and the bullets rattled around him pretty lively.

"Here, come back here, O'Malley," yelled the lieutenant of the company; "you will be killed."
"Well," replied O'Malley over his shoulder, "I might just as well be killed as having General Otis a-runnin' me up hill and down dale and comin' over to me house ivery mornin' and a-sayin' 'O'Malley, why don't you pay the Government for that haversack?'"

Then he calmly walked on, and got the lost piece of property, and as he came back and sat down just in time to escape a volley of Mausers, he threw the haversack on the ground and said: "And when he does come to-morrow mornin' to me house I'll say, 'Otis, me little man, you're dead wrong. I never lost no haversack. There's your bloody old potato-bag. Take it to the Government with me compliments.'"—*Chicago Tribune*.

Comfort and Coolness

Are obtained in a wonderful degree by wearing

"Arnold" Knit Gauze Umbrella Drawers for Summer Wear,

with ruffles of lawn, lace or embroidery. They are so light, porous and elastic that they do not hold perspiration, cling to the body or bind, as with all muslin, lawn or woven fabrics. Stout people are enthusiastic in their praise.

Sixty cents and upwards, according to elaborateness of ruffle. Money cheerfully refunded if they do not prove all we claim.

We also make the most sanitary, sensible and latest reform: Infants' and Children's Knit Outfits, models of comfort, Ladies' Lounging or Tourists' Robes at \$3.00 and upwards, and a pretty Dressing Sack of Robian Cloth at \$1.00.

Play Whist?

Then You Will Be Interested in This Table.

It is intended for Duplicate Whist. In the illustration, the large cut is the table set up for use. The small disk in the pocket for holding the cards. It is fastened to the bottom of the table and revolves. The dot on the margin shows the spring which controls it. At the side is the table folded. The pocket holds sixteen decks of cards. There are sixteen hands and each player has four leads. After playing a hand, cards are replaced in the pockets, and by touching the spring, a new hand is before each player. The advantages over trays are no lost cards, no errors and a place on which to play. The table is made in oak or mahogany and is a handsome, substantial piece of furniture. Price of each \$5.00, f.o.b. cars, Green Bay, Wis.

How to Grow Good Fruit.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticulture Society, at Lenox, Mass. The address bore chiefly upon spraying and general culture of orchard and field crops, how to do it, do it cheaply and good, and how to obtain the most profit from your labor in the easiest manner. The address is quite lengthy, about an hour's talk. It will not be sent to the disinterested. Owners of fruit trees, stating if at all interested in fruit culture, will get this book. Had this address been placed on the market in book form it no doubt would have sold at a good price. The full address, profusely illustrated, in pamphlet form was intended to be sent to fruit growers and owners of estates, free for the asking, but to prevent imposition by the curious and disinterested, the book will be sent to fruit growers, or owners of estates, enclosing fifty cents, to the Lenox Sprayer Company, 30 West Street, Pittsfield, Mass.

A HOT BATH IN FIVE MINUTES.

So simple any child can use it.

at any time, day or night, summer or winter, fire or no fire, if you have a Humphrey Crescent Instantaneous Water Heater. It is a comfort the more appreciated the longer enjoyed, a convenience which no well-appointed household can do without. An inexhaustible supply of hot water instantly, costing one cent a tubful. An ornament to any bathroom. Guaranteed perfect in every detail. No complicated piping—simply set up and connected with gas and water. You can not afford to be without this great home convenience and luxury. Write to-day for free illustrated price-list and booklet.

The general opinion is that this is an easy problem, and yet we haven't published one for a long time that has caught so many of our solvers as this little one. Every move from B-Kt 5 to Kt 8 has been tried; but Black's reply R-Kt 2 defeats every move except B-B 7.

The Rev. W. T. Douglas, Alamosa, Col., got 407.

Twenty-six States and Canada are represented by the solvers this week.

Steinitz and "Modern" Chess.

Emil Kemeny, one of the best writers on Chess in the United States, if not in the world, has an appreciative article on Steinitz and what is known as "Modern" Chess, in the *Philadelphia Press*, from which we take the following interesting excerpt:

"In the early years of his brilliant career, Steinitz was an extremely brilliant player, indulging quite frequently in somewhat risky sacrifices. The careful study he gave by annotating games convinced him that such tactics would prove disastrous, provided the defense to it was correct. He pointed out that a more promising road to success rested with a conservative development, relying on small advantages, which could be accumulated until they led to victory. At first, this method did not command public favor. Enthusiasts of the game were too much fascinated by the brilliant successes of Morphy, Anderssen, Labournais, and others, to adopt at once the theories of the Modern School. However, Steinitz's consecutive victories served to convince Chess players that his Modern School was the correct. There is no doubt that his Modern School contains much which is correct, but in many points he was mistaken. He, by adopting it, succeeded, but he could have succeeded had he abandoned it. Steinitz unquestionably was the strongest player of his time; he saw deeper and his play was more accurate than of any other exponent. This was the reason that he could maintain the championship of the world for twenty-eight years, and not the adoption of the Modern School. Justly says Las-

Use Horsford's Acid Phosphate.

Dr. GREGORY DOYLE, Syracuse, N. Y., says: "I have frequently prescribed it in cases of indigestion and nervous prostration, and find the result so satisfactory that I shall continue it."

A "Remnant Sale" For Readers of The "Literary Digest"

50 SETS AT REDUCED PRICES

IN disposing of our recent great edition of **WHITE'S SHAKESPEARE**, we had left on our hands fifty sets which we did not care to send out as "perfect stock." We labeled them "damaged," because a few leaves were faintly soiled, or perhaps a binding was slightly chafed. The imperfections are so small that most people would never notice them, but just sufficient to put them in the "imperfect" class; so we have decided to offer them, stating exactly what they are, to readers of the **LITERARY DIGEST**, at **reduced prices**. But there are only 50 sets, and this one offer will quickly exhaust them. We send the

Entire Set on Approval

This edition of Shakespeare has been widely advertised and is favorably known. It is not only a text of the plays, but also a **COMPLETE SHAKESPEARIAN LIBRARY**.

"Mr. White has given us the best extant text, while the fulness of his notes gives his edition almost the value of a variorum."—**JAMES RUSSELL LOWELL**.

WHITE'S SHAKESPEARE

The edition edited by Richard Grant White is a complete Shakespearian Library. The text is founded on the best authorities. The **introductions** to each play, the **notes**, **analyses**, and **glossaries** are full and scholarly. The life of Shakespeare and the history of the older English drama are probably the best ever written. One volume is given to a complete **Topical Index of Shakespeare**. The illustrations are photogravures.

Prices for

These 50 Sets

Our lowest club price for the 13 volumes in cloth is \$16; in half-leather \$19. The present offer for fifty sets only is \$12 for the cloth and \$15 for the half-leather.

We pay transportation charges. Books returnable if not satisfactory.

Size of volumes, 9 1/2 by 5 1/2 inches—more than one inch thick.

SPECIAL OFFER WHILE THEY LAST.

Write us at once....

THE UNIVERSITY SOCIETY, 78 Fifth Ave., New York.

Gentlemen: Please send me on approval, prepaid, a "damaged" set of the International Shakespeare in half-leather. If satisfactory, I agree to pay \$1 within 15 days and \$1 per month thereafter for 14 months; if not satisfactory, I agree to return them at your expense within 15 days.

Signed.....

L.D.D.S.

Address.....

In ordering cloth, change 14 months to 11 months.

and secure the benefit of this valuable offer, or send for beautifully illustrated pamphlet.

78 Fifth Avenue, New York.

ker, there is no old and modern school; there is good play and bad play. Truadapt brilliant tactics, if the position does not warrant it, is as good as to rely on slow process if there is an opportunity for a brilliant victory."

Chess in Nebraska.

Our old-time solver, C. Q. De France, is editing a very interesting Chess-department in the *Nebraska Independent*, published in Lincoln. He is doing good work for Chess, as his Game-Studies and Analyses are prepared especially to help those who desire to get at the science of the game. We notice that he has a Composite Game:

"The Chess-Player's Mind."

Champion Harry N. Pillsbury has a very interesting article in *The Independent* (May 10), from which we take the following extracts:

"Perhaps the mental quality most useful to the Chess-player who wishes to rise to distinction in the game is concentration—the ability to isolate himself from the whole world and live for the events of the board while a match is proceeding. And yet 'concentration' does not quite suit me as expressing the quality I refer to, for concentration implies narrowing, and I am satisfied that the influence of Chess broadens the mind.

"Besides the quality which we have, for want of a better name, called concentration, there are others that are essential to the good Chess-player. One of these is patience, or ability to wait. We have players who are known as plungers, who see an opening and drive ahead into it without studying out all that it leads to. Such men can never become good players. The Chess-master must have full control of himself at all times. He must not be impatient, he must be content to mark time, as it were, till he sees the result of his opponent's attack; and he must be able to resort to meaningless moves to kill time if there is no other way of holding fast to the fortified position till

EVEN though you want but a pound of White Lead, you do not want to have some cheap mixture of Zinc, Barytes, etc., labeled "White Lead," foisted upon you simply because the dealer makes a greater profit on it.

Insist on getting **Pure White Lead.** It will be pure if the package bears one of the brands named in the margin. You can buy them in one, two, three or five-pound cans.

FREE For colors use National Lead Company's Pure White Lead Tinting Colors. Any shade desired is readily obtained. Pamphlet giving full information and showing samples of Colors, also pamphlet entitled "Uncle Sam's Experience With Paints" forwarded upon application.

National Lead Co., 100 William Street, New York.

the danger is over. Not all men can do this. They want to rush out and attack, and thereby they expose themselves and lose the game.

"Another most useful quality is accuracy, in which Lasker excels. His foresight has not so great a range as that of Tschigorin, for instance, but so far as he sees he is infallible. Tschigorin may see five moves ahead and Lasker only three, but the latter more than makes up matters by his deadly accuracy and thoroughness."

The Mississippi-Nebraska Match.

A correspondence match between Mississippi and Nebraska is now under way. The personnel of the teams is as follows:

MISSISSIPPI.	NEBRASKA.
1. Judge A. H. Whitfield, Jackson.	A. Rasmussen, South Omaha.
2. M. D. McGrath, Brookhaven.	E. R. Tyson, Nebraska City.
3. A. B. Smith, Indianapolis.	T. N. Hartnell, Kearney.
4. E. W. Griffith, Vicksburg.	H. B. Hammond, Wyoming.
5. Allen J. Hooker, Jackson.	C. Q. De France, Lincoln.
6. N. J. Smith, Jackson.	W. R. Ellis, Bloomfield.
7. The Rev. Dr. B. Wadell, Meridian.	Dr. G. N. Seelye, Kearney.
8. John Lear, Vicksburg.	R. E. Briggs, Callaway.
9. L. R. Walden, Greenfield.	J. M. Brainer, Omaha.
10. E. G. De Lap, Natchez.	C. L. Owen, Omaha.
11. Prof. J. G. Deussen, Oxford.	D. B. Knuthburgh, Adams.
12. Dave Cohn, Brookhaven.	P. J. Barron, Lincoln.
13. James J. McGrath, Brookhaven.	John L. Clark, Platte Center.
14. S. R. Redden, La Motte.	A. Powell, St. Edwards.
15. C. C. Mowbray and colleague, Indianapolis.	S. H. Sedgwick and W. W. Wyckoff, York.
16. Thomas Helen, Captain Frank Johnston, and the Rev. C. A. Oliver, Jackson.	C. B. Swain, N. G. Griffin, and W. S. Swain, St. Edwards.

At board it two players consult on each side; and at 16 three play in consultation on each side.

Chess-Nuts.

The first Congress of the Italian Chess-Association to be held in Rome offers several valuable prizes. First prize, Sevres vase given by the King of Italy; also a diploma and gold medal; second prize, silver vase, donated by the Prince of Naples, also gold medal and diploma; third prize, presented by Baron Sarrasin, with medal and diploma; fourth and fifth prizes, \$50 and \$30.

Charousek, one of the great masters, died on April 16th.

HEART DISEASE.

Some Facts Regarding the Rapid Increase of Heart Troubles.

Heart trouble, at least among the Americans, is certainly increasing and while this may be largely due to the excitement and worry of American business life, it is more often the result of weak stomachs, of poor digestion.

Real organic disease is incurable; but not one case in a hundred of heart trouble is organic.

The close relation between heart trouble and poor digestion is because both organs are controlled by the same great nerves, the Sympathetic and the Pneumogastric.

In another way also the heart is affected by the form of poor digestion, which causes gas and fermentation from half digested food. There is a feeling of oppression and heaviness in the chest caused by pressure of the distended stomach on the heart and lungs, interfering with their action; hence arises palpitation and short breath.

Poor digestion also poisons the blood, making it thin and watery, which irritates and weakens the heart.

The most sensible treatment for heart trouble is to improve the digestion and to insure the prompt assimilation of food.

This can be done by the regular use after meals of some safe, pleasant and effective digestive preparation, like Stuart's Dyspepsia Tablets, which may be found at drug stores, and which contain valuable, harmless digestive elements in a pleasant, convenient form.

It is safe to say that the regular, persistent use of Stuart's Dyspepsia Tablets at meal time will cure any form of stomach trouble except cancer of the stomach.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$1.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

TOPICS OF THE DAY.

THE LITERARY DIGEST is in receipt of the following contributions to the India Famine Fund:

	\$191.50

The above list contains only those contributions received prior to May 21. They have been forwarded to Messrs. Brown Brothers & Company, 59 Wall Street, New York, who are custodians of the fund received by the Committee of One Hundred.

RELIEF OF MAFEKING AND PEACE RUMORS.

NO words of praise seem to be too high for the gallant little band of defenders of the little town of Mafeking, whose relief, so often falsely rumored, was reported last week in a despatch from Pretoria. This news, soon followed by the report that Mr. Kruger had sent a message to Lord Salisbury suing for peace, started a wildfire of tumultuous and, indeed, riotous celebration in England, starting in London, and spreading rapidly

to the smaller cities and towns. The peace rumors have set speculation rife. No one seems to suppose that the British cabinet will accept any other terms from the Boers than unconditional surrender, looking toward the annexation of the two republics to the British empire. The London correspondent of the New York *Tribune* says, however, that "the Dutch have made too gallant a fight against the resources of a mighty empire to accept the only terms on which Lord Salisbury can offer peace," and that "there is no probability that Kruger and Steyn can propose any terms of peace which will be acceptable to England. They will not suggest annexation, and that is the only practical basis of peace." He adds:

"The opinion in England is very strong on this subject. Peace negotiations ending in a fresh convention are not desired. An annexation proclamation by Lord Roberts is what Parliament expects and the empire demands. What has been going on in South Africa has borne a close resemblance to civil war, and, as Englishmen are agreed, must end like the American civil conflict, with magnanimity in triumph, but without an armistice or peace negotiations or foreign intervention or any compromise."

When Ladysmith was relieved, two months ago, the tumult of jubilation in London was itself a subject of considerable comment, but when the news that at last Baden-Powell and his garrison were safe was announced, the demonstration in London, according to the London *Times*, went beyond anything seen there for years. It continued: "Nor was this surprising. There has been nothing like the defense of Mafeking in modern history. Kars and Lucknow were fine examples of valor, endurance, and resourcefulness; but the means of defense in those cases was infinitely greater than what was at the disposition of Colonel Baden-Powell and his valiant comrades." Baden-Powell, it is said, had only 1,200 men to defend a town not naturally well fortified, and the supply of provisions was far from adequate; yet he held out against the best that the Boers could do for seven months. The town is of small importance from a military point of view, and its siege, defense, and relief have been looked upon, even by British critics, as matters principally of military pride. Some of the British papers have said at times that it would have been sounder military policy to have surrendered the town and left the invading army unhampered in its advance by the necessity of relieving Baden-Powell and his men. The Boer envoys in this country declare that Mafeking's relief does not mean the approach of the end of the war, and say that the fighting will not be over for a long time, "unless," they add, "the British surrender."

The warmest admiration for Colonel Baden-Powell is expressed on all sides. The London *Daily Telegraph* says that "there is no advancement which the nation would not hail as a fair reward for the brilliant capacity, cheerfulness, and iron courage of the hero of the empire," and the London *Daily News*, which compares Mafeking to Lucknow, says: "'B. P.' may stand for Baden-Powell or British Pluck. Splendidly have these resources responded to the need of Mafeking. They have realized the full ideal of a British settlement in a far-off land." The New York *Tribune* says:

"There has been censure enough for British generals in this war, no doubt well merited. There has been and there will be praise enough for many. But not even 'Bobs' himself will eclipse in renown the imperturbable young man who for more than half

C. N. WESSELLS.

J. M. A. WOLMARANS.

ABRAHAM FISCHER,
Chairman.**THE BOER COMMISSION.**

(From Photographs taken at The Hague.)

a year has held Mafeking against a host of foes. For, with all possible credit to his brave troops, Baden-Powell himself, and none other, has been the defender of that town. In personal valor, in resourcefulness of tactics, in patience and good cheer, and in that supreme will to do which is the crowning element of all great achievement, he has shown himself a worthy comrade of any name in the annals of England's wars. It is not easy for a man successfully to lead an army against a foe no stronger than himself. But this man has for many a weary month, with only a shattered regiment or two, held at bay an army of many times his strength, in a place hundreds of miles from any effective aid. And at the end, when the last grand assault in force was made against his weakened works, to carry them by overwhelming storm, he trapped as prisoners a part of his assailants and drove off the rest with heavy loss. After that even General Snyman and President Kruger should think better of human valor than they ever did before. As for the British, the world will not begrudge them, tho it might envy them, the tumult and the shouting with which they are now acclaiming the latest and not the least of their military heroes."

Even the pro-Boer press join in the general acclaim. Says the *New York World*:

"The moral merits of the cause for which the garrison of Mafeking stood are not improved by the devoted courage with which they defended their flag. But the hearts of all brave and chival-

rous men quicken with a sympathetic thrill wherever unflinching and dauntless courage shows itself. We believe that the Boers themselves, being brave and chivalrous men, will not grudge Baden-Powell and his unyielding little garrison the tribute of respect and admiration which will be everywhere awarded them.

"In an age oppressed with gloomy speculations on the decay of the virile virtues the episode of Mafeking comes, like a blast of the north wind, to give assurance that the saving salt of utmost daring and supreme sacrifice still abides among civilized men."

HOW THE PRESS LOOK AT THE BOER ENVOYS.

THE cordial greeting tendered to the three Boer emissaries upon their arrival in New York last week is also reflected in the sympathetic expressions of the press. On May 17 they were received by Mayor Van Wyck, who extended to them the freedom of the city. The friendly welcome of the Tammany organization, indeed, was so warm as to call forth indignant protest from the London press, in part directed against Richard Croker.

The envoys refuse to declare the object of their mission, but it is generally assumed that it is their purpose to urge the Administration to intercede on behalf of the South African republics. The Pretoria correspondent of the *New York Herald* reports that the envoys are empowered to ask this country to "assume a protectorate" over the Transvaal and Orange Free State, but this rumor is generally discredited.

The tone of the press is in the main friendly to the Boer commissioners and the cause they represent, but Republican and Democratic papers alike admit the futility of their mission. To the Republicans their arrival at this time is considered very inopportune. The *New York Journal of Commerce* goes so far as to say that their mission is "a piece of pure impertinence." The *St. Louis Post-Dispatch* (Ind.) makes the suggestion seriously that the Boers should be invited to emigrate to this country.

The *Minneapolis Journal* (Rep.) voices a general sentiment when it says that "there is no obligation resting upon our Government to repudiate its declaration of strict neutrality during the South African war," especially "as Great Britain has refused to entertain any proposition for mediation." The *New York Press* (Rep.) goes further in declaring that "the envoys' hope

AGUINALDO'S METHODS SEEM TO BE BECOMING POPULAR IN SOUTH AFRICA.
—*The Detroit Journal*.

to wedge their cause into a political campaign is destined to know no fruition," affirming that it shows "pitiable self-deception," and the *Hartford Courant* (Rep.) even maintains that all pro-Boer meetings, speeches, and resolutions are "morally criminal," in that they "simply tend to prolong the bloodshed in South Africa."

On the other hand, the *Philadelphia North American* (Rep.) which is strongly pro-Boer, declares:

"The generous sympathy that was given to Kossuth, to Garibaldi, to every champion of human rights who has turned from the Old World in despair and made his appeal to freemen of the New, will be accorded with heartfelt fervor to the Boer envoys. What more may come of their pathetic mission we do not know, for the time that remains for action which might stay the greedy hand of England is short—much too brief, we fear."

"But the least the people of this country can do is to drive through the British skull and into the British mind the fact that Americans detest from the depths of their souls the bloody piracy of the British Government."

THE POSTAL FRAUDS IN CUBA.

FURTHER investigation of the Cuban postal scandal seems to have revealed even greater corruption than was at first suspected. The embezzlements so far laid bare approximate \$100,000. Neely's arrest was soon followed by the arrival in

Cuba of Fourth Assistant Postmaster-General Bristow, who supersedes Estes G. Rathbone as director-general of the Cuban posts. E. P. Thompson, the Havana postmaster, W. H. Reeves, deputy auditor of the island, and two Cuban clerks in the stamp department have also been arrested and lodged in prison. Thompson and Reeves have made incriminating confessions, and the latter has restored \$4,500 given to him by Neely.

The discovery of such glaring dishonesty in this important department of

in which there is surprising unanimity of tone. Republican papers make no attempt to shield the Administration, and demand as eagerly as the Democrats that "the rascals be turned out." The anti-imperialist press finds in the incident a good opportunity to exploit its propaganda. "Possibly the Neely scandal," observes

the Cincinnati *Enquirer* (Dem.), "will have the effect of hurrying up the program of delivering Cuba to its rightful owners."

"Such offenses as that charged against Neely," says the *Chicago Inter-Ocean* (Rep.), "are even more outrageous than the plundering of our own treasury." "The revenues of Cuba," declares the *Philadelphia Evening Telegraph* (Rep.), "seem to have been entirely at the mercy of a gang of thieves who have

been as unscrupulous and as greedy as was the Spanish crew whose places they usurped a year and a half ago." The *Washington Evening Star* (Rep.) adds: "The people will look to see every official, superior or subordinate, who is touched by the breath of this scandal, pitilessly investigated, and if proven guilty of any degree of fraud or crime, punished to the full extent of the law." The *New York Tribune* (Rep.) holds that the best safeguard against official corruption is "the entire separation from national politics" of our island dependencies.

The *Kansas City Times* (Dem.) says:

"The cropping out of rascality in the system of carpet-baggism, which is an inalienable adjunct to the Republican policy of imperialism, comes not unexpectedly. The ravenous pie-hunters who hang around the national Capital demanding reward for election services in the shape of appointments to places in Porto Rico and the Philippines and under the provisional government in Cuba are the sort that are generally 'out for the

stuff.' This element of office-holders robbed the federal Government and the taxpayers of the South right and left in reconstruction days, and it may be depended upon to do a good deal of thieving when imperialism gets under full swing in what the Hanna organs call 'our colonial dependencies.'

E. P. THOMPSON,
Who was postmaster at Havana.

"Public thieves, like Neeley and his pals, are fine models wherewith to impress the Cubans, Porto Ricans, and Filipinos with the fact that the Administration proposes to govern them in an enlightened, superior, and honest manner."

The Labor World
(Duluth, Minn.)
says: "The dis-

graceful developments in Cuba make it clear that the less we have to say about Cuban bandits in the future, the more consistent we will appear in the eyes of the world."

IRISH-AMERICAN VIEWS OF LORD SALISBURY.

LORD SALISBURY'S speech before the Primrose Club in London, which was noticed in these columns last week, has stirred up the Irish-American press. Lord Salisbury said, it will be remembered, that there was "no hope of the predominant partner ever consenting to give Ireland practical independence," as England has "learned something from the South African war," and, he went on, "we now know better than we did ten years ago what a risk it would be if we gave a disloyal government in Ireland the power of accumulating forces against this country." *The Irish World* (New York) says:

"It is hard for a man to read with calmness the words of this intolerable arrogance. And yet, speaking for ourselves, a certain fierce delight takes possession of us, and we feel like breaking out into cheers for the brutal fellow, who talks to us in very plain English, and authoritatively for England, what Ireland will not get while England has the power to withhold it.

"The proverb has it that the better part of a speech is the end thereof. The part comforting to us in Salisbury's address comes near its close. He looks out from his island home and he sees enemies of 'perfidious Albion' everywhere. 'If we look around,' he says—

"If we look around we can see the elements and causes of menace and peril slowly accumulating, and they may accumulate to such a point as to require our earnest and most active efforts to repel them."

"God speed those 'elements and causes of menace and peril' to England's empire!"

The *Boston Pilot* remarks that this speech of Salisbury's puts an end to "the humorous extravaganza of English affection for Ireland, which has amused the world for some weeks with its absurd features of shamrock-wearing, royal condescension, and so forth," and it continues:

"If any Irish Nationalists have been deluded by the idea that the royal visit meant anything more than a bid for recruits, they may now disabuse themselves of that fallacy. If any Americans have put faith in British professions of affection for their country, they may read with profit the assurance of the Queen's

mouthpiece that he does not believe in their sincerity or consider their friendship of any value in the hour of need. Therein he is not so far astray, perhaps, and our blatant Anglomaniacs have received a not undeserved snub."

THE "FREE-HOMES" LAW.

THE bill which has passed both Houses of Congress and has been signed by the President, to throw open large tracts of land for settlement, and to relieve those who have recently settled on public land from the expense of paying for it, is explained and commented upon as follows by the *Chicago Tribune* (Rep.):

"This 'free-homes' measure changes the method of disposal of about thirty million acres of public lands, the title to which is now in the Government, and of about thirty million acres included now in Indian reservations, title to which will be acquired by the general Government in a few years. These lands, which have been bought from the Indians during the last twelve years, have not been thrown open to homestead entry on the same terms as other public lands. Homestead settlers have been required to pay a stipulated price, varying from 50 cents an acre up to \$3.75.

"Of the thirty million acres referred to, about 14,300,000 were ceded by the Indians to be disposed of for their benefit. The estimated value of those lands is \$12,300,000. The remainder of the thirty million acres was bought outright for the Government at a price of about \$25,000,000. So when the Oklahoma lands were thrown open the settlers were required to pay \$1.50 an acre, which was just about what the general Government had paid the Indians for them. Those same lands are worth now between \$5 and \$6 an acre. The Government has been paid thus far, however, only about seven cents an acre. The settlers wish to be relieved from further payments."

This law gives them the desired relief, and also relieves similarly those who have settled on other lands obtained from the Indians in the Dakotas and elsewhere during the last ten years. But, continues *The Tribune*:

"This will be an expensive matter for the general Government. While the lands ceded or to be ceded by the Indians to be disposed of for their benefit will be given away, an appropriation will have to be made to pay the Indians what those lands are worth. The Government will be unable to get back any part of the \$25,000,000 it has paid out for Indian lands during the last twelve years.

"The sole argument of the friends of the bill is that in 1862 Congress adopted the policy of 'giving lands to the landless and homes to the homeless,' and that that policy should be adhered to so long as there is an acre of arable land to give away. Between 1853 and 1886, it is said, the United States gave away lands for which it paid the Indians \$103,000,000. Therefore it should not hesitate to give away lands for which it has paid only \$25,000,000. This is considered an unanswerable argument."

Edwin Erle Sparks, writing in the May number of *The Chautauquan*, says of the public lands:

"The United States has failed to realize the hope entertained by Hamilton that the public lands would prove a source of revenue to the Government. The opposite of a direct return has been the result. This vast heritage has frequently tempted legislation for the sake of vested interests. It has made most unequal the contest between corporate powers and the people. It has enriched the few. But it has also evoked certain legislation for the people. It has given a home to many a poor man who could never have earned it in any other way. It has converted many a European tenant into an American landlord. It has contributed largely to the well-being of the masses so especially characteristic of this new world. It has produced a resident landed democracy, inclined, it is true, to indulge in political vagaries and visions, but thoroughly honest and virile, and giving a certain assurance of the perpetuity of a government by the people."

TAMMANY AND THE ICE TRUST.

THE charge that Mayor Van Wyck, of New York, holds four thousand shares of stock in the ice trust whose operations were considered in these columns last week, and that other leaders in the Tammany Hall organization are similarly interested, has created no small stir. The *New York Journal* (Dem.), which publishes this interesting information, not only credits the mayor with holding shares of the American Ice Company's stock to the par value of \$400,000, but avers that Judge Augustus Van Wyck, the mayor's brother, who gave Governor Roosevelt a close

A RATHER PAINFUL SITUATION FOR "THE PEOPLE'S FRIEND."
—The New York Tribune.

race for the governorship, holds a similar amount; that John F. Carroll, the acting leader of Tammany Hall, holds five thousand shares, valued at \$500,000, and that the chairman and another member of the dock commission, constituting a majority of the commission, each holds five hundred shares, valued at \$50,000. Some papers suspect that the dock commission's holdings may have some connection with the complaints of the small independent dealers that they can not get dock accommodations, and have to land their ice in Jersey City and bring it to New York on the ferries. *The Journal* says:

"Mayor Van Wyck, where did you get \$400,000 to buy stock in the ice trust? Did you save that sum from a \$15,000 salary as judge? Did you save it from a \$10,000 salary as mayor? You never honestly acquired such a sum, did you? Was that stock given you by the trust? If so, what did you do to earn it? Did you agree to help the trust to swindle the city which disgraced itself by making you mayor? Did you agree to help inflict sickness and suffering on poor women and children in your city? You have confessed a preposterous, impertinent ambition for a seat on the supreme court bench after your term as mayor. What do you think of your future political prospects now that you are caught with \$400,000 worth of ice-trust stock in your pockets?"

The *Philadelphia Times* (Ind.) remarks: "New York can not throw any stones at Philadelphia, just at present."

The outcry in the New York newspapers against the doubled price of ice, and the refusal of the company to sell five-cent cakes in the tenement districts, had not been going many days before the company announced that it would begin selling fifteen-pound cakes to the poor in the tenement districts at five cents a cake, and twenty wagons were sent out for this branch of the trade. The *New York Tribune* (Rep.), however, reported that people who applied for the five-cent "chunks" were asked so particularly about their poverty before they were allowed to buy that most of them preferred to pay the old rate.

The *Brooklyn Eagle* (Ind. Dem.) says that "Tammany has made one of the worst blunders in its record in this ice-trust matter," because "in this monstrous profit being made upon ice the

victims of the extortion are the poor. One would say the poor and helpless, save that they have votes. They may be helpless now, when their children suffer, but their day of vengeance will come with every succeeding election." The trade journal *Cold Storage* estimates that the New York ice monopoly has 2,000,000 tons more than it is likely to need this season, and calculates that its ice has cost less than \$1.50 a ton, and says that it is hard to see what reasonable excuse it has for making the retail price 60 cents a hundred pounds—\$12 a ton.

Controller Coler has suggested the building of a municipal ice-plant. He reckons that the city could sell ice at 30 cents a hundred pounds and make profit enough to pay for the plant in a few years. This is met by several papers with the objection that the Tammany organization might run the ice-plant for the profit of its individual members rather than for the public good. The *Chicago Tribune*, which is one of the papers to bring forward this objection, says, however: "The interesting feature of the matter is that such an extreme phase of municipal control should be seriously proposed and discussed. It appears to show an increasing tendency of public sentiment in that direction. It indicates how the greed of corporations in some lines may in time result in their own undoing."

SUPREME COURT'S RATIFICATION OF THE INHERITANCE TAX.

THE chief interest that the great majority of the people will have in the Supreme Court's decision last week, affirming the validity of the inheritance tax law, is, most papers agree, in the fact that it is now certain that no one who inherits less than \$10,000 in any one legacy will have to pay any tax at all. Before this decision was rendered, it was not considered certain whether the \$10,000 limit, above which taxation began, referred to the size of the legacy or the size of the estate. If it referred to the size of the estate, every legatee who received a share of an estate of \$10,000 or more, however small the amount be inherited, would be taxed; and that, too, at a rate as high as the one who inherited the largest share. By the court's ruling, however, the "whole amount," referred to in the law, is taken to mean the size of the legacy, so that those who inherit less than \$10,000 apiece are not taxed.

Another interesting feature of the decision, considered by many papers the most important point in the court's ruling, is its sanction of the "progressive" form of taxation, by which inheritors of large sums pay a higher rate than inheritors of small amounts, as may be seen by the summary of the law quoted below. This form of taxation was considered to be of doubtful constitutionality until this decision was rendered last week; supreme courts in Missouri, Ohio, Minnesota, and New Hampshire have declared it unconstitutional within a few years.

A third point that is attracting notice is the decision that a tax can be levied on a legacy of government bonds, which, it has heretofore been supposed, could not be touched by any form of taxation.

The law which is declared valid by the Supreme Court's decision is outlined briefly as follows by the *Philadelphia Ledger*:

"The act provides that when the person entitled to the interest is the lineal issue or lineal ancestor, brother or sister of deceased, when the 'whole amount' exceeds \$10,000 and does not exceed \$25,000 the tax shall be 75 cents on each \$100. The tax then increases progressively on larger shares of the class. When the share exceeds \$1,000,000 the tax is \$2.25 on each \$100. The second class is constituted of beneficiaries who are the descendants of a brother or sister. The lowest tax on shares of this class is \$1.50 on each \$100 when the 'whole amount' is in excess of \$10,000 and does not exceed \$25,000; the highest is \$4.50 on each \$100 when the amount is over \$1,000,000. The third, fourth, and fifth classes refer to more remote collateral relatives, or to 'a stranger

in blood or body politic or corporation.' In these three classes the tax rises from 3 to 15 per cent., according to the size of the share."

The Philadelphia *Press* declares that "no more important finding has been handed down by this tribunal of last resort since the income-tax decision," and adds:

"This decision is certain to give a great impulse to progressive taxation in this country. It accepts it as valid under the federal Constitution, and it will do much to incline state courts to interpret their organic law on these lines. The federal power to tax is also greatly widened. It is evident that under this decision personal property can be reached by the federal taxing power as no one has anticipated since the income-tax case."

In a similar strain the New York *Evening Post* says:

"Speaking generally, we may say that Congress is now competent to seize for public uses such portion of the personal property of a dead person as it chooses. It is henceforth restrained by no constitutional objections of equality or uniformity from establishing progressive rates, and the large revenue obtained by the English exchequer from high death duties will no doubt tempt our rulers to adopt similar taxation. The decision of the court incidentally sustains the power of the state governments also to impose a like tax."

"We may regard it as probably our future policy to appropriate, or confiscate, an increasingly large part of the property left by wealthy decedents for the expenses of government. The fact that such property may consist of government bonds exempted by law from all taxes or duties of the United States, as well as from taxation in any form by or under state, municipal, or local authority, is held to be immaterial. The theory by which this conclusion is reached is that a tax on the transfer of a bond, on the death of the owner, is not a tax on the bond. Whether such a theory has any foundation, either in fact or in logic, is now unimportant; it has received the highest legal sanction. . . . Both state and national governments have now the constitutional power to take for public purposes the whole or any part of the personal property of every citizen upon his death. The principle that taxation should be proportioned to value is finally repudiated, and that of progressive taxation definitively established."

The court itself, however, is far from sharing the fear expressed in the above paragraph, as may be seen from the following passage from its decision:

"The grave consequences which it is asserted must arise in the future if the right to levy a progressive tax be recognized, involves in its ultimate aspect the mere assertion that free and representative government is a failure, and that the grossest abuses of power are foreshadowed unless the courts usurp a purely legislative function. If a case should ever arise where an arbitrary and confiscatory exaction is imposed bearing the guise of a progressive or any other form of tax, it will be time enough to consider whether the judicial power can afford a remedy by applying inherent and fundamental principles for the protection of the individual, even tho there be no express authority in the Constitution to do so. That the law which we have construed affords no ground for the contention that the tax imposed is arbitrary and confiscatory is obvious."

As to the taxation of government bonds, the court draws the conclusion "from the state and federal cases" that "the State may lawfully measure or fix the amount of the tax by referring to the value of the property passing, and that the incidental fact that such property is composed in whole or in part of federal securities does not invalidate the tax or the law under which it is imposed."

The Baltimore *News* thinks that this decision in favor of progressive taxation ought effectually to dispose of the idea that the Supreme Court is partial to the capitalists. The court "has shown once more," it says, "as it has shown in many previous instances in spite of Populist assertions to the contrary, that its decisions are based upon the profound convictions of its members, and upon their honest interpretation of the Constitution and the laws, and not upon devotion to the interests or desires of any class, however powerful."

A JUDICIAL DECISION ON THE CONSTITUTION AND THE FLAG.

THE first judicial utterance since the war with Spain on the relation of our new islands to the federal Constitution has come from Judge William Lochren, of the United States district court of Minnesota. In deciding that a certain Rafael Oritz, of Porto Rico, was under the jurisdiction of the military court in that island before the peace treaty was ratified, he takes occasion to declare that the Constitution extends of itself (*ex proprio vigore*) over all our territory, new as well as old. Rafael's case did not directly involve this question, so that Judge Lochren's remarks on the power of the Constitution in our new territory are considered as *obiter dicta*.

The men who established this government, Judge Lochren says, established it "upon the theory that all just powers of government came from the consent of the governed," a government, as Abraham Lincoln said, "for the people, by the people, and of the people." He continues:

"It will be indeed marvelous if it is made to appear that these men who then founded our national Government so constructed it that it is capable of ruling with unlimited power a subject people who have neither guaranties to protect them nor any voice in the Government. This is foreign absolutism—the worst form of tyranny. If the Constitution does not extend to Porto Rico and our other new acquisitions of territory, Congress has the untrammelled, absolute power to establish subject governments or make laws for such territories; it has the power to establish dependent monarchies or satrapies, state religion, and even slavery."

He says, further, that "the national Government of the United States was created and its powers and jurisdiction granted and limited by the federal Constitution," and "it is clear that the general Government can not legislate over territory where the Constitution, from which its every power is derived, does not extend. The Constitution must be in force over a territory before the general Government can have any authority to legislate respecting it."

In spite of the fact that in the debate in Congress on this question the Republicans, with the exception of a small minority, took the view that the Constitution does not follow the flag, many Republican papers are found agreeing with Judge Lochren. The Chicago *Times-Herald* (Rep.) says that it is evident that this decision "is common sense, and therefore should be sound law," a sentiment with which the Philadelphia *Evening Telegraph* (Rep.) heartily agrees. The Rochester *Post-Express* (Rep.) says: "We do not believe that any higher court will ever reverse Judge Lochren's decision," and the Detroit *News* (Ind.) thinks that the decision "may do much to shake the new notion, now so widely prevalent among the unthinking and interested, that our Government may govern new territory according to the ideas of the Middle Ages or the nineteenth century, as pleases its discretion." The Springfield *Republican* (Ind.) observes that this decision "is not encouraging to the attempt to revolutionize the Government," and the Chicago *Record* (Ind.) believes that it "effectually demolishes the notion that Congress, in legislating for territories, is possessed of absolute powers."

Most of the papers which disagree with Judge Lochren emphasize the fact that his opinion on the Constitution did not directly concern the Rafael case, and they argue that his declaration is therefore of little weight. "Judge Lochren's opinions thus expressed," says the Boston *Herald* (Ind.), "have no judicial force, but they serve to emphasize the necessity of obtaining an authoritative decision from the court of last resort on this all-important question." The New York *Times* (Ind.) observes: "It must have given the learned judge great pleasure to have his say. But he has not changed the situation nor helped to settle the question whether the Constitution goes out to Porto Rico of its

own force, or must be applied by the action of Congress." The *Philadelphia Press* says that Judge Lochren's position is exactly the one taken forty years ago by those who declared that the Constitution extended over the Territories and carried slavery with it, and, it continues: "The Republican Party refused, in 1860, to accept this view of a 'constitution of its own force' carrying any specific limitations into the Territories. It refuses now. It won then. It will win now." The *New York Tribune* (Rep.) calls Judge Lochren's opinion "a stump speech from the bench," and adds:

"This, we think, will be something of a surprise to Congress, which for a century has been exercising legislative authority in places where the Constitution was not in force, and the Supreme Court, which has steadily been upholding such exercise of power. The other day we referred on this point to the court's sustaining a murder conviction by our representatives abroad without jury trial under an act of Congress. That was a case of the exercise of legislative authority where the Constitution does not extend. Congress has also legislated concerning the guano islands 'appertaining to the United States,' and the Supreme Court has sustained such legislation. The Constitution has no extra-territorial force, according to the Supreme Court, but Congress has extra-territorial authority. It has exercised it not merely in the cases cited, but also concerning Samoa, where the United States has long had sovereign rights, and it has exercised it over Cuba. The President is to-day administering the government of Cuba under the authority of Congress, which directed him to intervene and pacify the island, and if Congress sees fit at any time to enter into more specific direction of our rule there it undoubtedly has the power to do so. Yet probably even Judge Lochren would not dissent from the decision of Judge Lacombe, just handed down, that Cuba is not a part of the United States, and that its citizens can sue as foreigners in our courts. But if so, how is it that Congress may not legislate respecting territory unless the Constitution previously extends over it?"

MR. CLARK'S POLITICAL MANEUVER.

MOST of the press thought, when the Senate committee reported unanimously against the claim of W. A. Clark (Dem.), of Montana, to a seat in that body, that the affair was practically over, and that nothing was left but the adoption of the report, or his resignation, to close the case; but on Tuesday of last week, in a few hours, Mr. Clark and his friends, while seeming to retreat, took up a new position more difficult to attack than the old. His former claim rested upon his election by the Montana legislature, and it was attacked on the ground that the legislators were influenced by bribes. His present claim rests upon his appointment by the acting governor of the State to fill the vacancy caused by his resignation. Governor Smith has still further complicated the situation by appointing a second Senator, Martin Maginnis, for the same vacancy.

On Tuesday morning Mr. Clark, at the close of an affecting address, tendered his resignation and his name was taken from the Senate roll. Almost at once, however, he was appointed to the Senate again by Montana's lieutenant-governor, A. E. Spriggs, acting in the absence of Governor Smith. Governor Smith belongs to the anti-Clark forces, and the despatches from Montana say that he went to California on a business trip in the belief that in case of emergency he could return as quickly as Lieutenant-Governor Spriggs, who had gone to Sioux Falls, S. D., to the Populist convention. In this calculation, however, he seems to have erred: it is said that the lieutenant-governor made no stay in Sioux Falls, starting for Montana again as soon as he arrived, and that Senator Clark's resignation and Lieutenant-Governor Spriggs reached Helena, the state capital, about the same time. Governor Smith heard of Senator Clark's resignation on Tuesday, and wired to the state capital that he would

reach there on Thursday morning, but his telegram arrived too late. The lieutenant-governor had already appointed Mr. Clark to fill the vacancy. This left Mr. Clark's opponents in the Senate in considerable of a quandary, and altho they are outspoken in their condemnation of what they call a political trick, they seem to be somewhat at a loss as to how they can attack Mr. Clark's new position. The general opinion of the press, however, seems to be that if the Republican majority in the Senate is hostile to Mr. Clark's claim, they will find some way to send him back to Montana. Some papers remark that if a man with fewer enemies had been appointed the credentials would never be questioned.

The *Springfield Republican* (Ind.) voices a sentiment expressed by many other papers when it calls Mr. Clark's *coup* "about as slick a game as American politics has often witnessed." Indeed, the Republican papers think it is too "slick" to succeed. Says the *Chicago Evening Post* (Ind. Rep.):

"The copper king of Montana has overreached himself. His latest trick is as childish as it is impudent. It has made Senators angry and more resolutely bent than ever upon keeping him out of the Senate, and it has disgusted the country. Even the sympathy of the small minority in whose eyes Clark was the product of a bad environment has been forfeited. The American people may be too good-natured and indulgent, but they can not be deceived by so transparent a trick as that which ex-Senator Clark and his gang have tried."

The *New York Tribune* (Rep.) says: "The right of the Senate to reject such credentials as Mr. Clark will be able to present is open to dispute, but there is no doubt of its power to expel a member by a two-thirds vote," and the *Philadelphia Press* (Rep.) says: "Why not show him the door?" Nearly all the Republican and Independent papers agree that some other representative for Montana in the Senate would be more acceptable.

The Democratic press make the rejoinder that the Senate contains a number of Republican Senators whose records are none too good. The *Washington Times* (Dem.) believes that Senator Clark has been shamefully vilified. It says:

"The unpleasant position in which Senator Clark has been placed before the country by the machinations of his enemies, and the open vindictiveness and dishonesty of the efforts which they have made to defame and besmirch him, entitle him to the sympathy of fair-minded men. The worst that can be truly said of Mr. Clark on the strength of evidence or even gossip is that he gave freely of his wealth to secure victory for his party in Montana. Being a political beneficiary of the victory, because he was a successful candidate for the senatorship, he came to Washington under a cloud of charges that he had used illegitimate means to secure the office. But nothing has been discovered to justify an allegation of wrongdoing on his part, or of guilty knowledge that anything irregular was being done in his behalf. Compared with the circumstances which attended a famous effort of the late Calvin S. Brice to represent Ohio in the United States Senate, and of a later episode in the political history of that State, when Marcus A. Hanna managed to gain possession of the seat he now holds, the record of Mr. Clark's case, as far as that gentleman is personally concerned, is remarkably free from anything which could be made to reflect upon his honor or propriety of conduct."

"The *Daily* crusade against Senator Clark has gone far enough. Senators who are still inclined to countenance its continuation will discover that what has happened often before in the political history of the country has happened again. Inveterate pursuit and persecution of a citizen by his private and business rivals and enemies has excited widespread public sympathy for him. The American people are at heart and in action always champions of fair play. They have been watching the cool assumption of excessive virtue by notorious corruptionists and vote-buyers in the Clark case with indignation and contempt. Their voice will now be heard by Senators generally calling a halt. Senator Clark will be given his seat, as a matter of course."

IS IT WORTH WHILE TO EDUCATE THE NEGRO?

THE last few days have seen the rather unusual spectacle of a prominent New Englander decrying higher education for the negro, and the niece of a Confederate general coming to the negro's defense. The New Englander is Charles Dudley Warner, who was born in Massachusetts and has lived in Connecticut nearly all his life. In his address as president of the American Social Science Association before their recent annual meeting in Washington he contrasted the beneficial effects of slavery upon the negro with the injurious effects wrought by the attempts to give him a higher education; declaring that under slavery "the negro was taught to work, to be an agriculturist, a mechanic, a material producer of something useful," while "our higher education applied to him in his present development operates in exactly the opposite direction." He continues:

"When the negro colleges first opened there was a glow of enthusiasm, an eagerness of study, a facility of acquirement, and a good order that promised everything for the future. It seemed as if the light then kindled would not only continue to burn but would penetrate all the dark and stolid communities.

"Have these colleges, as a whole, stimulated industry, thrift, the inclination to settle down to the necessary hard work of the world, or have they bred idleness, indisposition to work, a vaporous ambition in politics, and that sort of conceit of gentility of which the world has already enough? If any one is in doubt about this he can satisfy himself by a sojourn in different localities in the South.

"The condition of New Orleans and its negro universities is often cited. It is a favorable example, because the ambition of the negro has been aided there by influence outside of the schools. The federal Government has imposed upon the intelligent and sensitive population negro officials in high positions, because they were negroes and not because they were specially fitted for these positions by character and ability. It is my belief that the condition of the race in New Orleans is lower than it was several years ago, and that the influence of the higher education has been in the wrong direction."

Mr. Warner's address has attracted considerable attention in the press, and no reply to it has received wider notice than a letter written to the *Springfield Republican* by Miss Caroline H. Pemberton, niece of John C. Pemberton, the Confederate general. Miss Pemberton is an able defender of the colored race, and is the author of the recent novel, "Stephen the Black." After a graphic description of the sad condition of the negroes under slavery, and the small likelihood of their obtaining there the industrial education that Mr. Warner speaks about, she says:

"I take exception to Mr. Warner's attitude toward the colleges that have been started for the advancement of negro education. It is fashionable to deride them. It is considered in good taste to sneer at the negro who can read Latin or Greek, or who aspires to be anything more than a hewer of wood or a drawer of water. Does Mr. Warner not know (along with the other good people who sincerely want to help the negro) for what purpose these colleges were started? Has he forgotten that there were no public schools in the South for either race at the close of the war, and that up to the present day every school-teacher of colored children south of Maryland must be drawn from the negro race, in deference to a universal Southern sentiment, which proclaims it a degradation for white people to teach them? Not only is it the vocation of these struggling colleges to provide teachers for the whole of the black South, but on their efficiency depends also the training of negro clergymen to minister to the moral and spiritual needs of the people. Where else are these people to look for guidance, if not to their teachers and pastors? And are the blind to lead the blind, and both to stumble along in dense ignorance together?

"There is not the slightest danger of the Southern negro becoming overeducated. In the first place, many of the so-called 'colleges' are little more than high schools, and the amount of learning they impart is not likely to make the negro 'top-heavy,' or otherwise injure his capacity for waiting on table. In the

second place, the negro masses, except in the towns and cities, have little opportunity to obtain even the rudiments of an education. A public-school system of three-months' schooling, without text-books or school-houses, and which opens its schools in deserted log cabins or colored meeting-houses five, ten, or fifteen miles apart, is not likely to prepare many pupils for the 'negro colleges' that Mr. Warner so much dreads. The public schools in the Philippine Islands would probably compare favorably with those provided for negro children in many of our Southern States—that is, for negro children on the plantations, where illiteracy often claims 70 per cent. of the population."

The *Boston Transcript* says of Miss Pemberton's letter:

"In this woman's quick intelligence, sound intuitions, deep sympathy, and undoubted knowledge of the facts of the situation there seem to be gathered up more truth and justice than in any of the labored and pretentious attempts to state the problem and furnish a solution that we have seen. The discouragements are so many that it has become easier to treat it as an academic question than it is to admit the hard facts and accept the responsibility and perhaps the sacrifices that they involve. We wish Miss Pemberton could have presented her views with equal fulness at the Montgomery Conference. We are not sure but they would have been worth more than the whole output of wisdom that was the result of that three days of deliberation."

Some interesting facts about the schools for negroes in the South are given in an article which Mr. T. Thomas Fortune, editor of the *New York Age* (Afro-American), contributes to the *New York Sun* in reply to Mr. Warner. He writes:

"I say deliberately that the 169 academies and colleges supported for the Afro-Americans in the Southern States have 'stimulated industry, thrift, the inclination to settle down to the necessary hard work of the world,' and the man who asserts the contrary does not know what he is talking about. To say that they have stimulated 'idleness, indisposition to work, a vaporous ambition in politics, and that sort of conceit of gentility of which the world has already enough,' is a malicious perversion of fact, which could only proceed out of dense ignorance of the facts. There are 27,000 Afro-American public school-teachers in the Southern States; there are 1,095 instructors in the 169 academies and colleges, many of them Afro-American graduates; there are 40,000 Sunday-school teachers, most of them women who have gone out of the schools into homes as wives of honest men, who will not sell their children to pay their gambling debts, as Mr. Warner's 'intelligent and sensitive population' of New Orleans habitually did before the war; there are 5,000 men in the ministry who have graduated out of these schools; there are 1,300 lawyers; there are 1,200 reputable physicians; there are 150 editors who are publishing weekly newspapers and magazines; and if Mr. Warner would go with me to so small a place as Jacksonville, Fla., I will point out to him at least ten men in business, on a small scale it is true, but in business, who are graduates of the schools he 'whistles down the wind.' And it is so all over the South. The Afro-Americans who are making character and reputation and money as a basis of race credit are not graduates of the plantations but of the academies and colleges; more, the men who fill the chain gangs, and who are lynched for 'stealing chickens,' 'sassing white folks' and 'committing criminal assault,' are not graduates of the academies and colleges planted in the South and supported by Northern money."

LETTERS AND ART.

VERESTCHAGIN'S CRITICISM OF TOLSTOY.

THE most caustic and significant criticism of Tolstoy provoked by "Resurrection" is doubtless that of V. V. Verestchagin, the famous Russian painter, who wields a pen as well as a brush, and who is fond of writing down his impressions, observations, and thoughts. These he publishes occasionally under the title "Leaves from a Note-Book," and the latest leaf is presented in the *Novosti* and deals with Count Tolstoy as artist and preacher. Verestchagin does not share the admiration of most reviewers, especially of European and American reviewers, for "Resurrection." In this novel, he says, Tolstoy the moralist triumphs over Tolstoy the artist, wherein it differs from his early great works of fiction, like "War and Peace," where, in the constant struggle between the two personalities in Tolstoy, that of the artist always prevails over that of the preacher and reformer. Tolstoy, he says, must have lost faith in the marvelous, inspiring power of art, and while there is still much brilliancy and vitality in his work, there is not the wholesome breath of life itself, the winning charm of direct translation of the observed into imaginative pictures. To quote from Verestchagin's critique:

"In spite of finely written separate scenes, full of realistic grace, the plot as a whole will not stand analysis. It is impossible to enumerate all the incongruities caused by the desire to point a moral. For example, Katusha, betrayed by Nekhludoff, stands at his side for several hours, and yet either fails to see him or else fails to recognize him. Neither is even an admissible possibility, because, according to the story, the hero has not changed appreciably. Yet this was necessary to the author's purpose, and he sacrificed probability. Again, the unnatural, the impossible Prince Nekhludoff, who despises his circle, does not shrink from bothering official personages, enduring insults and ridicule for the sake of legalizing his union with Katusha. But marriage is a spiritual as well as a legal, material union, and can there be such a thing as a spiritual union between these two? Marriage would have been worse than physical torture to both, yet somehow it was necessary to Tolstoy to insist upon it for his hero!

"In truth, Tolstoy himself perceived finally the unsoundness of his whole conception, and in 'Resurrection' the very thing we miss is the resurrection. The whole story ends with the accidental lighting of Nekhludoff on a page of the Bible, which shows him that everything was wrong, and that the right is something different. What? This is left for the future, also because it was necessary that it should be so.

"In a word, the artist in Tolstoy has lost at the expense of the preacher. And of his preaching let us take a few examples:

"Having wearied at the close of a long life of nutritious, palatable food, he assures us that it is injurious to man, even to young and strong men.

"Having reached the age of seventy, he wonders what good there is in life that it should be so ardently desired, and yet allows a physician to treat him in illness so that he may ward off death.

"Having bred a large family, he declares that the reproduction of the species is wrong and that celibacy is the right course for men.

"He advocates non-resistance to evil. What would he do if his family were kidnaped and sold as slaves? I think he would shoulder a gun and join the regiment that went to free the captives.

"The environing conditions are bad, inferior to our ideal, but we must reckon with them as they are. History makes no jumps. . . .

"It is amusing to read Tolstoy's affirmation that he has tried to discover a solution in science and has found the latter wanting. He talks of science as a blind man might of beauty. Well-read he is, but his scientific education is slender and he never learned anything systematically. He is regarded by many as a philosopher, but he is only a great novelist. It was Turgeneff who observed that true art is impossible without the largest freedom,

the fullest independence of systems, notions, and preconceived schemes. In Tolstoy the splendid talent, the wonderfully written episodes, the separate pictures, are all rigidly subordinated to a philosophic-moral system."

The result, from an artistic standpoint, must be deplorable, continues Verestchagin. There is no logical development, and characters can not remain true to psychological law. Things happen not as they must, not as they do in life, but as the writer is bent upon having them in order to prove his thesis. There is much in Tolstoy that is elemental, pathetic, inspiring, and noble; but the conflict of his two personalities has prevented the complete success of either.—*Translation made for THE LITERARY DIGEST.*

"WILLIAM MORRIS, CRAFTSMAN AND SOCIALIST."

WILLIAM MORRIS, "poet, artist, manufacturer, and Socialist, author of 'The Earthly Paradise,' " was proudest, it is said, of the title, "craftsman." His life-work was directed toward the realization of Ruskin's idea that "art is man's expression of his joy in labor." Francis Tiffany writes in *The New World* (March):

"Through and through he deplored and hated that fatal divorce between the mechanic and the artist, the toiling hand and the creative brain, to which he traced back the source of all our modern woes—a divorce, he insisted, ruinous alike to master and to man, to designer and to his human tool, to art and to all native common joy in it. . . .

"Here, then, lay the root characteristic of the man, and out of it instinctively grew all his theories, esthetic and social, all the herculean toil of his life. A roundly fashioned man all through, his muscles craved their stint of work as consumingly as his brain, and palpable sense of the reaction bred of the wrestle with rough-and-ready matter was as needful to his fullest joy as lying off dreaming on any heights of Parnassus. Nothing short of this divine unity of soul and sense meant to him the earthly paradise, the kingdom of heaven on earth, and never till it was restored once again to the modern world would society cease to be a chaos of ugliness, brutality, discord, and hate. Blunt, brutish human tools on the one side, supersensitive esthetic weaklings on the other, this summed up to him the outcome of the modern caste-divisions, of the hideous divorce between brain and hand, of the limitation of art to an emasculating luxury for the idle and too often vicious."

At an early age this idea of the close union of artist and mechanic became manifest in Morris. Mr. Tiffany says that the captain of Morris's dormitory—

"relates how on his walks he [Morris] 'invented and poured forth endless stories about knights and fairies, in which one adventure rose out of another and the tale flowed on from day to day over a whole term.' Here, already in full flow, is revealed the extem-

THE LATE WILLIAM MORRIS.

pore, the automatic character of Morris's poetic faculty. It knew no travail in labor, no birth pangs. Like Burns's poem 'On a Field Mouse,' it shaped itself in the mind while the hand was guiding the plow. Years later he said, 'If a chap can't compose an epic poem while he's weaving tapestry, he had better shut up, he'll never do any good at all.'"

"To William Morris," writes Mr. Tiffany, "architecture was the supreme art of arts, and gothic architecture the most transcendent flight of beauty and sublimity the genius of man has ever soared." Mr. Tiffany continues:

"Nor was it merely the beauty and sublimity of such architecture that inflamed Morris's mind with a fervor of worship. The appeal it made to his sense of a common humanity, to his sympathetic interest in the lot of his toiling brother man, was equally strong. These glorious buildings, he insisted, were never the work of a caste of mere supersensitive, over-refined artists, cut off from hearty, flesh-and-blood contact with toiling humanity. They were the work of thousands of rough-and-ready craftsmen—under superior leadership, indeed—but alike able to unite brain with hand, to design as well as hew, to feel the relation of each man's part with the wondrous whole—a breed of craftsmen, therefore, who were intelligent and self-reliant men, at once developing their own powers and thoroughly enjoying their work, as they only can whose work is creative and not slavishly mechanical."

Thus in all of his work there may be traced his socialistic tendency, which is so closely connected with his art. Morris himself wrote:

"My hope is that people will some day learn something of art, and so long for more, and will find, as I have, that there is no getting it save by the general acknowledgment of the right of every man to have fit work to do in a beautiful home. Therein lies all that is indestructible of the pleasure of life: no man need ask for more than that, no man should be granted less; and if he falls short of it, it is through waste and injustice that he is kept out of his birthright. . . . Every one of the things that goes to make up the surroundings among which we live must be either beautiful or ugly, either elevating or degrading to us, either a burden and torment to the maker of it to make, or a pleasure and solace to him."

Great Educational Gifts of 1899.—Mr. Rossiter Johnson, editor of "Appleton's Annual Encyclopedia," has lately gathered data relating to the public gifts and bequests of 1899. A summary of these statistics from the advance sheets of the Encyclopedia is presented in the *New York Times* (April 7), from which it appears that the contributions for educational and benevolent purposes amounted last year to \$62,750,000. This does not include gifts under \$5,000, ordinary denominational contributions, nor municipal, state, and national appropriations. The following table indicates the increase in private gifts for the past seven years:

1893.....	\$75,000,000
1894.....	75,000,000
1895.....	72,500,000
1896.....	47,000,000
1897.....	45,000,000
1898.....	55,000,000
1899.....	62,750,000
Total.....	\$474,250,000

Of the private benefactions to purely educational purposes during 1899, the largest are the Carnegie and Rockefeller gifts, each of which run up into the millions, and—greatest of all—Mrs. Leland Stanford's gift to the Leland Stanford Junior University, conveying the bulk of her wealth in stocks and real estate. *The Times* says:

"The first transaction, May 31, transferred property of a face value of \$38,000,000 and a cash market value of \$15,000,000, and the second, June 15, comprised two large tracts of recently purchased grazing land, with valuable water rights, which were in-

corporated with the famous Vina Ranch, now owned by the University. These gifts swell the endowment of the University to \$45,000,000, calculated on the basis of a 5 per cent. return from the properties in which the Stanford fortune was invested. The face value of the securities constituting the bulk of the investments is about \$80,000,000, and any increase in their market price will enhance the total endowment, already the largest of any privately established institution in the world."

ACTORS AND CULTURE.

THE wide popularity of the romantic novel, thinks E. H. Sothorn, the well-known American actor, has had a great deal to do with the increase of culture among actors of the present day. They must keep abreast and even a little ahead of their audience, he declares, for fear of being tripped up. Scenery must be exact, knowledge of the costumes of the times must be indisputable, and all anachronisms must be avoided. He writes in *The Criterion* (May):

"I have felt it necessary, for instance, to go to London with a fellow actor, with whom I was to have a rapier combat, and study for many weeks under the best sword-master in the world; for, aside from the personal pleasure of having the thing truthful, I had in mind American audiences where any night a man might come to me and make me ashamed for my ignorance of the common skill of the period I was representing."

H. R. Irving, the son of Sir Henry Irving, discussing the art and status of the actor in *The Fortnightly Review* (May), says of culture and the actor:

"As one great critic has tersely expressed it, 'neither the poet nor the actor pretends closely to copy nature, but only to represent nature sublimated into the ideal,' and it is this process of idealism that the actor must apply to every character he undertakes to portray, no matter how nearly that character may seem to approach to every-day reality, if he would present it conformably to those rules of correct and beautiful expression that are as imperative in the art of the theater as they are in the arts that express themselves on canvas or in marble. The carrying out of this process calls on him for gifts of insight and imagination similar to those we look for in any other form of artist; and as insight and imagination of the highest order are employed in the creation by the poet of such transcendent beings as *Hamlet* or *Lear*, so in translating such beings into action, in putting them before the spectator as creatures of flesh and blood, insight and imagination of a high order will alone enable the actor to achieve that 'union of grandeur without pomp and nature without triviality,' that supreme idealization of man in action as we see him about us, which is the fitting and worthy complement of the art of the dramatic poet. Without in any way detracting from the share of the dramatist in the productions of the theater, it must, I think, be admitted, by any one who takes the trouble to consider the question from an enlightened standpoint, that the actor is not the mere parrot-like reciter of the words of the playwright, that the higher the dramatist soars the greater is his need of some kind of intellectual response on the part of his actors, and that, instead of setting up actor and author as rivals who are perpetually endeavoring to extend their frontiers at each other's expense, they should be regarded as equal participators in the highest achievements of the theater."

Some Writers' Opinions of Themselves.—In a recent number of *Punch*, three novelists who have come in for a good many hard knocks from the critics of late are made to give their own views of their literary output. The following three letters (presumably autograph) are printed therein for the first time:

"The principal impression produced upon me by the perusal of my own works is a splitting headache, especially acute in the case of my poems. I have a strong suspicion, amounting at times to a conviction, that I generally have meaning if only it can be

found. In my more recent works, however, this feeling is less marked.

"A subsidiary impression is amazement at the number of people who read my works and profess to understand them.

"G-RGE M-R-D-TH."

"A glow of satisfaction thrills me as I gaze upon the bookshelves which contain my works. There is really some very good stuff among them. I don't profess to know what I meant when I wrote some of them, *e.g.*, the 'Jungle Book'; but plain tales of Ortheris, Mulvaney & Co., were played out, and one had to strike out a different line somehow. I confess, when I read 'The Day's Work' I have an uncomfortable misgiving that I am running to seed, which, however, is instantly dispelled when I hear the barrel-organ outside my door discoursing the classic and familiar strains of that undoubted work of genius, 'The Absent-Minded Beggar.'

R-DY-ED K-PL-NG."

"When I read some of the awful rot that I have undoubtedly written, I find myself wondering if I am quite responsible for my literary actions. Can it be that I am as mad as my last creation, 'The Worshiper of the Image'?

"R-CH-ED LE G-LL-NNE."

Considering the well-known enterprise of *Punch*, and the still better known quarrel between the critics and Marie Corelli, the wonder is that she is not also represented by an autograph letter.

GRAND OPERA IN ENGLISH.

WILL grand opera be difficult to render in English? this has been the uppermost question in the minds of music lovers since Mr. Grau announced his intention of trying the experiment in New York next season. Miss Suzanne Adams, who has been engaged for the new English company, and who will appear in "Faust," "Romeo and Juliet," and many other familiar operas, writes in *The Criterion* (May) that the new venture has assured elements of success. She says:

"So far as vocalization is concerned, probably the Italian language lends itself most gracefully to the demands of musical rôles, but the English lyrics, if carefully prepared with a regard for the singer, can be quite as effective, and certainly more interesting to English-speaking audiences. The English translation of French and Italian opera, of course, must and will be of the very best, and provided that the librettos be skilfully arranged, I can not see that there are any great difficulties in the way of presenting English opera.

"There is an impression, possibly, that the English language will interfere with the phrasing of certain passages in operas that have, according to tradition, been sung in French and Ital-

ian, and I may say German, but I think the impression is false. If the lyrics are so written as to balance the musical value of an operatic score, the singer will not find any change in the original arrangement of the music."

JOURNALISM IN JAPAN.

THE Japanese, grasping at all things modern, have not failed to take up with avidity the most distinctively modern of all modern things—journalism. Like other new things which the Japanese have planted in their rich soil, the journalistic seed came out of the West, and the acorn has now grown to a great tree, with offshoots in every city and town of the island empire. Only four or five decades ago, Japan of the old *régime* was a feudal realm, divided into three hundred and sixty *rans* or territories, under feudal lords; and a newspaper would have been as great a novelty and seemed as much of an incongruity as it would at the court of King Arthur at Camelot. But the Japanese mind has many eminently journalistic traits, and Mr. T. J. Nakagawa, who writes in *The Forum* (May), shows how from a single insignificant pamphlet first printed in 1863, Japanese journalism has developed into an institution which to-day comprises 745 periodicals, of which the capital, Tokyo, alone possesses 201. "And yet," Mr. Nakagawa remarks, "a little more than twenty years ago there was not, throughout the whole of Japan, a single regular publication to which the name newspaper could justly have been applied."

Of the earliest attempt at a periodical—one can not term it a newspaper—Mr. Nakagawa writes:

"The publication was in pamphlet form, and consisted mostly of translations of items of news from Dutch newspapers published at Batavia, the chief port of the Dutch East Indies. From this circumstance the periodical was known as the *Batavia News*. Man-hio was publisher to the government office known as 'Ban-shochosio'—literally, 'Bureau for Investigating Barbarians' Books'—an institution which was the nucleus of the Imperial University. At the suggestion, and with the assistance, of the professors of this bureau, Man-hio undertook the publication of *The News*; but the enterprise was not long-lived. Following this, many periodicals cropped up, published at irregular intervals as occasion required. Among my collection of these early so-called newspapers I have specimens of the *Yenkin Shimbun* (*News of the Metropolis and Provinces*); the *Bankoku Shimbun* (*News of All Nations*), published as the organ of the English missionaries; the *Moshiyusa* (*Collection of Sea Weeds*), edited jointly by Mr. Ginko Kishida and an American, the first genuine newspaper published in Japan."

All these publications were brochures of a dozen or so leaves, printed from wooden blocks, with rude sketches by way of illustration, and special information about foreign affairs designed to show how Western nations had attained to power and civilization. Hawkers went from place to place, reading aloud the contents of the paper to stimulate a desire for more. These journals were, however, short-lived. The first really successful daily newspaper was the *Mainichi Shimbun* (*Daily News*) issued at Yokohama in 1871, and later at Tokyo. This is now owned by Baron Miyoji Ito, ex-minister of agriculture and commerce. It was soon followed by other successful dailies; and now the capital alone has twenty of these. The post of managing editor or editorial writer is highly appreciated by the highest classes of the Japanese; and many officers of the Government, including cabinet ministers, vice-ministers, members of Parliament, governors of prefectures, and other men of rank are actively connected with the daily press as owners or contributors. Japan also has its yellow press, altho the Oriental variety is not so touched with yellow rays as that of the Occident. It is a singular and noteworthy fact, also, that Japanese journalism is acquiring another characteristic of the West. Newspapers—particularly the smaller ones—are coming to be looked upon as

MISS SUZANNE ADAMS AS MARGUERITE IN "FAUST."

Courtesy of *The Criterion*.

commercial "property." On some papers, says Mr. Nakagawa, the editorial writers "are no longer allowed to express their views freely and independently, but are completely subordinate to the managing editor, whose sole object is to sell his paper, principle and tone having no weight with him." The larger political papers, indeed, still maintain the high tone and spirit of former days; but the minor journals, in their struggle for supremacy in news-gathering, have "scant sense of dignity and honor."

OUTLOOK FOR COLLEGE WOMEN.

MANY hundreds of women annually receive the privileges of higher intellectual training at the Leland Stanford Junior University; and its president, Dr. David Starr Jordan, would therefore seem well qualified to offer an opinion as to the results of such an education. He does not agree with those who hold that a woman loses something by going to college—particularly to a college where coeducation prevails. "All she had she holds," he remarks, "and may gain with it much more." Higher education does not unsex, he says; and not only will the direct intellectual training itself bring increased power for all the uses of life, but the intellectual atmosphere, the more serious views of life which prevail there, and the manifold associations with broad-minded women will result in increased gain in all womanly ways. He writes (*Harper's Bazar*, May 5):

"It is true that the college woman has higher ideals of life and makes greater demands on manhood than the uncultured woman. No doubt as a result of this she may marry later, or not marry at all. But surely this is better than to be yoked unevenly. The higher culture gives resources for joy and action. It gives worth and dignity to unmarried life, but it takes away none of the joys of true marriage. I know that the idea is prevalent that the educated woman is spoiled for humbler duties, that she will play the piano in the parlor while her mother cooks in the kitchen, that she is weak in nerve and flabby in muscle, less fitted for the stress of life, and less willing to do her part in it, than her untrained mother or her unlettered grandmother. As to this I can only say it is not the fact. It may be true in some slight degree of the sham education in French and music of the fashionable boarding-school. These are the candy and sweetmeats of education, not its solid and nutritious substance.

"A little learning without training is a dangerous thing. In these days of many books the uncultured woman is exposed to many new dangers which our grandmothers could not know. Half-educated mothers are too often caught by passing fads—medical, literary, and religious. It is among partly educated women that worthless books find their readiest sale. It is from among them that the societies for the promotion of 'the higher foolishness' draw their membership. Christian Science, Ralstonism, vegetarianism, faith cure, relic cure, osteopathy, psychic experiences, and a variety of delusions which real knowledge would dissipate, and which now add unprecedented terrors to matrimony, derive their support from women who have leisure to read, but who have never been trained to think.

"The training of the American college of to-day opposes to all this the critical spirit. It makes for calmness and firmness. The college woman is as vigorous in health, as firm in step, as clear in brain, as ready for real service, as devoted, loyal, and loving when she leaves the college as when she enters it. She knows a good deal better how to use her time than her mother did, and how to apply her strength. She is ready for her part in life, and she has some clear and critical sense of the relative value of different men and actions. There is no way known and none has ever been found which could prepare her better, or which could make her more ready for her great duties as wife and mother."

What is the outlook, he asks, for the university woman, the woman who not only has a baccalaureate degree, but in addition has spent two or three years in special preparation for some definite profession? Dr. Jordan thinks it is a long road and a stren-

nous, but that those who aspire to it and are fit will never regret the effort:

"I was asked not long ago—'Should we encourage young women to work for the doctor's degree?' Should we tell them that success awaits them when this goal is passed and urge them to strain every muscle to reach it? As to this, it depends on the girl. If your encouragement is needed for her decision, do not give it. A college training is good for every intelligent and healthy girl, no matter what place in life may fall to her lot. She gains much and loses nothing. But the specialization of professional training has its losses as well. It is well to count all these. We should not urge a girl to strive for what she may not want. As a rule, she will not take it when she gets it. As a rule, she will not succeed when she takes it.

"The exceptional girl who is fitted for a college professorship will push ahead regardless of our encouragement. She will find few positions open to her when she reaches her goal. She will have many days of discouragement, but in the end her real deserts will be sure to find her out. But few of the women who have filled college positions have been really successful. This is partly because women find their joy in feeling rather than in achievement. In many cases this is because good intentions have been accepted instead of real capacity. Girls have been 'encouraged' to do what they were not ready to do well. Something like this is true in other professions. The woman lawyer is not readily accepted as an equal by her brethren. Many of these women have worked for notoriety rather than solid acquisition. Those who have patiently sought real success find a quiet career as counselors rather than a noisy one as advocates. In medicine many women have been most useful and successful. But the full percentage of triflers and quacks is found among women physicians.

"If a girl is fitted for a profession, she will distinctly feel a 'call' for its work. With the call which comes from taste and fitness she will not need to be urged forward. But this she must know, there is no gallantry in science or in art. She will not gain success on any but the most exacting terms, the same terms on which a man might win the same success."

NOTES.

MR. JULIAN RALPH'S forthcoming book, which is to be called "Toward Pretoria," will be the first book on the South African war by an American. Mr. Ralph has succeeded the late Mr. G. W. Stevens as special war correspondent of the *London Daily Mail*.

DR. W. ROBERTSON NICOLL calls attention to the fact that the honors of song, like the honors of war, are to-day with the Irish. The best of England's younger poets, Mr. V. B. Yeats, is Irish of the Irish, he remarks. There is also a brilliant group of feminine verse-writers, including Miss Jane Barlow, Miss Katharine Tynan, Mrs. Dora Sigerson Shorter, Miss Nora Hopper, and Miss Moira O'Neill.

LITTLE seems to be definitely known about Kipling's new novel, which is to appear serially in this country next autumn. It is variously rumored that the scene is laid in Upper Burma, in India, and in South Africa. *The Critic* (May) announces that the story is to be called "Kim of the Rishbi," and adds that it is not a novel of action, but philosophical and analytical in its character. *The Publishers' Circular*, London, states that for the serial rights of his new novel Mr. Kipling is to receive the highest price ever paid to an English writer of fiction—a sum equal to the annual salary of an English cabinet minister.

COLONEL HARVEY, the new head of the house of Harper & Brothers, has been visiting London, and *The British Weekly* publishes an interview with him in which, among other things, he had this to say: "My plans are to carry out the business on the old lines, but free from traditional restrictions. For example, the firm has always been opposed to ten-cent magazines; but if, after full examination, I find a ten-cent magazine is wanted, I shall start one and endeavor to make it just as good as possible. While seeking to retain the high literary reputation of the Harpers, I shall be more ready perhaps to consult the public taste."

THE past twelvemonth has been a period of literary surprises in the field of fiction. At least three novels by American authors have had within a period of a few months sales unprecedented in recent years. "Richard Caryl," "David Harum," and "Janice Meredith." And now comes a new and remarkably promising aspirant to popularity, Miss Mary Johnstone's "To Have and to Hold," a historical novel dealing with the settlement of Jamestown. Within two weeks and a half the sales, it is announced, reached 111,000 copies, and it has now reached 200,000. Even "Uncle Tom's Cabin" can not show such figures, for it took two months to reach a sale of 100,000 copies, and a year to reach 200,000. All these remarkable sales are believed to indicate a vast growth of recent years in the American reading public. At no time has so tempting a field been presented to the successful novelist.

SCIENCE AND INVENTION.

THE SOFT-NOSED PROJECTILE AND KRUPP ARMOR.

RECENT government experiments in which Krupp armor was penetrated by a soft-nosed projectile have been made prominent in the press by the fact that an attempt has been made in Congress to use them to defeat the clauses of the navy bill authorizing the purchase of Krupp armor. The action of the soft-nosed projectile was described some time ago in these columns. It has long been used in our navy, altho not perfected until about two years ago. That it gives additional value to the armor-piercing projectile is admitted in naval circles, but officers contend that it has no great bearing on the armor question. The Washington correspondent of the *New York Sun*, May 10, writes as follows in relation to the matter:

"The inventor of the shell is I. G. Johnson of the Johnson Steel Company of Spuyten Duyvil, N. Y. Through the use of a soft steel cap over the hard point of the projectile, a bed to hold the point in place as it enters the armor is formed. This permits the projectile to strike the plate squarely, prevents glancing and wobbling, and serves as a lubricant. The principle is the same as that applied in driving a needle through a coin by means of a cork, which holds the needle in place, keeping the point firm against the metal.

"It was demonstrated several years ago that no armor could resist shell fire where the distance between plate and gun was sufficiently short and the shell large enough and of good material. But the naval ordnance experts are working to secure such shells only as will pierce armor at the distances under which naval engagements would ordinarily be fought. Any Krupp plate, it is contended, may be pierced at a hundred yards, but modern armorclads would probably never fight at such a short range.

"The velocity of the soft-nosed projectile fired at the Krupp plate at Indian Head was regulated to conform to a 2,000-yard range. That the plate was bored from face to back by two 6-inch shells indicates that the soft-nose is available for successful use in a naval engagement. The Navy Department will make another test of the Johnson cap to ascertain whether it will enable a shell to penetrate a plate when a glancing blow is struck. Should the test be successful, the soft-nose will have shown its superiority over the sharp-pointed, hard shell cap with which ordinary armor-piercing projectiles are fitted."

Russian ordnance experts, we are told, originated the idea of covering the heads of projectiles with a soft substance. Their experiments failed, however, and Rear-Admiral Sampson took up the matter personally four years ago when he was chief of the Naval Ordnance Bureau. He tried several metallic substances as caps and experimented also with lubricating material. After his term of office as chief of ordnance expired Mr. Johnson began conducting experiments and succeeded in overcoming the chief difficulty, that of attaching the soft-nose to the projectile proper. He took out patent rights on his invention and these were acquired by the United States two years ago. To quote again:

"Experiments with soft-capped projectiles were conducted by the Naval Ordnance Bureau three years ago while Admiral Sampson was its chief. In every case the capped projectile penetrated deeper into the target than did the uncapped projectile. The targets were plates of face-hardened armor. Various ranges were employed, the perforation being obtained with normal impact. Service muzzle velocities obtained from smokeless powder were used.

"Soft caps for armor-piercing shells were provided for the American ships in the Spanish-American War, but were not used, as no occasion arose where uncapped shells were not suitable."

Rear-Admiral O'Neil, chief of the Naval Bureau of Ordnance, says of the experiments in a published interview:

"There is nothing new in this cap except that we have just

had a chance to try it on Krupp armor. There has been nothing new in projectiles for four years that I know of. We have known for that length of time that a cap of this kind would increase the force of a shell 15 or 20 and in some places 25 per cent. That is all there is to it, and this ratio of advantage applies to the Krupp as well as to the Harveyized and lighter plates.

"The public seems to have a very erroneous notion as to armor-plate; the people think it invulnerable. Such is not the case. In the struggle between the gun and the armor, the gun is ahead and probably always will be, since there is a limit to the weight of the armor which any ship may carry. It is one thing to penetrate armor at close range and in favorable conditions and quite another when striking the ship at sea, which is always in more or less motion. If a shell strikes obliquely, its power is greatly lessened, and, of course, lessens with the distance. The reason the hard-nosed shell does not penetrate armor is because of lack of lubrication. A series of experiments resulted in the addition of a soft-nosed cap, which acts as a lubricating element to the point of the projectile."

A SLOT-MACHINE FOR BOOT-BLACKING.

THE latest slot-machine is for blacking boots. It comes from Paris, and is thus described in *Cosmos* (April 7):

"We have automatic vendors of all sorts; but until the present time there has been none to aid in the details of the toilet. This want is now filled; we can not yet, it is true, have our hair cut, or be shaved by dropping a nickel in the slot; but we can have our boots blacked.

"The automatic boot-black has three rotary U-shaped brushes, which enclose the top and sides of the shoe; these brushes are contained in a metal cylinder having two openings for the introduction of the foot. In the lower opening the shoe is attacked above and on the sides; in the upper one (see illustration) the heel is treated by the brush. The stages of the operation are as follows:

"The user, after dropping his nickel in the slot, takes hold of the horizontal bar, introduces his foot into the first brush-hole, and turns a handle. At once a small electric motor sets the axle of the rotary brushes in motion and in the twinkling of an eye the shoe is cleaned.

"The man next passes to brush No. 2, which puts on the blacking; this brush takes up the desired quantity of polish by means of an ingenious mechanism similar to that of the inking part of a printing-press. Brush No. 3 polishes the shoe. One foot having received the desired attention the operation is repeated with the other.

"A needle that moves on a scale after each stage of the process indicates to the user what he must do next; he has even a mirror before him, so that if he wishes he can arrange other details of his toilet while the blacking is proceeding. The only care he has to take is to turn up his trousers, an important precaution when one thinks what the machine might do to them if this were omitted."

In closing, the writer of the notice remarks that there is a great future for slot-machines of this general type, for use in

A NICKEL-IN-THE-SLOT BOOTBLACK.

hotels, colleges, etc. Many of the offices now performed by servants may in certain cases be rendered expeditiously and well by such devices as these.—*Translation made for THE LITERARY DIGEST.*

THE CUBAN CENSUS.

THE Cuban census has in many respects brought to light unexpected facts, which show on the whole a gratifying condition of affairs in the island. The accompanying diagrams, which are reproduced from *The National Geographical Magazine* (May) emphasize the more important facts. Says this publication:

DIAGRAM SHOWING POPULATION BY COLOR.

"From the relatively large proportion of native-born whites, 58 per cent. of the total population, it is evident that the administrative control will remain in the hands of the native white Cuban when the United States withdraws from the island. Thus Cuba will not become a second Haiti.

"The right to vote at the municipal election June 16—a right gained by the ability to read and write or by the ownership of property—is possessed by about 140,000 native Cubans. As so many citizenships were in suspense at the time the census was taken, it is impossible to state exactly how many Spaniards will also have the right to vote, but they will not exceed 30,000, if they reach that number.

DIAGRAM SHOWING CONJUGAL RELATIONS.

"Of the total population of 1,572,797, 1,108,709 are single, 246,350 are married, and 131,788 live together as husband and wife by mutual consent. In justice to the Cuban, however, it should be stated that unions formed by mutual consent are considered no less binding and are no less permanent than those sanctioned by the marriage ceremony.

"The excessive fees charged for weddings, perhaps, explain the frequency of the omission of the ceremony.

"The census returns show the need of a thorough system of education. Of persons over ten years of age, 43 per cent. can not read or write, while only 11.4 per cent. of the children under ten years are attending school."

DIAGRAM SHOWING PROPORTION OF THOSE UNDER TEN YEARS.

DIAGRAM SHOWING LITERACY OF THESE TEN YEARS.

Sugar and Animal Temperature.—A series of interesting observations is published by the Italian professor Mosso in the *Atti dei Lincei*, on the temperature of a fasting animal and the assimilation of hydrocarbons. His experiments, which were carried out in the University of Genoa, are particularly interesting as showing the effectiveness of sugar in raising animal temperature that has been lowered during a period of fasting. Thus 1 to 4 grams [15 to 60 grains] of sugar cause a rapid rise of temperature in the ten or fifteen minutes after taking. In one to two hours the temperature reaches its maximum and remains constant during an interval of time that varies with the quantity of sugar taken. This action of sugar is very marked after a long fast, when the temperature is lowest. In certain conditions the

action of bread is very different. The temperature rises much more slowly after eating bread than after eating sugar, and in this case the rise is very rapid with animals whose fast has been short and whose temperature is not too low. These results are in accordance with the hypothesis that sugar is assimilated more rapidly than bread by an animal that is suffering from hunger. Professor Mosso tells us that with sugar he has succeeded in restoring life to dogs suffering from loss of vital heat, when he could not save them by administering albumin.—*Translation made for THE LITERARY DIGEST.*

THE PHYSIOLOGY OF ENJOYMENT.

AN attempt has recently been made to explain on the basis of natural science conditions and phenomena that have usually been regarded as purely intellectual. In a book by Dr. C. Lange, of Copenhagen, entitled "The Physiology of Enjoyment as a Basis for a Rational Esthetic," the author, who is well known for his contributions to the psychology of the emotions, develops considerably the ideas of this school of psychologists. To quote from a notice in *The British Medical Journal*:

"The criterion that a given sentiment is an enjoyment for any one is the fact that he seeks to experience it. Dr. Lange points out that the emotions are largely vasomotor phenomena, and therefore the factors which can cause such phenomena are eagerly sought after or as eagerly avoided. Of the greatest importance are those emotions which are caused by vasodilatation, and the next the joy of those which are caused by vasoconstriction, as, for example, the enjoyment of the feeling of being kept in suspense. Ecstasy is not quite the same as the other emotions, but is the purest and most intense, the most abstract enjoyment, as it were, and undoubtedly the highest of the pleasurable sensations which the human organism can experience. A lower degree of ecstasy is admiration, perhaps the most important of the sensations because it is so common. Its objects are to be found in abundance in the world around, and man is also capable of creating them himself in the arts. The long protraction of joy can be explained as due to a paresis of the muscular coat of the blood-vessels in the brain, which may persist some time, while anger and sorrow are associated with spasmodic vasoconstrictions which can last for a little while only, and are succeeded by weariness. Only one emotion—disappointment—never seems to show itself as a feeling of enjoyment, and the physiological explanation is perhaps to be sought in its being accompanied by a feeling of atony."

Dr. Lange classes the means of enjoyment biologically into three main groups. In the first the nervous impulses reach the vasomotor centers either through the nerves of sensation, or by more indirect routes emanating from the psychical centers of the brain. He regards pleasurable feelings aroused by alterations of temperature, by smell, and by taste as belonging to the group of enjoyments aroused by single sensations, while those aroused by colors and sounds require a cooperation of sensations. To quote the abstract further:

"The Southern races of Europe are characterized by duller senses, and therefore require stronger impressions than those of the North. The means of enjoyment of the second main group operate in the form of physical and chemical substances entering into the circulation via the alimentary canal or otherwise; for example, substances such as coffee, alcohol, tobacco, and opium. The third main group comprises mechanical movements. This includes dances and movements of various kinds, in which children instinctively enjoy themselves. Anger, however, can also be excited as by war dances, while ecstasy is promoted by religious dances. Besides the different types and means of enjoyment, there are two conditions which are of the greatest importance in producing and enhancing pleasure, change, and sympathy. Rhythm is closely associated with change, but introduces an element of method. As strengthening the enjoyment of change and rhythm we have 'surprise'—a sudden breach of rhythm. This constitutes 'comic art.' Sympathy has very deep roots in human nature, and is closely bound up with the instinct of imitative reproduction. Dr. Lange quotes instances from painting and

poetry, architecture and decoration, and the dramatic art, to illustrate his points as to the fuller meaning of sympathy, of change and of admiration as conditions for enjoyment. Men instinctively have recourse to these three expedients to satisfy artificially their need of enjoyment when the natural means are insufficient. The productions of man to satisfy these conditions constitute works of art—a sober but a very practical conclusion."

IS THE STOMACH A DIGESTIVE ORGAN?

THAT a human being whose stomach has been removed can still live and eat, as has been proved to be the case in some recent surgical operations, has seemed little short of miraculous. It need not astonish us, however, if, as some late investigations go to show, the stomach is rather a receptacle for food than an organ of digestion. In *The Dietetic and Hygienic Gazette* (May) we find a statement of the results of experiments on the mechanism of gastric secretion by Pawlow, of St. Petersburg, and his pupils. Says the writer of this notice:

"We have known that, in man and in the dog at least, the secretion of the stomach is intermittent and appears only during meals. If water be taken on an empty stomach and then withdrawn through a tube, it will be found practically unchanged both as to quantity and reaction. If, on the other hand, a light meal, such as bread and weak tea, be given, a strongly acid liquid is obtained, which contains pepsin and has the power of digesting albumin. These observations have taught us that the introduction of food into the stomach causes an active secretion, but further than this our knowledge has not extended. We have seen in experiments on dogs that neither the sight nor the smell of food, nor mechanical acts, like masticating a moist sponge, are capable of provoking gastric secretion, save perhaps a few drops. . . .

"It has been shown by Pawlow that the passage of food through the upper portion of the alimentary tract is followed by an abundant outpouring of active gastric juice—a phenomenon which goes to prove that gustatory impressions are capable of provoking the stomach into secretory activity. . . . The centripetal fibers engaged in this reflex act are the nerves connected with the sense of taste. . . . On account of its dependence upon more or less agreeable gustatory impressions—in other words, its connection with a psychical process—it has been called the *psychical secretion*. Certain substances, like salt, mustard, and other condiments, which act as excitants in man, are without effect, however, in the dog.

"Besides the psychical secretion there is yet another—the *chemical secretion*—which has already been mentioned, but the precise mechanism of which it has remained for Pawlow to discover. . . . When food was introduced into the stomach, it was found that secretion took place within a space of five or six minutes, and that it lasted from fourteen to sixteen hours, its digestive power being greatest during the first hour. This chemical secretion was entirely distinct from that produced by psychical impression."

It is a study of the conditions of this chemical secretion that must cause us to modify our ideas of the importance of the stomach in digestion. Meat produces a chemical as well as a psychical secretion; bread, starch, and fats produce only the psychical. Milk gives no psychical and only a partial chemical secretion. Both secretions are evidently produced under the stimulus of nerve-action, but neither is specially important in digestion, all previous ideas to the contrary notwithstanding. Says the writer:

"Neither of the two secretions plays an important part in digestion; we have seen that they act only upon one kind of food—the albuminoids—leaving the starches and sugars intact, and being, moreover, inhibited by the presence of fatty substances. But even as a digestant of albuminous food the gastric secretion seems to be of little use. As can be seen by experiments *in vitro*, albumin is not completely digested until the end of ten or twelve hours, and we know that food does not ordinarily remain in the stomach that length of time."

These considerations lead the writer to regard the stomach

as a receptacle of food rather than as an active organ of digestion. For, he says, of the four kinds of food we eat, three are not acted upon, while the fourth escapes but slightly changed because it does not remain long enough. If, as these observations seem to show, the stomach is a comparatively useless organ, we should expect but little risk to follow its removal. As a matter of fact, the experiments of Czerny and Dastre on dogs, and recent surgical experiences in man, have proven that privation of the stomach is quite compatible with life and even with health. He says in conclusion:

"The assertion made by some authors that the gastric juice is an efficient destroyer of bacteria holds good only to a limited extent. Quite a number of microorganisms—non-pathogenic, it is true—have been found to flourish in the stomach, and an Italian observer, Spallanzani, has found that meat may undergo slow putrefaction, altho impregnated with gastric juice. If, as is normally the case, the secretion contains a sufficient amount of acid, it has undoubtedly the power of killing the germs of cholera, typhoid fever, tuberculosis, and other microorganisms liable to do serious damage to the intestinal tract.

"From all that has been said we conclude, then, that while a good stomach is an excellent thing, it is better to have no stomach at all than to have a bad one. For in the latter event it is liable to give rise to a variety of troubles dependent, primarily, upon the faulty composition of its secretion, and, secondly, upon the morbid changes brought about by impurities of the blood."

DOES THE TROLLEY KILL TREES?

THERE seems to be some difference of opinion on this subject. According to a resident of Bay Ridge, Brooklyn, N. Y., the overhead trolley wire there is responsible for the wholesale destruction of trees along one of the finest avenues of that part of Greater New York. As quoted in *Electricity*, May 9, he says:

"Five years ago there was the finest natural archway of trees, between Sixty-fifth Street and Fort Hamilton, to be found within the limits of Greater New York. Now, for blocks at a stretch, one tree, at least, out of every three is blasted, and the others, tho they are in leaf in the summer, are losing their vitality, and are surely doomed unless the destroying influence can be averted in some way.

"I am confident that if the public knew at the time the wires were strung through the trees the effect the leaking electricity would have, there would have been such a kick that the wires would, at least, have been more carefully strung. The public understood that the wires were covered with insulating material, and that even, as in nearly every case, when they touched or rested on branches the trees would be safe.

"I have talked with electrical experts since then, and have been told that there is no such thing as an insulating material through which electricity will not slowly make its way. It is only a matter of time before it will leak through any material in such a way as to destroy anything the wires may happen to be in contact with. I think something should be done to save the rest of the trees. Their destruction is an act of vandalism."

The residents claim, *Electricity* goes on to say, that in damp weather the current leaks through the insulation of the feeder cables where they touch branches and passing through the latter seeks the ground. It is asserted that examination of the trunk of a recently fallen tree showed that it was decayed and hollow through most of its length. It is also stated that wherever a cable touches a branch it shows signs of decay and dies. Says the journal already quoted:

"That escaping electric current is responsible for this condition of affairs is very likely, for the best of insulations will occasionally break down after being long in use, and there is no doubt but what a wet tree offers an excellent grounding medium. It is rather difficult, however, to explain why an electric current at a comparatively low voltage should cause a tree to decay and rot, especially when it was reported from Brussels, Belgium,

some time ago that stray trolley currents were 'stimulating' the trees along a certain avenue in that city and causing them to put forth an unusual number of blossoms.

"However, the condition of affairs in Bay Ridge would seem serious enough to warrant a careful examination being made, after which if the trolley companies are found at fault steps should be taken to compel them to more thoroughly insulate their conductors, or, better still, to so run their cables that the leakage of current to a tree would be impossible. Such action would serve as a precedent and might in future prevent a similar condition of affairs elsewhere. In fact it is the least that is due to the residents of that vicinity, who naturally take a proper pride in their surroundings."

THE VALUE OF LIGHTNING-RODS.

THIS is the lightning-rod season, and it is regarded by *The Electrical Review* as an opportune time to put the farmer on his guard against the wiles of the "lightning-rod man," who is now going his rounds in the rural districts equipped with "a reel of twisted wire ribbon, some alleged insulators, a few gilded points and spikes, and an enormous quantity of impudent loquacity." *The Review* warns its readers that the lightning-rod as a protector has been much overestimated, and that in the case of many of those purchased from the agents aforesaid its value is nearly or quite nothing at all. It says:

"It is just as well for people who live in the suburbs or the country to know that the average lightning-rod has about as much influence on the disposition of lightning to strike their premises as the color of the paint on their houses. There is not enough known to-day about lightning and its habits to formulate a really satisfactory statement of its laws, but a few things about it are known. There appear to be several kinds of lightning discharge, the two most prominent perhaps being best defined as the impulsive rush discharge and the oscillating stroke striking several times over the same spot. We know that lightning is the discharge of an enormous condenser of which the clouds and the earth are plates, and of which the electrical capacity is simply enormous. The volume of the average discharge of lightning is probably not very large as compared with the heavy currents used in electric lighting and railway work, but the nearest approach that has been made to measure it indicates that it is of the order of a thousand amperes more or less. Since the discharge is almost invariably either a sudden rush or a violent electrical oscillation, the ordinary laws governing electrical conductivity do not control its actions, and it is necessary to look to the phenomena of high-tension and high-frequency discharges in order to understand what may be expected from a lightning stroke."

We are further warned by *The Review* that the present state of knowledge on the subject is mostly confined to negative conclusions, but that one of these conclusions is that the average lightning-rod is of no use whatever. We can be certain that ample protection would be given to a barn by enclosing it in a thick copper shell, but a lightning-rod constructed upon the most scientific principles might avail little if it came into the path of certain kinds of lightning. On the other hand, lightning may take the ordinary lightning-rod as a path and go quietly to earth over it without doing damage. To quote the concluding paragraph:

"There should not be, in thickly populated regions where houses are close together, any particular uneasiness about the danger of lightning. In places where the population is entirely concentrated and the buildings are close together the fatal results of lightning are practically *nil*. It is in the country districts, where trees are abundant and houses frequently surrounded by them, that fatal accidents more frequently occur. Furthermore, the city man, as a general thing, has no lightning-rod. The country man almost invariably has. In either case, however, the chances of death by lightning are so small as to be utterly negligible."

CONTAGION BY TELEPHONE.

FOR many years past it has been recognized that the contact of telephone transmitters and receivers with the ears and lips of a great number of persons might result in the transmission of contagious diseases. The microphonic plate against which we speak is in particular a receptacle for all sorts of organic matter, including drops of saliva, which dry on it and form with floating dust breeding-places for noxious germs. The speaker must articulate distinctly and open his mouth wide; there is therefore, as he inhales and exhales, an opportunity for a free exchange of microbes. All these facts, which are by no means new to students of hygiene, have at last begun to be noted officially. *The Revue Encyclopédique*, in an article by Dr. Foveau de Courmelles, quotes the following bit of news regarding what is being done in France:

"By advice of a special commission, M. Mougeot has recommended that, in public telephone booths, the vibrating-plates of the transmitters and the cones of the receivers should be wiped with a cloth slightly moistened with dilute carbolic acid, and that the walls of the booths be sprayed with the same daily. . . .

"In cafés, banks, etc., this should be obligatory. In Vienna the telephone booths are furnished with napkins bearing the inscription: 'Wipe, if you please.' . . . These measures, good tho they are, will be effective only when the napkins are changed frequently.

"There is still a better plan—to do away with the present form of telephone apparatus and to substitute new systems in which hearing and speaking are effected at some distance. . . .

"It is well known that the loud-speaking telephone, capable of being heard at a distance, is an accomplished fact. We have at least three systems, based either on perfection of line and of instruments, or on a combination of microphone and phonograph. . . . We have recently seen M. Dussaud's telephone at work in a newspaper office, and it apparently satisfies the requirements of both hygiene and electricity. We know that these two branches of science may lend each other powerful aid, and now we have not only electric antisepsis (made possible by electrically-produced ozone) but a practical hygienic telephone!"—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

A SUGGESTION was recently made by an English electrical journal, according to *The American Machinist*, that the proprietors of an English factory should bring over a large number of American workmen, in order to demonstrate how, by the use of "automatic" machinery in American style, ordinary "doot laborers" may be utilized to do the work of skilled mechanics. This publication also advances the extraordinary opinion that it would pay the company to house the men near the works, "as American workmen often do not object to living in a comparative shanty, so long as wages are good and green corn is obtainable."

"TOOTHPICK" PLANTS—*Amni visnaga*, an umbelliferous plant, called the "toothpick bishop-weed" on account of the use made in Spain of the rays or stalks of the main umbel, is described in *Merck's Report*: "The stalks after flowering, shrink and become so hard that they form convenient toothpicks. After they have fulfilled this purpose they are chewed, and are supposed to be of service in strengthening the gums. The spines of *Echinocactus visnaga* are in common use among the Mexicans for a similar purpose. The number of these spines upon a single plant is something enormous. A comparatively small plant in Kew Gardens was estimated to have 17,500 and a large specimen not less than 35,000."

"THE Portuguese Government," says *La Nature*, "has offered to give all aid in its power to foreign astronomers who go to that country to observe the eclipse of May 28. It has appointed a commissioner to see to the matter, and it has issued the following orders: 'Custom-house employees at sea-ports and frontiers are to give astronomers every facility for the entry of their baggage, their instruments being admitted free on presentation of a certificate from an astronomical observatory countersigned by the Portuguese consular agent.' . . . The Lisbon Royal Observatory has issued a pamphlet containing charts of the path of the shadow across Portugal, of the hours and angles of the first contact, and of the heavens in the neighborhood of the eclipse, as well as valuable numerical data. It will be neither difficult nor onerous to procure necessary building material and passably skilful workmen. The delicate repairs that may become necessary are possible only in the large centers such as Lisbon."—*Translation made for THE LITERARY DIGEST.*

THE RELIGIOUS WORLD.

SOME TRAITS OF MR. MOODY.

A FEW years before the death of Mr. Moody an intimate friend asked for his permission to publish the only authorized biography of his life. Mr. Moody declined to grant this request, but expressed the wish that his son, W. R. Moody, undertake the task after his life-work had been finished. When the son made objection that he lacked the necessary literary experience, the evangelist replied: "I don't care anything about that. What I want is that you should correct inaccuracies and misstatements that it would be difficult to straighten out during my life. You are the one to do this. All my friends will unite with you and give you their assistance. There are many who think they know me better than any one else, and would feel themselves best able to interpret my life. If you do not do this work there will be many inaccurate and conflicting 'Lives.'"

This authorized life of Mr. Moody has appeared, and sooner than originally intended, the author says, because of the announcements of unauthorized biographies. The book contains nearly six hundred pages, and more than a hundred illustrations, many of which are new. Mr. Moody's genesis, his family, his early struggles, his career as a shoe merchant, and his forty years of evangelistic work in America and England and his building of the Northfield College are described. The text is largely anecdotal, incidental, and illustrative in character.

Mr. Moody was descended from the Moodys and Hattons, two Puritan families who settled in the Connecticut valley in 1630. They were sturdy families, but Mr. Moody evidently claimed no credit for himself on account of his ancestry, remarking on one occasion: "Never mind ancestry! A man I once heard of was ambitious to trace his family to the *Mayflower*, and he stumbled over a horse thief. Never mind a man's ancestry!"

In his case the boy was certainly father to the man. His mother was widowed with nine children, and young Dwight early manifested the traits of character that made him famous. His vitality, his jokes, his energy, his leadership, and ambition all distinguished him as a lad. When only ten years of age and in the absence of his older brothers he "swapped" the old family plow-horse to some gypsies for a lank, raw-boned animal, but made a good trade. He was a great practical joker, playing upon himself as well as upon others.

While cutting logs on the mountain-side with his brother Edwin in the spring of 1854, he exclaimed in his characteristically abrupt manner:

"I'm tired of this! I'm not going to stay around here any longer. I'm going to the city."

His family tried to dissuade him, but it was of no use, and the next day he started to tramp to Boston, a hundred miles away. His brother gave him five dollars, enough to take him to the city, but he had all the bitter experience of a country lad in a city looking for work. He had two uncles in the shoe trade, but they were slow to give him a position on account of his awkwardness, abruptness, and independence of manner. At last he was taken into one of their stores upon the promise that he would not try to run the store. But dissatisfied to wait in the store for customers, he went out on the sidewalk to cry his wares. His keen observation and energy made his success instant, and before he was twenty-five he had saved enough money to venture into the world as an evangelist, preaching without price.

While in Boston, the young man joined a Congregational church. In a year or two he went to Chicago and entered business. It was here during 1856 that he became a revivalist and Sunday-school worker. While doing pioneer Sunday-school work in the slums, he was greatly annoyed by ruffians of the lower Catholic element. He determined to put a stop to their disturbances, and went directly to Bishop Duggon with his com-

plaint. When he asked for the bishop the maid at the door informed him that the bishop was busy and could not be seen. But Mr. Moody insisted that he would wait, and accordingly took his seat. At last the bishop came out, and Mr. Moody briefly told the bishop of the disturbance by the Catholic element in his Sunday-school and insisted that he should instruct the parish priests to have it stopped. The bishop replied that these ruffians could not be Catholics, or, if they were, they were so low that the church had no control over them. "Your zeal and devotion are most commendable in behalf of these people, however," he added, "and all you need to make you a great power for good is to come within the fold of the only true church."

"But," replied the young missionary, "whatever advantage that would give me among your people would be offset by the fact that I could no longer work among the Protestants."

"Why, certainly you could still work among the Protestants," was the reply.

"But surely you would not let me pray with a Protestant, if I became a Roman Catholic."

"Yes," replied the bishop, "you could pray with Protestants as much as ever."

"Well, I didn't know that," said the young man. "Would you, Bishop, pray with a Protestant?"

"Yes," said Bishop Duggon, "I would."

Mr. Moody proposed that they pray right there and they did, sealing their friendship, and there was no more disturbance from the Catholics in the Sunday-school.

It is well known what an immense capacity Mr. Moody had for work, preaching three and four times a day for weeks at a time. Some years ago Sir Andrew Clark, after an examination, told him he had a weak heart and was a fool for doing so much work. Mr. Moody asked the famous physician how many hours he worked.

"Sixteen or seventeen every day," was the reply.

"Then, doctor, I think you are a bigger fool than I am and will kill yourself first." And he did.

Many people wished to learn the secret of Moody's sermon-making. "I have no secret," said Mr. Moody to a body of young men. "I study more by subjects than I do by texts. If, when I am reading, I meet a good thing on any of these subjects, I slip it into the right envelope and let it lie there. I always carry a note-book, and if I hear anything in a sermon that will throw light on the subject, I put it down and slip it into the envelope. Perhaps I let it lie for a year or more. When I want a new sermon I take everything that has been accumulating. Between what I find there and the results of my own study I have material enough." He added that he was not afraid to repeat a sermon to practically the same audience. But the best of his sayings were impromptu. He insisted that the church needed men who could "think on their heels."

His son says that the Mr. Moody's most prominent characteristics to the public were his enthusiasm, his energy, his impulsiveness and resolution, yet he possessed a great strength of patience, sympathy, and unselfishness. But all of his other qualities were dominated by his "consecrated common sense." It never ceased to be a wonder to him why people wanted to hear him preach. The head of a lecture bureau asked him to introduce Henry Ward Beecher to an audience in Chicago. "What," responded Mr. Moody, "introduce Beecher? Not I. Ask me to black his boots and I'll gladly do it."

One night while Mr. Moody was traveling, the newsboy came through the car, crying: "Ingersoll on Hell." The evangelist took out a copy of his book on heaven and gave it to the boy, who amended his cry thus: "Ingersoll on Hell, Moody on Heaven!"

The keynote of Mr. Moody's character, his son thinks, is struck in the following incident reported from China:

"A young missionary far in the interior of China received for

baptism a little child. The name given was Moo Dee, so unusual a combination that the minister asked its origin. 'I have heard of your man of God, Moo Dee,' was the reply. 'In our dialect, Moo means love, and Dee, God. I would have my child, too, love God.' Mr. Moody knew no Chinese, but his name alone told in that language the secret of his life."

Mr. Moody's idea of how to settle the Transvaal war was simple and characteristic. A few days before his death he remarked to his son:

"I know what I would do if I were old Kruger."

Thinking that he had been dreaming, his son inquired if he had had a good rest.

"I wasn't asleep," he replied. "I was thinking of that horrible war."

"Well, what would you do if you were Kruger, father?"

"Oh, I would just send a message to Lord Salisbury, and state that there had been so many hundreds killed on the Boer side, and so many on the English side, and I would say as an old man, I should have to stand before God, and I did not want to go before Him with all this blood on my conscience, and I would tell England to make her own terms of peace."

It was suggested that possibly England herself was not entirely innocent.

MR. SHELDON ON NEWSPAPER SENSATIONALISM.

DURING the brief period in which the Rev. C. M. Sheldon edited the *Topeka Capital*, the American press lost no opportunity to deride and belittle his experiment in "Christian" journalism. Mr. Sheldon now carries the war into the enemy's camp in a scathing denunciation of American newspaper methods. Writing in *The Outlook*, he says:

"For the last three years a large number of prominent daily newspapers have printed falsehoods about my books, my daily habits, my family life, my church, and my parish in general. I have never, except once, to a reporter from my own home paper, been interviewed for publication in a daily paper, and yet scores of supposed interviews have been published in daily papers. One large New York daily a few weeks ago published two letters purporting to come from me, and signed my name to them. I never wrote such letters, and never made the statements attributed to me. Yet these letters were reprinted in papers all over the country, and in religious weeklies, and, with two exceptions, none of the editors asked me whether the statements were really mine or not. A prominent religious paper sent a correspondent to Topeka to 'write up' everything connected with the *Topeka Capital* the week I was asked to take the editorship of it. He sent to his paper several pages of matter, including several columns of 'interviews' and accounts of my personal habits and family life, nearly all of which might, without any reservation, be characterized as falsehoods of the most serious character. When the statements made about my church or my daily life or the conduct of the paper were not actual lies, they were so grossly exaggerated as to be absolutely misleading. . . .

"Several times during the last three years representatives of large daily papers have said to me in my church study, where they had come to secure 'interviews,' 'If you do not give us anything, if you refuse to talk about yourself, we shall send on something.' And they have sent on 'something,' and I have wondered a good many times lately whether the modern system of newspaper invasion of a man's personal and private life, even the most sacred and holy sanctuaries of his home and his church, has not assumed a tyranny that employs as merciless a method of extortion as the old-time rack or fagot pile. . . .

"Is it not time that the people of this country began to demand of the daily press that it tell the truth first of all? As it is now, I believe that no more serious charge can be brought against a certain proportion of the press of this nation than the charge of lying, of gross exaggeration, and of a failure to verify the statements which it is every day printing as 'news.'"

WU TING FANG ON CHRISTIANITY AND THE CHINESE.

WU TING FANG, Chinese Minister to the United States, who has been attracting considerable attention by his speeches concerning our trade in China, now comes forward with some interesting views on the influence of Christianity and missionaries upon the Chinaman. The Chinese, he says, are nominally all Confucians, who embrace the simple creed of "belief in

goodness," but at the same time they recognize the value of lessons from other teachers. Of Christianity, he writes in *The Journal* (New York):

"I must acknowledge that the teachings of Jesus Christ seem to me to establish a standard of conduct as highly ethical as that established by the doctrine of Confucius. Jesus Christ, in fact, goes a little further than Confucius. If your enemy smites you on one cheek, he bids you turn the

WU TING FANG.

other also. Confucius is more practical. He says: 'Requite justice with justice, favors with favors.' 'If we requite our enemy with kindness, how, indeed, can we reward our friend?' he asked.

"Christianity will make people good, if they live up to it. But how many do? What Christians repay evil with good? Show me them. It must, however, be remembered that Christianity has done immense good in this world. I have no quarrel with any religion that is based on a foundation of virtue. If they all bid one do good and deter one from doing evil, I say let them all go on. If there is a reward in some future life for the good deeds on earth, if there is a heaven for the righteous, there must surely be many ladders leading up to it, just as there may be many staircases in a house. To say that there is only one ladder is too narrow for me. If there is reward for any, I believe it will be for all good people. Some Christians say that except you believe in Christ you can not be saved. I am broader than that doctrine. My religion comprehends all.

"I have read the history of Europe during the Middle Ages, and the account there given of persecutions caused by difference in religious belief has filled me with horror. We have no such records in China. Jews, Mohammedans, Buddhists have lived there peaceably side by side. It is only when indiscreet Christian missionaries go to extremes and excite the people that they ever have any trouble. They say: 'Oh, you Confucians! You are all wrong. You worship idols. Tear them down.' This is idle, and does not appeal to the Chinese as consistent, for they know that all Roman Catholics have idols in some shape in their churches. The missionaries should go about their work more quietly if they hope for success. No one ever heard of the Chinese rising against the Mohammedans, altho Mohammed was a conspicuous enemy of idols.

"It seems to me that Christians often forget that Jesus Christ was an Asiatic and a Jew. The religion that he founded has gained most of its adherents in Europe and America, and yet some Western people are not very kindly disposed toward Asiatics.

"Christianity owes most of its converts in China to the fact that it is more alluring than any religion we have there. The idea of a future life and rewards for the righteous is tempting to many. Confucius teaches no such doctrine. He was once asked if he believed in a future life, and he answered: 'If I don't know

what will take place to-morrow, how can I know anything about a more remote future?' He exhorted men to do their best to-day with no thought of reward. That seems to me the higher view."

MRS. PIPER OUTDONE.

MRS. PIPER, the famous medium whose powers have been investigated during the past fifteen years by the Society for Psychic Research, has been referred to in these columns as "the most remarkable woman in the world." This lady is, however, now apparently outdone by another, Miss Helen Smith, who has been the subject of an exhaustive investigation for more than five years by professors of the University of Geneva, in Switzerland. The facts are set forth in a work just published by M. Th. Flournoy, professor of psychology in the faculty of sciences in that university. It is entitled "India and the Planet Mars: A Study in Somnambulism." *The Independent* (May 10) gives some interesting information concerning Professor Flournoy's discoveries.

The subject, Miss Smith, was not a professional medium, but a clerk in a Swiss establishment. Professor Flournoy, with Prof. August Lemaître, of the same university, after a scientific examination found her absolutely normal physically, not neurasthenic as is often the case. She was found to come of good parents, and had had limited advantages of education and travel. In her sittings she revealed several remarkable phenomena, of which the doctrine of the transmigration or reincarnation of the soul formed the basis. Says *The Independent*:

"She believes that Helen Smith has lived on earth twice before her present existence. Five hundred years ago she was the daughter of an Arab sheikh, and under the name Simandini became the favorite wife of a Hindu prince, named Sivrouka Nayaka, who ruled over Kanara, and built the fortress of Tchandranguiri in 1401. In the last century she reappeared in the person of the illustrious and unhappy Marie Antoinette. Now reincarnated in the humble station of Helen Smith, on account of her sins, and that she may be perfected, she revives the recollections of her glorious avatars in her somnambulistic trances, and becomes at one time the Hindu princess and at another the Queen of France.

"But Miss Smith also claims that as a medium she can enter into relation with the people and things on the planet Mars. In this last cycle of stories the most remarkable phenomena of speech and writing an unknown language are developed. It is impossible here to present more than a summary of the results obtained at these *séances*, which the author of the volume groups under the separate heads of Hindu, Martian, and Royal Cycles. Many *facsimiles* of the manuscripts produced by Miss Smith in her trances, as well as drawings, are reproduced in the book.

"In the Martian cycle she claims to ascend to the planet in a vehicle without wheels or visible propelling force, by a kind of levitation. Once arrived there she meets the people, whose manners and appearance she describes, and the portrait of at least one of the Martians is drawn. Astone is the name of this planetary friend, who wears a robe of odd shape, and flies about by aid of machines which he holds in his hands and presses on when he wishes to fly. The houses, trees, plants, fish, are pictured by Miss Smith. The language is a well-developed one, yet totally different from French. Professor Flournoy has arranged an alphabet from the various writings, and finds in them traces of the French alphabet, metamorphosed, but still evident. He accounts for the development of this cycle by a reference to the work by Flammarion on the inhabitability of Mars, published in 1892. This is to him the subconscious suggester of all the hallucinations, as he calls them, in this line.

"The Marie Antoinette cycle is so open to similar suggestion that he finds little of the astonishing in it. But the Hindu cycle is not so easy to explain, especially as Miss Smith, altho it seems that she has never had any opportunity to study Arabic or Hindustani, speaks and writes classical Arabic and Hindustani. The results of the *séances* in this cycle have been submitted to Orientalists, who agree that the texts are correct. But there was one

peculiarity in this connection: She wrote but four words of Arabic, which were drawn as if from memory, while in Hindustani she used a large number of words on different occasions, and she even chanted a Hindu melody."

Professor Flournoy thinks that nearly all of these phenomena can be accounted for on other than spiritistic grounds, but to do this we must grant vastly greater powers to the soul-functions than has hitherto been admitted. Indeed, in his opinion these phenomena are chiefly valuable because they indicate such tremendous imaginative and curative powers as a subconscious possession of the human soul. He believes it safest to suspend judgment for a time upon these points.

THE NEW REFORMATION.

THE Rev. R. Heber Newton, rector of All Souls' Church (Prot. Epic.), New York, believes that a new reformation, as sweeping in its scope as the great ecclesiastical revolution of the sixteenth century, is needed at the present time and will inevitably take place. The primitive authority in Christianity, he says, was Jesus himself, who "spoke as one having authority." To every question as to the reason of his faith, the sufficient answer of the disciple was: "The Master taught us thus to believe." But with the lapse of time, says Dr. Newton, this authority necessarily weakened and became second-hand, third-hand, and fourth-hand testimony to what Jesus taught. Then an inevitable authority arose—the church—whose right to teach was unquestioned for a thousand years. "With the incoming of the Reformation," says Dr. Newton, "a yeast process began—the ferment of man's mind and soul." It was an age when every received opinion was questioned and had to justify itself or be rejected. Yet, as in every new movement, a host of tares grew up with the wheat, and the wildest theories appeared upon every hand. Again, an authority to sift truth from error was needed, and the Bible was set up. No longer was it asked: "What does the church teach?" but, "What does the Bible say?" Says Dr. Newton (in *Mind*, May):

"Every opinion was haled before this court. Every question was determined by it. Philosophy and science and art—all human knowledge was passed upon by this final court of appeals. Again, a satisfactory authority so long as it remained unchallenged. While men could receive it, there was an unbounded comfort thus to be able to bring every doubt to a tribunal that could determine it finally. Of course, there went, with the good of such a final authority, the evil of it, as in the case of the church. While faith was preserved, the intellectual life was stifled. A tyrannous authority sat upon the mind and conscience of man. The way to progress in religious thought was effectively barred.

"Our age sees an era closely paralleling the period in which Christianity arose and the period in which Protestantism broke from the great Catholic Church. Again man's mind is teeming with new, fresh thought. Novel knowledges are streaming in upon him from every side. The whole horizon of his outlook has changed. His mind is yeasting with new ideas. The old experience renews itself—a vast growth from the soul of man, alike of good and of evil, demanding once more an authority capable of sifting the true from the false and of deciding between the right and the wrong. Never was authority more needed than to-day—provided it be the right sort of authority. Never was authority more craved than to-day—so that it be an authority to which man's mind and conscience can cheerfully bow."

"The historical study of the origins of the church," says Dr. Newton, "has impeached its claim to be a divine institution"; and the critical study of the Bible "has disposed forever of the claim that it is such an oracle of God as we can submit our intellects to unquestioningly." Dr. Briggs says that there are three coordinate authorities—the Church, the Bible, and Reason. But when they disagree, which is to be the final court of appeals? asks Dr. Newton. They do disagree widely to-day, he asserts.

Dr. Newton believes that the ultimate court of appeal is Reason

—not the reason of Thomas Paine and the present-day realistic rationalists; but rather the "Divine Reason" of Socrates, Plato, and the author of the Wisdom of Sirach. Reason in this sense means not merely or chiefly the rationalizing faculty, but the moral nature—"the whole spiritual being of man." "It is what conscience teaches," says the writer, "as well as what the intellect affirms, that, together with the voice of the heart, form the trinity of true authority—of Reason." Dr. Newton thus concludes:

"There need be nothing surprising to the conservative Christian in thus accepting Reason as the ultimate court of appeal in religion. What is the fundamental doctrine of the Christian Church, if it be not the doctrine of that divine *Logos*, or Reason, imminent in the universe, indwelling man; the light of his intelligence, his affections, and his conscience; the light which lighteth every man that cometh into the world—the very light of God Himself. We are bowing not to the human reason alone, but to the divine Reason of which it is the expression.

"And so we return, in the cycle of the church's story, to the primitive authority, in another and a deeper sense—the authority of the Master himself. That was not the authority of one man over against other men: it was the authority of one man speaking from the common nature of all men, as all together were the sons of 'my Father and your Father,' 'my God and your God.' The authority of Jesus was not the authority of a being sent down from the skies: it was the authority of humanity itself, finding a voice in the individual man who brought the spiritual conscience to the full, and so became himself a revelation of the indwelling *Logos*, or Reason, of God."

A Hindu Legend of the Creation of Woman.—Colonel Ingersoll, in his lecture on "The Mistakes of Moses," was fond of narrating an immemorial Oriental legend of the creation of man and woman, and trying to show how superior it was, in chivalry toward the gentle sex, to the story in Genesis. It is doubtful, however, whether he would have upheld the superiority of another narrative of this character found in a book of Hindu legends lately discovered. This work, written in Sanskrit, is called "The Surging of the Ocean of Time," and in the last section of it, entitled "Of a Finger of the Moon Reddened by the Setting Sun," occurs the following passage, lately translated by an English writer, Mr. Bain, and reproduced in the *Chicago Times-Herald* (May 7):

"At the beginning of time, Twashtri—the Vulcan of the Hindu mythology—created the world. But when he wished to create a woman he found that he had employed all his materials in the creation of man. There did not remain one solid element. Then Twashtri, perplexed, fell into a profound meditation. He roused himself to do as follows: He took the roundness of the moon, the undulations of the serpent, the entwining of climbing plants, the trembling of the grass, the slenderness of the rose-vine, and the velvet of the flower, the lightness of the leaf and the glance of the fawn, the gayety of the sun's rays and tears of the mist, the inconstancy of the wind and the timidity of the hare, the vanity of the peacock and the softness of the down on the throat of the swallow, the hardness of the diamond, the sweet flavor of honey and the cruelty of the tiger, the warmth of fire, the chill of snow, the chatter of the jay, and the cooing of the turtle dove. He united all this and formed a woman. Then he made a present of her to man. Eight days later the man came to Twashtri and said:

"My lord, the creature you gave me poisons my existence. She chatters without rest, she takes all my time, she laments for nothing at all, and is always ill." And Twashtri received the woman again.

"But eight days later the man came again to the god and said: 'My lord, my life is very solitary since I returned this creature. I remember she danced before me, singing. I recall how she glanced at me from the corner of her eye, that she played with me, clung to me.' And Twashtri returned the woman to him. Three days only passed and Twashtri saw the man coming to him again. 'My lord,' said he, 'I do not understand exactly

how, but I am sure that the woman causes me more annoyance than pleasure. I beg of you relieve me of her.'

"But Twashtri cried: 'Go your way and do your best.' And the man cried: 'I can not live with her!' 'Neither can you live without her,' replied Twashtri.

"And the man was sorrowful, murmuring: 'Wo is me, I can neither live with or without her.'"

A Roman Catholic Protest against Extreme Papal Homage.—The Latin races are prone to adopt high-sounding expressions and titles in much of their intercourse, but this often jars on the Anglo-Saxon ear, particularly when it is employed in religious matters. The *London Weekly Register* (Rom. Cath., March 23) comments disapprovingly on the fact that some even of "the most Catholic of newspapers and the most Catholic bishops of Latin origin," particularly in Italy, frequently use expressions of extreme adulation toward the Pope. It says:

"One bishop is exhorting his priests to 'render homage to Jesus Christ and to the Pope,' by instructing the members of the approaching pilgrimage for the Jubilee indulgence. In a Catholic paper last week we read: 'Solemn homage to Christ the Redeemer and to His August Vicar.' It is right that such ill-chosen phrases should sound ill in our ears: apparently no one thinks of their damaging effect on the religion of the ignorant. A little pamphlet printed in Rome, and sold for twenty-five centimes, in the interests of the temporal power of the Pope, seems to follow Luther's *perca fortiter* in this respect. It is entitled '*A che Serve il Papa*,' and to the inquiry: 'What is the value of the Pope?' it replies: 'His value is the value of Him whom He represents, i.e., God Himself.' We are further taught that 'For the civilized world God is all, religion, justice, liberty, security, etc., and the Pope is all this.' 'That which all beings should say of their Creator, the civilizing principles of Christian nations can say when speaking of the Pope; it is in him that we have life and motion and being: *In ipso enim vivimus et movemur et sumus*.' As far as I know, who still hold and retain the pamphlet in question, this production has not been denounced to the Index. But it, and its like, explain the customary language held by the Roman people toward the Pope—*si dice che è Dio in terra* [so speaks he who is God on earth]."

RELIGIOUS NOTES.

ENGLISH-SPEAKING travelers in Italy have often noted a peculiar facility in the Italian mind for distorting the English language in signs and other semi-official documents. The *London Weekly Register* (Rom. Cath.) says that very recently two English religious books were advertised in the *Voce della Verità*. The first is called "The Temporal Power of the Pope," and the other "The Civil Principality of the Vicar of Christ Revealed in the Old Scriptures." The latter title suggests that it may have been penned by an Italian from the East Side, London.

MR. RUSKIN as a churchgoer is not so familiar a figure to us as Mr. Ruskin as a writer and artist. The *Westminster Gazette* quotes the following from the Rev. C. Chapman, vicar of Coniston, Ruskin's home:

"He was a devout worshiper in our house of prayer, and when for some reason or other I missed him from his place therein I ventured the remark that the regular attendance or otherwise of the landed gentry around exercised a powerful influence for good or ill upon the working classes, he seemed struck with the idea, and promptly said: 'I never thought of that before. I will take care to be present myself, or to send my carriage that members of my family may attend even when I am not able to go with them. And to the day of his death he fulfilled his promise.'"

IN the course of an interesting discussion which has been going on in the Liverpool *Hub* on scientific Bible study in the Church of England, Mrs. Humphry Ward, replying to "A Curate" who has taken part in the correspondence, asks him if he has ever grappled first hand with any problem of historical testimony such as the miracles of Martin of Tours, and whether he has ever worked through the chapters in Strauss, Keim, or Schürer, treating of the New-Testament birth stories; above all, whether he has ever read and weighed such a book as Holtzmann's "Handkommentar," England, in Mrs. Ward's opinion, in Biblical study, is far behind Germany, which, she says, is still the only country which possesses a scientific and fully organized course of theology. Among the best books for real study of the Bible, Mrs. Ward names Harnack's "History of Dogma," Caird's "Evolution of Religion," Schürer's "Jewish People in the Time of Jesus Christ," Hausrath's "New-Testament Times," and Gardiner's "Exploration Evangelica."

FOREIGN TOPICS.

MOMMSEN AND MAX MÜLLER ON THE SOUTH AFRICAN WAR.

OF all the controversies concerning the British-Boer war, that which has challenged most interest the world over is doubtless the passage at arms between Germany's aged and famed historian, Theodor Mommsen, and the eminent Oxford professor and scientist, F. Max Müller, who is of German extraction and has never hesitated to defend Germany against British censure and attack at the risk of personal unpopularity. Pro-

JOHN BULL'S TRIUMPHAL MARCH TO PRETORIA.
—Amsterdammer.

fessor Müller is strongly anti-Boer at this juncture and heartily approves of the war. The hostility of the German press and public to England has pained him deeply, and he finally concluded to express publicly the views he had sought to disseminate among his German friends in private letters of remonstrance and explanation. His medium was the *Deutsche Revue* (Berlin), and his article appeared in the April issue of the magazine. It was rather aggressive and harsh in tone, and promptly elicited a reply from Professor Mommsen, who had previously written in strong denunciation of British policy. The reply was published in a special supplement to the *Revue*. Mommsen acknowledged Professor Müller's services to Germany and the propriety of his endeavor to counteract prevailing sentiments, but he assails both the logic and the history of the Oxford professor, citing against him the opinions of leading Englishmen like Bryce, and intimating that he is more British than some of the Britons themselves.

Professor Müller does not pretend to have anything new to say to the German public. He only hopes to shed a little more light on well-known and indisputable facts. His article is long and largely historical. The best idea of its contents will be conveyed by a free *résumé* of the whole argument, with free translation of the salient passages. It runs as follows:

The British nation and Government have acted most justly on the whole. England was not ready for war and did not desire it. This is "proved best of all by the fact that she was not prepared for it." The British had hoped for peace. "Who declared war? Who made the initial attack on British territory? Should England beg forgiveness for trying to preserve her old protectorate? Was she to permit the Boers to maintain slaves—in the form of apprentices—wage war upon the natives, and treat the Uitlanders like helots? That is not her conception of colonial government, and that her conception is a progressive and good one is demonstrated by the devotion felt by all her colonies."

But did England justly claim a protectorate over the Transvaal? Yes. She bases her claim on the settlement of the Vien-

na congress of 1814. Then, for the first time, the South African colonies became the subject of international treaties, and Europe then recognized the protectorate of England over South Africa. Owing to differences over slavery, the Boers trekked in 1836, and the republic of Natal was established. England considered the emigrants as her subjects and annexed the new republic by force, as was her right. Another exodus took place, and in 1848 England took possession of the whole Orange River State, still under the Vienna title, which gave her the territory as far as 25° south of the equator. The Sand River convention in 1852 surrendered England's right of interference in internal affairs on the other side of the Vaal, but the protectorate was preserved. This also applied to the Orange Free State. The colonies were given every possible freedom, but not national independence.

Much has been made of the conventions of 1881 and 1884. But the former convention conferred internal independence only, British suzerainty was recognized by the Boers. The word suzerainty was dropped because England did not care for the word. But she kept the thing, for she made conditions which implied suzerainty and a protectorate. For a time the Boers were more than contented; but soon after 1884 they set out to extend their territory in many directions in violation of the convention, and in other ways they sought to annul the restrictions of the treaty. The new arrivals were treated with the most flagrant injustice. The vast resources, gathered from aliens, were squandered in preparations for war. Even the Quixotic Jameson raid was caused by the outrages of the Pretoria government. The Uitlanders had been forced into conspiracy and revolt.

"No one should defend such revolt, and still less the employment of mercenaries. But when we think of the Transvaal conspiracy and its preparations for war, so long and quietly continued, the Jameson raid becomes intelligible, at least, tho it was similar to an attempt of a goat to stop an express train. It has been asserted, but never proven, that the British government was implicated in this silly business, and he who knows Lord Salisbury and his record knows that the accusation is wholly incredible. The suspicion against Mr. Chamberlain is a subject of regret, but let an indictment be brought, and his vindication will not be long postponed.

"There are Boers and Boers, and those who, with Kruger, are at the helm and grow rich on the millions of the republic deserve no sympathy, in Germany least of all. When the real facts are

THE NEW GALVANIC BATTERY.

LORD ROBERTS (about to apply "extra strength"): "I'll make him cry 'Enough' directly."
—*Newcastle Weekly Chronicle*.

understood, the talk about British greed will cease. England has all the territory she wants, and more; but she has grave responsibilities in South Africa. She can not withdraw without fighting, any more than she could withdraw from India. History goes forward. Every nation fulfills its destiny and the present, as well as a long future, we hope, belongs to Great Britain.

"The revolt of the Boers is an insurrection. Should they be victorious, it would of course be converted into something else. But right is more than might, and England, who is envied and

disliked, can say with pride, in any event, 'Many enemies, much honor.'"

Mommsen, in his caustic reply, objects to the insinuation that Germany "shrieks" after France. It is her sense of right and justice that has rebelled, he insists. Considering the tragedy of the conflict—a conflict between two civilizations, between the sixteenth and the twentieth centuries—Mommsen finds it difficult to understand Professor Müller's "lightheartedness." He says:

"Tho the business of governing other nationalities is not a fine one and things do not always go on in it as they should, yet not everything, by any means, is allowable in this sphere. There are performances which outrage the sense of justice and are condemned by the highest tribunal of civilization, the public opinion of the honorable people of all nations. This tribunal has no executive, and its utterances may be labeled emotional politics; but the sense of right, not pity, prompts its judgments."

The historian takes up the argument in detail. He says that Germans care little about the verbal war over suzerainty. The little Boer republics, surrounded and cut off from the sea, never could have real independence, he says; but England has herself fostered the sentiment of "paper independence" in them, and has made conventions with them, pledging non-interference in internal affairs. It was her duty as the stronger power to keep her promises. Her whole policy has been a model of blundering stupidity and inconsequence, and, as is generally the case, folly rather than deliberate wickedness has caused most of the mischief. Professor Müller shuts his eyes to the substantial truth of the case. He alleges that the Uitlanders were driven to revolt and conspiracy, but he is refuted by James Bryce, who shows that the franchise problem would have settled itself naturally; that England had no right to dictate in a matter purely internal, and that the Uitlanders' lives and property were perfectly secure, nothing preventing them from enjoying and enriching themselves. It is singular, says Mommsen, that the Oxford professor should regard such a condition as excusing or explaining rebellion. Was the raid due to Boer tyranny? "There are in Germany and also in England not a few persons who are denied the suffrage. Is it permissible for them to mobilize troops in a neighboring state and undertake to right matters?"

Referring to Müller's defense of Chamberlain and the English Government, Mommsen says:

"The courteous exception in favor of Lord Salisbury every one will admit; but the naïve belief of the Oxford scientist that Jameson was an ordinary footpad will not be shared by many even in England, especially by those who pondered subsequent developments—the purely nominal penalties imposed on participants in the raid; the careful binding of searching investigation; the parliamentary commission of non-inquiry, and everything that is still fresh in the memory. . . . As for Chamberlain, we have waited five years for his vindication, and in the interval there has surely been no lack of accusations. Moreover, it is silly to demand specific charges from the accusers. Müller's own 'regret' proves how well founded the suspicion is, and it was the duty of the British Government, especially of Parliament, to proclaim the vindication for the nation and the outside world, or, if that be impossible, to punish the guilty criminally and, above all, politically, thus freeing itself from complicity."

The British people did not want war, Mommsen agrees, but the Government did want it. The Boers had been preparing for it, true, but that was inevitable. They had anticipated an assault and had suspected the Government of conspiring with the financial interests. Who could blame them, particularly after the raid? England was unprepared—not for war, but its suddenness and violence. She simply exhibited military inferiority after having shown want of statesmanship. The fate of the Boers may be sealed; the Germans have often seen wrong without having the power to correct it. But, concludes Mommsen:

"We have been and remain of the opinion that Jameson was

a criminal of the basest kind and that his accomplices have gone unpunished and retained power. To reap advantage from crime, when it inures to the state and not to oneself, is something few decline, perhaps only Quixotic souls. Innumerable Englishmen who would have shrunk from sharing in the act regard the war and its spoils as a godsend for England. Are they right? Will the Boers, brought into closer relations with the central power, thankfully receive the blessings of modern civilization, or follow the example of Ireland? Who can foretell? But, whatever the future may have in store, one thing is certain for the present and future—a new page has been added to the glorious English history, the performance of executioners' work on the belated comrades of William Tell."—*Translation made for THE LITERARY DIGEST.*

THE COAL SITUATION ABROAD.

THE enormous increase of the iron industries of the world, due in part, no doubt, to the redoubled exertions of the great powers in the race for naval superiority, has led to a corresponding demand for coal. Owing to the present war Great Britain needs more steam coal than ever before; she can not fill all foreign orders, and for the first time the United States enters as a serious competitor in the European coal market. A German manufacturer has contracted for large supplies to be shipped from here to the Ruhr and Wupper region. It is rumored that no less than 50,000 tons a month will be required. How seriously the world would be affected by a momentary coal famine may be gathered from the following data, which we take from the *Amsterdam Handelsblad*:

Within thirty years the production of coal has increased as follows:

	—From 1869-1879.—	
	1,000 TONS.	1,000 TONS.
Great Britain	109,048	220,000
United States	28,758	205,000
Germany	95,794	130,000
France	11,310	35,000
Belgium	12,928	24,000
Austria	1,000	15,000
Russia	310	15,100
English colonies	710	15,000
Japan and other countries	100	5,000
Total	187,828	663,500

England exports 50,000,000 tons now; it may possibly be raised to 60,000,000, but that seems to be the limit, and the demand is much greater. The enormous increase in the demand for steel is chiefly responsible for this. Coal has been raised in price from 10 to 100 per cent. throughout the world. The present is a time of great prosperity, which causes a greater demand for coal on the railroads, in steamships, and in households as well as in the industries. Fifty to sixty million tons of oil and other fuel are being used in addition, but this does not relieve the strain.

There seems to be no danger of a genuine scarcity of coal, caused by the want of material. The German expert Frech, who is quoted extensively on the Continent, expresses himself in the main as follows:

Great Britain has a sufficient supply for centuries to come. Germany, owing to the cheap supply from England and Austria, has hardly begun to develop her coal-fields. The United States could furnish all that is necessary for many generations, and China as well as Russia has coal enough to furnish the world for thousands of years, even if science did not lead to the discovery of other less exhaustible heat-producers.

In Great Britain, Germany, Austria, and France strikes can not be suppressed by military force as in this country without arousing widespread discontent. Moreover, the railroad systems of these countries do not favor judicious reduction of rates in the interest of national exports. It is the failure to put down strikes which has mostly caused the famine in Europe. A writer in *The Nineteenth Century* gives the following facts:

In Natal and the Cape Colony the miners have been called out

for the defense of the British empire. This, and the fact that the Boers for a long time held possession of British mines, afterward destroying them, influenced the market. The British miners have obtained better wages and shorter hours, tho it is doubtful if they produce less on that account. The British mines are simply not as good as they were. In Germany a regular coal famine exists. Every bit of coal coming above ground has a purchaser. The miners' working hours have been reduced, their wages have been raised, but they are masters of the situation and arbitrarily institute holidays which still further reduce production. In Austria no less than 50,000 miners struck. Terms: 20 per cent. raise and the eight-hour day. In southern France the miners successfully opposed importation of foreign coal. In Russia the demand for coal is raising the standard of the miners. America alone profits.—*Translation made for THE LITERARY DIGEST.*

COLLECTING BILLS FROM TURKEY.

OUR little dispute with Turkey has caused many a broad smile in Europe, where it is well known how difficult it is to collect a bill from Turkey. However, there is no doubt that reasonable claims will in the end be paid. The *London Times* says:

"It has been said that the Sultan's reluctance to comply with the American demands was due, not only to an unusual scarcity of cash, but also to the apprehension that if he were to pay the

A ROW BETWEEN THE MOON AND THE STARS.
—*Humoristische Blätter.*

United States other powers having similar claims would also insist upon payment. This may be the case, but I have heard further reasons suggested. One of them is that the Sultan is anxious that his Mohammedan subjects should again see that he only yields to force."

The *Brussels Indépendance Belge* points out that it is very difficult for the Sultan to admit the validity of the American claims in principle. Hence he is willing to pay them *de facto* by ordering the construction of a war-vessel in the United States. The *Amsterdam Handelsblad* regards the Sultan as very complaisant in this matter, as he has already permitted the rebuilding of the American church and school at Kahrput. The *Berlin Tages Zeitung* remarks that the Americans show unusual vigor in this case, considering the fact that they refuse to hold themselves responsible for the lives and property of foreigners residing among them. The *Paris Journal des Débats* supposes that the United States will eventually be satisfied with the Turkish promise to give American missionaries the same compensation as the missionaries of other nations. The *Figaro* expresses itself to the following effect:

The American threat to bombard a Turkish coast town is not without interest to Europe. The question is whether such a

course should be permitted. It may be necessary for the powers to warn the Americans "off the grass." The rumor that the Russian Government has offered its good services, at the same time advising Mr. McKinley to be prudent, no doubt is very pleasing to England. The British cabinet has at present every reason to treat the United States gingerly, and Great Britain would be pleased to find Russia engaged in the matter, should McKinley cause unexpected trouble in the Mediterranean.

The *St. Petersburg Zeitung* wonders whether the Americans will, "fire at sparrows with big ordnance" by indulging in so costly an experiment as the despatch of a fleet to Turkey to collect \$90,000. The *Novoye Vremya* says:

"The Sultan does not underrate the importance of the United States. The fact is that even a small sum can not always be obtained at once from Turkey, partly on account of her slipshod methods, partly because she is generally in want of cash. American demonstrations can, however, easily be avoided if the Sultan will accept the mediation of Russia. Russia has reason to be watchful in anything concerning the Orient, and her services may well be accepted on the basis of The Hague peace conference."

Some papers point out that the Sultan has it in his power to make things pretty uncomfortable in the Philippines, where his influence as head of the Mohammedan world should not be underrated. The *Toronto Westminster* says:

"The President is hampered now by the fact that a considerable proportion of the Filipinos are Mohammedans who look on the Sultan of Turkey as the head of their religious organization. The position of the United States is in this respect analogous to that of Great Britain with the Mohammedans of Hindustan to hamper her in any action to coerce Turkey into more reasonable treatment of her Christian subjects. Imperialism has its drawbacks as well as its glories."

The English press promises on the part of Great Britain a benevolent neutrality. The *London St. James's Gazette* says:

"The Sick Man of Europe has long been accustomed to pressure more or less ungentle from various friendly neighbors. And Abdul Hamid has learned by long experience the art of playing one European power against another. He knows to what lengths procrastination may be carried in view of the dread which all nations feel of stirring the hornet's nest of the Eastern question. It will be interesting to watch this game being played with the United States. America has entered the European arena, and apparently has no intention of standing any humbug from the Turks. Why should she? The Eastern question has no terror for the power that has the whole ocean between herself and the Balkan peninsula. . . . There is talk about seizing Smyrna, presumably for the purpose of satisfying the claim out of the customs of the port. But if America sets foot in Asia Minor she will perhaps find that neither Russia nor Germany will be an uninterested spectator. From ourselves she will get nothing but sympathy and good will. But no doubt the Sultan will pay up as soon as he finds he has to deal with a power that need not hesitate to act."

But the *London Clarion* prophesies that the incident will develop into "Turkish Compensation," a drama in ten acts, from which we take the following:

ACT I.

(Date 1900. The Diplomatic Workshop of Bustum Pasha. Bustum asleep on divan; telephone bell ringing at his ear.)

BUSTUM (yawning): "Eh, oh! What is it? That compensation?" (Picks up papers, and goes to telephone.) "Halloo, are you there? Bustum Pasha. About those missionaries. Eh? Oh yes, we shall pay almost directly now. Can't we do it sooner? Oh yes. I'll consult my Government at once, and ring you up." (Makes face at telephone, winks, and goes to sleep again.)

ACT II.

(Date 1900. Scene as before. Bustum with an expression of "Well, I've been to sleep, I believe," goes to telephone, which has been ringing for hours.)

BUSTUM: "Halloo, McKinley? Oh, indeed, not President now. So sorry. That compensation's ready; twenty pounds, wasn't it? Eh? twenty what?"

You must be mistaken. Go to *where*, did you say? Oh, all right, keep your hair on, and I'll inquire." (*Rings off, and goes to sleep again.*)

ACT III.

(*Date, 1950. Scene as before. Bustum wakes himself with snoring; sits up rubbing his eyes with moldy papers, and goes to telephone.*)

BUSTUM: "By the beard of the Prophet, I feel all the better for that nap; and—halloo! Bustum Pasha. Are you President?—Eh? King Carnegie did you—Eh? American empire! Congratulate you, I'm sure. I—what did you say? Oh! That compensation case, certainly. Let's see, how much was it you were to pay us? Oh, was it? Ah, then, I'll look into the matter, and ring you up directly."

ACT IV.

(*Date, 2000. Bustum's successor discovered at telephone.*)

BUSTUM THE SECOND: "Emperor of America—Amer— Oh, compensation. Don't remember paying you any compen— Eh? *Once* you compensation, do we? Must be some mistake, your Majesty. I'll— Did you say *damages*? Oh, damnati— Tut! tut! Well, look in any time you're passing; always glad to see you. Eh? You'll come round now? All right." (*Rings off telephone; puts "Office to Let" in window, removes cashbox, and goes to Greece in a fruit-boat.*)

(*To be discontinued in our next.*)

—Translations made for THE LITERARY DIGEST.

BRITISH FEARS FOR THE BRITISH NAVY.

WHEN the London *Times* congratulated the British Government upon having escaped a peaceful solution of the South African quarrel, several persons were laughed at for stating that this war would endanger Great Britain's existence as a world power. Recently, however, British ministers have hinted that England may expect dangerous complications with powers whose force is better matched with her supposed strength, and Englishmen naturally ask themselves whether their navy is in better condition than their army. Mr. H. W. Wilson, the naval constructor and author of "Ironclads in Action," takes rather a gloomy view. He writes in the main as follows in the London *Nineteenth Century*:

The insolent manner in which Germany received the news that England had exercised her right to search vessels, and the sums voted abroad for naval armaments should, serve as a warning. Unfortunately, Great Britain is not in a proper state of preparation. Thirty-seven vessels are building or pretending to build, but we are told that it is impossible to obtain the necessary armor. Instead we are comforted with the news that the Admiralty are saving. There are not enough shipwrights. Five battle-ships that should have been ready in 1899 are still incomplete. The Germans build as cheaply and faster than ourselves; the Russians and French certainly build faster. Of the seven battle-ships in the French northern squadron two are perfectly modern, the others have been modernized and stripped of their woodwork. Of our ten not one is of recent date, and as the Santiago fight showed they would burn like tar barrels. Not one has smokeless powder for the heavy guns, and one still carries muzzle-loaders. Their artillery is in quality and power inferior to that of the French. The fleet has no colliers, no repair ships, not enough cruisers, and it is inferior in speed. The Channel squadron is composed of modern ships, but it has at present no cruisers. In the Mediterranean and Channel fleets many ships carry an excess of woodwork. It would take from twelve hours to seven days to remove this danger. The Spaniards postponed it. Their three ships destroyed by fire were all English-built, and there are many, many ships in our navy no better protected against fire than the *Infanta Maria Theresa*. On the China station our fleet is in strength below that of Russia alone.

We are also sadly in want of auxiliary cruisers. The Germans have two vessels completed and three building that are faster than anything in our navy or merchant service. These ships have an immense radius of action as commerce-destroyers, and we have nothing to catch them.

Mr. Wilson ends his article as follows:

"This much may be said with absolute truth, that no navy contains so high a percentage of inefficient vessels as our own. No navy parades thirty- or forty-year-old ironclads, armed with muzzle-loaders, in its returns, as if they were of any serious value for war. How is the man in the street to know that of the fifty-three completed British battle-ships, which appear in our

latest return, sixteen or seventeen are in an ineffective state? Let these hoary shams be struck off the active lists and we shall understand better where we are."

The London *Outlook* thinks the main question is whether there is a competent admiral or two. It says:

"It may be laid down as a cardinal principle that with such a fleet as we now possess a brace of Nelsons would make invasion a matter of utter impossibility. The question, therefore, is not so much whether we have a fleet strong enough, but whether we have an admiral capable enough. And there is no data upon which to found an answer. Given a weak admiral and a powerful fleet his very force is a source of weakness, and Nelson proved the converse to be also true."

This paper, one of the most patriotic from the belligerent point of view, does not believe that the French artillery is better than the English, and it calls the French ships "overgunned," a remark, it will be remembered, that used to be made by English critics against the American and the equally heavily armed German ships.

In France, Germany, and Russia naval experts point continually to Britain's numerical superiority in order to obtain the necessary grants for increases of the navy. Thus the German admiralty confesses to only seven first-class battle-ships in 1899. But the quality of the British navy is much doubted, and some of the ships still on the lists were the laughing-stock of continental naval experts as long as ten years ago, such as the *Hercules*, *Sultan*, and *Nelson*. The *St. Petersburg Zeitung* avers, as do other continental papers, that England has not sufficient crews to man all her ships, an assertion which may frequently be met with in English papers also. The London *Spectator* thinks that it is best to let the people know the truth, as foreigners undoubtedly know the condition of the British navy.

THE WHITE MAN'S SAVAGERY IN AFRICA.

WHILE it is customary to speak of the African natives as "savages," and to deplore the cruelty of the Sultan of Turkey, who permits the slave trade to flourish between his dominions and the east coast of Africa, late revelations prove that men of more civilized nationalities can be quite as cruel. The Brussels *Petit Bleu* relates the following:

"The rise of the Bundja tribes against the Kongo authorities was caused by Belgian tyranny. Hundreds of men died with Lothaire and other Kongo agents in defense of the cruel practices there. The agent Moray says: 'The rebellion of the Mongalla region is due solely to the cruelty with which the natives are treated. Rubber is the booty of the white invader now. If, in a village of 100 male inhabitants able to work, only 50 appear with the required amount of rubber, soldiers are sent to kill the other fifty. The "loyal" natives are used to fight against the "disloyal," and as all are man-eaters, it is easy to reward the loyalists by promises of feasts on the corpses of the slain.'"

The following statement which appears in the continental papers speaks for itself:

"CONGO STATE, DISTRICT BANGALA: Before me, Agent of the Antwerp Trading Society, appeared at Mandika, the sergeants Massamboko and Mulanda, and the privates Mutuana and Pongo, all of the Station of Mandika, who swore as follows:

"White Man! We have returned from the war. We marched thirty hours' distance with the white man Imela (Van Eyken). He ordered us to enter the villages, to see if the inhabitants had gathered enough rubber. If they had not, we were to kill them. In one village we told him we had fulfilled his orders. He told us we had not done enough. He told us to cut up the men, placing the pieces on poles; the bodies of the women and children we were to put in a big scaffold in the shape of a cross. Returning through N'Dobe we found all the natives treated like that. We swear that this is true.' Follow marks and agent's name: Moray."

According to other reports hundreds of natives have had their hands chopped off because they did not furnish the required quantity of rubber. Similar cruelties are reported from the French Sudan. Several high officials formerly in the German employ have also been punished as offenders of this kind. The Dutch papers remark that the French, English, and Spaniards have a great advantage in the patriotic discipline of their newspapers, for while the Dutch and German papers will report an outrage of their countrymen immediately, Frenchmen and Englishmen will exercise patriotic prudence.—Translations made for THE LITERARY DIGEST.

PERSONALS.

CRONJE THE MAN.—The following from *The St. James's Gazette* (London) was published before General Cronje's surrender:

An appreciation of General Cronje by "One Who Knows Him" appears in *The Daily Telegraph*. In person (we are told) Cronje is short in stature, very active, but reserved in speech. His face, with the heavy black beard, reminds one of the type that Rubens and other old masters loved to paint. He is a member of the Executive, but I know that he rarely speaks, tho when he does his words carry great weight. He is, in fact, one of those strong silent natures, of a masterful disposition and the greatest determination. He is of fearless courage, and his men have the utmost confidence in him, for they know he possesses tact, skill, and a determination to win. There is no one who knows how to handle Boer forces better, but it is a fact that his men are afraid of him. A few biting words will cause them to cringe as if cut with a whip.

Cronje is about sixty-five years of age. In private life he is an unassuming man and his manners, to many who have met him, possess a certain charm. His face is pleasant to look on, with an expression of serious kindness that totally belies his masterful and fighting nature. He possesses a sharp wit, is fond of hearth and home, and, according to Boer characteristics, makes a hospitable host. What his fortune is nobody can rightly say, but he is a wealthy man. Any one who has been a member of the Executive of the Transvaal Republic must possess a fair sum of money. He owns several farms, one, which is of several thousand acres, being near Pitschetsfontein, and he lives in the grand and patriarchal manner with his family and native servants, whom he rules with an iron hand. He bears a great contempt and hatred for the English, tho this is a characteristic in which he is not singular. In the battle-

The Best Summer Books.

Dickens' and Thackeray's Works.

THE OLD SIZE AND THE NEW SIZE.

Pocket Size Standard Novels.

The NEW CENTURY LIBRARY is a radical departure in the art of bookmaking. Each novel is published unabridged in a single volume which is so small that is equally suitable for the pocket or satchel, and consequently invaluable for summer reading and travelling. As a library edition it is handsome in the extreme. The size is only $4\frac{1}{4}$ by $6\frac{1}{4}$ inches, and not thicker than a monthly magazine. India paper, the thinnest printing paper in the world, is used in making these books. Notwithstanding this the paper is very strong and remarkably opaque. The type is as large and as easily read as that you are now reading.

"One of the most remarkable feats of modern bookmaking."—*The Churchman*.

The volumes are published monthly in three bindings: Cloth, \$1.00 per vol.; Leather, limp, \$1.25; Leather, boards, \$1.50. Already published: *Dickens*—"The Pickwick Papers," "Nicholas Nickleby," "Oliver Twist" and "Sketches by Boz," "Old Curiosity Shop," "Martin Chuzzlewit," "Thackeray"—"Vanity Fair," "The Newcomes," "Pendennis," "Henry Esmond." For sale by all booksellers or sent, post-paid, on receipt of price. Sample page and prospectus mailed free on request.

THOMAS NELSON & SONS, Publishers, 37 East 18th St., New York

Beacon Lights of History

"Every realm of activity has already had its giant makers, every problem its colossal thinkers, every germinal question its superb students."

These are the "Beacon Lights" that glow with life under the genius of Dr. Josiah L. Loomis, who could perceive and portray the very spirit of an epoch; grasp and interpret the complex life and literature of a people; analyze and characterize a great

representative man or woman, some of whom "perplex ages with their fame."

"A stimulating historian."—JOHN FRISK.
"Fascinating, instructive, inspiring."—JOHN HEWY BARRIS, President Oberlin College.

"It is read as eagerly as a work of fiction, and at the same time is absolutely authentic."—F. W. GUNSAULE, D.D.

"The clearest statement of the greatest men and epochs that have made our civilization."—PROFESSOR S. D. FESS, Ohio Normal.

"Every sentence from the pen of Dr. Lord is worth attention."—PROF. GEORGE K. MORRIS, D.D., Boston University.

FORDS, HOWARD & HULBERT. - New York.

"A Devout Bluebeard"

This book is a truthful satire of the snobbery of the day, together with the foibles of churches and their social machinery. The devout Bluebeard is so well portrayed that few will fail to recognize him. It abounds in naturalness and witticisms. If you would rather laugh than cry, read it. May be ordered from any bookseller or will be mailed for one dollar by the

ABBEY PRESS, Publishers, 114 Fifth Avenue, New York.

field Cronje's activity is ceaseless. On his pony he moves hither and thither encouraging his men by word and deed, and the greater the danger and the harder the stress of battle, the cooler and more clear-headed does the little man remain. He is essentially the one to command in such a desperate position as his army at present occupies.

SOME SPURGEON ANECDOTES.—*The Westminster Gazette* writes: There are a number of anecdotes in the final volume of "C. H. Spurgeon's Autobiography" (Passmore & Alabaster) published to-day. One day at Westwood a visitor, who professed to have come from the United States, was received by the famous preacher with considerable cordiality because he announced himself as "Captain Beecher, the son of Henry Ward Beecher." He was conducted through the grounds, and managed very well to sustain the rôle he had assumed until just before leaving he said, "Oh, Mr. Spurgeon, excuse me for making such a request, but could you change a check for me? Unfortunately I waited until after the bank was closed, and I want some money very particularly to-night." Spurgeon's suspicions were at once aroused, and he said with pardonable severity: "I do not think you ought to make such a request to me. If you are really Mr. Beecher's son, you must be able through the American consul to get your check cashed, without coming to a complete stranger"; and foiled in his attempt the young man departed. A few days afterward a gentleman was found murdered in a carriage on the Brighton Railway, and when the portrait of the criminal Lefroy was published in the papers, Mr. Spurgeon immediately recognized the features of his recent visitor.

One Sunday evening a service had been held in the study at Westwood, and a small window had been opened for ventilation. It was not noticed at the time for locking up, and remaining open was entered by a burglar during the night. He did not get much for his pains, his principal plunder being a valuable walking-stick presented to Mr. Spurgeon by Mr. J. B. Gough. News of the burglary got into the papers, and as the result Mr. Spurgeon received a letter purporting to have been written by the thief. Among other things he said he did not know that it was "the horrors

Pianos On Trial

Where no dealer sells them we will ship a piano at our expense for trial in your home, not to be kept unless it is entirely satisfactory. Easy payments giving 3 years to complete

purchase if desired. We will send catalogue, a list of lowest prices, fully describe our Easy Payment Plans, and write a personal letter showing how easy and safe it is for you to buy a piano direct from our factory, even though you live 3000 miles away. A postal card will secure you valuable information about piano-buying, and may save you \$100. Old pianos taken in exchange. Write to-day.

Spurgin" that lived there, for he would not have robbed him, and added the very pertinent question, "Why don't you shut your windows and keep a dog?" Spurgeon took the hint. From that time dated the entry to Westwood of "Punch," the pug, concerning whom his master testified that he knew more than any dog ever ought to know!

A goodly portion of the volume tells of Mr. Spurgeon's many visits to Mentone in search of health. An incident which happened during one of his visits has reference to the time when the phylloxera was committing such deadly havoc among the vines of France and Italy, and the two countries tried to prevent its further spread by forbidding the transport of fruit, flowers, etc., from one land to the other. One day Mr. Spurgeon was going with a party of friends for a picnic, and among the articles in his possession were a couple of oranges. At the frontier he was told that the fruit could not be allowed to pass, but his ready wit soon suggested the best way out of the difficulty. He walked at once into the soldiers' room, peeled the oranges, carefully putting all the peel into the fire, and ate them, to the great amusement of the defenders of the crown rights of the King of Italy!

When occupying a sheltered spot among the cyclamen one day in Dr. Bennet's garden he was intensely amused, being himself on the sick-list, in hearing a young lady quite near exclaim in transatlantic tones: "O mother, du come here! There are some lovely sickly men (cyclamen) just here. I du love sickly men!"

Reduced Prices on Suits and Skirts.

IN order to reduce our stock of Spring and Summer materials, we will make to order fashionable suits and skirts, at great reductions from former prices. One-third has been cut off the price of nearly every cloth suit and skirt in our line, and every wash suit and skirt has been reduced to one-half of former prices; but the quality of materials and workmanship is right up to our usual standard—just as good as if you paid double the money.

Order from this Reduced Price Sale as freely as you wish; send back anything you don't like and we will refund your money.

SOLD ONLY BY

The Singer
Manuf'g
Company

OFFICES IN
EVERY CITY
IN THE WORLD

THE correct construction of a costume according to one's own ideas can best be accomplished at home by one's self. The most convenient stitching mechanism for the purpose is the **Singer Automatic**, making the single-thread chain-stitch. Its simplicity of parts, easy operation, and the excellence of its work, specially commend its use to the dilettante dressmaker desiring to express her artistic perceptions in the most appropriate form.

Having all the advantages claimed for other "automatic" sewing-machines, the **Silent Singer** has many points of preference that can easily be demonstrated by comparison. Of **faultless construction and finish**, it is absolutely the lightest-running, the simplest and most compact. It is more easily threaded, and its parts are better protected from dust. The broad treadle better

Promotes the Health and Comfort

of the operator, because it is lower and the position of the feet can be changed at will. These points are worthy careful consideration by those of delicate health or unaccustomed to continuous use of a sewing machine.

But the sunshine and clear air at Mentone seemed always to keep him in excellent spirits. Walking by the seashore at a time when the Mediterranean was raging furiously, he asked, "What are the wild waves saying?" and then he gave his own witty answer to the question, "Let us (soprano)." On the occasions when he fell down a marble staircase he turned a double somersault, in the course of which some money fell from his pocket into his Wellington boots. Having lost a tooth or teeth in his descent, he humorously described the whole transaction as "painless dentistry with money to boot!" The volume contains many portraits and other illustrations.

MORE OR LESS PUNGENT.

Natural Instinct.—KENTUCKY FATHER: "Wife, wife, come here and see the baby!" KENTUCKY MOTHER: "What is it?" KENTUCKY FATHER: "Watch him hold his rattle just like a 48-calibre!"—*Syracuse Herald.*

New Arrangement on D., L. & W.—"Say, old chap, there'll be no more rear-end collisions after this—"

Realism.—"I've bought a bulldog," said Parsniff, to his friend Lessup, "and I want a motto to put over his kennel. Can you think of something?" "Why not use a dentist's notice—"Teeth inserted here?" suggested Lessup.—*Tit-Bits.*

What He Would Fear.—"I don't think," said the Observant Boarder, "that I should care to propose to a girl addicted to photography." "And why not?" asked the Cross-Eyed Boarder. "I should be afraid that she would seize the opportunity."

How to Select a Piano.

So many persons doubt their own judgment in the question of quality in a piano that the selection is hard to make even among instruments of standard reputation.

The question is solved, however, by the offer of the Ivers & Pond Piano Co., 113 Boylston St., Boston, whose advertisement appears in another column of this issue. They offer to send a piano to you for trial, without charge, no matter where you reside, providing they have no local agent. Live with it, let your musical friends pass judgment and then keep it (on easy payments if you desire) or return it at their expense if dissatisfied. Catalogue and particulars on request.

May 14.—General Buller's advance from Ladysmith began on Thursday, a force moving eastward to Helpmakaar and driving out the Boers on the Beggarsberg line of hills.

The Eighth Division, under General Thabant, advances from Thabanchu, the Boers retreating toward Clocolan.

May 15.—Despatches from Sir Helvoers Buller confirm the report of the capture of Dundee. The Boers are retreating north.

May 16.—General Buller's army occupies Glencoe, in upper Natal, the Boers evacuating their position on the Beggarsberg.

Lord Roberts reports another advance of the white flag by the Boers.

May 17.—Reports from Pretoria indicate that the final Boer assault on Mafeking failed of its purpose.

General Buller's troops are steadily advancing along the line of the Natal railway.

May 18.—A dispatch from Pretoria announces the relief of Mafeking and abandonment of the siege.

General Botha and two other Boer generals are reported captured.

May 19.—The carnival of rejoicing over the relief of Mafeking continues throughout the British empire.

General Buller's cavalry under Lord Dundonald reaches Laing Nek, while Clery's division is at Ingogo, a day's march behind.

May 20.—Lord Roberts reports the surrender of parties of burghers in the Free State.

How to Grow Good Fruit.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticulture Society, at Lenox, Mass. The address bore chiefly upon spraying and general culture of orchard and field crops, how to do it, do it cheaply and good, and how to obtain the most profit from your labor in the easiest manner. The address is quite lengthy, about an hour's talk. It will not be sent to the disinterested. Owners of fruit trees, stating if at all interested in fruit culture, will get this book. Had this address been placed on the market in book form it no doubt would have sold at a good price. The full address, profusely illustrated, in pamphlet form was intended to be sent to fruit growers and owners of estates, free for the asking, but to prevent imposition by the curious and disinterested, the book will be sent to fruit growers, or owners of estates, enclosing fifty cents, to the Lenox Sprayer Company, 30 West Street, Pittsfield, Mass.

DOUBLE VALUE

BOTH FOR A DOLLAR!

THE INGERSOLL WATCH AND GUARANTEE

You need not cash the "double value" bill without thinking twice. For you have doubtless had experience with our guarantee or double-value watches which simply justify our claim that our guarantee watches are the value of the Ingersoll Double Watch. It means your having an accurate reliable watch, without expense, for 48 hours a year.

Double Watches. Such a guarantee (and it stands for more than its face value) is a watch that we can afford to guarantee as broadly must be a good one in accuracy and longevity.

Two years should be sufficient as an accurate time.

The new Ingersoll model shows greater precision than ever before and value are increasing accordingly.

"A million a year" is a handsome reward at the rate of nearly five thousand watches daily.

Sold by these dealers throughout the country or sent by mail in U. S. and Can. on receipt of price.

ADDRESS ROBT. H. INGERSOLL & BRO. Dept. 17 67 CORTLANDT ST. NEW YORK CITY.

The Best Office Clock

is this one. Wind it once in two or three months and it will tell month, day, hour and minute at a glance. It is handsome, a perfect time-keeper, and the most durable clock made. Would you like to see it?

PRENTISS CALENDAR CLOCK.

We will send you to any reputable business firm or man on **Thirty Days' Trial**. If not perfectly satisfactory, return it, and we will pay express charges both ways. That is square. We are not anxious to throw away money, but this is a case where "seeing is believing."

Write to-day for catalogue No. 20 of calendar, program, system, and novelty clocks. PRENTISS CLOCK IMPROVEMENT CO., Dept. 39, 49 Day Street, New York.

It is reported that General DeWet has offered to surrender conditionally and that President Kruger has asked for a suspension of hostilities.

OTHER FOREIGN NEWS.

May 14.—Greece has decided to settle the controversy with Turkey by an appeal to outside powers for arbitration.

The degree of LL.D. was conferred by the University of Cambridge on King Oscar of Sweden.

May 15.—Cuba: General Wood makes a hopeful expression of opinion regarding postal affairs.

Members of the Extreme Left in the Italian Chamber of Deputies cause an adjournment by noisy tactics.

May 16.—The German budget committee approves the supplementary appropriation for the expenses of Emperor William's trip to Jerusalem in 1898.

May 17.—The dispute over territory in the Kongo Free State between Germany and Belgium will probably be submitted to arbitration.

Cuba: Postmaster Thompson of Havana is released on bail; others connected with the Cuban frauds are unable to furnish bail.

May 18.—Philippines: Aguinaldo has issued a proclamation advising the Filipinos as to the course to pursue toward the expected commission from America.

May 19.—The "Boxer" agitation in China grows more dangerous; German troops protect American missionaries at Shanghai.

May 20.—The Colombian rebels are harassing Panama.

Keep Your Clothes and Furs from the MOTH! MOTH! MOTH!

USE THE **Universal** MOTH, DUST, and WRINKLE PROOF BAG.

MADE OF CLOTH

Sizes: For Suits 24 x 51
Overcoats 30 x 51

Price single bag \$1.75;
two or more \$1.50 each
on receipt of the amount;
delivery prepaid.

Entirely new idea, opening at the bottom, and closing so as to exclude moth and dust.

The bag remains hanging while placing the garments in, and while removing them from the bag.

The coat, vest, and trousers are all supported by a combined Clothes Hanger placed within the bag.

Garments always ready for use; no wrinkles, no moths, no dust, no disinfectants, no trouble; saves expense.

National Lead Co., 100 William Street, New York.

THE true value of a paint can be determined only by a series of paintings. It costs more to burn off a cracked and peeled surface than it does to paint a new one.

The cost of keeping a house in good condition for a series of years is less with Pure White Lead than with any other paint. When repainting is required the surface is always in good condition. These brands are genuine.

FREE For Colors use National Lead Company's Pure White Lead Tinting Colors. Any shade desired is readily obtained. Pamphlet giving full information and showing samples of Colors, also pamphlet entitled "Uncle Sam's Experience With Paints" forwarded upon application.

Q: "Excellent. Hurrah for the Yankee Boy!"—F. S. F.; "I congratulate our youngest solver."—F. H. J.; "Decidedly good, with a goodly number of mates. Key also good, but with rather a large tag."—W. W.; "The passivity of White K a slight flaw in a set of considerable strength and polish."—W. R. C.; "Easy, but very neat."—N. L. G.; "Able to produce this at the age of 15, what may we expect from him when he is 30?"—J. R. W.; "A fine variety of mates."—C. D. S.; "Neat and beautiful."—B. A. R.; "Good enough for a Nestor to construct."—H. W. F.; "Too simple to be first-class."—S. M. M.; "Is he also the youngest composer? If so it is pretty good for a beginner."—G. P.; "Very ingenious."—E. C. D.; "Good, but not so beautiful as 468."—J. E. W.; "A good problem."—A. J. D.; "Very pretty."—A. F. R.; "Remarkable youngster."—C. S. M.

A number of solvers will be amazed not to see their names with those who got 469. The reason for this is that they didn't see the neat little trap and relied upon key-moves that would not solve it. Most of those who did not get it supposed that Q

Kt3 would open the way. Black plays K-K6, and, no mate next move. B-If3 was tried, overlooking K-K6, and K x P. The point of the problem is to bring the B to protect the P, so that when Black plays K-K6, White mates by Kt-Q5. The composer of this problem is a boy of 15, who shows Chess-genius of a very high order. He solves nearly every problem we publish, plays a very creditable game, and his work as a problematist is full of promises. This problem, although some persons judge it to be simple, is really a very fine two-er.

P. H. J., J. R. W., A. T.; Prof. R. Moser, Malvern, Ia.; E. C. Kouth, Winchester, Tex.; and D. P. Mowery, New Ulm, Minn., got 468.

Only one person, M. W. H., has sent the solution of the 4-mover of Traxler. Key-move, Kt-B5.

The Composite Game.
Roy Lopez.

<i>White.</i>	<i>Black.</i>
1 P-K4	P-K4
2 Kt-KB3	Kt-QB3
3 B-Kt5	Kt-B3
4 Castles	Kt x P
5 P-Q4	P-Q4

W. H. Bartlett, Peoria, Ariz., makes White's 6th Q-K7, and H. C. Butler, Leadville, Col., plays P x B.

It would be more interesting if the comments on the moves would come from the players, than from the Chess-Editor.

Chronic Rheumatism

Articular and muscular rheumatism and all uric acid troubles are caused by defective action of the kidneys and digestive organs; the kidneys not properly removing the waste products. Uric acid and chalky deposits then accumulate in the muscles and around the joints, causing the excruciating pains peculiar to these diseases. The only way to cure rheumatism is to rid the system of this poisonous acid.

Tartarlithine

regulates the action of the kidneys, dissolves and removes the uric acid and chalky deposits, and reduces inflammation. It does not upset the stomach, and can be taken by the most delicate. It is a true cure for rheumatism, for which it is prescribed by many leading physicians.

Tartarlithine is supplied in bottles containing 50 doses at \$1.00 and can be obtained of all druggists or post-free by mail. Pamphlets with Testimonials sent FREE.

Problem 473.

By JAN KOTKE.

Black—Eight Pieces.

White—Eight Pieces.

White mates in two moves.

Problem 474.

Second Prize, *Aftonbladet* Tourney.

Black—Nine Pieces.

White—Eleven Pieces.

White mates in three moves.

A Remarkable Game.

In Pillsbury's recent exhibition of blindfold play against twenty opponents, his game with S. W. Hampton is a magnificent specimen of masterful Chess, and, Emil Kameny says, "will go on record as one of the finest games played without sight of board or men."

BOARD NO. 1.

Ruy Lopez.

PILLSBURY. White.	HAMPTON. Black.	PILLSBURY. White.	HAMPTON. Black.
1 P-K4	P-K4	22 R x P ch	Kt (H) R3(e)
2 Kt-KB3	Kt-QB3	23 Q x Q ch	R x Q
3 B-Kt5	Kt-B3	24 B-K5	K-Kt4
4 Castles	Kt x P	25 P-K Kt4(f)	Kt x P
5 P-Q4	Kt-Q2	26 R-KKt5ch	K-R3
6 B-R4(a)	P-K5	27 B x R	Kt x B
7 R-K4	B-K2	28 R x Kt	K-Kt3
8 Kt-K5	Castles	29 R-K5(g)	P-Q3
9 Kt-QB3	B-B3	30 R-K7	B-R6
10 B-R4	R-Ksq	31 K-Rsq	R-KBsq
11 Kt-Kt4(b)	B x P	32 R-Kt5ch	Kt-Kt5
12 Kt-Q5	B-K4	33 R x KP	K-B4(h)
13 Kt x B	Kt x Kt	34 R-K2	R-Ksq(i)
14 Q-R5	P-KB3	35 R (Kt sq)	Kt-K4
15 B-OKt3	K-Rsq		
16 R-K3	P-RKt3	36 P-KB4	K x P
17 Q-R4	R-K3(c)	37 R-B2ch	K-Kt4
18 R-KR3	P-KR4	38 B-Q5	P-B3
19 Kt x Kt	Kt-B4	39 R-Kt5ch	Kt-Kt5
	P(d)	40 B-B3	R-K5
20 Q-Kt5	Kt-B2	41 B x Kt	B x B
21 Q x KtP	Q x Kt	42 R(H)Kt2	Resigns.

Notes by Emil Kameny, in *The Ledger*, Philadelphia.

(a) The usual play is B x Kt, followed by P x P. The text move leads to more lively continuations, but involves the sacrifice of a Pawn.

(b) Brilliantly played. The sacrifice of the Q P strengthens the attack. White has the Kt-Q5 and Kt x QBP continuation in view.

(c) P-K Kt4 could not well be played. White answers B x Kt, followed by B x P ch or Q-R6 according to Black's P x Q or R x Kt reply.

(d) Another brilliant move, and quite deep, too. Black can not capture the Kt with Q or R, for White ultimately wins the Kt and the exchange.

(e) This enables White to continue Q x Q ch: B-K5 and P-K Kt4, etc., eventually winning the exchange. Better, perhaps, was Kt (B4)-R3.

(f) Which wins a Rook and White comes out the exchange ahead. Black can not well move his Kt from B4, for B x R ch, and R x Kt would follow.

(g) R-B4 would have been answered with K-Kt4, Black retaining the exchange.

(h) Guards the Kt and also threatens Kt x BP mate.

(i) A nest trap. If White captures the Rook then Kt x B P mate follows. White answers cleverly R-Kt5ch. Black can not reply Kt x B P mate and R x K ch, for White captures the Kt with check.

The Paris Tournament.

The great International Tournament of 1900 began in Paris on Wednesday, May 16. Eight countries are represented: America—Pillsbury, Showalter, Marshall; Austria—Marco, Schlechter; Cuba—Sterling; France—Janowski, Didier, Rosen; Germany—Lasker, Mieses; Great Britain—Born, Mortimer, Mason; Hungary—Brody, Maroczy; Russia—Tschigorin. This list composes the greatest exponents of Chess in the world. Three masters are conspicuous by their absence: The veteran Steinitz, who has played in every tournament of any importance, for many years; the renowned amateur, Tarrasch, one of the most profound and scientific players in the world, and the brilliant Blackburne, who has been for so long a time champion of England. Apropos of the great Englishman, it is noticeable that in the recent tourney of resident English players, Mr. Blackburne stood sixth in the list of thirteen. Reichen, in *The Times*, Philadelphia, calls attention to this fact, and says: "Mr. Blackburne's low position is another evidence that he does not (do well) in a prolonged struggle, altho in single games he has downed such men as Lasker, Pillsbury, and Tarrasch. The reason for this irregularity is that players like those mentioned have a more thorough mastery of Chess-development in all its branches, whereas, Mr. Blackburne shows only in positions where a combination is perceptible. In situations of a dead calm, Lasker and Pillsbury will outwit him. In combinations he is almost a Morphy." These words of the witty Philadelphian should be taken *cum grano salis*. We believe that Mr. Blackburne has as thorough a knowledge of development as any man living, but he is an old man, and those who "outwit" him are in the flush and vigor of youth. Probably Mr. Blackburne's special weakness in tournament play is his predilection for combinations leading to brilliant continuations; while these other players rely chiefly upon a conservative, slow, pawn-winning game.

"The Antiquity of Chess."

A writer in *The Evening Post*, New York, finds a "curious notice on the game of Chess" in the Babylonian Talmud, compiled about the year 450 A.D. In it there is a report of discussions which took place as far back as 277 A.D. The question referred to is that concerning marriage contracts, and especially on the right of a wife to be free from all household work and "to sit in a chair." In the Talmud it is said she might play with little pups or at "Nadrshir." The writer of the article says that the word "nadrshir" is evidently a corrupt reading for Ardesbir and indicates a game in which a King plays the foremost part, and adds: "Rashi, the great commentator on the Talmud, a rabbi living at Troyes in central France, who died in 1158, and whose comment on this subject we may place about the year 1000, leave no doubt on the question. He says *ad locum*, 'Nadrshir is what we call *esquar*, the Old-French form of *schach*, the German *Schach*, for *Shah*.'"

The Literary Digest

VOL. XX., No. 22

NEW YORK, JUNE 2, 1900.

WHOLE NUMBER, 528

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$1.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

TOPICS OF THE DAY.

THE LITERARY DIGEST is in receipt of the following contributions to the India Famine Fund:

Previously acknowledged	\$191.50
M. E. Church of Monroe, Ia.	25.00
Free Methodist Church, New Castle, Pa.	50.00
Herbert W. Seager, Minneapolis, Minn.	10.00
W. T. Davis, Waco, Tex.	.25
S. Hirsch, Pittsburg, Pa.	1.00
Fort Hill W. C. T. U.	5.00
Dr. J. A. Lee, Lisbon, Ia.	1.00
Conrad Bowers, Lisbon, Ia.	1.00
L. P. Krome, Lisbon, Ia.	.75
T. H. Cogswell, Washington Depot, Conn.	10.00
Christian Reformed Church, Sioux Center, Ia.	144.19
	\$468.34

The above list contains only those contributions received prior to May 28. They have been forwarded to Messrs. Brown Brothers & Company, 59 Wall Street, New York, who are custodians of the fund received by the Committee of One Hundred.

DO THE FILIPINOS DESIRE INDEPENDENCE?

IN the report of the Philippine Commission in February that only a small part of the Filipinos desired independence, the continued fighting in almost all parts of Luzon and in many other places in the archipelago, and the treachery of the native officials in towns where General Otis tried to set up civil rule, have created a widespread impression that the natives strongly prefer independence to American rule. Gen. Theodore Schwan, however, in a letter to Adjutant-General Corbin, just made public, reiterates the opinion that the Filipinos do not care to be independent. They are prevented from openly accepting

our rule, he avers, only by the terrorizing domination of small bands of bushwhacking brigands, such as have always existed in the islands, and whose operations can not be dignified by the name of war. The most important paragraphs of his letter are the following:

"Excluding the savage mountain tribes and those directly connected with the bands above mentioned (a comparatively small but constantly varying quantity), the Filipinos may be roughly divided into two classes, viz., the intelligent educated (also, as a rule, the property-owning) class, who form a small minority, and the uneducated, laboring, or peasant class, constituted the great mass of the people. Most men of both classes honestly desire the restoration of peace and order under American or any other kind of rule, being thoroughly weary of war. Those of the former class, for the most part, prefer American rule, believing that, tho mild, it will be firm, and, above all, just, and because they have no faith in the fitness of the Filipinos as a people to govern themselves. They are, however, afraid to cast their lot unreservedly with the Americans, fearful that the anticipated withdrawal of American troops may expose

FRED W. ATKINSON,
New Superintendent of Instruction for the
Philippines.

them to severe treatment at the hands of the insurgent leaders, who, with even a small following, seem to be able to terrorize the people, and in the past have shown a vindictiveness and cruelty almost beyond parallel. Hence, while yielding a passive obedience to or at least refraining from positively hostile acts against the military (American) occupants, some of them keep up relations with and contribute to the needs of the guerilla bands in their neighborhood, promiscuously made up of robbers and ex-insurgents. Many men of the lower class, while preferring a quiet, humdrum life to the hardships and dangers of highway-men and bushwhackers, are yet amenable to the persuasions or threats of the brigand chiefs, and join or quit the brigand service according to circumstances.

"Those who actively or openly seek to maintain brigandage as a nucleus or rallying point for a future rebellion are the military and political leaders of the late organized insurrection, of whom all but a few are utterly unscrupulous and actuated by purely selfish motives. These men realize that, should the insurgent movement die out entirely and American rule be firmly established, they will forfeit forever positions of influence and prominence and will be relegated to their former obscurity and penury in private station.

"In the main they rest their hope for a revival of the insurrection and the reconcentration of insurgent forces upon the supposed necessity American troops will be under of abandoning many of their present positions owing to the impossibility of supplying the latter during the wet season and upon the success

of the Democratic and anti-expansion party in the coming Presidential campaign in the United States."

The New York *Sun* (Rep.) thinks that this statement from General Schwan ought to put an end to the anti-expansionist opposition to the Administration's policy. It says:

"This statement is wholly in line with that of President Schurman, who, in his recent address before the American Geographical Society, declared that the Filipinos never asked for independence from Spain, but presented grievances and demanded redress; and that since the islands passed into our hands independence has been the shibboleth merely of a few ambitious leaders, while the masses, tired of war, crave only peace, and the aspirations of the most intelligent class will be satisfied with religious liberty, civil rights, and such extension of the franchise as the people are capable of exercising. . . .

"The touching spectacle of 8,000,000 people fighting for the independence of their country has in fact been wholly evolved from the imagination of the Aguinaldo party in the United States. The Filipinos have not asked for independence, do not want it, and would not know what to do with it. The remedy they do want for the evils they have suffered for centuries is to be found along the lines of the American policy as indicated by the Philippine Commission—protection for life and property, religious freedom and local self-government wherever the people are capable of exercising it."

On the same day that General Schwan's letter was published (May 24), the Springfield *Republican* (Ind.) published some documents written by Mabini, who was formerly at the head of Aguinaldo's cabinet. These documents convey quite a different impression from the one given in General Schwan's letter. One of the documents consists of Mabini's answers to questions addressed to him by General Wheeler when he was in the Philippines. In reply to a question as to whether "the people wish a good government by the United States," Mabini said:

"When they are convinced of the impossibility of obtaining for the present self-government, which in their opinion is the best, they will accept provisionally that which the United States shall impose; but solely that it may serve as a means to obtaining, sooner or later, self-government; for this is what progress, which is the law of every people, demands. When the American Government shall oppose the action of this law, the period of its decadence and ruin will not be far off."

Another of the documents is a note that Mabini addressed to three American newspaper correspondents in Manila, in which he said:

"The Filipinos are keeping up the struggle against the American forces, not through hatred, but in order to show the American people that, far from regarding their political situation with indifference, they are ready, on the contrary, to sacrifice themselves for a government which shall secure to them individual rights and rule them in accordance with the desires and the needs of the people. They have been unable to avoid this struggle, because they have not been able to obtain from the Government of the United States any definite and formal promise to establish such a government."

Fred. W. Atkinson, the new superintendent of instruction for the Philippines under the new Philippine Commission, whose portrait appears herewith, leaves the principalship of the Springfield (Mass.) high school to accept the new position. He is a graduate of Harvard of the class of '90, is thirty-five years old, and is about six feet four inches tall, a fact, thinks the Springfield *Union*, that will impress the little Filipinos. There are about five thousand pupils, it is said, in the Manila schools, taught by 85 native, 40 Spanish, and 22 American teachers. Half of the American teachers are women, some of them daughters of army officers. The children are said to be quick to learn and their parents ambitious to have them learn. Many of the parents attend the schools themselves to study English. Desks are reported to be scarce and blackboards almost unknown, and several children have to use one text-book.

NEW YORK'S ICE TRUST AND THE LAW.

THE American Ice Company and its troubles continue to stir up the interest of the newspapers, not only in New York City, but the country over. "If it be an exaggeration," observes the *Chicago Evening Post*, "to say that the eyes of the country are on the fight upon the Tammany ice trust, it is no exaggeration to say that, in view of the agitation over the monopoly question, the attention of all intelligent men should be turned in that direction. In a most profound sense the proceedings directed by Governor Roosevelt himself against the greedy ice monopoly of New York will afford a test of the value of strict anti-trust legislation when applied to a combination in the modern form of a large corporation resting on no restrictive contracts, no pools, and no conspiracies in restraint of trade."

The opening gun in the State's fight against the ice trust was the announcement last week by the attorney-general of the State that he had decided to proceed against the company under the state anti-trust law to prohibit it from doing business in New York State. He said: "Upon a careful consideration of the petition, affidavits, arguments, and all the papers submitted upon the hearing in the above-entitled matter, I am satisfied that the American Ice Company is an unlawful combination, conducting its business in restraint of trade, in violation of law, and against public policy." The *Nashua* (N. H.) *Press* says that if this suit succeeds—

"then it will be clear that all other trusts, monopolies, and combinations that were inepted to crucify labor may be crushed out, and also that public officials have not been doing their duty by the people. Then, if this trust is broken and dissolved, every

MAYOR ROBERT A. VAN WYCK (DEM.),
Of New York City.

ANOTHER POLAR EXPEDITION COME TO GRIEF.

—The New York Tribune.

newspaper in the land should put in the pillory every man in authority who fails to do his duty and denounce every man who takes a fee to defend one of these corporations."

What some papers consider still more important than the anti-trust proceedings, however, is the charge that the mayor and other city officials own large blocks of the ice company's stock; and some of the New York papers do not hesitate to infer that the city officials have shown illegal favoritism to the ice trust, and aided it very materially in shutting out rival dealers. Five members of the Municipal Assembly, acting under the provisions of the city charter, summoned the mayor before a magistrate last week, to investigate his connection with the trust. The mayor, however, protests his integrity with great vehemence. In a spirited address which he delivered to the reporters of the New York City papers on Wednesday of last week, in his office in the city hall, he said:

"You may say to the people of the city of New York that their mayor is all right, and that he will as successfully meet the challenge to the integrity of his official acts made by five Republican members of the Municipal Assembly as he has similar Republican assaults and charges in the past.

"He has successfully met the Republican assaults in the past. First he successfully met the charge of Lemuel E. Quigg, then Congressman and chairman of the county committee, who had an unholy alliance with the then chief of police and a member of the police board; then the assault of John McCullagh, the discredited chief of police, who has retired from the force; then Thomas Hamilton, the police commissioner, who was removed for the good of the service, and then Governor Black, calling an extra session of the legislature, and all the Republicans of the State in chorus, challenging the integrity of the official conduct of the mayor of the city of New York. Then came Robert Maret, chairman of the Republican investigating committee, and when he went to the people for indorsement he was murdered at the polls; also the counsel for the investigating committee, Frank Moss, who goes around the town whining because he was not paid enough for doing the dirty work; then John Proctor Clarke, whose only chance of holding public office is to have the governor remove some Democratic officials without cause.

"Then came old Dr. Parkhurst, who in his holy garb entered the 'Tenderloin' and paid for and indulged in the most indecent exhibitions known to depraved humanity. Then the Rev. 'Tom' Slicer, the wandering minister, who seeks notoriety, whether dirty or clean, by making charges.

"Now come five Republican members of the Municipal Assembly, five Republican angels from heaven, whose characters are as white as the driven snow, who have challenged the integrity of the official conduct of the mayor of New York and have had him haled to court on Saturday morning. Tell the people of New York that the mayor will be there in willing obedience to that order, and that in the mean time they need have no fear that any fact can be proved that will in the slightest degree challenge the integrity of his official conduct."

The mayor's reference to "old Dr. Parkhurst" impelled a reporter to ask Dr. Parkhurst what he thought of the mayor's speech. Dr. Parkhurst replied that the mayor's "want of serenity shows his consciousness of the lack of moral support." The *New York Tribune* says:

"The Tammany office-holders are as angry over any revelations of their ownership of stock in the ice trust as if they themselves recognized an interest in this oppressive monopoly as a disgraceful thing. Nevertheless, they one and all protest that it is nobody's business and that they have a right to own stock in the American Ice Company or the American Sugar-Refining Company if they so desire. They forget two things, however, in taking this position. One is their public office and the other is their political pose as enemies to trusts. . . .

"Apparently the Tammany view is that the trust is a good thing publicly to abuse and privately to share in. The Van Wyck political creed is not necessarily for private devotion. So long as trusts exist these enemies of the octopus believe that they might as well reap the profits of them. Somebody else would get 30 cents a hundred for ice from the poor people if they did

not get 60 cents, and it is better to keep the money in the organization. Yet when the voter comes to apply the Tammany anti-trust teaching at the polls he may think it better to vote directly against the trust stockholders whom he does know than to hunt around to see if some other vote will indirectly hurt some other trust stockholders whom he does not know."

The investigation of the city officials' connection with the trust, scheduled for Saturday of last week, was adjourned to a later date. As the result of still another legal action, the officers and directors of the Ice Company have been held for the grand jury, charged with conspiracy to restrain trade in an article of general necessity.

FURTHER DEVELOPMENTS IN THE CUBAN SCANDALS.

THE irregularities recently laid bare in the Cuban postal service are now shown to have extended also to the military government of that island, and both Republican and Democratic newspapers are clamoring for a complete investigation into our colonial system. It has developed from the War Department's report to the Senate that Cuba's government last year cost \$12,000,000, which sum, as the *Philadelphia Record* (Ind. Dem.) points out, "greatly exceeds the annual expenditures of the

UNCLE SAM STILL HAS THE OLD HULK TO RELEASE.

—The Defiant Free Press.

largest States in this Union." Moreover, the report lacks detail, and, according to the *Boston Herald* (Ind.) "has the appearance of an effort to befog the facts."

On the other hand, during a debate on this question in the Senate (May 23), Mr. Platt, of Connecticut, declared that not one cent had been misappropriated in the military rule of Cuba, and pointed out that General Wood had himself been the first to expose the irregularities in the postal service there. He read a letter of instructions given by Postmaster-General Smith to Mr. Bristow (who has now assumed full control of the investigation in Cuba), in which "rigorous and unsparing prosecution of all guilty persons and their swift and condign punishment" is called for. Says the *Philadelphia Press* (Postmaster-General Smith's paper):

"These instructions are an unanswerable proof of the determination of the Administration from the President down to expose and punish all concerned in this disgraceful record. These instructions meet with irrefutable proof the vague chatter and

the irresponsible rumors that any man in this malfiance was being screened, concealed, or protected. None has been; none will be. These instructions prove that every intention existed of exposing and punishing all."

The arrest of C. F. W. Neely, the accused financial agent of the Cuban postal department, has involved some difficulty on account of the fact that the crime with which he is charged was committed on Cuban soil, whereas he was apprehended in this country. As Cuba is not recognized as part of the United States, special legislation became necessary, and a bill has been passed by the House which, it is expected, will cover his case and provide for his extradition to Cuba. Mr. Neely was arrested in Rochester, and released on \$20,000 bail. He was rearrested in New York a few days later on the charge of larger embezzlements than those at first specified, and held in prison in default of \$60,000 bail.

The Indianapolis *Sentinel* (Dem.) declares that "the Administration is going through the pitiful farce of getting up *ex-post-facto* extradition laws to send this criminal to Cuba" for the purpose of "preventing him from being brought to punishment." *The Sentinel* continues:

"He knows too much. There are men in Washington implicated in these frauds. The orders issued show it. No one ever

CAPTAIN KIDD: "We lived too soon!"
—The St. Louis Republic.

heard of such a thing before as ordering the destruction of stamps in the localities where they were held. They have always been returned to Washington for that purpose. The Administration does not want to punish Neely. Its proposals for newly enacted extradition laws are as farcical as the proposal for an anti-trust amendment to the Constitution. They are intended to prevent what they profess to be intended to accomplish."

The Washington *Post* (Ind.) says that "Neely must be sent back to Cuba, tried there, and punished there in full view and to the certain knowledge of the people he has robbed." The Chattanooga *Times* (Dem.) says of the affair:

"It is probably well that this humbling episode came to us thus early. The occurrence will inspire double vigilance in the future. Congress will bestir itself in providing necessary laws and regulations, checks, and balances."

Major Estes G. Rathbone, who has been superseded by Mr. Bristow, is suspended, but not arrested, and this fact has called forth some hostile criticism from the Democratic press. "It is evidently felt at headquarters," says the Washington *Times* (Dem.), "that he must be tenderly dealt with, in view of the

veiled threat attributed to him declaring that the Administration did not dare to remove him."

The New York *Journal of Commerce* says of Postmaster Thompson:

"The offense of Postmaster Thompson of Havana appears to have been taking money out of the public till and putting his I O U in its place. The practise is said to have occurred among postmasters in this country. It has been employed with disastrous results in a few banks. It is a very thinly disguised form of dishonesty; it is highly dangerous, and the Post-Office Department will perform a public service if it will proceed rigorously against all persons guilty of it. This is preeminently an age of credit. Modern business can not be done without confidence of man in man. This practise of lending to oneself the money of the public or of depositors undermines credit, arouses distrust in men who have the handling of funds not their own, and strikes a blow at the commercial system of the world. No higher duty rests upon persons in authority than the prompt and severe punishment of men who use for any purposes of their own moneys committed to their charge."

STREET RAILROAD STRIKE IN ST. LOUIS.

THE growing list of killed and wounded in the St. Louis street railroad strike has made it a topic of considerable interest and importance. An Associated Press despatch from St. Louis says that since May 8, when the strike began, "hardly a day has passed without somebody being wounded by bullets or injured by flying missiles and police clubs. The list of casualties shows four persons shot and killed, twenty-two wounded by bullets, and fifty or more injured in other ways. Two of the killed were innocent bystanders, the others being a striking motorman and an emergency policeman. Several of the wounded are in a critical condition and may die." The question in dispute between the Transit Company and its employees is not a question of wages, which seem to be perfectly satisfactory, but of union labor and of the control which the union shall exercise over the hiring and discharge of men by the company. According to the reports in the daily press, the demands of the strikers may be summarized as follows:

That all conductors, motormen, gripmen, and all men employed in the sheds shall be compelled to be members of the union; that the officers of the union, together with the officers of the company, shall have full power to adjust all differences that may arise, and that in the event of their failure to agree shall, if mutually agreed to, place the case before three arbitrators; that any member suspended by the union shall be suspended by the company, without pay, until such time as the union requests his reinstatement; that any man elected to an office in the union requiring his absence for not more than a year shall, upon his retirement from such office, have his old place with the company.

The violence and bloodshed, however, have drawn public attention from the question in dispute to the riotous methods of conducting the strike. "It is a reflection on our civilization," declares the Indianapolis *News*, "that it should be in the power of any two or three thousand men to disorganize the life of a great city for weeks at a time. Some way must be found by which disputes between such corporations and their employees can be settled without involving the entire community in the trouble and entailing great loss, inconvenience, and suffering on all." The St. Louis *Republic* calls the strike "an almost intolerable infliction" on the people of the city, and says that "the interference with business, the depredations upon property, the assaults upon inoffensive and innocent people must cease." It goes on:

"Responsibility for the existing situation rests equally upon the police authorities, the management of the St. Louis Transit Company, and the leaders of the striking union. Neither can escape the burden of duty the situation imposes, and the public, which is so grievously suffering, has a right to insist upon united

effort by all responsible parties to restore peace, quiet, and order.

"Upon the police department naturally and properly rests the gravest responsibility. Disorder, turbulence, and violence continue, to a greater or less extent, in various quarters of the city, and the police department must redouble its efforts to bring about such a condition of order and safety as will permit the operation of the street railway lines without danger to life or property. . . .

"There have been no more pernicious and active enemies of the striking union than the roughs and outlaws who have created and maintained the disorder of the past week. It is they who have made it impossible for the public to discover whether the railway company has or has not enough men to run its cars and operate all its lines. They are the enemies of the public, and every decent, honorable citizen should join the work of hunting down these depredators and driving them into the jail, where they belong. In no other way can a good union man do more to help the union cause than by giving evidence that unionism is against disorder, lawlessness, and rioting. . . .

"We must clear this situation of the haze of doubt and uncertainty. We must give the people of St. Louis a chance to see whether the St. Louis Transit Company or the disorderly element of the city's population is most responsible for the imperfect car service. The demonstration of responsibility can be quickly made when disorder is once effectually and permanently put down."

THE PRESIDENT'S TREATMENT OF THE BOER ENVOYS.

THE reception accorded to the Boer commissioners by President McKinley and Secretary Hay has met with almost unanimous approval from the press of the country. It is generally conceded that the policy of strict neutrality now definitely announced by the President, and ratified by the Senate in its refusal to extend to the Boer emissaries the privilege of the floor, was the only course that could consistently be pursued at this time. Says the *Chicago Record* (Ind.):

"It is safe to say that there will be little difference of opinion among the people generally concerning the wisdom of the answer

affairs in the continent of Africa is not a task that appeals in the slightest degree to Americans"; moreover, "the United States suggested mediation, and England promptly and firmly declined it." The *Washington Times* (Dem.) declares that "the manner in which the Boer envoys were notified at the State Department of the hopelessness of their mission is to be commended for its definiteness." On the other hand, the *Baltimore Sun* (Ind.) says:

"Among other courtesies which the President offered the representatives of the Dutch republics of South Africa, a press de-

AN ECLIPSE PROCEEDING IN SOUTH AFRICA.
—The New York Tribune.

spatch states, was 'a splendid view of the Washington Monument from the rear porch of the Executive Mansion.' Whether this was the most tactful thing the President could have done is open to question. It was Washington who led the American revolutionists to victory in their war against the same power which is now endeavoring to destroy the independence of the Dutch republics. If he were President now it is possible that the Boer envoys would have received a different reception in the capital of this mighty nation. . . . Times have changed, and instead of fostering liberty we are engaged in murdering it thousands of miles from our own shores. We are too busy shooting Filipinos to give any attention to the tragedy in South Africa."

Some interest is manifested by the press as to the course of action which is now likely to be pursued by the envoys. It is expected that they will institute a vigorous pro-Boer agitation in the principal cities of this country. Already their action in participating in a mass-meeting at Washington, presided over by Representative Sulzer, has been severely criticized by some of the Republican papers, and they are warned by the *Chicago Evening Post* (Ind. Rep.) against making "the paramount interest of their country the football of party politics." The *Rochester Democrat and Chronicle* (Rep.) calls to mind the fate of "Citizen" Genet, who more than a hundred years ago sought to appeal from Washington to the American people on behalf of the French Republic, and was recalled by his own Government. The *Nashville American* (Dem.) declares:

"That any considerable number of thinking American people, understanding the liberty, freedom, and opportunity which follows the flag of England, and the despotism which exists under the Transvaal oligarchy, are going to give them anything more than a hearing, is, in our opinion, not likely to take place."

The *Philadelphia North American* (Rep.), however, warmly commends the mission of the Boers in attempting to arouse popular sympathy for their cause. It says:

"The people are not deterred by solicitude for the sensibilities of British Ministers or British editors from declaring their conviction that the farmers of the Transvaal and Orange Free State

McKINLEY (to Boer Peace Commissioner): "You may think this is the statue of Liberty enlightening the world, but you mustn't believe everything you see."
—The St. Louis Republic.

made to the Boer envoys. Even the critics of the Administration, if in power themselves, would not undertake to involve the United States in hostile complications with Great Britain. . . . No other answer could reasonably have been expected. It would be an unprecedented course for the United States to take a hand in the settlement of a controversy raging in a distant part of the globe. . . . Such a course on our part would be most unwise, and would be opposed to our traditional policy."

The *St. Louis Globe-Democrat* (Rep.) adds that "regulating

are making the same fight that was made by the farmers of the American colonies."

The Irish World (New York) says:

"The last word in this Boer business has not yet been spoken. The American people are still to be heard from. To them the Boer envoys must now turn for the recognition and the moral support that the McKinley Administration in its subserviency to England has refused to extend to two sister republics in the hour of their sorest need."

SETBACK FOR THE NICARAGUA CANAL.

THE papers which predicted a few weeks ago, when the House passed the Nicaragua canal bill by the rousing majority of 225 to 35, that it was all for political effect, and that the representatives had been assured that the bill would not be allowed to go through the Senate, took it as a confirmation of their political sagacity last week when the Senate, by a vote of 25 to 21 (37 not voting), refused to consider the measure. Many papers, however, indorse the Senate's blockade of the bill, believing that, in view of the pending treaty with England and the pending report of the canal commission, the time for legislation is not yet ripe. Thus the *Philadelphia Inquirer* (Rep.) says: "No one doubts that the Senate is in favor of the bill, so far at least as its main purpose is concerned. It has steadily favored the construction of the Isthmian canal, and unquestionably it does so still; but there is a time for all things, and this does not happen to be the time for that particular legislation." The *Baltimore Herald* (Ind.) believes that "defeat can have no other effect than to delay the inauguration of the work," and thinks that the permanent blocking of the enterprise "is out of the question." The *Cleveland Plain Dealer* (Ind. Dem.) says that "when Congress meets again in December there will be materials before it on which to base a decisive judgment, and it is good policy and good sense to wait until that time, instead of rushing through in hot haste a bill committing the country to a scheme which the commission's report may show not to be the best." The *New York Times* (Ind. Dem.) thinks that the action of the Senate is "wholesome and of good augury." It continues:

"The vote to postpone consideration of the Nicaragua canal bill spares us the reproach and shame of an indecent action. That bill is in sharp disaccord with an existing treaty and with another treaty, negotiated but not yet ratified, which is before the Senate. The one must be abrogated and the other withdrawn before we can pass the Nicaragua bill, unless we wish to commit an act of deliberate and wanton rudeness to a friendly power.

"That power is England. There are demagogues in the Senate and out of it who would rejoice at the giving of offense to England. That is not the sentiment of the American people. It is not the purpose of the Administration, which has negotiated the Hay-Pauncefote treaty. The postponement of the Nicaragua bill is a triumph for the Administration and for decency and dignity. It is a triumph of the serious-minded men in the Senate over the blatherskites, among whom we are glad to say Senator Morgan, of Alabama, is by no means to be reckoned. He has been a tireless supporter of the canal project. We have no doubt that in the fit and proper season his valuable labors will have their reward."

A somewhat different view may be seen in the following comment from the *Washington Times* (Dem.):

"Of the two alternative propositions [Nicaragua and Panama] the Administration favors the Panama scheme, because the syndicate now in control of that exploded enterprise is composed of financiers, adventurers, and, under the rose, of politicians identified with it. But at the present time the Administration does not want any canal legislation whatsoever, pending acceptance by the Senate of its agreement to surrender the Monroe doctrine to England, through the iniquitous Hay-Pauncefote treaty. The idea which permeates the White House and the Hanna headquarters is to secure the adjournment of Congress without action

and then, next winter, hold up the Senate and force the Hay-Pauncefote treaty upon it by the same influences that were used in compelling the majority to pass the Porto Rican bill against the better judgment of many if not most Republican Senators.

"Much time and national exasperation would be saved by disposing of the Nicaragua canal bill now. We repeat what we have often said before, which is, that it is within the power of the friends of the measure to bring it to a square issue and a vote which will either send it to President McKinley for his approval or veto, or else put the enemies of an American canal and the agents of the British alliance and the Panama job disgracefully and eternally on record."

THE KENTUCKY CASE.

THE Supreme Court's decision that it can not interfere in the contest between W. S. Taylor (Rep.) and J. C. W. Beckham (Dem.) for the Kentucky governorship is accepted by most, if not all, of the press as a wise and just decision; altho the papers do not all agree, by any means, that the result of that decision—the award of the governorship to Beckham—is just or desirable. The court's decision is, in brief, that an office is not property, so that ex-Governor Taylor is not being deprived of "life, liberty, or property, without due process of law"; that the constitutional provision that "the United States shall guarantee to every State in this Union a republican form of government" depends for its enforcement upon the executive, not the judicial department of the Government, and that each State must decide its own election contests. Chief Justice Fuller, who handed down the decision, said:

"It is obviously essential to the independence of the States and to their peace and tranquility that their power to prescribe the qualifications of their own officers, the tenure of their offices, the manner of their election, and the grounds on which the tribunals before which and the mode in which such elections may be contested should be exclusive and free from external interference except

so far as plainly provided by the Constitution of the United States, and where controversies over the election of state officers have reached the state courts in the manner provided and have been determined in accordance with state constitutions and laws, the cases must necessarily be rare in which the interference of this court can be properly invoked.

"For more than one hundred years the constitution of Kentucky has provided that contested elections for governor and lieutenant-governor shall be determined by the General Assembly.

"It is clear that the judgment of the court of appeals, in declining to go behind the tribunal vested by the state constitution and laws with the ultimate determination of the right to these offices, denied no right secured by the Fourteenth Amendment. . . .

"The Commonwealth of Kentucky is in full possession of its faculties as a member of the Union, and no exigency has arisen requiring the interference of the general Government to enforce the guaranties of the constitution or to repel invasion or to put down domestic violence."

Justices McKenna and Brewer dissented from the view that an

GOV. J. C. W. BECKHAM (DEM.),
Of Kentucky.

office is not property; and Justice Harlan dissented from the main conclusion, holding that if an injustice is done in a state election, the Supreme Court has power to correct the wrong.

Most of the press, Republican as well as Democratic, agree with the Supreme Court that Kentucky must be left to work out her own salvation without interference from the outside, and that since the Kentucky legislature and the Kentucky courts have decided in favor of Beckham, he should be governor until next November, when another election for governor will be held. Yet the contention is still heard that a Republican governor was elected last fall and that the triumph of Beckham means the defeat of the popular will. The Kentucky Democrats "are right as to the legal forms," says the *Burlington Hawk-Eye* (Rep.); "they are wrong, and most perniciously wrong, in their acts under cover of law." The *Cleveland Leader* (Rep.) declares that "nobody can defend the despicable methods to which the Democrats resorted," yet says that Mr. Taylor and his advisers must have known in advance what the result would be, "and they would have gained in public estimation if they had submitted quietly to the law of their State." The *Brooklyn Eagle* (Ind. Dem.) thinks that the decision "leads to a result that is better than civil war, but it falls a long way short of justice. It puts in the governorship a man who was defeated and it turns out a man who received a majority of the votes cast." The *New York Sun* (Rep.) admits that ex-Governor Taylor's position in this controversy "would have been much better if he had not issued his proclamation adjourning the legislature and had not excluded that body from the State House by force," while the *New York Journal* (Dem.) urges the Kentucky Democrats to convene an extra session of the legislature and repeal the Goebel election law, whose workings have been the cause of all the trouble. The *New York Evening Post* (Ind.) rejoices that the contest has been fought out in the courts and not, as at one time it seemed imminent, on the State House grounds and the streets of Frankfort by force of arms. "The real issue," it observes, "was whether the United States is a nation which is governed by laws and respects constitutions. The peaceful settlement of the long and bitter dispute through the courts is a triumph for the republic which will be recognized throughout the world."

The *Louisville Courier-Journal* (Dem.), the most prominent organ of the Goebel Democracy in Kentucky, welcomes the Supreme Court's decision as a rebuke to those who, reckless of our system of government, "would willingly sacrifice it for the sake of a selfish and temporary partizan advantage, and it is a grateful assurance that, whatever the partizan passions that may break at the foot of the Supreme bench, the highest court of the land as at present constituted has not lost sight of this principle of government which it is its province to guard and maintain." The *Louisville Dispatch* (Dem.), which opposes the Goebel wing of the party, calls upon the citizens of Kentucky to correct at the polls next fall the evil state of affairs, and take the rule from the present state officials, who it refers to as "as bold a crew of political pirates as ever scuttled a ship of state." The *Louisville Commercial* (Rep.) thinks that with "civil liberty" for a platform the Republicans can sweep the State next fall and win back by fair means the "stolen title which a corrupt Democratic legislature has bestowed upon Beckham."

Ex-Governor Taylor's visit to Indiana, where Governor Mount

MURPHY J. FOSTER (DEM.).

SAMUEL DOUGLASS MCENERY (DEM.).

LOUISIANA'S SENATORS.

(Rep.) refuses to honor the requisitions of Governor Beckham, has aroused some comment. No requisition has been issued for ex-Governor Taylor, but Governor Mount has refused to honor a requisition for ex-Secretary of State Finley of Kentucky, who is in Indiana with ex-Governor Taylor, and is wanted in Kentucky as an accomplice in the murder of William S. Goebel, the Democratic candidate for governor. Governor Mount says that he fears that "the inflamed state of public opinion in Kentucky, especially among professional politicians, who are vehemently threatening vengeance," might cause a tragedy. The *Chicago Evening Post* (Ind.) condemns Governor Mount's position, and thinks Mr. Taylor's course far from admirable. It says: "Dodging the officers of the law, hiding behind a complaisant and biased governor of a neighboring State, can do nothing but prejudice his case. The bitterest of his opponents could ask nothing better suited to their purpose. It places him in just the light they would have him, and strengthens all their contentions. He should go back of his own volition."

LOUISIANA'S NEWLY CHOSEN SENATORS.

THE election of ex-Gov. Murphy J. Foster and the reelection of Samuel Douglass McEnery last week to represent Louisiana in the United States Senate brings out some diverse views. The *New Orleans Picayune* (Dem.) says of their speeches before the legislative caucus:

"Both gentlemen made broad-minded and liberal presentations of individual opinions, showing that in all matters of fundamental principle they were Democrats, but in regard to mere questions of policy they reserve the right to hold personal opinions. They made brave and manly exhibits of their convictions, showing an entire freedom from any slavish submission to any despotic dictation, but recognizing the proper obligations of party allegiance. . . . Louisiana will gain honor and benefits in being represented in that august body by two such brave, able, and devoted Democrats."

A quite different opinion of them is entertained by the *Boston Transcript* (Rep.) which remarks: "It may be that both these nominees are fully worthy of the constituents they represent. They would have to be the very cheapest of political material if they were not. . . . Both stated their convictions, but were perfectly willing to change them upon those points where not acceptable to the Democrats of the Pelican State. The latter did not care much what the academic theories of their Senators might

he, so long as they were willing to do as they were told, an arrangement which they seemed perfectly willing to make." The election of Senator Foster displaces Senator Caffrey, who has lost favor with the party leaders of his State. *The Transcript* says of him: "He is dropped because he has been too high-minded, too courageous, too self-respecting, too patriotic, and in every way too honorable to shift with every passing wind of sectional doctrine. . . . He is so little of a time-server and so far above the appreciative capacity of the Louisiana Democrats that his retirement is the result of natural conditions."

An Experiment in Municipal Economy.—An experiment as unique as it is simple and efficient was recently carried into effect by a mayor in the State of Missouri. The incident is thus described and commented upon in the *Chicago Times-Herald*:

"Not long ago the mayor of St. Joseph ascertained that so much of the money raised by taxation was being paid to municipal officials that practically nothing was left with which to improve the city. New streets were needed, old streets were in need of paving, and in many other directions improvements were necessary."

"It was proposed by those who were drawing salaries from the city to increase the taxes, but the mayor, being an anomaly among municipal officeholders, objected to such a proceeding. He thought the taxes were high enough, and, finally, he boldly proposed to fill most of the city offices with business men and others who could afford to do the duties required of them without drawing salaries for their services."

"Of course there was consternation among the ward-workers

and professional officeholders, but the mayor's scheme was put into operation, and is now reported to be working very well. Two-thirds of the amount raised by taxation has been taken away from the politicians, and is being devoted to municipal improvements, the result being that the people of St. Joseph are getting something like an adequate return for their money."

The Times-Herald suggests that this plan might be applied with admirable effect to the city offices of Chicago and other American municipalities, with excellent effect upon their swollen pay-rolls.

TOPICS IN BRIEF.

Good advice to Admiral Dewey: "Don't give up the ship."—*The Yonkers Statesman*.

Do the Kentucky Democrats think it worth all it cost?—*The Boston Transcript*.

MAFEXING's next great danger will be in the shape of indigestion.—*The Washington Post*.

THE war in Kentucky is ended, but it is a little doubtful whether reconstruction has begun.—*The Philadelphia Ledger*.

DOES Great Britain remember how shocked it was to see us rejoicing in a victory over so small a rival as Spain?—*The Chicago Record*.

THE doings of the Havana postmaster should make people much more lenient in judging the country official who contents himself with reading the postal cards.—*The Washington Star*.

ONE of the regulations of the new ice trust in New York will provide that if the house girl is not at hand to receive the ten-cent lump it will be pushed under the door.—*The Cincinnati Commercial-Tribune*.

MASSACHUSETTS has again decided not to abolish the death penalty. It is remarkable how much more precious a man's life becomes after he has committed murder than it was before.—*The Philadelphia Ledger*.

PRONUNCIATION OF WORDS IN CURRENT HISTORY.

LETTERS AND ART.

SOME ENGLISH VIEWS OF COWPER.

THE Cowper centenary has brought forth diverse criticisms in the English reviews, dealing with the poet from many points of view. There was a time, during the predominance of the Romantic School, when Cowper dropped from notice and public appreciation; but he has outlasted the contrary current of opinion, and is, by critical students at least, once more appreciated at his true worth, as the precursor of the nineteenth-century movement in English poetry, and the first great poet to break the shackles of eighteenth-century artificialism. Writing in *Leisure Hours*, Augustine Birrell says:

"The literary history of Cowper's reputation is a strange one. Cowper was not only a pious poet; he was a Christian poet, and

Painted by George Romney.

WILLIAM COWPER.

a Christian poet whose Christianity was no fanciful concoction, no dreamy aspiration, no pathetic stretching forth of blind hands into the void, no vague tho passionate desire for immortality, but a plain-spoken Bible religion. He believed in the Word of God as made known to man in the canonical Scriptures. The melancholy fact that a constitutional madness (which in its first beginnings had no sort of connection with religion whatsoever) prevented him, save at too rare intervals, from enjoying the peace of God, in no way impaired the vitality of his faith. Dr. Newman was not quite sure whether Dr. Arnold was a Christian, but both Newman and Arnold agreed that Cowper was one."

During his life, Cowper received almost universal admiration; he was indeed admired for the very passages which to-day are considered his least worthy ones. Mr. Birrell says:

"For some generations Cowper was the favorite poet of Protestant piety, not that there was anything in his vein of Quietism to repel the pious Roman Catholic, had such a one by any chance turned over his pages. Entirely free as Cowper is from affectation and pomposity (which so sadly mar the verse of Akenside, also a prime favorite in his day), beautifully sincere and nobly pathetic as almost every line reveals him, we need not wonder that he should have stirred the hearts and kindled the enthusiasm of many piously nurtured minds brought up in homes

where books were not too abundant. They were not much to be pitied, the young people who had Cowper for their favorite poet. . . .

"Cowper's natural equipment for a poetical career consisted of a delicate and playful humor, a taste exquisitely refined and at the same time strangely shrewd, and a scholarly gift of versification. He was a shy gentleman with a pretty wit and a quick eye for the humors of society. He came of a strong Whiggish stock, and understood the British constitution a great deal better than Lord Salisbury seems to do [Mr. Birrell is a British Liberal]. In the works of no other of our poets are to be found manlier opinions, and in none a loftier patriotism, combined tho it was in his case with a passionate desire to see justice done to all mankind."

Cowper always worked under the gloom of an ever-threatening insanity. His early association with Dr. Newton was unwholesome, inasmuch as serious subjects dealing with Death, Sin, and Judgment were fatal for him to dwell upon, and Dr. Newton's persistency on such themes kept him under a constant strain. Cowper gradually withdrew from these influences, however, and became, above all things, a lover of nature, the forerunner of Wordsworth and the nature poets. Another critic, Alice Law, writes (*Fortnightly Review*, May):

"Cowper carried a burden heavier than that of most men: the burden of a hypersensitive brain, and ultra-emotional temperament, and, heavier than anything, that foreknowledge of his own predisposition to attacks of suicidal mania which effectually disqualified him for the ordinary avocations of life. Such a knowledge would have hopelessly bowed the spirit of many men, yet it never broke Cowper's. For nearly forty years he fought and wrestled with those grim monsters, Disease, Death, Despair; often down and crushed in the arena, but always bravely struggling to his feet ready to battle with them again. Overweighted and handicapped as he was, he not merely ran the race, but distanced all competitors, and won the laurel."

Speaking of Cowper as a critic, as an editor, and above all as a letter-writer, Miss Law continues:

"Never was the famous maxim, *le style c'est l'homme*, more happily illustrated than in Cowper. His charming literary manner was the outcome of his distinctive personality. Despite the fact that he was constitutionally dependent upon others, no equally great man has had so little of the egoist about him. His own bitter experience of the painful complications of life made him seek and advocate a severe simplicity in all things. Partly a horror of entanglements, partly an innate feeling that *noblesse oblige*, made him always endeavor to meet, at whatever cost, such liabilities as were put upon him. He was essentially single-minded, single-hearted; his mental and moral vision was clear, his gaze steady, and his aim unfailingly direct. His style was like himself, majestically simple. He abhorred affectation, and condemned alike the wordy pomposity of Johnson and the stately periods of Gibbon. In his own writing he disdained all artifice, exaggeration, emphasis. He avoided the use of adjectives, or of anything approaching elaboration of method. But apart from what he avoided, his style possesses in itself a certain almost indefinable quality of distinction, the reflection of his own inherent nobility of bearing; it is final, royal—royal in the sense of being the speech of one not accustomed to the necessity for reiteration. It has, with all this, the presence and commanding dignity of one who has made the great refusal. Stevenson has happily observed: 'There is but one art: to omit.' This, it may be said, is the art of Cowper."

Yet Cowper has never regained his hold upon the popular fancy. As to our attitude toward Cowper to-day, the writer adds:

"The cold indifference of the moderns toward Cowper is largely due to the fact that he has left no love poetry behind him. For this reason they find him uninteresting, and they regard him pretty much as he says his contemporaries and former associates did: 'They think of me as of the man in the moon, and whether I have a lantern, a dog, and a faggot, or whether I have neither of these desirable accommodations, is to them a matter of perfect indifference.' Whether his heart was torn with the agonies of love or not, Cowper does not tell us. He has left no confessions of this nature. His appeal is not to our passionate 'prentice

years, but to our maturity, when having suffered, we have, learnt our lesson, and profited by it to pass out of the petty circle of ourselves into the study of life's larger whole."

Mr. George A. B. Dewar, in *The Saturday Review*, speaking of Cowper as a poet, writes:

"Cowper belonged as a poet of nature rather to the Thomson than the Wordsworth school. His verse gives us the idea that he loved nature as did Thomson, Gray, and other poets of the eighteenth century, fondly but complacently: Cowper as a poet of nature is to Shelley what Gilbert White is to Richard Jefferies—the note of intense passion, of dreamy, rapt adoration for nature which you find in the inspired verse of Shelley, and in the scarcely less inspired prose—if it be quite prose—of Jefferies's 'Meadow Thoughts' or 'Bits of Oak Bark' is of course utterly lacking in Cowper or White. Before the French Revolution we look in vain for the passionate attitude to nature which we find preeminently in Shelley and in Jefferies, and perhaps in a more restrained form in Wordsworth and Tennyson."

Mr. A. Edmund Spender writes of Cowper as follows in *The Westminster Review* (May):

"We can not but admire a man who, subject to a lifelong illness that inflicted with frequent recurrence an intense mental agony, fought persistently against his weakness—at times their master, at times a victim to their influence. Still he did not flinch even under this torture, but held his pen and pressed it to write in a cause which was distinctly unpopular. Cowper was preeminently a poet of feelings; he may have been melancholy, but he pointed out to his readers how they were themselves subjects of emotion. He owed a debt to Providence, and he rebuked the people for their follies. In doing so he was regardless of his own fame and of their opprobrium. He gave them tolerable advice, and strove to awaken them from their apathy to a sense of their duty toward their neighbors."

"First of poets, since the days of Milton, to champion the sacredness of religion, he was the forerunner of a new school that disliked the political satires of the disciples of Pope, and aimed at borrowing for their lines of song from the simple beauties of a perfect nature."

Those who wish to see Cowper at his best, writes Mr. Birrell, should turn to "Hope" and read the eighty lines beginning with

"Adieu," Vinosa cries, and yet he sips
The purple bumper trembling at his lips.

Then, says Mr. Birrell, read the first six hundred lines of "Conversation," then lines 144 to 209 of "The Sofa"; afterward the glorious lines from the "Time-Piece," beginning

England, with all thy faults I love thee still,
and ending

Oh, rise some other such,
Or all that we have left is empty talk
Of old achievements, and despair of new.

"The whole of the famous 'Winter Morning Walk,'" says Mr. Birrell, "can be read with positive delight and exhilaration; but if shorter poems need citation, 'Boadicea,' 'Toll for the Brave,' and the 'Lines to Mary' are among the masterpieces of British verse."

This will be sufficient, thinks Mr. Birrell, to establish Cowper in the mind of the reader as one of the foremost English poets.

Education at the End of the Century.—Dr. Nicholas Murray Butler, in an address delivered before the annual conference of the department of superintendence of the National Education Association in Chicago, summed up in an interesting way the present status of education at the century's end. Everywhere, he remarked, there are to be found two forces at work—evolution and individualism; and these two principles work harmoniously together to bring about individual culture and power while holding the individual in vital touch with the interests and common life of humanity. The election system—now so widely extended—is one fruit of individualism. The de-

mand for cooperation between schools of all grades and for co-ordination of studies is an evidence of the presence of the evolutionary principle in education.

The great expenditures made for education by the chief countries of the world are striking evidence of the enormous importance attached to education even from the purely official standpoint. We quote Professor Butler's figures, as given in a recent number of *The Outlook*:

"Education, so conceived and so shaped, has made an irresistible appeal to every civilized nation. During the century education has definitely become a state function, not as a dole, but as a duty. Consequently, the public expenditure for education has become enormous. In the United States it amounts annually to \$200,000,000 for the common schools alone, or \$2.67 per capita of population. This sum is about one tenth of the total wealth of Indiana or of Michigan as determined by the census of 1890. In Great Britain and Ireland the total public expenditure on account of education is over \$88,000,000, or \$2.20 per capita. In France it is about \$55,000,000, or \$1.60 per capita. In the German empire it is over \$108,000,000, or more than \$2 per capita. These four great nations, therefore, the leaders of the world's civilization at this time, with a total population of nearly two hundred and ten million, are spending annually for education a sum considerably greater than \$450,000,000. The annual expenditure of the United States for common schools is quite equal to the sum total of the expenditures of Great Britain, France, and Germany combined upon their powerful navies. It is nearly four fifths of the total annual expenditure of the armed camps of France and Germany upon their huge armies. It is a sum greater by many millions than the net ordinary expenditures of the United States Government in 1880. This expenditure for common schools has nearly trebled since 1870, and during that period has grown from \$1.75 to \$2.67 per capita of population, and from \$15.20 to \$18.86 for each pupil enrolled."

A NOVELIST ON ART.

AT a dinner given recently by the National Sculpture Society, William Dean Howells gave his views on art and the true principles of art criticism. He said (we quote from the *New York Evening Post*, May 16):

"A whole critical jargon, a sort of chinook or pigeon, has grown up, by which we complete the confusion of our minds in the region where the arts must divide if they are to live, and we babble of color and drawing, light and shade, lyric and drama, form and structure, as if these were all equally or convertibly applicable to the various expressions of invariable art. But when a poet and a painter or a sculptor or an architect come honestly to rub their ideas together, and try to arrive at a mutual understanding, they perhaps find that they are thinking of something very different under these fine names, and possibly end by each thinking the other a humbug, or each tacitly owning himself a humbug."

"No doubt the instinct for these would be the same in all of us, but the application of that instinct would be subjectively as diverse as a book and a statue and an edifice objectively are."

The vital question—so thinks Mr. Howells—is, how can we reach the good and the pure meaning in art? He continues:

"It may not be there by authority as simple and absolute as the most beautiful man or woman who pauses before it; but I wonder if the vast mass of those who see it do not judge it as directly as they do those spectators; and whether they are not right in doing so. If my conjecture is true, do not they, after all, the ignorant, tasteless, uncritical multitude, render your art the highest tribute in viewing its expression with the same mind that they view some 'cunning'st pattern of excelling nature'?"

"I know very well that the multitude admires many wretched and paltry things, and that it confuses the esthetical and ethical qualities of things; but I should like to believe that as we simplify ourselves and get directly at the core of life, we find ourselves in a larger companionship than when we hold aloof from the elemental things which all can understand and feel. In other terms, and to give an instance with my saw, I should like to

think that the average man when he looks in the park at a certain group of an Indian hunter and his dog, feels more pleasure than when he looks at a certain statue of Robert Burns, or even at a certain other statue of FitzGreene Halleck; I should like to think his pleasure in the first would be of as high and pure quality as any that art could give.

"He is a terrible fellow, the average man, but there are a great many of him, and it is worth while trying to find out his secret if he has one.

"The difficulty is not to make him like the best, but to give him the best. In this case, as in so many others, the law of demand and supply works backward, and the demand follows the supply. We must in all these things rely upon education, but education that begins with the artists, as with those who write and paint and build, as those who model and carve. When I see people reading the nine hundred and ninety-ninth thousand of the latest historical romance, my heart sinks; but I do not lose my faith that, when some great novelist divines how to report human nature as truly as such romances report it falsely, people will read him too in the nine hundred and ninety-ninth thousand. I do not say that they will think his novel greater than those romances; probably they will not, just as the average man who enjoys the Indian hunter might not think it greater than the Robert Burns or the F. G. Halleck. But happily that is not the artist's affair, in either art; his affair is to do a beautiful and true thing so simply and directly that the average man will not miss the meaning and the pleasure of it."

ENGLISH VIEWS OF "ZAZA" AND THE SEX DRAMA.

BY a curious and rather suggestive coincidence the literary centers of three leading nations have within the past half year been agitated over the question of a dramatic censorship. In Germany the proposed Lex Heinze (see THE LITERARY DIGEST, April 14, May 5), which seeks to bring all forms of literary and artistic expression under the strict surveillance of the law, has aroused the indignation of Germany's leading scholars and men of letters. In America, two widely read journals at least were lately deeply agitated over the alleged immoral qualities of Mr. Clyde Fitch's dramatization of "Sappho," altho their efforts in behalf of public morality were unavailing and the play still holds the boards. New York, which found cause of stumbling in Miss Nethersole's rendition of "Sappho," listened patiently, indeed admiringly, to "The Belle of New York" and to "Zaza." But a portion of the British public now finds the latter play demoralizing, and the question of making the censorship so strict as to exclude it and similar plays has been brought to the attention of the British Parliament by Mr. Samuel Smith, a member from the Welsh county of Flintshire. Mr. Smith indeed later confessed that he had never been within the walls of a theater, but was relying upon hearsay; and the House of Commons finally adopted the view that the public might safely be left to determine for itself what plays it would hear and support.

The more critical English journals do not find very much to praise in "Zaza," altho Mrs. Leslie Carter is accepted as a capable actress, and the play has attained a marked success at the Garrick Theater. The dramatic critic of *The Saturday Review* says of it:

"Zaza" is an absurdity within an absurdity. It is absurd, in the first place, to suppose that you can make a play by merely writing a part in which a celebrated actress may run through her favorite tricks and by setting up a number of little dummy parts round it. When a dramatist subverts the nature of things by making himself the humble interpreter of an actress, he ceases forthwith to be a dramatist. Also, he does a grave disservice to the actress; but as she is always very anxious that he should do it, and as the doing of it is almost always very lucrative, his eagerness for the job is not unnatural. There are many people who delight to see the celebrated actress disporting herself in a part specially made for her. I can understand their taste, tho I do not share it myself. I can understand that Mme. Réjane

must have played the part of Zaza quite perfectly, tho I personally, who care for mimes only as media, do not regret not having seen her in it. Such plays as "Zaza" are all the more objectionable when they are translated into another language for the benefit of other actresses who do not at all resemble the actresses for whose benefit they were originally faked up. I called "Zaza" an absurdity within an absurdity because Mrs. Leslie Carter is not at all like Réjane. She is a very capable, even powerful, actress, but she has little instinct for comedy, and the part which fits Réjane like a glove does not fit her. The glove, if I may say so, splits loudly at every seam. Loudness is, indeed, the chief feature of her performance; every point is exaggerated and underlined, every scene is overacted. On the first night at the Garrick, Mrs. Carter overacted to such a degree that at the end of the fourth act she had ten or eleven "recalls."

There is a not unimportant school of critics in England who believe that Mr. Pinero and the other realistic dramatists have confined their attention too exclusively to conjugal infelicities, to such an extent indeed as to make the mere physical side of sex relations the principal motive of human conduct. In a recent address Mr. Pinero defended the modern sexual drama against these critics. True comedy, he said, "must faithfully portray the manners of the age instead of stupidly setting to work to reform its morals." It is life, according to his view, with which literature and the stage have to deal. Mr. Pinero said further (we quote from a reproduction of his address in the *Philadelphia Times*):

"It is surely the great use of modern drama that while in its day it provides a rational entertainment, in the future it may serve as a history of the hour that gives it birth. History is the word I desire to impress most strongly upon you. It is, in my judgment, the word which in a breath defines the task, the duty of the writers of modern drama. These writers are the abstract and brief chronometers of the time. And yet one of the chief difficulties in the way of the modern dramatist arises out of that very point. It is no new difficulty, at any rate in our country. It is always snapping at the heels of the writer who takes the manners of his day for his material. The license of the dramatist is the cry raised, the protest continually being made against the practise of the art of the playwright.

"Last year there was more chatter about decadent stage plays and decadent literature generally than usual. I do not mean on the part of professional and qualified critics, who were entitled to deal with the question, but on the part of certain gentlemen conspicuous in walks of life remote from art and literature, who are, in my opinion, not so qualified."

Mr. Pinero quotes, as an example of such criticism, the words of the Lord Chancellor, who said, in speaking of decadent stage plays:

"On all sides intellectual development is visible, yet there are dark features in respect to our literary taste. Familiar public amusements, plays, and so on are tainted with what, with all reverence, I might call the spirit of those who made a mock of sin. And to my mind it has become a serious question whether, seeing some of the plays now being enacted, there is any great advantage in finding somebody to act as censor, and to prevent them from being played. If some of the plays now before the public might be played I do not know what might not be played."

Mr. Pinero also cites as an example of such pseudo-criticism Sir Edward Clark's sweeping declaration that Swinburne's "Rosamund" should have been burned. Such criticism, he thinks, is not only arrogantly unjust but subversive of all real ethical spirit. He writes:

"So if any one elected to enter the ranks of the critics upon the strength of such indiscriminate denunciations, he must not complain if those who put a different and wider interpretation upon the mission of literature and the drama assign to them places among those persons not remarkable for qualities of liberality and open-mindedness.

"He must not mind if he were included in that body of people which in its mistrust of the theater, in its jealousy of the influence of the theater, would reduce the drama to the intellectual level of the drawing-room charade. He must not complain if he

were classed with those who could not perceive that true comedy, by faithfully imitating the manners of the age instead of deliberately and stupidly setting to work to reform its morals, might be, from the very force of its object-lesson, a moral entertainment of the finest kind. He must not complain if he were classed with those who failed to recognize that it is life with which literature and the stage had to deal, and not their own prudish and sentimental view of it; who would bury the charter of the theater and of letters under a rubbish heap of cant and make-believe; and who were unable to understand that the real decadent drama and the real decadent literature are the drama and the literature which presents a flattering but false conception of human conduct. And finally he must not accuse us of discourtesy if we make bold to warn him of the danger of evil association with those people who, under the pretense of being moralists, are nothing but moral-mongers."

Mr. Pinero's critics continue to allege, however, that he and his school restrict their survey of life to a single side of it, however important a one this may be. While having little sympathy with the would-be custodians of other people's morals, they nevertheless maintain that Pinero, Ibsen, Bernard Shaw, and the other writers of the modern sexual plays would be truer artists and truer moralists if they did not put all the accent upon a few notes.

D'ANNUNZIO'S NEW AUTOBIOGRAPHICAL NOVEL, "IL FUOCO."

THE young Italian poet and novelist D'Annunzio has created a stir in two widely separated spheres—political and literary. He is a deputy in the Italian parliament (the representative of Beauty, he has been called), and a few weeks ago he

GABRIELE D'ANNUNZIO.

changed his party affiliations in a sudden and sensational manner. He had become disgusted with the "right," to which he belonged, and at the close of a particularly stormy sitting, he walked over to the group of Socialists and radical Republicans and startled them by saying: "I have come to join you; for you are life." He declared that his eyes had been opened to the pettiness, selfishness, stagnation, and emptiness of the old, conservative parties, and

that he would sever his connection with them.

Close on the heels of this sensation, and in a sense connected with it, came another—the publication of a new novel, entitled "Il Fuoco" ("The Flame"). It also appears to embody a change of tendency, an aspiration, a moral alien to all of D'Annunzio's previous works—namely, that art is greater, fuller, broader than love. The story is autobiographical. It tells the story of the love of a great poet, Stelio Effrena, and an illustrious tragedienne, la Foscarina. These pseudonyms are more than transparent, according to the critics, and the novelist has taken special pains to identify his hero with himself and his heroine with

Eleanora Duse, the famous actress. B. Guinaudeau, writing about the novel in the Paris *Aurore*, says:

"Nothing remains veiled from us. We know how the lover is constituted, with all his physical and moral traits, and we are not left in ignorance of the intimate attractions, as well as of the defects, of the sweetheart, who is, for the young Stelio, just a little too much of an old woman. We are told how she has resisted him at first; how she has yielded; how she poured out, and drank, love's intoxication with overflowing heart; how, later, she has fled from her lover in order to save his genius, for he had ceased to work, to produce masterpieces, and she was devouring him with her passion."

D'Annunzio's new story has pages of art and poetry that are pronounced by many continental critics to be superb and perfect, but it is at the same time, in the opinion of many, a monument of sensuality and unconscious immodesty, an exhibition of egotism such as the literature of no country has heretofore contained. Neither Lamartine nor Musset has so disrobed himself, artistically speaking, in public, nor so placed himself on exhibition upon a pedestal. D'Annunzio's warmest admirers have severely attacked his performance, and declared that in Stelio the author made himself ridiculous and repugnant by his pride and self-praise. Thus Enrico Penzacchi, in the *Nuova Antologia*, writes in an open letter to the novelist:

"How I should like to be able to separate your personality from that of your hero! But, alas! you have yourself ingeniously contrived to prevent this, for you have made yourself the continuous and obstinate *leit-motif* of your novel; you have put your personality, corporeal and moral, into every scene and have chosen to aggrandize it by numerous touches of exaggeration. . . . Your Stelio Effrena has something in him which makes him not only immoral, but also odious and ugly. A breath of morbid infatuation, escaping from the mind of this personage, traverses the whole action, transfigures the scenes, deforms the subordinate characters, and puts on everything an extravagance and want of mental equilibrium. We see nothing from page to page except the monstrous shadow of this Stelio, who imagines himself holding in his hands 'the primordial forces of things.'"

Stelio, it seems, and therefore D'Annunzio whom he represents, believes that art is a domain reserved for the *élite* and inaccessible to the vulgar herd. He typifies the fatuity, the ferocious snobbishness of the decadents, literary mystics and symbolists who have endeavored to create an exclusive literary and esthetic world for the privileged few. Did not D'Annunzio so plainly portray his own personality, the type might be taken for a deliberately cruel exposure of this type, according to Guinaudeau and Penzacchi. But the former adds that, the next step must be the subordination by the artist of art itself to life, just as he has embraced radicalism and Socialism because he found reality and vigor and truth in them. The novel marked a transition, but the poet's present intellectual and moral state has advanced beyond that depicted in this work. His next work should reflect his new conception of life and the place of beauty, love, and art in it.—*Translations made for THE LITERARY DIGEST.*

NOTES.

DESPITE some adverse criticisms of Kipling's "Absent-Minded Beggar," it is said that the poem has brought the English war fund the sum of \$425,000.

AFROPE of Kipling, it seems that his "Stalky & Co." is creating a furor in the English schools. Since its appearance, one head master has reported that there are increased difficulties of maintaining discipline and a respect for school regulations.

A NEW book from the pen of Mark Twain is announced under the title, "The Man that Corrupted Hadleyburg." It will contain various descriptive sketches, some of the titles of which are "Diplomatic Play," "Clothes," and "Stirring Times in the Austrian Parliament."

FRANK DAMROSCH, it is reported, is still pushing his scheme to raise \$2,000,000 for a building with a seating capacity of 2,000 persons, where concerts shall be given by 120 orchestral members and a chorus of 3,000 singers. His idea is to reach in this way the people who are unable to pay more than ten or twenty-five cents for a seat.

SCIENCE AND INVENTION.

THE SPLASH OF A RAIN-DROP.

THERE are few persons who, during a heavy shower, have not tried to pass the time by observing the thousands of little crystal fountains that spring up on the surface of ponds and rivers. Smaller jets take the form of rings or crowns, and others are simply areas of disturbance that disappear as suddenly as they are formed. The formation of such jets or fountains as these has recently been the object of serious scientific inquiry, and the success of the method of studying them by means of instantaneous photography has thrown new light on some of the problems connected with the motion of liquids. An article on

SERIES I.

FIGS. 1 TO 13.—SPLASHES CAUSED BY A SHORT FALL.

the subject is contributed to the *Revue Encyclopédique* (April 28) by M. R. Jarry. Says this writer:

"The problem is a very old one, and is among those that have always awakened and piqued the curiosity of man. How many generations have observed these same jets . . . and have wondered without being able to get at the inner nature of the phenomena! At the present day when the cinematograph and instantaneous photography have so many different applications, it may seem that it ought to be easy to follow a drop falling into

SERIES II.

FIGS. 14 TO 19.—SPLASHES CAUSED BY A LONG FALL.

water; but in practise the thing is not so simple, for the changes are much more rapid than those that are within the reach of cinematography, and no instrument of this kind has yet been de-

vised that can take the photographs necessary in such an investigation.

"For such rapid motions the most perfect photographic shutters are much too slow, and it is necessary to have recourse to the much briefer illumination than the electric spark produces. The

SERIES III.

FIGS. 20 TO 23.—CHANGE OF A SPLASH-CRATER INTO A CLOSED BUBBLE.

originals of the photographs herewith presented were taken by means of a spark whose duration was certainly less than one three-millionth of a second—an interval of time that bears the same relation to a whole second that a day does to ten thousand years."

M. Jarry describes at length the apparatus used for producing the spark, for dropping the water, and for taking the picture precisely at the instant desired, all of which require ingenious and careful adjustment. Passing to the photographs M. Jarry notes that the first series show that a falling drop changes its shape as it falls, acting as if it were contained in an elastic envelope. When it struck the surface in this case, it was elongated. As it enters the liquid it forms a sort of crater which increases in size and height. Jets at first spring from it, but they soon contract into lobes, which flatten out, and then the crater settles down into a simple circle on the surface. Next the spot at the middle of the circle begins to rise and shortly a crystal column is formed, which in its turn falls and appears finally as a sphere resting on the surface. After a few final oscillations the liquid is at rest. Different phenomena are seen when the fall is from a greater height. To quote M. Jarry's account:

"If we let the drop fall from the height of a meter [3 feet 3 inches] and use a drop about one third of an inch in diameter, we shall observe an emerging column as before, but we shall have some new forms; this time the crater rises much higher and has time to close over the central cavity; the bubble thus formed

SERIES IV.

FIGS. 24 TO 26.—SPLASHES PRODUCED BY AN IVORY BALL.

always opens again, and retreats, so that it offers no obstacle to the rising central column. This is shown in Series II. . . .

"For Series III. we operate from a height of 137 centimeters [4 feet 5 inches] . . . and with double the size of drop. The crater still closes up and takes the form of a real bubble. The envelope of this bubble is at first thick, uneven, and covered with ridges, but it soon becomes thinner and more regular; the liquid runs down its sides and is distributed more evenly over its surface. The formation of each of these mysterious domes takes place in less than two hundredths of a second, and before a tenth of a second the whole edifice has vanished.

"In Series IV. are represented the splashes produced by the fall of a sphere of polished ivory 1 centimeter [0.4 inch] in diameter, falling from a height of 60 centimeters [24 inches] into a mixture of milk and water contained in a glass vessel 1 foot deep and 9 inches in diameter. When the sphere is imperfectly polished, the splash makes a noise and is accompanied by a brisk projection of bubbles from the liquid surface. In Fig. 24, the shadow thrown on the surface gives us interesting information; while the sphere is penetrating into the liquid the surface is quiet; we may therefore conclude that the general level rises as soon as the sphere enters the water, or at least that the speed with which

the leveling is effected is of the same order as the speed of falling of the solid body."—*Translations made for THE LITERARY DIGEST.*

A NEW DEVICE FOR STILLING THE WAVES.

THE success of a thin film of oil as a means for quieting turbulent wave-motion is now well known. Somewhat similar in principle is a method invented recently by an Italian, Baron Benvenuto d'Alessandro, and he claims that it is yet more efficient. He designs it for the protection of vessels at sea, entrances to harbors, light-houses, etc. We quote the following description from *The Marine Review* (April 26), which gives credit for its information to a consular report:

"His invention consists in retaining on the surface of the water an unsubmergible floating net by means of outriggers when used to protect vessels in storms at sea, and by attaching it to buoys when used to protect lighthouses, hydraulic works in construction,

entrances to harbors, etc. He bases the idea of his invention upon the principle that in covering the surface of the sea with a thin, flexible, light, and floating body of whatever nature, the part covered forms a crust under which the molecules of the imprisoned mass of water can not move in the same manner as the surrounding body of uncovered water, the result being that even the most violent waves, upon reaching the edge of the crust, instead of climbing over it, of breaking or of destroying it, will pass under it as if there were a fall or difference of level, become flattened out, and lose much of their force.

"The net used in the recent experiments at Havre was made of a

NET IN POSITION.

thin hemp fiber, knitted in square meshes of 4 centimeters [1.57 inches], and afterward waterproofed by the application of a solution of powdered cork and pure rubber. The material of the finished net was 3 millimeters [0.12 inch] in thickness and light, weighing only 120 grams [4¼ ounces avoirdupois] per square meter [10.76 square feet]. It was constructed by the Société Industrielle des Téléphones at Paris. The net was 110 meters [360.9 feet] long and 15 meters [49.2 feet] wide, made in four sections, securely fastened together. The two outside sections were 5 meters [16.4 feet] wide throughout the whole length of the net. The middle sections were also 5 meters [16.4 feet] wide, but extended only 30 meters [98.4 feet] from either end, leaving an open space in the center of the net 50 meters [164.4 feet] long and 5 meters [16.4 feet] wide. The inventor's reason for constructing the net with an open space in the center is that in his numerous experiments with the net made in this way, when used for the protection of entrances to harbors, etc., he found the surface of the water enclosed in the free spaces to be always calm, as if it were actually covered by the net. The net with the open space is only used when it is anchored. For the protection of vessels at sea the net is made solid.

"The accompanying sketch shows the dimensions of the net and the arrangement of the buoys by which it was held in position. To illustrate the efficiency of the net in protecting hydraulic works in course of construction from the effects of a heavy surf, Baron d'Alessandro, about three weeks ago, placed his net off the middle of the north jetty of the new avant-port at Havre, which is now finished for about 400 meters. The buoys BB were

anchored in 50 feet of water, at high tide, in a position to secure the head of the net in the direction at the prevailing westerly winds and perpendicular to the jetty; the buoys BB being about 100 meters [328 feet] from it. At first only four buoys were used—BB and BB—but the anchors not being heavy enough to stand the force of the current, the buoys dragged, allowing the net to be slackened and take the form of a crescent. Afterward, the buoys BB were added and the weight of the anchors increased. During a heavy westerly gale recently the net was held in position; but, on account of the seas hurling themselves against the jetty and breaking over it, it was impossible to approach near enough to observe the effects which the net produced upon the portion of water protected. Mr. d'Alessandro is not discouraged by the unsatisfactory results of his experiments at Havre and intends in the near future to place his net in another position, in which, while being exposed to the heavy seas, it can be readily seen from the shore and its action judged. Other trials have been made of the floating net; in 1891 at Quiberon, department of Morbihan, and in 1892 at Cherbourg."

SOME PHASES OF HUNGER.

IT is characteristic of modern scientific investigation that it is not satisfied with our knowledge of the most familiar things, but finds mysteries to solve in every-day objects and in phenomena so close to our daily lives that we hardly realize that there is anything in them to investigate. Such are familiar sensations like thirst and hunger. An interesting discussion of the nature of the former was recently published in these pages, and we now translate an article on some facts connected with the latter, contributed to *Cosmos* (April 7). Says the writer:

"Hunger is a vague and ill-defined sensation, which impels us to take food; the opposite sensation is that of satiety. The first degree of hunger is appetite. The absence of appetite, when it is permanent, constitutes a malady known technically as 'anorexia.'"

"We generally localize the sensation of hunger in the stomach. Nevertheless, the need of eating does not habitually manifest itself by uneasiness in this organ. However, as the taking of food rapidly appeases the hunger, we are led to localize it in the stomach. Schiff has made some investigations on this point that seem to establish the vagueness of this localization. If we inquire of subjects ignorant of anatomy, some will report a general feeling of disquiet, without any clear seat, while others designate the neck or the breast as the locality of the disagreeable feeling that is appeased by taking nourishment.

"It is not always the same; in a diseased state this sensation may make itself felt in various ways. There have been described many abnormal forms of it, such as desire to eat sand or earth, or to drink ink or other repulsive substances. These, however, are rather aberrations of taste than perversions of hunger.

"The following is a special kind of perversion: At the hour corresponding to the need of taking food the normal appetite fails and is replaced by nausea. This state, which masks that of hunger and is its morbid equivalent, ceases when food is taken. It is very important to realize this fact, for when it is not understood there results an insufficiency of nourishment that increases the feebleness and nervousness of the patient."

Two other kinds of hunger are described, we are told, by Drs. Mathien and Beauchant, and have been named "painful hunger" and "agonizing hunger." The need of taking food generally produces secretion of the gastric juice, and with some persons the excess of acid in this fluid causes pain, which may be allayed by taking an alkali to neutralize it. The variety of hunger referred to above as "agonizing hunger" is characterized by painful anxiety of mind. Those who suffer from it fear that some terrible accident is about to happen to them; they break out into perspiration, tremble, and sometimes almost lose their reason. If food is taken, all these symptoms disappear. Says the writer:

"In reality, these persons are suffering from fear of inanition, fear of hunger, in the same way that others suffer from fear of great spaces, of crowds, of public assemblages, etc.

"Many of these victims take the precaution to have food always

within reach. During the day they have bread in their pockets; at night they keep food on a table near the bed. In this way, their minds being at ease, they can go out or sleep without fear, certain of finding nourishment promptly if attacked by hunger. If, on the contrary, they have no food at hand they are disquieted, and this disquietude brings on a crisis. Such persons are usually not great eaters; a very small amount of food suffices to satisfy them.

"The chemical condition of one person suffering from a malady of this sort was, as observed by M. Soupanet at the Andral Hospital, about normal. In two other cases there was a slight excess of hydrochloric acid in the organism, and it is easily understood how such an excess, which often accompanies exaggerated or painful hunger, may become in predisposed persons the occasional causes of crises of 'anxious' hunger. It is, however, not an indispensable factor.

"The different varieties of nervous fear, or 'phobias,' are met with in certain neuropathic persons; they are almost always stigmata of hereditary degeneracy. Thus all persons who suffer from this malady are either nervous invalids, simple neurasthenics, hysterical patients, or actual degenerates."—*Translation made for THE LITERARY DIGEST.*

A UNIQUE ELECTRIC ROAD.

AN electric railway embodying some peculiar and unusual features has recently been installed at Palermo, Sicily. This road, we learn from *L'Énergie Électrique* (condensed in *The Western Electrician*), connects Rocca and Moniale, somewhat less than a mile apart, and has steep grades, from 7 to 12 per cent. These grades were thought to necessitate a variation from simple traction methods, so that a curious combination of cable and trolley has been adopted. To quote the account:

"The system comprises two double tracks, one for the coaches and one about half as wide for the electric locomotive. Two locomotives are connected by a metallic cable passing over a drum at the upper end, as shown in the plan.

"At the lower terminal the descending locomotive motor follows its track, going below the level of the coach, and the latter passes over it.

"These locomotives have single motors of 60 kilowatts, which drive the wheels through an endless-screw attachment and cog gearing. They weigh 7.5 tons each. The coaches weigh 8.5 tons light and 11 tons loaded. These are equipped with two motors of 25 kilowatts each.

"When a coach is ready to rise the grade, it passes the locomotive which is beneath it, and waits a signal from this to the locomotive at the top of the grade. That locomotive comes out of its hiding-place ahead of the car, and starts down the line, and as the two locomotives are connected by cable, this action draws the lower one up from its retreat, and this then pushes the up-going car.

"During this maneuver the locomotive which is descending is the only source of power. When the lower car has reached the summit the locomotive is detached and the car goes through the medium of its own motors over the rest of the route through the city.

"The current used is continuous at 500 volts, and the rails are utilized for a return of the current.

"The sketch will illustrate the description. In its position 1 shows arrival of the coaches at the two terminals of the line (A) and (B). In position 2 the ascending car is ready for the locomotive to push and the descending car is ready to move. In position 3 the ascent and descent commence. The descending locomotive and car are moving independently of each other. Position 4 is the same. In position 5 the end of the grade is reached. In positions 6 and 7 the cars are disengaged and proceed on their trips. The plan shows the system of switching.

"The street line is operated in connection with the street-lighting system and the city lighting generally."

WATCHING PLANTS GROW BY KINETOSCOPE.

THE application of the principle of the kinetoscope to very slow motions, so that a movement that takes several months to accomplish may be exhibited on a screen within the space of a few minutes, is not new. Such an application to the exhibition of plant growth was made in France several years ago and described at that time in *THE LITERARY DIGEST*. But recent great improvements in the mechanism of the kinetoscope have made it possible to use the method for serious study, and it has lately been so used by Charles S. Slichter, who describes his experiments in *Science* (April 6) in the course of an article on "The Mechanics of Slow Motions." He had been studying the slow movement of such viscous solids as clay, or wet sand, which is so important a factor in geological changes, and found difficulty in getting reliable data for his investigations. He says:

"It occurred to me a few years ago that the kinetoscope offered a ready means of securing almost any desired magnification of the rate of these slow motions and thus presented to us a method of securing the lines of flow and rates of motion for any desired case. The method that I selected for that purpose was as follows: Let the moving body be photographed upon kinetoscope film at stated intervals—every few minutes, or every few hours, as the case may require. After a sufficient number of these photographs have been obtained, the film may be run through an ordinary projecting kinetoscope at the usual rate. In this way the motion that has required several weeks for its production may be reproduced upon the screen within the limits of a few minutes or seconds. I have magnified in this way the rate of motion about five hundred thousandfold, but of course there is no major limit to the possible rate of magnification. I made the first application of this method of magnifying slow motions to the motion of growing seedlings. Several peas and beans were placed in a glass root cage containing wet sand. The photographs were taken by artificial light at fixed intervals day and night for about three weeks. When the film is run through the kinetoscope the entire growth for the period of three weeks is reproduced in a few seconds. I found the motions of two peas, which were placed upon the top of the soil, especially interesting. These peas found it almost impossible to get their roots into the soil. In one case the root came out of the top of the pea and made directly for the moist soil. It found this too hard to penetrate, but the root continued to grow, the result being that the pea was rolled about the root cage in a very grotesque manner, the root curving and writhing much like an angleworm struggling to get into the soil.

"The kinetoscope also shows very clearly the different speeds at which the various parts of the plant grow, and the different speeds at which the same part grows at different times. The greatest variety in the rate of growth exists, as I suppose is well known, and of course the kinetoscope brings out the relative rates of growth in a very truthful and graphic manner. I regret that my first film does not show any considerable part of the growth of the stems of the plant, as after growing a few centimeters the stems opened the lid of the root cage and passed out of range of the camera.

"The rather startling results of this method as applied to growing plants has caused me to give some further attention to the matter. At the present time I am preparing some additional films taken from growing seeds. Of course there is no reason why the photographing should not be continued until the plants

have bloomed and fruited, if any fact important to mechanics or botany is likely to result from the trouble. Perhaps botanists know of matters in plant growth and plant development that it may pay them to investigate by the same method. I anticipate that some interesting facts concerning the mechanics of the root's motion into and through the soil will result from such studies.

"I have taken up the work now being done upon living organisms as merely preliminary to the general problem that I have set before me. It must be several months before enough material can be accumulated for a proper discussion of observed and theoretical results in the motions of plastic solids. The actual results may prove disappointing, but this fact can not be determined in advance."

A "CIGAR-SHAPED" TRAIN.

RAILROAD experts have long known that in running at high speeds the chief resistance to be overcome is that of the air. The recent feat of a bicyclist in riding sixty miles an hour behind a moving train has demonstrated the same thing. It has been pointed out that in the case of a train the spaces between and beneath the cars increase this resistance greatly and that for high speeds these ought to be covered over in some way, so that the train would slip through the air as an ocean liner does through the water. Several years ago experiments were made in France with a locomotive covered with a protective shield, but the first practical attempt to carry out these ideas on a large scale has been made by Frederick U. Adams. The construction of his train, which he believes will revolutionize railroading, is thus described in *The Railway World* (May 12):

"A unique railroad train, designed to reduce to a minimum the atmospheric resistance which retards all moving bodies, and which is built on plans prepared by Mr. Frederick U. Adams, was given a preliminary trial last Monday over the Baltimore and Ohio, and, tho the test was not designed to bring out all the capabilities of the train, the results indicate that a new epoch in train operation has dawned. The train consisted of an engine, a tender, and six cars. The engine was one of the lighter variety, and not speedy. What attracted attention to it was the construction of the cars, the body continuing all but to the track, completely hiding the wheels and trucks. The roof line is continuous, and the rear car tapers. These are all features in the reduction of resistance, the shape of the train offering the least possible surface to the draft."

Among other feats accomplished under circumstances not calculated to develop speed, we are told, were runs of $3\frac{1}{4}$ miles in two and a half minutes, 15 miles in sixteen minutes, and 10 miles in eight minutes. West from Washington the train took grades on which two engines are usually required, at 30 miles per hour, three minutes faster than the best regular time. To quote again:

"Mr. Adams believes his method of train construction will eventually be adopted throughout the country, the ordinary coaches being readily altered to fulfil the ideas of the new method. A series of formal tests have been arranged over a course from Washington to Jersey City. There will be three of them. The first will be a full test at a schedule speed of 40 miles an hour. The second will be a speed test, the new train and one of the ordinary make, with engines of similar weight and equal trains, going to the limit of their ability over the same track. The third will be as well a speed test, but, instead of an ordinary engine, one of the great Royal Blue flyers will draw the train, and Mr. Adams fully expects the result to be a speed that has never been equaled in the history of railroads. After these trips the train will be taken westward, and similar trials will be made on the roads leading out of Chicago. Mr. Adams has spent the last six months superintending the construction of the train at the Mount Clare shops of the Baltimore and Ohio Railroad. His theories were scientifically demonstrated a number of years ago, but the train which pulled out from Camden Station last Monday was the first ever in operation, and the inventor was jubilant at this practical demonstration of his claims."

The Longest Bridge Span.—The honor of possessing the longest span in the world, which was wrested from the Brooklyn Bridge by the Forth Bridge, is again to return to this Continent, altho not to the United States. This great span will form part of the new bridge across the St. Lawrence at Quebec, Canada. Says *The Scientific American*:

"The Brooklyn Bridge measures a few feet under 1,600 feet between the towers; the new East River Bridge between the same points of measurement will be exactly 1,600 feet; the two main spans of the Forth Bridge are 1,710 feet in the clear, while the great bridge now to be erected across the St. Lawrence at Quebec is to have a central span of 1,800 feet. The securing of the contract by the Phoenix Iron and Steel Company, of Phoenixville, Pa., is another distinct tribute to bridge-builders of this country; for it is certain that the award of a \$4,500,000 contract for the erection of a bridge on British territory would not have come to this country if the British bridge-builders had been able to offer superior inducements in the way of design and economy.

"It is significant that in spite of the oft-repeated statement that all subsequent bridges of this magnitude would be constructed on the suspension principle, the new Quebec bridge is to be of the cantilever type. The old objection of lack of stability which formerly held against suspension bridges has disappeared. The principles of the suspension type are better understood, or, shall we say, better applied, than they were, and with the improved materials that are now available, it is possible to give suspension bridges of the largest size all the rigidity which can reasonably be asked for. As regards the question of economy, the cantilever is by far the more costly type, the difference in cost increasing at a multiplying ratio of the increase in length. In view of this fact it is probable that the adoption of the cantilever type at Quebec was due to the local conditions."

SCIENCE BREVITIES.

THE following method for determining the age of eggs is practised in the markets of Paris, according to the *Bäcker- und Konditor-Zeitung*: "About six ounces of common cooking-salt is put into a large glass, which is then filled with water. When the salt is in solution an egg is dropped into the glass. If the egg is only one day old it immediately sinks to the bottom; if any older it does not reach the bottom of the glass. If three days old it sinks only just below the surface. From five days upward it floats; the older it is the more it protrudes out of the water."—*Translation made for THE LITERARY DIGEST.*

A PECULIAR condition of the hair in a negro child is described by a physician in Trinidad, West Indies. Says *The Medical Record* (May 5): "The hair grows luxuriantly and separates itself into thin rope-like strands, made up of closely interwoven meshes. The strands measure from six to twelve inches in length. The parts nearest the skull are black; the distal ends are a pronounced red, due to the exposure to the sun. The condition is congenital. There is much superstition among the natives affected, and children are obliged to carry this abnormal mass until they are old enough to cut it away with their own hands. After cutting, the condition does not recur."

"ELECTRICAL power transmission has been developed to a really remarkable extent in this country, if we can trust a report of a lecture by Sir William Preece that appears in the English journals," says *The Western Electrician*. "The genial and versatile lecturer is credited with this statement: 'The waterfalls of the Highlands may work the tramways of Glasgow; Niagara already works those of Baltimore.' Inasmuch as Baltimore is 23 miles from Niagara Falls as the crow flies, we believe the statement to be incorrect. Very likely Buffalo is the city intended to point the moral, and the error probably, and perhaps not unnaturally, arose from the fact that the United States is a large country, and the further coincidence that the names of both the cities begin with the same letter."

"PROF. MIGUEL MARAZTA has made what seems a curious anthropological discovery in the valley of Rebas (Gerona), at the end of the Eastern Pyrenees," says *Omnia*. "There exists in this district a somewhat numerous group of people, who are called Nanos (dwarfs) by the other inhabitants, and as a matter of fact are not more than four feet in height. Their bodies are fairly well built, hands and feet small, shoulders and hips broad, making them appear more robust than they really are. Their features are so peculiar that there is no mistaking them among others. All have red hair; the face is as broad as long, with high cheek-bones, strongly developed jaws, and flat nose. The eyes are not horizontal but somewhat oblique, like those of Tartars and Chinese. A few straggling, weak hairs are found in place of beard. The skin is pale and flabby. Men and women are so much alike that the sex can only be told from the clothing. Tho the mouth is large the lips do not quite cover the large projecting incisors. The Nanos, who are the butt of the other inhabitants, live entirely by themselves in Rebas. They intermarry only among themselves, so that their peculiarities continue to be reproduced. Entirely without education, and without any chance of improving their condition, they lead the life of pariahs. They know their own names, but rarely remember those of their parents, can hardly tell where they live, and have no idea of numbers."

THE RELIGIOUS WORLD.

SOME RESULTS OF THE METHODIST CONFERENCE.

THE early report that the younger and more progressive element had gained control of the great quadrennial conference of the Northern Methodist Church in Chicago is believed to have been amply confirmed by the radical acts of the conference in admitting the lay delegates to equal representation with the clergy and in admitting women delegates; by its large (alho insufficient) vote for a negro for bishop; by the decision

ever since. He is the author of the following works: 'Jesse Lee and the Old Elm,' 'People's Church Pulpit,' 'Lives of the Methodist Church Bishops,' and 'Fraternal Greetings: The Church in Ireland and England.'

"David H. Moore, of Cincinnati, editor of *The Western Christian Advocate*, was born near Athens, Ohio, September 4, 1838. He was appointed to the Bainbridge circuit as junior preacher in 1860, having been graduated from the Ohio University. In 1861 he was stationed at Marietta, Ohio, but a year later entered the Union ranks as a private soldier. He was elected captain of Company A, Eighty-seventh Ohio Volunteer Infantry. He was made prisoner at Harper's Ferry, but was exchanged, and later assisted in forming the One Hundred and Twenty-fifth Ohio Volunteers, in which he rose to the rank of lieutenant-colonel.

THE NEW METHODIST BISHOPS.

that church papers must be put on a paying basis or stop publication; by the removal of the time limit from the pastoral term, and by the movement to relax the ban on questionable amusements, which was defeated only by a very narrow majority.

The long balloting for the two new bishops, which consumed nearly a week, aroused considerable interest all over the country, and presented several picturesque features. Before the voting began the conference decided that a negro could hold the episcopal office, and many took it for granted that J. W. E. Bowen, the only negro candidate, was sure of election; but after holding a prominent place on the first few ballots his vote began to fall off, and he withdrew. J. F. Berry, the leading candidate on the first thirteen ballots, reached the conclusion that it was his candidacy that was the cause of the long deadlock, and withdrew from the race, so that he, too, the other candidate who seemed certain to be made bishop, failed of election. The careers of J. W. Hamilton and D. H. Moore, who were elected, are sketched as follows in the Chicago despatches of the Associated Press:

"John William Hamilton was born in Lewis County, Va., March 3, 1845. He was graduated from Mount Union College, Ohio, in 1865 with the degree of A. B., and from the Boston University in 1875 with the degree of D. D. During his career he has been financial agent of Mount Union College, pastor of a church at Newport, Ohio, and at Malden, Mass. For twenty-five years he had been a prominent preacher in and near Boston. In 1892 he was elected corresponding secretary of the Freedman's Aid and Southern Education Society, and has held that position

He followed Sherman on the march to the sea, and at the conclusion of the war returned to his ministerial duties. During his career later he served as president of Wesleyan College for Women at Cincinnati, as chancellor-president of Colorado Seminary, as chancellor of the University of Denver, and as editor of *The Western Christian Advocate*, to which he was elected in 1884. He is recognized as one of the greatest pulpit orators of the church, and in the present conference came out as the champion of the rights of women in the General Conference."

F. W. Warne, pastor of the English Church of Calcutta, and E. W. Parker, president of the Epworth League of India and presiding elder of the conference of North India, were elected as additional missionary bishops in the Orient without opposition.

The interesting fact brought out in the course of the conference session, that nearly all the church periodicals are published at a loss, has occasioned some surprise. Of the fifteen official papers of the church, it is said, only two, the *New York Christian Advocate* and *The Epworth Herald*, of Chicago, are financially profitable. The other thirteen have lost \$108,000 during the last four years. The policy which the conference has decided to take toward these publications is to consolidate unprofitable papers in neighboring fields, or allow the local conferences to guarantee their support, or, where these methods fail, to discontinue publication. A writer in the *New York Evening Post* notes that other denominations have had to meet the same problem. He says:

"The Unitarians faced this exigency a few years ago, and *The*

J. W. E. BOWEN,
The negro candidate for bishop.

Christian Register now is kept up to its present standard because it is endowed. Within five years the *New Hampshire Journal*, the *Vermont Chronicle*, and *The Christian Mirror* of Portland, Me., organs of the orthodox Congregationalists of Vermont, New Hampshire, and Maine, have avoided death by being merged in *The Congregationalist*; and *The Religious Herald* of Hartford, Conn., a similar mouthpiece, has died recently of inanition. Within ten years *The Christian Inquirer* of New York City and *The National Baptist* of Philadelphia have been merged with *The Examiner* of New York. Three years ago the Universalists decided that the only way for their denomination to have a worthy organ was for *The Christian Leader* and *The Universalist* to unite. Many rivals of *The Churchman* have come and gone, and great sums have been sunk, first and last, in Protestant Episcopal journalism in New York City, but to-day the entire Eastern field is left undisputed to *The Churchman*, its last prospective rival, *The Church*, of Boston, living but a brief career."

The same writer goes on to sketch the reasons, as he sees them, for this falling-off in the support of the religious press. First, he says, "there is the waning of sectarianism"; second, the multiplication of journals edited by specialists. For theology, the reader can turn to special theological journals; for literary criticism, to literary journals; for agriculture, to the farm journals. "Or," he continues, "does the reader want editorial comment on the news of the world that formerly was deemed so wicked by the *New York Observer* that it printed it apart in its secular department, and warned its readers not to read it on Sunday, why there are *The Outlook*, *The Independent*, *THE LITERARY DIGEST*, *Public Opinion*, and *The Christian Herald*, which latter, with its cheap price, its 'up-to-date' daily newspaper methods, its many illustrations, and its continuance of the old custom of offering premiums to subscribers, has probably done more to make 'hard sledding' for the conventional religious weekly than any competitor which they have had of late."

The third reason, he believes, is the fact that the day of masterful, dominating personalities in journalism has passed; and the fourth, that the illustrated monthlies and weeklies are proving formidable competitors for the religious papers. Yet, he concludes, as long as denominations exist, denominational papers will be needed, and "on this basis it is presumable that a few religious weeklies will find it possible to survive, but whether as privately owned or as subsidized properties is an unsolved problem, about which prophecy is difficult. Obviously, the journals which are conducted with the most catholicity of spirit, the greatest range of news, the freshest setting forth of new methods of carrying on church work, will succeed best."

Church Union in Scotland.—The death of the Duke of Argyll, himself an early upholder—tho not a member—of the Free Church of Scotland, which separated from the Established Presbyterian Church in 1843, is coincident with a far-reaching effort among the Scottish ecclesiastical bodies looking toward reunion. Influences have long been at work tending to a union between the Free Church and a still earlier seceding body, the United Presbyterian Church—the two largest dissenting bodies in the kingdom. Both these secessions from the Established Church were due, not to doctrinal differences, but to disputes relating to administrative details. A day has now been set—October 31—for the first meeting of the representative body of the "Free United Church of Scotland," and arrangements have been made for theological teaching in the new denomination.

There is a possibility, according to the *London Times* (April 20), that this union between the Free and the United churches may be followed by other movements in behalf of union. The Laymen's League, an influential association composed of all the Presbyterian bodies of Scotland, has lately issued a manifesto in favor of the organic reunion of Presbyterians generally. Indeed,

reunion may go still further. The Scottish Episcopal Church, says *The Times*, has recently been making enormous strides in the good graces of the people, particularly of the more cultured classes. Upon this interesting development *The Times* remarks:

"There have been private conferences of late among Scottish Protestants of all denominations with a view to promoting 'the reunion of Christendom,' and it is not impossible that these may bear fruit, more especially as very cordial relations exist between Anglican laymen and the rank and file of the Church of Scotland. It is suggested that overtures for establishing closer relations between the two communions may be made from the Church of Scotland ere long. The hint has even been thrown out that the lead in this new movement may be taken by the Rev. Dr. Marshall Lang, a popular minister of the Establishment, whose recent appointment by the secretary for Scotland as principal of Aberdeen University has proved very popular, and one of whose sons is a distinguished clergyman of the Church of England. But nothing has been decided on by the leaders of the church."

PROTESTANT BEGINNINGS IN THE PHILIPPINES.

THE impression that the Filipinos are eager for some new form of religion is not sustained by the latest reports of careful observers. Bishop Potter's views on this subject were recently quoted in these columns (see *THE LITERARY DIGEST*, April 14). The special correspondent of *The Standard* (Baptist, April 14), writes from Manila that, tho in the case of many individuals this eagerness exists, the mass of the people are not less devoted than in the past to the Roman church:

"The Filipinos love the Roman church, but loathe the Roman friars. This distinction is clear and perfectly understood here. The church is not held responsible for the crimes of the priesthood. Should the ecclesiastical authorities decide to deport the friars and discontinue the monastic orders in the Philippines, substituting secular priests in their stead, the native population may still be regarded as devoted Romanists. The opposition to friars really became threatening in the year 1876, when three secular native priests were strangled at Cavite after having been found guilty of sending in to the archbishop a protest against the friars, at the same time alleging gross immoral conduct on their part.

"I was recently presented with a cane from the upright timber of the garroting-machine upon which these Filipino padres were executed. From that hour to this popular feeling has grown hostile to the three orders of Dominicans, Augustinians, and Recollectans. As I have before observed, this hatred has not extended to the Jesuits.

"Now this may be a promising Protestant field, and it may not be. I should say that a church with democratic forms of church government would not find in the Filipino the proper temperament for easy control, after a traditional discipline of 300 years under monarchical forms. If congregational bodies gain a foothold, it will be by corporate centralization, when questions of property rights are involved. The Filipino is a weak, passionate, jealous, and revengeful character. He is withal intellectually bright. He is a brighter and morally a better man than the Cuban, and in saying this I am but repeating what Admiral Dewey has long ago said."

The writer pays high tribute to the work of Chaplain C. C. Pierce, once a Baptist, but now an ardent high-church Episcopalian:

"Upon arrival here in the autumn of 1898 he addressed himself to the task of acquiring a mastery of Spanish, and he succeeded, and is able to preach fluently in that language. In addition to his numerous duties, he sought to reach the Filipino by conducting complete Episcopal services in Spanish, and in this way influenced not a few publicly and over their own signatures to renounce Romanism. So far as practicable, he conformed to their religious notions, and, accordingly, made his altar gleam with many candles. Episcopalianism have themselves expressed surprise at the splendor of ceremonial to be witnessed at the Anglo-

American Church. Some thousands of dollars now stand to the credit in the bank of this congregation.

"Chaplain Pierce is now in the United States, and is expected to return to Manila with a large sum of money with which to erect an edifice and found a school. Not only does he attract the Filipino, but during his absence Chaplain Marvine has received into that communion several of the wealthiest Chinese in Manila, who have heretofore been at least nominally Roman Catholic. I have only words of commendation for the work that has been done by the Anglo-American Church, tho I am too much set in nonconformist ways to fully appreciate the methods adopted in this propaganda. I am so desirous that something shall be done for the good of this great city that I do not find it in my heart to criticize methods. Time will disclose the wisdom or unwisdom of these. Prophecies are not in order."

Concerning the work of other denominations, the writer says:

"The Methodist Episcopal Church has made a small beginning at the Plaza de Goiti under Dr. Goodrich, of the American Bible Society. A small day-school is in operation and a hall open to soldiers constitute the present limits of the effectiveness. A service is also held here in Spanish, and Filipinos in considerable numbers frequent the 'Institute.' The Presbyterians have organized a church, which meets at No. 69 Calle Nueva, Ermita. Spanish services are also held regularly at this mission. This is very new interest, and its history is yet to be made.

"Besides these organized efforts, there are a few independent workers who are doing I know not what in various parts. The religious crank is already upon the ground, who is addressing himself to the employment of distributing anti-Romish literature upon the street corners. He would gladly destroy the faith of the simple-minded native, tho he has nothing visible to offer instead. Some of his tracts are highly inflammatory, and deal with certain priestly scandals of which the Filipino has in his own experience probably been surfeited. To this irresponsible propaganda I am opposed. This does not help in any direction whatsoever. On the contrary, actual harm is done. Who is sufficient for these things in the Philippines? Who will solve these burning problems? Who will bind up these broken hearts? Who will pour wine and oil into these festering wounds?"

The Rev. Joseph M. Alque, S. J., director of the observatory at Manila, takes a different view of Chaplain Pierce and his work. Writing from Washington, where he is at present engaged in a scientific mission, Father Alque says (New York *Sun*, April 4):

"Mr. Pierce might properly have confined himself to his duties as a regimental chaplain; but from the beginning he has been the pastor and servant of all sorts and conditions of men, organizing a congregation for the citizens of the United States, another for the Filipinos. Certainly Mr. Pierce might properly have confined himself to his duties, and I have heard very prominent American officers complain that the American Government did not need to have a man in Manila organizing religious congregations of a special sect, as the American law extends equal protection to all religions, more particularly if the organization interferes, as it does, with the duties of a regimental chaplain. It was considered creditable and honorable to the Catholic chaplains of the army to see them always devoting themselves to their regiments. About the work of Mr. Pierce, I can only say that many natives mistook him for a Catholic chaplain, as he used to carry a crucifix in his uniform, and I was told that in his chapel he used candles, incense, and so forth, and also that he asked for a fee in case of a marriage. Now, ordinary people can scarcely distinguish refined differences of worship and religious doctrines. I will quote only one case, in which I had to intervene. A young Catholic man applied to Chaplain Pierce and was married by him. The man, realizing that he, Mr. Pierce, was not a Catholic priest, and that he had done wrong, became sorry for it, tried to excuse himself on the pretext of the fee, and applied to his own parish priest. I was told that this instance had been repeated many other times. It is also true, unfortunately, that some knew that he was not a Catholic chaplain, and nevertheless followed him, but such men are well described by Mr. William E. Shunk, Engineer, U.S.A., in his report, 'Intercontinental Railway,' vol. ii., p. 28. Speaking about the Indians of Colombia, he says: 'Religion in these countries is the Roman, Catholic, Apostolic, exactly adapted to the genius of the race. It is a deplorable fact that the few who reject it do not ex-

change it for other forms of belief, but appear to drop right down into the gloomy pit of materialism.' The few Filipinos who followed the Protestant chaplains in the Philippine Islands are of this very sort."

THE PRESBYTERIAN ASSEMBLIES.

A GROUP of Presbyterian assemblies have been in session during the past fortnight, including the Presbyterian Church North in St. Louis, the Presbyterian Church South in Atlanta, the United Presbyterian Church in Chicago, and the Cumberland Presbyterian Church in Chattanooga. Of these the General Assembly at St. Louis is the most important and influential, representing the supreme governing body of a church organization with nearly a million communicants and over seven thousand ministers. There were present more than five hundred ministers and elders, and Dr. Robert P. Sample, of New York, the retiring moderator, delivered the opening sermon. The Rev. Dr. Charles A. Dickey, of Philadelphia, was elected moderator. His election is accepted by the Philadelphia *Evening Bulletin* "as evidence that the conservatives who oppose the revision of Presbyterianism's historic creed are in the majority at the St. Louis gathering." An "added honor" was conferred upon Philadelphia by the selection of that city as the seat of the next General Assembly.

REV. DR. CHARLES A. DICKY,
The new Moderator of the Presbyterian General Assembly.

The question of Sunday observance came up early for discussion, and radical resolutions were adopted declaring against the purchase and reading of Sunday newspapers, and against "all forms of excursions, sports, and amusements" on that day. The Assembly went so far as to request the St. Louis newspapers to omit all mention of its sessions in their Sunday editions. The Chicago *Evening Post* voices vigorous dissent from this action, and declares:

"The question of Sunday observance came up early for discussion, and radical resolutions were adopted declaring against the purchase and reading of Sunday newspapers, and against 'all forms of excursions, sports, and amusements' on that day. The Assembly went so far as to request the St. Louis newspapers to omit all mention of its sessions in their Sunday editions. The Chicago *Evening Post* voices vigorous dissent from this action, and declares:

"To make the day of rest insufferably dull is the best way to promote, instead of preventing, desecration. . . . What will be the effect of such a newspaper policy as is proposed? The Sunday editions will continue, but the amount of good, improving, inspiring matter will be considerably reduced! Would this conduce to the promotion of morality and the strengthening of religion?"

On the other hand, the Indianapolis *Aetna* says:

"We may not with impunity deny to the race an opportunity for meditation, for rest from turmoil, as well as toil, a time in which the better part of man shall have a chance to build itself anew, to add to the strength of the moral nature. We need the just medium. We need a condition of things in which the man who works shall have a time for rest—rest of mind and of body. We might have got on further in the right way if the churches had given fuller life to their belief in this regard. If we are not to have the churches as a source from which a living impulse shall come to preserve to mankind one day in the week of freedom from work and opportunity for rest, where shall we find that source? Verily, the Sunday question is something that the

churches everywhere could profitably consider, not merely by way of definition, but as an exercise of religion."

The most important matter before the Assembly is the question of creed revision. After lengthy discussion, which has been foreshadowed in the religious and secular press during many months past and recorded in these columns, it was decided by an almost unanimous vote to appoint a committee of fifteen to inquire of the presbyteries concerning their views as to a revision of the Westminster Confession of Faith, to report to the Assembly in 1901. It is probable, therefore, that the chief subject of discussion in the Northern Presbyterian Church during the coming year will be that of creed revision.

On the other hand, no action nor even discussion of this subject has arisen in the Southern Presbyterian Assembly. The Presbyterian Church South, which constitutes a distinct religious denomination, is, as is well known, much more conservative than the Northern Church. An overture from a presbytery in Brazos, Texas, asking the Assembly to modify the statements of the Confession regarding the eternal damnation of non-elect infants, was reported negatively by the committee to which it had been referred, and a resolution was adopted precluding the possibility of any discussion over the Confession.

The Cumberland Presbyterian Church, which was founded early in the century partly in protest against some of the extreme Calvinistic views of the Presbyterian Church, has always rejected what it terms the doctrine of "fatality" in the Confession, and naturally its sympathies are with the revisionists of the older body. Its sessions have been largely devoted to matters of administration, to educational questions, and to missions.

In the General Assembly of the United Presbyterian Church at Atlanta, questions of a doctrinal nature have not been under discussion. A substantial increase is reported in the membership of this religious body, which numbers about 118,000 communicants.

THE MOVEMENT TOWARD ROME.

THE discussion of the "Away-from-Rome" agitations, especially as seen in the religious life of Austro-Hungary and France, has in recent months been so prominent a factor in scores of journals that a counter-agitation, namely, one in the direction of Rome, has been rather overlooked. Even aside from the ritualistic movement in England, there has been evident in some circles a certain trend that has carried those whom it has influenced back into the fold of the Roman Catholic Church. A series of special articles has lately appeared on this subject by the noted German *littérateur*, Hans Fischer, entitled "Die Hin zu Rom-Bewegung," as illustrated especially by the conversion of the gifted but revolutionary Swedish poet, August Strindberg. This is all the more timely as it appears at the moment when the Protestants of Germany are chagrined to learn that Frau Gnanck-Kühn, the leading woman representative of the Protestant agitation in favor of Christian Socialism, whose addresses in past years at national Protestant conferences had been resounded throughout the Protestant church, has recently become a convert to Rome and is anxious to publish in Protestant papers, too, her reasons for this step. Fischer in discussing this movement says substantially as follows:

In contrast to the away-from-Rome agitation, as seen in its greatest potency in Austria, it is perfectly correct to speak of a movement toward Rome among certain classes of literary men of our day, and as is usual in the case of extreme and radical movements in literature, this too has come via France, and this country has furnished the first and most noteworthy examples of the agitations. Paul Verlaine, probably the greatest of modern French lyric poets, shortly before his death found his way back to the fold of the only saving church. Huysmans, one of the most consistent and persistent writers of the naturalistic school in France, even more pronounced in his naturalistic philosophy

than Zola, has become a monk. The genial humorist, Joséphin Péladon, already for years, and especially in his fourteen-volume novel cycles "La Décadence latine," preaches the gospel of a return to Rome as the only salvation for the Latin races. Barbey d'Aurevilly, who is highly esteemed in these literary circles, openly avows his preference for the same church. But the movement has overstepped the boundaries of France. The most recent converts from this class of writers have been Ola Hansson and the Swedish poet, August Strindberg, the great skeptic and eternal doubter, for many years the rabid protagonist of the most destructive ideas in religion, politics, and Socialism. His character and conversion are typical of this Romeward movement. Strindberg has in recent years attained a somewhat international reputation for the brilliancy of his poetical productions and for his bitter attacks on "society," "marriage," "morals," and other fundamentals of the present social fabric. In his remarkable work entitled "Legends," he tells us how he learned that the ideas of right and wrong were perfectly indifferent conceptions, and that morality was philosophically and practically nothing. His career outwardly has been as varied as his inner development. In the fifty years of his life he has been a public school-teacher, an actor, a physician, a telegraph operator, a preacher, a newspaper man, an artist, a private tutor, a librarian, and a chemist. In some of his more recent works, such as "To Damascus," and "Before a Higher Judge," he has shown some signs of sober reflection, and now this reaction has ended with his entrance into the Church of Rome.

Why do such men as Strindberg, when they break with their own past, find their way into the Roman Catholic Church? The greatest mistake would be to imagine that this is caused by a reawakened conscience. In not one of these cases have any religious motives been made a prominent factor or force in this singular step. A psychological analysis of their change leads to entirely different agencies. Their original naturalistic and radical ideas and ideals can not end otherwise than in a perfect wreck of their physical and mental natures. At bottom they were men devoted to sensualism, and their end is bankruptcy. What they want is an opportunity to rest, to recuperate, to have the opportunity to be restored to health of body and mind. To obtain this they cast themselves into the arms of Roman Catholicism, and they seek in this communion not religious but only esthetic help. The magnificence of the Roman Catholic cultus, the incense of the service, the lack of all appeal to their own activity of thought, the perfect guardianship assumed by the church over its adherents, give them the opportunity they want. Protestantism under these circumstances they hate, as it makes demands on their will and insists on moral energy. These men, tired of their own wild mental career, want rest; they desire to sleep and to dream; and for this purpose they prefer the Roman Catholic cultus.

Several years ago the Norwegian poet, Arne Garborg, published a novel in which he pictured the soul career of such characters, and significantly called his book "Tired Men." In reality it appears in this work as in the cases mentioned, that the nervous disorders of these men have more to do with their conversion to Rome than the religious teachings and tenets of the church herself. In close connection with this fact is the notable phenomenon in modern literature, especially in Germany, that while there is no Romeward tendency on a large scale noticeable, nevertheless there is a pronounced revival of interest in romance and mystic literature, which in earlier periods has gone hand-in-hand with a revival of a Roman Catholic propaganda in literary circles.

RELIGIOUS NOTES.

THE latest official Roman Catholic census, which is very carefully prepared, shows a surprising strength of that church in this country. There are altogether 10,122,677 Roman Catholics in the United States. In the archdiocese of New York alone (not the province) there are 825,000—more than all the Protestant Episcopalians in the United States, more than all the Congregationalists by 200,000, and much more than any of the separate Lutheran bodies.

In a pamphlet on "Atheists and Agnostics," Mr. F. M. Holland tells of a sexton who, when asked by the rector why a certain wealthy parishioner had ceased coming to church, and whether the neglect was due to Latitudinarianism, replied, "No, sir; it's wusser nor that!" "Then it must be Unitarianism?" "No, sir; wusser nor that!" "Ah! Perhaps it is agnosticism?" "Oh, no, sir! It's wusser nor that!" "But it can't be atheism?" "No, sir! It's wusser nor that!" "But there can't be anything worse than atheism." "Oh, yes, sir! It's rheumatism."

FOREIGN TOPICS.

THE BOER DELEGATION.

RARELY has the voyage of a little knot of persons been watched with greater interest by Europeans than the trip of the Boer emissaries to the United States. It is admitted by most European writers that an American President has no greater right to plunge his country into a war with doubtful issue than has a European monarch. A few sarcastic individuals wonder whether American humanitarianism goes far enough to ab-

EQUIVOCAL KINDNESS.

MR. KRUGER: "Dot vas very kind oph you to make dose appeals on behalf of my oppressed country."

MR. BRYAN: "Oh, that's all right, Colonel. I only hope the Republicans don't do the same thing."

—Montreal Herald.

sorb a couple of states despite the claims of Great Britain; and hint that these states might object to Anglo-Saxon domination in their internal affairs as much if the suzerain were American as if it were English. Others, again, assuming that the British empire has proved itself unable to carry on a war against a great power, in this struggle with a handful of patriotic white men in South Africa, suggest that the United States should help the Boers and annex Canada for our trouble. The British papers, on the whole, consider reference to our attempt to crush Filipino hopes for independence as sufficient to deter us from interfering with Britain's efforts to civilize the barbarous Dutch. *The St. James's Gazette*, which has always argued along this line, ridicules the thought that Americans would listen with more than passive sentiment to people whose mother tongue is not English, and says of the Boer emissaries:

"It is to be feared that their European trip has been a disappointment, and we have a shrewd idea that they will get but cold comfort from the hard-headed Anglo-Saxons on the other side of the Atlantic. They will get warm expressions of sympathy no doubt in various quarters, but soft words will not stay the march of Roberts and Destiny. It must, however, be disappointing to some of our friends in this country not to have had an opportunity of entertaining these gentle Boers at St. Ermin's Hotel. Messrs. Fischer and Wessels are themselves devotees of 'accurate information.' Mr. Fischer has explained that their purpose in going to America is 'to rectify erroneous opinions and to make known the truth.'"

In *The Nineteenth Century*, a magazine hardly second in influence to *The North American Review*, the *Deux Mondes*, or the *Deutsche Revue*, an American named Bowers, after repeating the accusations against the Boers with which every reader of current English literature is familiar, declares that the United States will not interfere because she is the natural heir of the British empire. *The Toronto Globe*, one of the largest and best edited of Canadian papers, says:

"There are only two ways in which the Boers can hope the United States may help them: either (1) by asking Britain to stop the war, or (2) by making war against the British to help the Boers. . . . But the country that was mainly preserved from any such interference during her war with Spain by British firmness is not very likely to interfere in the South African war at the bidding of the Boers. Interference with military force is a still wilder and more absurd idea. That the nation which is still fighting to subjugate the Filipinos should make war against Britain, to prevent her defending her people and the interests of justice and civilization in Africa, deserves no answer."

In another issue *The Globe*, which is edited very much after the pattern of the *New York Herald*, admits that a large number of the best Americans oppose Great Britain in the Boer war on purely ethical grounds, without the slightest doubt that the English-speaking peoples are at least equal to any others.

It would be useless to deny that English-speaking Americans stood high in the estimate of the Boers. They have always received preference where English-speaking officials were required, and, except in the case of capitalists, have been treated with great consideration. Even men like Mr. Lionel Phillips escaped hard punishment for siding with the Rhodes faction at the time of the Jameson raid. The appeal of the delegates of the Boers, set forth in the following summary taken from the *Paris Gaulois*, is therefore based upon reciprocity:

"We go to ask the Americans to help us in ending this cruel war, they whose countrymen are fighting and dying on our side. . . . We go to tell them that we are willing to put our quarrel before a tribunal of arbitration. . . . We are willing to let the United States judge our case."

The *Paris Journal des Débats* says:

"It is, of course, quite possible that the Americans may interfere. In that case the love of the Boers will only be equal to the disinterested sympathies which enabled the Americans to vent their dislike of Spain. The question simply is whether the United States thinks the time has come to settle a boundary quarrel which sooner or later must be attended to."

On the whole, however, it was doubted even before the Boer

THE MAN ON THE FENCE.

PAUL KRUGER: "Say, you kin annex these two watermelons."

UNCLE SAM: "Yes, sonny, but who'll annex the bull-dog?"

—Montreal Telegram.

deputation left Europe that the United States Government would intervene.

"The members of the deputation," says the Amsterdam *Han-delsblad*, "do not despair of the Boers' ability to hold their own. Why should we? Their own intrepid courage is the Boers' best and only protection against brutal Britain." The Amsterdam *Wochenzeitung* publishes a statement by the delegates, from which we take the following:

"1. Altho disturbed, the position of the Boers was not desperate when the deputation left, as Lord Roberts has found out since then. 2. There is no disagreement among the Boer leaders. Nothing but the tenfold numerical superiority of the British gave Roberts his slight advantage. 3. The foreigners—especially the Germans—fight well. The pity is, there is not enough of them. 4. They will be looked after in the same way as the Boers, after the war. 5. Johannesburg is safe unless strategical reasons lead to its destruction. 6. Foreign shareholders of mines will not suffer seriously if the Boers win. 7. The Boers will not leave the country if vanquished. It would take a couple of soldiers to each Boer to enslave them as is contemplated. 8. The English will oblige by exhibiting explosive or expansive bullets fitting any rifles except their own. 9. Even if the Boers are beaten, Britain will not profit in the way of business. Boer men and women will pay a shilling more for German, American, or French goods rather than buy an article of British manufacture, as they are convinced that nothing but British greed has caused the war."

There is little, if any, chance that the government of any European country will interfere. The Munich *Vaterland* says:

"The facts are enough, and the facts are that 250,000 British are sent to kill or imprison 50,000 Christian people, of good Teutonic stock. But 'civilized,' 'humanitarian' Europe does not raise a finger; some of the powers even assist the British murderers. Fle!!"

Like the French in the times of our own struggle against Britain, the Russians are deeply moved. Not a single Russian paper defends Britain's attitude, and many demand armed intervention on the part of the big northern empire. The St. Petersburg *Novoye Vremya* says:

"The best intervention would be if somewhere else in the world Great Britain had to defend herself. Not much is needed. If Great Britain can not send additional troops to South Africa, if she is forced even to withdraw a few battalions, the Boers would be sufficiently relieved."—*Translations made for The Literary Digest.*

BRITISH VIEWS OF THE TURKISH-AMERICAN DIFFICULTY.

THE United States having renewed the pressure upon the Sultan in connection with the Armenian indemnity claims, the attitude of the European powers having special interests to promote in Turkey becomes a question of some moment. Russia is supposed to have designs upon the Sultan's territory in several quarters, and she always displays keen concern in matters affecting the "sick man" of the near East. Her leading papers have commented on American threats against the Porte in a sharp and hostile tone. Here is the view expressed by the *Novoye Vremya*:

"Turkey can escape unpleasant reprisals, in the shape of an American naval demonstration in her waters, by turning for mediation to the power nearest to her. The Sultan's recent irade granting Russia special privileges in Asia Minor as regards railway construction shows that our friendship is appreciated on the shores of the Bosphorus. Further cementing of good neighborly relations is of course highly desirable alike to us and to Turkey. In the interest of peace, the chief preserver of which is Russia, it is necessary to avert all acute conflicts. In all that relates to the near East, where the equilibrium is not characterized by complete stability, and where the least disturbance might lead to serious complications, it behooves Russia to be particularly attentive."

"On the basis of the convention elaborated at The Hague,

which allows mediation and friendly interference in international disputes, it is possible to take a hand in the present controversy. This would maintain the peace and relieve our old neighbor, Turkey, from her difficulty."

More emphatic are the comments of the *Novosti*, which says:

"Having extended her sphere of activity, the United States must of course submit to the terms of the European international code. Turkey was admitted at the Paris congress of 1856 into the European union of nations, and she had representatives at The Hague. Therefore she must be treated like any other European power. . . .

"Europe is not in the habit of looking with indifference on events in Turkey, and the appearance of an American squadron in one of her ports would create an impression far from agreeable. She is not another China. It is to be hoped that at Washington common sense will prevail over all other influences. We must either recognize that the difficulty with Turkey is susceptible of adjustment by arbitration, and in that case the convention concluded at The Hague must be applied, or else it is to be concluded that the United States is simply seeking a pretext for intermeddling in the purely European Eastern question."

"In either case, it will be the duty of all the European powers to take measures to protect their legitimate interests. Turkey is under European guardianship, and it will therefore be necessary for the United States to reckon, in some way or another, with the wishes of the former power's trustees and guardians. If the Porte deems the American demands excessive and unjust, it can ask any of the governments to undertake a settlement by mediation. Should this fail of the desired effect, the Porte can, and is entitled to, ask for the reference of the issue to an arbitral tribunal."

The *Novosti* accuses England of egging on this country to extreme measures in the hope of diverting attention from South Africa and involving the United States in still greater entanglements.—*Translations made for The Literary Digest.*

THE FAMINE IN RUSSIA.

WHILE large sums are being collected for the starving millions in India, it is almost forgotten that Russia, too, is suffering from a famine, which has become chronic in some of the southern and southwestern provinces. A correspondent of the Berlin *Roersien Courier* blames the great landowners mainly for this state of things. We summarize as follows:

It can not be said that the wealthy are indifferent. Soup-kitchens have been established in many towns, coal is sold below cost to the poor and often given away, and there is much willingness to provide medical aid, as the famine breeds disease. Nor is the Government idle. Seed corn is distributed free of charge and taxes are remitted. But all this assistance is only palliative. The farmers are too poor to withstand a series of bad harvests. The land has been cut up into lots which are too small for the families, for the great landlords oppose all attempts to bring about a more just division of the soil. The peasants are, therefore, forced to work as day laborers, and as such they can not earn enough to support their families except in the industrial districts. The ruin of the peasants is a foregone conclusion under these circumstances, and the famine only hastens the end. During the summer months the peasants will obtain some, tho badly paid, employment on the large estates, and their own grain will keep them until the beginning of the winter. Then the time of starvation begins once more. The only remedy is the strengthening of Russian industries. Sooner or later revolts will take place which may endanger the state. That bullets will then be thought a fitting remedy for all economical evils may be doubted. Even Russia is too far advanced for that.

The *Russkaya Myisl* points out that the condition of the peasants is to-day as bad as before their emancipation in the '60s. It says further:

"Bad harvests are caused by chance, and can not be prevented. But famine, with its attendant typhoid, scurvy, and other evils, should be prevented. Were the peasants better educated, were

they not weakened, there would be less apathy, less mortality in years of famine. The increase of industries is not enough to remedy the evil. The factory has entered into the village in many cases only to make matters worse. What is needed is a thorough reorganization of the laws regarding the division of property among the farming population."

The Government tries to remedy the evil by assisting emigration to the eastern parts of the empire. But this does not permanently relieve the overcrowded villages, as Russian families increase very fast. The worst enemy of the peasants is, according to many authorities, neither the landed gentry nor the sudden rise of industries which has made the peasant half farm laborer, half factory hand, but their peculiar commission, which prevents them from owning the land they till, and makes improvement very difficult.—*Translations made for THE LITERARY DIGEST.*

THE GERMAN FLEET AND ITS MEANING.

THE continued assertion on the part of English publications that Germany must be wiped out to insure the happiness of Great Britain has produced the impression throughout the world that, sooner or later, in the interest of "Anglo-Saxon humanity and civilization," an attempt will be made to destroy the inferior Teuton. The acceptance of a naval policy on the part of the German empire therefore creates no surprise anywhere. The *St. Petersburg Birshewiya Vedomosti* says:

"The greater England's successes in South Africa, the greater the need of defensive measures on the part of other nations. . . . Public opinion in Germany as well as in France realizes this. Hence the people submit to the brutal necessity of building a fleet, which is the best guaranty for the preservation of their liberty."

The *Paris Journal des Debats*, referring to the meeting of the emperors at Berlin on the majority of Kaiser Wilhelm's eldest son, says:

"It is not without significance that France was represented by her ambassador in a special mission. . . . Peaceful as was that reunion, it can not blind us to the fact that peace is hardly in the keeping of the powers of Central Europe to-day. However much peace may be desired there, and however little suited the ground may be for a conflagration, it is necessary for the Continent to show a united front."

It has not been easy for the German Government to obtain parliamentary sanction for the creation of a moderately effective fleet. Much assistance was rendered, however, by the British press. Reiterating that, as *The Saturday Review* expressed it, "every Englishman throughout the world would be the richer the day after Germany's destruction," they convinced even the German Radicals that Germany would not be allowed to win bloodless victories without being attacked. H. Dietzel, in the *Berlin Nation*, writes in the main as follows:

The stronger the German fleet, the better assured will be the peace of the world. It will produce sober second thought. Mexico, Brazil, and Argentina will take care that the "great republic" does not extend her sway over Central and South America, if necessary with the help of England, France, and Germany. That Germany must be reckoned with will have a pacifying effect upon Great Britain and the United States. That these two nations wish to inaugurate an era of bloodshed is quite possible. But the result of their adventures is not encouraging. England may in the end win in South Africa, but it will cost her much more than she bargained for. "Great powers need such lessons at times," says Leroy-Beaulieu; "the French got them in the days of Louis XIV. and Napoleon, the British are getting them now." What the jingoes of New York and London experience is not likely to encourage them. The peace of the world is likely to be more firmly established by the lessons taught John Bull and Uncle Sam in South Africa, Cuba, and the Philippines.

The German Reichstag has accepted the new navy bill in com-

mittee, striking off about ten per cent. This will give Germany a fleet of forty battle-ships and fifty cruisers. Ten cruisers for foreign service have been struck off, but the London *St. James's Gazette* thinks that this is not likely to affect the efficiency of the fleet. It says:

"The German admiralty has only to order its constructors to design its vessels with good seagoing qualities, and a respectable coal-carrying capacity, and then they can go anywhere. When once the need for fighting with them has arisen, the 'war lord' will not allow deputies of any party to dictate to him the use he is to make of the armed forces of the empire."

It is well known in England that German armaments are generally much more extensive than the newspapers advertise, and that ships are built not slower but faster than the schedule demands. Many English papers hint that the German fleet is intended chiefly to oppose the United States. The London *Spectator* says:

"Germany, to take a concrete example by way of illustration, will get into a dispute, say, with Brazil, and will prepare to occupy the southern provinces in order to protect her subjects and restore order. America will thereupon quote the Monroe doctrine, and then the Monroe doctrine will be quietly but quite firmly ignored. The next move will be America's. If she is strong enough she must send her fleet wherever the German fleet is to be found and destroy it. If and when that is done, nothing will be easier than to enforce the Monroe doctrine, for nobody can reach, much less hold, a part of Brazil or Central America without having the command of the sea—or at any rate the relative command of the sea. . . . We do not wish to be alarmists, we do not wish to tempt America into warlike courses, we do not wish to make ill blood between America and Germany. But we love America and her people, and so have a duty to perform. It would be doing America a very ill service to pretend that she has nothing to fear, and to join in the outcry against Mr. Elihu Root because he has spoken out."

The Saturday Review doubts that we have still even a moral claim to insist upon the recognition of the Monroe doctrine, and adds:

"Their right to do so has never been unquestioned, even when they confined their operations strictly to the American continent, but now that they have chosen to appear as a conquering power in the Eastern seas and among the West Indies, the claim is being gradually exposed in all its naked extravagance."

The Germans themselves disclaim all intention to annex parts of South America. But they do declare most emphatically that they will not permit the United States to interfere with the formation of a state in which the German element is predominant. Some parts of Brazil are likely to turn out this way, and, always in the interest of "humanity and civilization," Americans and English, according to the Brazilian papers, warn the Portuguese and Indians against the dangers of being ruled by a German-speaking majority. The Germans of Brazil, who number among them a strong leaven of people who reemigrated from the United States, have no wish to become benevolently assimilated by the English-speaking races. Neither does it seem absolutely certain that the German-speaking citizens in the United States regard Anglo-Saxonism as an undiluted blessing. H. F. Urban, a German-American writer of no little influence, writes to the following effect in the *Berlin Zukunft*:

It is a naive bit of arrogance when the Monroe doctrine is used to proclaim a kind of supremacy over South America. As to the so-called unification, pacification, and improvement of South America, we know what that means. It is merely an Anglo-Saxon circumscription for pilfering territory. The South Americans know all that. If the United States wants to prevent a European power from setting foot in South America, she must use cannon. The Monroe doctrine is not worth the paper it is written on.

Many German papers ridicule the idea that either the United States or Great Britain would do anything just. The United

States tariff legislation, the attitude of both powers in Samoa, the alleged attempt of Great Britain to destroy German shipping by interfering with German vessels, are all quoted as illustrations. According to the most influential German publications Germany is not willing to trust the Anglo-Saxon, but abides by a trial of strength. The *Hamburg Correspondent* says:

"The Monroe doctrine has never had more than an apparent existence. It has now been thrown overboard by the Americans themselves, as they have gone beyond their own continent to demonstrate the right of the stronger. Henceforth American questions like all others are merely questions of power."

The Berlin *Neuesten Nachrichten* expresses the opinion of many other German papers by saying that "Uncle Sam loves to stalk around rattling a sword, especially at election times."—*Translations made for THE LITERARY DIGEST.*

BRITISH VIEWS OF ADMIRAL DEWEY'S CANDIDACY.

ADMIRAL DEWEY'S brief run for the Presidency has not attracted much notice abroad, except in the British empire where the reelection of Mr. McKinley is hoped for with almost national interest. Admiral Dewey does not come off without some scathing criticism, and the British think the joke "Dewey want to be President?—'Ee do!' very funny. The London *Saturday Review* says:

"What can have prompted the extraordinary conduct of this 'modern Nelson' is matter for conjecture. The most charitable suggestion is that he desires to make Mr. McKinley's election sure. The most probable is that he has allowed his head to be turned by popular adulation. It would be interesting to know in what fundamental principles of foreign policy he disagrees with the President. What is the view of the hero of Manila regarding the future of the Philippines? The fact is that the victories of the American forces were so lightly achieved that the extravagant laudation of the populace has led a worthy sailor grossly to overrate his personal importance, and a few designing politicians are trying to make use of his name by fostering his vanity."

The *Spectator* reveals its knowledge of history and of American politics in the following:

"The 'bosses' of American parties are in consternation. Admiral Dewey, who took Santiago, has consented to stand for the Presidency as 'the candidate of the people'—that is, without a party nomination—and Mr. Hanna and Mr. Platt are wild with rage and doubt. Suppose the admiral draws away half a million voters from the two parties, what becomes of wirepullers' calculations? It is dreadful, and the admiral is derided and denounced by a thousand pens. As he formerly refused to engage in politics, some strong pressure must have been put upon him, and we fancy it proceeds from that section of the Democrats which is in favor of gold and expansion. They are so afraid of Mr. Bryan that they would rather wreck their party than see him President. If that hypothesis is correct, Mr. McKinley's reelection is almost a certainty."

In Canada, on the whole, the admiral's chances are regarded as slight. The Toronto *Saturday Night* says:

"The people hereabouts and in South Africa would be glad if General Dewet, of Pretoria, were capturing as few votes as is Admiral Dewey of Washington. The people of Washington are laughing Admiral Dewey and his wife out of the Presidential campaign, but General Dewet, at Dewetsdorp, recently captured four hundred and fifty British prisoners, together with a large quantity of ammunition. General Dewet seems to be running well in the Transvaal, but it is not a pleasant thought to us that so many Britishers are going with him."

The Montreal *Herald*, however, says:

"Dewey has shown a good deal of hard sense in such of his letters and despatches as have been made public, and there is little doubt that any treatment of the new possessions to which he might assent would be wiser and more consistent with American institutions than the course that has been pursued by the present Administration, controlled, as the Porto Rico incident showed, by a plutocracy. If Dewey adheres to his determination, there may be some sensations in American politics this year, and the despatch announcing the destruction of the Spanish fleet at Manila will probably pass into history as the most successful of all campaign documents."

CORRESPONDENTS' CORNER.

Luther and Polygamy.

To the Editor of THE LITERARY DIGEST:

Your valuable publication of April 28 contained an interesting historical statement signed by C. A. Wendell. The candor of the writer is evident, and his earnest desire for truth commendable. His purpose is to repel the charge made against Luther as justifying polygamy by his formal permission given to Philip of Hesse to have two wives at the same time. This charge was revived in a more extended form lately, by its having been used in Congress in defense of a member elected from Utah. The incident is of public notoriety.

Mr. Wendell does not explicitly deny the historical truth of the fact, which, he says, "is certainly a sad blemish on the character of Luther, if it is true." The phrase "if it is true," which I have presumed to italicize, indicates that Mr. W. would clearly imply a doubt as to the truth of the action of Luther. But Michelet, in his favorable Life of Luther, makes doubt impossible. He writes: "He (Luther) dared not condemn that which the Old Testament sanctioned; besides, the doctrine illustrated and invoked by the landgrave was precisely that which Luther had adopted in principle from the very commencement of the Reformation." ("History of Luther," bk. 3, ch. 3.)

But a more serious aspect of the case may not be overlooked. It was not merely Luther's individual permission that was given to the landgrave; the collective assent of the leaders of his cause was engaged in sanctioning the indulgence. Thus Michelet continues: "The whole of the theologians of Wittenburg assembled on the occasion to frame a reply. . . . If your highness is utterly determined upon marrying a second wife, we are of opinion that it ought to be done secretly." (*Ibid.*) The secrecy is not strong evidence of moral courage or consistency. This document was signed by Luther, Melancthon, Bucer, Corvin, Lening, Winfert, Melanther.

We now come to the point of contention made by Mr. Wendell. He quotes from Lord Herbert's "History of England under Henry VIII.," p. 144, a letter from George Casalis, Henry's agent at Rome, urging the divorce from Catherine. Casalis is alleged to have written: "Some days ago the Pope in private offered to me this proposal, as a thing of which he made much account, that your majesty might have a dispensation to have two wives."

Lord Herbert's History is not accessible to me, but Horace Walpole's opinion of the author may be accepted as indicative of what he might write about the Pope: "The History of Don Quixote was the Life of Plato." ("Encycl. Brit.," art. Herbert.) Thus characterized by Walpole, Herbert's historical accuracy may be reasonably impugned. It is also stated that "he was held up as an atheist." (*Ibid.*) Doubtless an atheist may be an honest writer, yet such a statement as that ascribed to Casalis about the alleged offer of Clement VII. may not be exempt from doubt as to its veracity when considered in such relationship and from such a source.

It is well known that Henry had many agents at different courts and at universities, urgent, and not, perhaps, overscrupulous as to the means used to advance his divorce suit. But even the ardent lover of Anne Boleyn never thought of asking for a bigamous marriage dispensation explicitly. And it is not reasonably conceivable that against one of the commonest principles of Christian doctrine and conduct Clement would make such a base proposal, even in private. His character as given by that eminent Protestant historian, von Ranke, repels such a charge. He says: "His conduct was remarkable for the blameless rectitude and moderation of its tenor. . . . He was a man of extensive information. He spoke with equal knowledge of his subject, whether that were theology and philosophy, etc." ("History of the Popes," vol. 1, bk. 1, ch. 3.)

It will appear impossible to reconcile blameless rectitude of conduct and extensive theological information with a vile proposal to contradict both in order to gratify the voracious King of England.

The story of Casalis is, on its face, incredible. Even if true it was no more than the record of a private conversation, perhaps a joke; while the Lutheran decision was deliberate, formal, official.

As Mr. Wendell admits that it would be absurd to try to trace Mormonism back to this, he is commendably logical. But can he justly draw a like inference from the wholly dissimilar declaration of the fathers of Lutheranism?

(REV. JAMES NILES.)

ST. PETER'S CHURCH, PROUDFORD, N. Y.,

MAY 17, 1900.

Goldwin Smith, Kipling, and Shakespeare.

Editor of THE LITERARY DIGEST: In your number for March 30, in your review of Prof. Goldwin Smith's book on "Shakespeare the Man," you make the author utter some grave charges against the poet; for instance: "But the dramatist makes strange mistakes. He introduced artillery in the reign of John," etc.

At the foot of Kipling's story, "Watchers of the Night," I recently pencilled a note as to his concluding paragraph which says:

"Shakespeare alludes to the pleasure of watching an engineer being shelled by his own battery. Now this shows that poets should not write about what they do not understand. Any one could have told him that sappers and gunners are perfectly different branches of the service."

Kipling is right: poets shouldn't write about what they do not understand, as I think I can show he did in the above quotation. Both he and Goldwin Smith, I suspect, have forgotten the original meaning and use of "engine," "engineering," and "artillery." There is, I submit, reason to believe that Shakespeare understood "an engineer" to be one using enginery—i.e., any large implement of war, a catapult or a battery, i.e., a battering ram.

Regarding "artillery," how do you think it would do to consult the Bible, 1 Sam. xxi. 20 for instance? It reads (in the A. V.): "And Jonathan gave his artillery unto his lad and said unto him, Go carry them to the city."

The Hebrew word being "instruments," which, in part, are classed in verse 25 as "arrows." Clearly the gentlemen have lost the connection of the original and modern use of the words.

LONG BEACH, MISS.

JAMES BOARDMAN CABLE.

PERSONALS.

PRESIDENT KRUGER'S PEDIGREE.—In a letter published in *The Standard* (London), the following is of interest:

The authority for President Kruger's pedigree is Mr. T. F. Van Vordt, B.A. ("Paul Kruger and the Rise of the South African Republic," Jacques Dusjean, Amsterdam and Kaapstad). I give the title in English, but it is a Dutch book, and I do not know if it has been translated. As he investigated the matter thoroughly, and the particulars are not given quite correctly in English papers, you will allow me to repeat them. Frans Kruger, in Berlin, marries Elizabeth Hartwigs. A son, Jacob, then seventeen, arrives in Capetown in 1713, in the service of the East Indian Company. He seems to have lost the free use of one of his hands, and is allowed to establish himself as a Burgher in Stellenbosch; marries Johanna Kemp; has eight children. The sixth one—a son, Hendrik, baptized April 8, 1743—marries Francina Cloete. It seems that this Hendrik soon went eastward, as his son Gert (Gerrit) Kruger, baptized May 21, 1750, marries, November 12, 1766, Susanna Lacya Buys, of which lady it is known that she belonged to one of the first families that went eastward. Their son, Stephanus Johannes Kruger was baptized March 13, 1778, in Graaff-Reynet, and this man was the grandfather of President Stephanus Johannes Paulus Kruger. Of course, "baptized in" means here in the district of, and thus also in the district which afterward was called Graaff-Reynet.

Stephanus Johannes Kruger marries, January 28, 1798, Sophia Margaretha Steenkamp; lives in what afterward was Tarka; "treks" in 1836 with Potgieter. One of his sons, Caspar Jan Hendrik, born 1804, marries Elsie Francina Steyn, daughter of Doun Steyn, of Bulhoek, near actual Colesberg. They remain there some time, and in that place the President is born October 10, 1825.

A SOCIALISTIC novel from the pen of the Duchess of Sutherland has attracted much attention in England recently, and many people are asking how the young Duchess of Sutherland has managed to see so much of the inside of the Socialist movement, and how she has learned to steer among the curious cross currents. It fell out thus: More than two years ago Miss Margaret Macmillan, a well known Socialist speaker and writer, was lecturing one Sunday in the Morris Labor Church at Leek, in Staffordshire. The duchess was hard by, at Trentham. Her mind was already occupied with the education of the people, what it was, and what it might be, and also with the hideous condition of life and labor in the potteries, which lay as it were just outside her palace gates. She determined to hear for herself what a highly educated woman, a leader of Socialist thought and activity, had to say. The duchess dropped into the lecture-hall just as any other item in the audience did. She was introduced to Miss Mac-

How to Grow Good Fruit.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticulture Society, at Lenox, Mass. The address bore chiefly upon spraying and general culture of orchard and field crops, how to do it, do it cheaply and good, and how to obtain the most profit from your labor in the easiest manner. The address is quite lengthy, about an hour's talk. It will not be sent to the disinterested. Owners of fruit trees, stating if at all interested in fruit culture, will get this book. Had this address been placed on the market in book form it no doubt would have sold at a good price. The full address, profusely illustrated, in pamphlet form was intended to be sent to fruit growers and owners of estates, free for the asking, but to prevent imposition by the curious and disinterested, the book will be sent to fruit growers, or owners of estates, enclosing fifty cents, to the Lenox Sprayer Company, 30 West Street, Pittsfield, Mass.

EDWIN A. JACKSON & CO., 54 Beekman St., N. Y.

milian after the lecture under some simple, commonplace name, and after a long talk revealed her full personality and begged for a continuance of the intercourse. The friendship thus began ripened steadily. The duchess, in her ardor and research, visited Bradford (where Miss Macmillan is a member of the school board) in the dripping days of a black November and saw for herself what the children and the schools and the life of a great manufacturing town were like.

The following picture of Miss Macmillan, from "Mainly about People," is strangely at variance with the general conception of the Socialist agitator: "Miss Macmillan lives a simple, not to say austere life, with her books and her own idealism as chief companions, in the cozy little nest she has made for herself. Years ago she decided to set aside all opportunity of luxury and to devote herself to the labor movement, in which she has been one of the most inspiring, and at the same time one of the most chastening influences. In fireside talk she is perfectly delightful; full of quaint, subtle, elusive humor, and quick to make thumbnail sketches of her friends and acquaintances. She has written many brief ephemeral things. Whether she will bring her powers to bear on a larger work, time will show."

COLONEL RADEN-POWELL, who at the outbreak of the Transvaal war asked to be placed in "a warm corner," has now held his "little corner" long enough to break all British siege records, including that of Lucknow. The place he has held so long, by the way, is, according to *Cottier's Weekly*, pronounced Mahf'king, not Mafeking. In regard to the colonel himself, Dr. Haig Brown, his former headmaster at Charter House, has this to say: "I notice that the name is invariably mispronounced," said the doctor. "The 'a' in Baden is generally given the sound 'ah,' but it should have the usual sound of 'a,' as in 'Bathing Towel,' which was his nickname among the boys at school. The boy was essentially the father of the man; he was very active, lively, full of fun and amusement, and exceedingly popular with his schoolfellows."

The colonel's father was the late Professor Raden-Powell, and he is descended on his mother's

Wanted by a young lady of education and refinement (not a stenographer), a position as private secretary, or companion; has a good voice for reading, is accustomed to the care of invalids. Would travel. Position with literary person preferred. Address MISS CASAUDON, 220 West 44th Street, New York City.

**Hyomei Antiseptic Skin Soap**

Made from the fresh green leaves of the Tasmanian Blue Gum Tree.

Contains no fats or grease to clog the pores.

No dangerous alkali to dry and parch the skin.

Nature's own skin purifier and cleanser.

Healing. Refreshing. Beautifying.

As much superior to the best toilet soaps made as they are to the commonest laundry.

Send five cents for sample cake.

Sold by all druggists, or sent by mail. Price 25c. THE R. T. BOOTH CO., 45 Ave. J, Ithaca, N. Y.

side from a family which achieved distinction in the naval service. He was educated at Charter House, and at the age of nineteen he joined the Thirteenth Hussars, serving as adjutant with his regiment in India, Afghanistan, and South Africa. Thus he made the acquaintance of the Cape very early in his career, an acquaintance to be resumed on more than one memorable occasion afterward. He was despatched to Cape Town again in 1887 as assistant military secretary to Gen. Sir Henry Smith. He held this appointment for two years, and during that period he served in the Zululand operations, and came in for mention in the despatches—always an honor, but even more so in those days than now. Then he was appointed military secretary to the governor of Malta, who, tho he had no power to do so, gave him the local and temporary rank of major. H. R. H. the Duke of Cambridge was commander-in-chief at the time, and by his command Haden-Powell had to substitute two stars for the one crown on his shoulder-cords. His next step made him the youngest colonel in the British army.

TOUJOURS LA POLITESSE.—"During a recent sharp skirmish," says *The Sphere*, "an English officer in South Africa noticed that one of his guns was in danger. Calling an officer to his side he requested him to go and help the captain to try and bring it in. 'Pardon,' he added, as the officer turned to obey, 'perhaps you do not know the captain.' The officer had not the pleasure. 'I'll introduce you, then—charming fellow,' said his lordship, and, regardless of bursting shells and puffs of dirt which marked the pitch of bullets all around them, he cantered along the hillside with him. 'Captain,' he shouted, 'let me introduce my friend, Mr. B—Captain A. He will lend you a hand to bring in that gun; hope neither of you will be knocked over doing it.'"

A HOT BATH IN FIVE MINUTES

So simple any child can use it.

at any time, day or night, summer or winter, fire or no fire, if you have a Humphrey Crescent Instantaneous Water Heater. It is a comfort the more appreciated the longer enjoyed, a convenience which no well-appointed household can do without. An inexhaustible supply of hot water instantly, costing one cent a tubful. An ornament to any bathroom. Guaranteed perfect in every detail. No complicated piping—simply set up and connected with gas and water. You can not afford to be without this great home convenience and luxury. Write to-day for free illustrated price-list and booklet.

HUMPHREY MFG. & PLATING CO., KALAMAZOO, MICH.

Gluten and Starch

The two chief constituents of wheat are gluten and starch. The nutritive value of wheat lies in the gluten, starch being of small food value.

Cream of Wheat

is made of wheat grown in the northwest, which is very largely gluten. It has most of the starch washed out in process of preparation and is distinctly muscle-building food.

We issue a series of very beautiful gravures, without advertising marks of any kind, any one of which you can have by purchasing two packages of Cream of Wheat. Your grocer has them.

Cream of Wheat Co., Minneapolis, Minn.

MORE OR LESS PUNGENT.

An "Anti."—"I am an anti," declared Sammy Snaggs, whose father is an ardent expansionist. "You are what?" demanded the elder Snaggs, with great surprise. "I am an anti," repeated Sammy: "an anti-expansionist." — *Pittsburg Chronicle-Telegraph*.

The Table Turned.—STUBB: "There goes a man who used to address thousands of people every day."

PENN: "What is he doing now?"

STUBB: "Addressing circulars at \$6 per week." — *Philadelphia Record*.

Absent-Minded.—CUSTOMER: "Give me ten cents worth of paregoric, please."

DRUGGIST: "Yes, sir."

CUSTOMER (absent-mindedly): "How much is it?"

DRUGGIST: "A quarter." — *Exchange*.

Mixed.—One of the signs in the grocery store announced: "Raspberry jam, etc. the jar." "Ah!" said Mrs. Newliwed, "Isn't that dam jar?" "Beg pardon!" exclaimed the grocer. She tried it again. "I said, isn't that dam dear?" Then she blushed vividly and retired in confusion. — *Philadelphia Record*.

Catching.—MAMMA: "What is Willie crying about?"

BRIDGET: "Shure, ma'am, he wanted to go across the street to Tommy Green's."

MAMMA: "Well, why didn't you let him go?"

BRIDGET: "They were having charades, he said, ma'am, and I wasn't sure as he'd had 'em yet." — *Exchange*.

NEW MED: "Yes, indeed. Counted up to 18,000."

OLD MED: "Bully! And then you fell asleep, eh?"

NEW MED: "Guess not! It was morning by that time, and I had to get up."—*Pennsylvania Punch Bowl*.

Current Events.

Foreign.

SOUTH AFRICA.

May 21.—Lord Roberts sends despatches announcing the relief of Mafeking.

Sir Redvers Buller reports that his advance has been delayed, owing to the destruction of the railroad line.

May 22.—A cavalry squadron of Colonel Bethune's force is ambushed by the Boers.

May 23.—Lord Roberts's army reaches the Rhenoster River on its march to Pretoria, the cavalry under General French crossing over and General Hamilton's column seizing Heilbron; the Boers retreat northward.

May 24.—Lord Roberts's army resumes its march from the Rhenoster River to the Vaal.

May 25.—Lord Roberts's infantry forces were within thirty-five miles of the Vaal River on Thursday, General French's cavalry being in advance; General Buller was holding a strong Boer force at Laing's Nek; General Hunter, on the western border, occupied Vryburg.

May 26.—Lord Roberts announces that the British advance forces cross the Vaal River on the Queen's birthday.

May 27.—Lord Roberts announces the passage of the Vaal by the main British army on Sunday, unopposed, the Boers falling back to positions near Johannesburg.

OTHER FOREIGN NEWS.

May 21.—*Philippines*: Owing to the disturbed conditions in Southern Luzon, the order for municipal government will not be put in force in those districts.

May 22.—*Philippines*: Two complete companies of Filipinos surrender at Tarlac to the American forces.

The Queen Regent of Spain signs the postal convention with the United States.

Rubonic plague appears at Rio Janeiro.

MERIT ALWAYS A WINNER.

When an article obtains a distinct lead over the many others in its class it is a pretty sure sign of special merit. There are garters and hose supporters *ad infinitum* on the market, but the brand known familiarly as the "Velvet Grip," made by George C. Frost Co., of Boston, has so distinct a lead as to make it difficult to even recall the name of any other.

Ice Cream Without Labor

No more back breaking necessary to enjoy a plate of ice cream, ice or sherbet. The XXth Century Freezer makes as delicious and smooth ice cream as the best old-fashioned freezer, and no crank grinding is required. Simple, durable, economical. No parts to break or get out of order, easily cleaned and therefore healthful. It saves its cost in salt and ice consumed in a single season. The

"XXth Century" Freezer

has all these advantages and costs less than the cheapest dash freezer. It is the only freezer which can be used as a mould. Salt cannot reach the cream, which remains frozen three times as long as in any other freezer. Why buy one of the old-fashioned kind and work at what should be a pleasure, when you can get one that freezes without grinding, will do the work just as well, and costs less money.

Use it for 10 days, and if it is not all that you hoped for or expected, return it at our expense and we will immediately refund the full purchase price—no questions asked.

"Ices Dainty and Novel," an illustrated book giving 30 new recipes for creams, ices, sherbets, etc., by Mrs. Janet M. Hill, of the Boston Cooking School and Ladies' Home Journal, will be mailed on receipt of 10 cents in stamps.

CORDLEY & HAYES, 171 Duane Street, New York

Play Whist?

Then You Will Be Interested in This Table.

It is intended for Duplicate Whist. In the illustration, the large cut is the table set up for use. The small cut is the pocket for holding the cards. It is fastened to the bottom of the table and revolves. The slot on the margin shows the spring which controls it. At the side is the table folded. The pocket holds sixteen decks of cards. There are sixteen hands and each player has four hands. After playing a hand, cards are replaced in the pockets, and by touching the spring, a new hand is before each player. The advantage over trays are no lost cards, no errors and a place on which to play. The table is made in oak or mahogany and is a handsome, substantial piece of furniture. Price of each \$5.00, f.o.b. cars, Green Bay, Wis.

GEO. H. RICE, - Green Bay, Wis.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

May 23.—**Mr. Grisco, United States Charge d'Affaires at Constantinople**, presents another and more peremptory note to the Porte, demanding prompt settlement of the American missionary claims.

May 24.—**The Queen's birthday** is celebrated throughout England with unusual enthusiasm.

The powers, through their representatives at Peking, demand of the Chinese Government immediate suppression of the "Boxers"; otherwise the powers will land troops in China.

May 25.—**More trouble in China** caused by the "Boxers."

In the French Senate a question relating to letters in the Dreyfus case is discussed; the Minister of War announces that the Government considers the case closed.

PRICE \$5 TO \$12, EXPRESS OR FREIGHT PREPAID.

Racine Cabinet For Turkish Baths

THE RACINE CABINET is a strong double-walled room, rubber-coated inside and outside and fitted with a door. When ready for use, the walls are rigid, yet by merely tipping the cabinet you fold it in a second into a 6-inch space.

A patent alcohol stove heats the cabinet to 150 degrees in three minutes. For a vapor bath, pour a pint of water into the vaporizer. For medicated baths, put the proper drugs in the water. We send 35 formulas with the cabinet.

The Racine cabinet places in your home all the benefits of the best Turkish bath rooms. Not an essential feature is lacking. You save breathing hot air, save the risk of exposure afterward, save time and expense. The cost is but 3 cents per bath.

For the cure of rheumatism, kidney and blood diseases, no other treatment can approach it. The hot-air bath forces the impurities that cause the disease out from five million pores at once. In all sanitariums the Turkish bath is the most important treatment. All who value cleanliness, complexion and health will eventually own one of these cabinets. The quieting, refreshing, invigorating effects of the bath are the pleasantest sensations possible. One bath will always stop a cold.

The Racine Cabinet is guaranteed to be the best one on the market. Not in any way similar to the worthless affairs now advertised for this purpose. We sell on approval, to be returned at our expense if not satisfactory. Sold direct to users at from \$5 to \$12, express or freight prepaid; alcohol stove, vaporizer and face steaming attachment included. Send today for handsome illustrated catalogue, and order from that.

A GOOD COMPLEXION

Depends on Good Digestion.

This is almost an axiom although usually we are apt to think that cosmetics, face powders, lotions, fancy soaps, etc., are the secrets for securing a clear complexion. But all these are simply superficial assistants.

It is impossible to have a good complexion unless the digestive organs perform their work properly, unless the stomach by properly digesting the food taken into it furnishes an abundance of pure blood, a good complexion is impossible.

This is the reason so many ladies are using Stuart's Dyspepsia Tablets, because they promptly cure any stomach trouble and they have found out that perfect digestion means a perfect complexion and one that does not require cosmetics and powders to enhance its beauty.

Many ladies diet themselves or deny themselves many articles of food solely in order to keep their complexion clear. When Stuart's Dyspepsia Tablets are used no such dieting is necessary, take these tablets and eat all the good wholesome food you want and you need have no fear of indigestion nor the sallow, dull complexion which nine women out of ten have, solely because they are suffering from some form of indigestion.

Bear in mind that beauty proceeds from good health, good health results from perfect digestion and we have advanced the best argument to induce every man and woman to give this splendid remedy a trial.

Stuart's Dyspepsia Tablets can be found in drug stores and costs but 50 cents per package.

If there is any derangement of the stomach or bowels they will remove it and the resultant effects are, good digestion, good health, and a clear, bright complexion.

CUFFS HELD...

EMPLY a practical painter. There's no economy in buying ready-mixed paint and employing a tramp to slather it on. The experienced painter will tell you that if you want paint which lasts you must use **Pure White Lead**. To be sure that it is pure, see that the packages bear one of the brands named in margin.

FREE For colors use National Lead Company's Pure White Lead Tinting Colors. Any shade desired is readily obtained. Pamphlet giving full information and showing samples of Colors, also pamphlet entitled "Uncle Sam's Experience With Paints" forwarded upon application.

National Lead Co., 100 William Street, New York.

An Historical Game.

The Westminster Gazette, London, publishes a game famous by reason of the distinguished persons who played it. It was played by telegraph in 1845 between Gosport and London. The Gosport side was led by the renowned Howard Staunton and Captain Kennedy, a well-known writer of that day. The London team was marshalled by Buckle, author of "The History of Civilization," Captain Evans, of Evans Gamet home, and George Walker, a great authority on Chess.

NEW YORK, JUNE 9, 1900.

WHOLE NUMBER, 529

Published Weekly by
PUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address in which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

NEARING THE END IN SOUTH AFRICA.

IT is now admitted on all sides that the end of the two Boer republics in South Africa is at hand, and that to all intents and purposes the whole of South Africa may be considered British territory. Lord Salisbury's declaration last week, in a public speech, that "our only certainty of preventing a recurrence of this fearful war is to insure that never again shall such vast accumulations of armaments occur, and that not a shred of the former independence of the republics shall remain," is taken by a number of papers to mean that the new crown colony will not

be given the autonomy enjoyed by Canada and Australia, which have the right to collect arms and ammunition and levy militia forces, but that it will be ruled by officials appointed in London, and will have little or no voice in the running of its own affairs for a number of years at least.

The Brooklyn *Eagle* rejoices in the British triumph. "The consequences of the victory of the British," it says, "will be good for the world. In the Orange River colony and in the Transvaal independence will be less, but liberty, equality, opportunity, and humanity will be more. A viciously corrupt, fanatical, superstitious, and medieval oligarchy will disappear, and local government with free manhood suffrage, just laws, and open rights of petition, discussion, printing, and schooling, will take its place." So, too, thinks the Philadelphia *Press*, which says: "Wrong has existed on both sides in this dire struggle, and the British cause was seriously compromised by corporate greed; but, taking the large, far view, the rights of the entire population of the region, white and black, Boer and Uitlander, taken together, are advanced by the result, and the peace, prosperity, and civil liberty of all colors and races will be ultimately forwarded." The New York *Times* agrees with this view, declaring that the "freedom and equality before the law for all, general education, security for the rights of property and of the person, and the maintenance of order," which will come with British rule, will bless both Boer and Briton. But, it adds, "there will be blunders; the passions surviving from the war will have their untoward influence; the manners of our English friends will be in South Africa, as they have often been elsewhere, an obstacle to their sincerely pursued good intentions, and the greed of the Rhodeses and the bumptiousness of the Chamberlains will interfere as they have so sadly interfered in the past. But in the long run . . . the peace and progress of the world will be decidedly advanced." The New York *Tribune*, which sympathizes with the British side of the controversy, thinks that even the Boer sympathizers must rejoice that the British triumph, since it was inevitable, has come so soon, and with so little bloodshed. "It is neither good sense nor good morals," it says, "to fight against the inevitable just for the sake of fighting and doing all possible harm."

Many papers are still unconvinced, however, that the British triumph is either just or desirable. The Baltimore *American*, for example, says of the war:

"There was no excuse for it. The world has not yet accepted and never will accept as either reasonable or just the pleas that England has put forth in defense of her course. It was not a war to protect her subjects in their rights in a foreign land, but a war of greed and gain, a war to secure possession of a land rich in gold and precious gems, a war which will always be condemned as heartless and cruel, a blot upon the name of the mightiest power of Europe. . . . The Boer republic will now pass out of existence, crushed to death to satisfy the greed of a mighty empire."

The Pittsburg *Dispatch* declares that "the cause of human liberty—of popular government—has suffered by the British triumph," and the Baltimore *Sun* says:

"To Americans the saddest thought in connection with the war is that the destruction of the Dutch republics may retard the development of a republican form of government in other parts of the world. That may be one of the consequences of the extinction of the independence of the South African republics. No

weak state is now safe from the encroachments of a great empire, and if the imperial spirit is not checked in the United States the American republic will commit the same crime in the Philippines and possibly in Cuba which Great Britain is now preparing to commit in South Africa."

The Springfield *Republican* thinks that "in refraining from blowing up the Rand gold-mines and razing the hated city of Johannesburg, these Boers have given a superb answer to their defamers, and have shown a self-control under the most intense provocation to wreak a terrible vengeance, that entitles them to rank morally, at least, with peoples of the most gilded civilizations."

The annexation of the Orange Free State, with whom Great Britain had no quarrel before she came to the aid of her sister republics, is regarded by some papers as especially regrettable. The Chicago *Tribune* says:

"Leaving the merits or demerits of the Transvaal out of the question, the fate of the Orange Free State can not fail to inspire regret in the minds of almost all Americans. Even the British press confesses to sentimental qualms on this score. The Free-State people had no gold-mines and had not tempted the cupidity of the fortune-hunters, but they were kindred of the Transvaal Boers and knew that the two republics must ultimately stand or fall together. Their loss is the more bitter because the more swift and unexpected. In place of their admittedly poor and able government there now appears some form of the British colonial system, in which Mr. Rhodes and his financial clique will necessarily play a prominent part, as they have done in the politics of the British colonies in South Africa for many years. If this is a triumph of progress and civilization it is not apparent on the surface."

The Chicago *Inter Ocean* remarks, in a similar strain:

"Lord Roberts's proclamation omits 'Free' from the new territory's name. This was well done. The word has been wiped from the face of the land by the imperial armies. A free state has perished from the earth. An imperial colony has its place. And the saddest thought of all to the American citizen is that this outrage has been accomplished with the moral, tho tacit, support of that branch of the United States Government which represents the banner republic of the century in the eyes of the civilized world."

The following interesting chronology of the war appears in the New York *World*:

October 11—War began.
October 12—Natal invaded.
October 13—Newcastle occupied by Boers.
October 14—Kimberley isolated; 34 days' siege began.
October 16—Mafeking attacked; 214 days' siege began.
October 20—Battle of Glencoe; British claimed victory, but retired.
October 21—Battle of Elandsvaagte; Boers defeated.
October 22—British evacuated Dundee, retreating to Ladysmith.
October 23—General Symonds died of wound.
October 26—Battle of Nicholson's Nek; 1,000 British captured.
November 1—Ladysmith invested; 117 days' siege began.
November 15—British armored train wrecked at Chieveley.
November 21—Battle of Belmont; Boers retired.
November 25—Battle of Graspan; Boers retired.
November 26—Battle of Modder River; Boers retired.
December 10—Battle of Stormberg; Gatacre defeated.
December 11—Battle of Magersfontein; Methuen defeated; General Wauclupe killed.
December 15—Battle of Colenso; Buller defeated.
January 6—Boer attack on Ladysmith repulsed.
January 10—Roberts arrived at Cape Town.
January 14—Spion Kop captured by Warren.
January 15—Spion Kop abandoned by British with heavy loss.
February 5—Buller's third attempt to relieve Ladysmith began.
February 7—Vaal Krans evacuated by British.
February 9—Roberts reached the Modder.
February 10—Kimberley relieved by French.
February 16—Cronje's army defeated at Paardeburg.
February 17—Cronje surrendered.
February 18—Ladysmith relieved by Buller.
March 12—Salisbury rejected Boer peace proposals.
March 13—Bloemfontein occupied by Roberts.
March 17—Joubert died.
March 18—British trapped at Sanna's Post, losing seven guns.
April 1—Cronje and 1,000 Boers sailed for St. Helena.
April 4—Five hundred British troops captured at Reddersburg.
April 5—General Villiers-Mareuil killed.
April 14—4,000 Boers landed at St. Helena.
May 1—Roberts began march on Pretoria.
May 12—Kroonstad occupied.
May 17—Mafeking relieved.
May 19—British crossed Vaal River.
May 30—Johannesburg occupied.

THE CHINESE "BOXERS" AND THE POWERS.

THE uprising of the Chinese secret society, called the "Boxers," is rapidly becoming a matter of international concern. During the past few days the revolt has assumed formidable proportions. A number of missionaries and several hundred native Christians have been massacred, a railway near Peking has been destroyed, and a steamer attacked on the Yang-Tse River. The interest felt by the United States is accentuated by the proximity of the American legation at Peking, and the existence of many American citizens in that part of China.

There are persistent rumors that Russia is at the back of the present uprising, and that she hopes an opportunity will be afforded her of landing large forces of troops in China, thus strengthening her grip on this dying empire. As yet, however, her designs have been thwarted by the prompt action of the other powers. The State Department at Washington has been in close communication with Minister Conger, at Peking, and one hundred marines have already landed from the American flag-ship *Newark*, and marched to the Chinese capital, in company

CHINA MAY HAVE TO DEAL WITH A NEW KIND OF "BOXERS."
—The St. Paul Pioneer Press.

with detachments of French, British, Italian, Japanese, and Russian troops.

The society of "Boxers" is thus described by the Philadelphia *Times*:

"The Chinese name for the society is I-Ho-Tuon, the I meaning righteousness, the Ho standing for peace, and Tuon meaning fist. . . . It numbers nearly eleven millions of men, and was originally called 'The Great Sword Society.' Organized as a law-and-order league, it became bitterly anti-foreign and anti-Christian. A series of outrages on Christians followed until, in last October, the Christian nations forced the Government to send a force against the Great Swords. There was a battle, followed by the report of the governor of Shantung that the so-called rebels were honest country folk. Then the Great Sword Society disappeared, by edict, and in its place sprang ready-made the 'Universal Society of Boxers,' with the old organization and purposes and with the added idea of fighting all foreign influence—missionary or otherwise—and of having the Government help it. The operations of the society and outrages committed by it have since continued, and have constantly become bolder."

It is declared that the revolt is being secretly encouraged by the Dowager-Empress of China and her Government. "Reports from Peking," says the Brooklyn *Eagle*, "suggest that the uprising has been stirred up by the Dowager-Empress to sustain the claims of her dynasty. She is opposed to foreign aggressions, for they mean the cutting off of many of her perquisites and the

to Germany have for years past been but trifling. What are the things we sell the Germans in important amounts? In the last ten months \$59,000,000 worth of cotton, \$23,000,000 worth of breadstuffs, \$15,500,000 worth of the products of petroleum and of the oily seed of the cotton-plant, \$8,500,000 of copper, \$4,500,000 worth of tobacco, and \$2,500,000 of agricultural implements. The only other items of consequence are \$2,000,000 each of fruits and fertilizers.

"Here is certainly a good customer who takes \$117,000,000 worth of the above-mentioned products in ten months. Figures, as a rule, are rather uninteresting, but these surely are worth a moment's study at this time. Of our lard and bacon we have sold them in the same ten months \$12,500,000 worth, but the shipments of salt and pickled beef and pork have never amounted to as much as \$1,000,000 in a corresponding period. Compared with the bulk of our exports to Germany, the meats are but a trifling item, and we can safely trust to the hard heads and complaining stomachs of the German masses to take down at an early day the barriers erected against these by the cattle-raiser of the old country. Apropos of the Bailey bill we are told that 'all the live-stock States are desirous of having adequate measures adopted by Congress to overcome the discrimination by Germany.' This is preeminently a case in which the old motto, '*Laissez faire, laissez aller*,' should be our rule."

John F. Winter, United States consul at Annaberg, Germany, in a report to the State Department, gives some interesting facts about the foreign trade of Germany, England, and the United States. "Germany," he says, "has built up her foreign commerce at Great Britain's expense; and the United States, just entering the field, is building up a great foreign trade at the expense of both Great Britain and Germany." Of the \$18,000,000,000 worth of foreign commerce carried on by all the nations of the world, he finds that Great Britain's share is 18.3 per cent., Germany's 10.8 per cent., and that 9.7 per cent. belongs to the United States.

CHICAGO'S MUNICIPAL HOUSE CLEANING.

IT is not often that the absence of comment in the press indicates the presence of a topic of national interest, but those who remember the moralizations current a few years ago on the sad condition of Chicago's city politics will see that the rarity of such reflections now reveals the fact that a radical change must have taken place. That such, indeed, is the fact, we are told by Mr. Edwin Burritt Smith, lawyer, professor of law in Northwestern University, and an active worker in political reform movements in Chicago, who writes in the June *Atlantic Monthly* the story of the cleansing of the city council. To show the magnitude of the work that confronted the friends of honest government he says:

"The city government of Chicago touched bottom in 1895, when fifty-eight of its sixty-eight aldermen were organized into a 'gang' for the service and blackmail of public service corporations. Within that year six great franchises of enormous value were shamelessly granted away, in utter disregard of general protest and the vetoes of the mayor. Most of the members of the council were without personal standing or character. The others were practically without voice or influence. The people scarcely realized that the council contained an element representative of public interests."

There was a general desire for better things, but the outlook was dark. In fact, he declares, "the task seemed all but impossible."

"The city carried on its registration lists over three hundred and fifty thousand voters. About three fourths of these were of foreign birth or parentage, and many understood the English language but imperfectly, if at all. Nearly all who composed this vast aggregation of seemingly diverse elements were bent upon their private pursuits. Could they be united to rescue the city from the spoilsman? Few so believed."

So much for the situation. To remedy it there met, in January,

1896, about two hundred men, representing various clubs and reform organizations, who banded themselves into "The Municipal Voters' League." This league chose an executive committee and gave the members of the committee power to choose their own successors; and the executive committee have carried on the work from then until now without calling another meeting of the league. The committee's work, however, has proved eminently satisfactory, and "its facts and conclusions are usually accepted by the press, and no substantial newspaper support can be had for candidates whom it opposes." As to methods, Mr. Smith says that the League's "fundamental purpose is to inform the voters of the facts about all candidates." He goes on:

"There is nothing that the city statesman of the ordinary spoils variety so dislikes as a campaign in which the issue is upon the facts of his own record. He abhors such an issue as nature abhors a vacuum. He prefers a campaign conducted on broad national issues. He regards discussions of the tariff and the currency as of much greater educational value than the facts of his own modest career. In this he is much mistaken. The League has demonstrated that there is nothing of such interest to the voters, on the eve of a municipal election, as an authoritative statement of these suggestive facts."

One result of this plan of campaign is that "party managers in many wards in which the League's support has become vital to success submit names of candidates in advance." As to further results of the League's work he says:

"It has now conducted five campaigns, in each of which the election of one half the membership of the council of the city of Chicago was involved. In its first campaign, twenty out of thirty-four wards returned candidates having its indorsement, two of these being independents. Five others, to whom it gave its qualified indorsement as the choice of evils, were chosen. Each of these last proved unfaithful to public interests. Five others betrayed their pledges. At the expiration of their term, two years later, the League recommended nineteen retiring members for defeat, and fifteen for reelection. Of the first group, but five secured renominations, and but two reelections. Of the second group, three declined renominations in advance, the twelve others were all renominated, and eleven of them reelected. In the same campaign, twenty-five former members of bad record sought to return to the council. The League objected to their nomination, giving their records. Only six were nominated, and three elected. In the campaign of the spring of 1899, the Democratic candidate for mayor carried seventeen wards from which Republican candidates for the council having the support of the League were returned. All but two of the retiring members condemned by the League were defeated for reelection."

"The net result of the five campaigns must suffice, in lieu of further details of the several contests. Of the fifty-eight 'gang' members of 1895 but four are now in the council. The 'honest minority' of ten of 1895 became a two-thirds majority in 1899. The quality of the membership has steadily improved. Each year it is found easier to secure good candidates. To-day the council contains many men of character and force. A considerable number of prominent citizens have become members. The council is organized on a non-partizan basis, the good men of both parties being in charge of all the committees. It is steadily becoming more efficient. No general 'boodle ordinance' has passed over the mayor's veto since the first election in which the League participated. Public despair has given place to general confidence in the early redemption of the council. It is no longer a good investment for public service corporations to expend large sums to secure the reelection of notorious boodlers. It is no longer profitable to pay large amounts to secure membership in a body in which 'aldermanic business' has ceased to be good. It is now an honor to be a member of the Chicago council."

The *Chicago Tribune* says that the League deserves all the praise that Mr. Smith gives it; and *The Times-Herald* says: "There can be no doubt in any one's mind that the League has performed a great service for the people. It has given them the organization and the information that they needed to circumvent a wretched political system, and while it is not representative

like a boodle convention chosen at boodle primaries, the facts show that it is thoroughly representative of public sentiment." The *Chicago Record* remarks that "Chicago has been so long accustomed to look to other cities for object-lessons in municipal progress that it is especially a cause for pride to be able to present to others some features in which we excel and are deserving of imitation."

VIRGINIA AND NEGRO SUFFRAGE.

THE decision made by the voters of Virginia, by a majority of about 18,000, to call a convention to revise the state constitution is attracting wide interest, especially in view of the fact that one purpose of the revision is to be the addition of an educational and property qualification to the ballot laws, such as is now in force in South Carolina, Mississippi, and Louisiana, and the additional provision, also in force in the three other States mentioned, that lineal descendants of men who voted before the Civil War shall not be barred from voting by lack of education or property. The effect of these constitutional provisions, in the States where they are being tried, is to keep nearly all the negroes from the polls, without disfranchising any white men. South Carolina, Mississippi, and Louisiana, which have adopted this plan, are the only States in the Union which have a larger proportion of negroes than of white inhabitants. Three other States—Virginia, North Carolina, and Alabama—have more than half a million colored inhabitants each, and will vote on constitutional amendments this year or next. North Carolina will vote on the amendment in August. Virginia will vote as soon as the legislature and constitutional convention can frame the amendment, and Alabama will vote on the question this summer.

The *Cleveland Leader* (Rep.) asks if it is not rather inconsistent that the Democrats of the South, who "profess to have great solicitude for the welfare of the people of the Philippine Islands," and "are clamoring for the granting of political freedom and national independence to the dark-skinned followers of Aguinaldo, and have wept barrels of crocodile tears because of their apprehension that these people may be oppressed in some way," should be the very ones who "have done their utmost during the past thirty-five years to oppress and disfranchise the millions of black men in the South who were freed from Democratic slavery by the Republican Party." The *Boston Journal* (Rep.) declares

that "Virginia has no excuse of any apprehensions of negro domination for her course," as the white voters outnumber the negro voters two to one. "If Virginia white men are made of such stuff," it remarks, "that two of them, on the average, can be 'dominated' by one negro, a frightful degeneracy has taken place in the old State."

A Virginia view of the matter may be seen in the following comment from the *Richmond Times* (Ind. Dem.):

"Under the constitution, which is to be framed, large numbers of negroes will be deprived of their votes, but they will not suffer by reason of it. The black man's vote has done him far more harm than good, and the great majority of black men in this State would be better off without the right of suffrage than with it. The whites are determined that the negro party in this State shall not rule, and so measures have long been in force to nullify the black man's vote. His vote under the present system is not effective and never will be effective, and so the black man might as well not have the right to vote.

"So much for the masses. As for that class of intelligent, law-abiding, property-owning colored men, and it is a considerable class in Virginia and growing, we are heartily in favor of extending the suffrage to them. We believe that all such will be given the right to vote, and that the inducement will be held out to other colored men to qualify."

MR. HAZEL'S APPOINTMENT.

THE nomination by the President of John R. Hazel, of Buffalo, for United States district judge for the newly created judicial district of western New York has stirred up an amount of adverse comment seldom seen in the case of minor federal appointments; and the opposition has succeeded in delaying, if not defeating, confirmation by the Senate. The main objection urged against Mr. Hazel's appointment is expressed in the report by the New York Bar Association, which says: "We can not avoid the conclusion that his deserts are political rather than legal, and his selection a reward of political service, and to be explained as such rather than a recognition of professional prominence or merit." Mr. Hazel's critics after a search of court records assert that he has appeared in court only four times in the last ten years, and say that he never attended a law school, being admitted to the bar soon after he was graduated from high school. He is said to be a valued ally of Senator Platt in the Republican political organization, and a shrewd financier.

—The Detroit Evening News.

—The Philadelphia Evening Bulletin.

SOME POLITICAL ECLIPSES.

as shown by his sale of the yacht *Enquirer* to the Government during the war with Spain. This yacht, according to the *New York Tribune* (Rep.), cost her owner, Mr. W. J. Conners, of Buffalo, about \$45,000. Mr. Hazel, it appears, succeeded in selling the craft to the Government for \$30,000, and the authorities, after using her a year, and spending over \$4,000 on her for repairs, advertised her for sale at an appraised value of \$20,000. *The Tribune* quotes Mr. Hazel's testimony as given before a court in Buffalo in which he says that he received \$5,000 for his part in the transaction. It is said that Secretary Root and Attorney-General Griggs earnestly, altho unsuccessfully, urged the President not to appoint Mr. Hazel.

The *Buffalo Express* (Rep.) is opposing confirmation vigorously, and the *New York Tribune* calls the appointment a "serious blunder." It continues: "The party can not afford to go before the people with the record of prostituting the federal courts to the service of politicians. This Administration has gone as far as it can safely go in the degradation of the judiciary from the standard set by the names of Marshall and Story. The district court does not always command men of the eminent reputation of Supreme Court justices, but it does demand men of similar character and serious legal training, and it has generally had them." The *New York World* (Ind. Dem.) calls the appointment "a scandal and a disgrace to the federal judiciary," and *The Evening Post* (Ind.) calls it an "outrage." The latter paper continues: "We do not believe that a man was ever nominated for judge of a United States court so utterly devoid of legal knowledge, training, and experience."

President McKinley, too, comes in for a share of criticism. The *New York Herald* (Ind.) says that "the President confessedly made the appointment because both Senators and a Buffalo Representative recommended it, and he could not afford to get into trouble with Platt and Depew in the year of a Presidential election." The *New York Times* (Ind.) observes that "this is not a nice theory of the Presidential function. It does not add to the dignity of the high office or of the man who occupies it. It makes the incumbent of the Presidency seem a good deal like a dummy. . . . He has not only made a bad appointment, an appointment so bad that it has become a national scandal, but he exhibits himself as lacking the courage to revoke it without the permission of the appointee's backers. Practically he confesses that he surrendered the executive function to the Senators from New York." The *Philadelphia Record* (Ind. Dem.) remarks that "President McKinley lacks backbone," and the *Waterbury American* (Ind.) says that this affair "is simply additional evidence of McKinley's structural weakness."

So much for Mr. Hazel's critics. His friends argue that his native ability, as shown in his success in politics and business, will make him an able judge, regardless of his inexperience. His chief reliance is a list of 300 indorsements, containing the names of a number of prominent judges. Mr. Hazel is indorsed by both Senators from New York, Depew and Platt.

The *New York Sun* (Rep.) expresses the suspicion that "there is quite as much of politics in the opposition to Mr. Hazel's confirmation as there is alleged to be in his appointment." Perhaps the best defense of the appointment so far given is made by Senator Depew, who presented Mr. Hazel's name to the President for appointment. Mr. Depew said in an interview with a representative of the *New York Times*:

"Mr. Hazel came first to Mr. Platt, not to me. I am not much of a patronage dispenser. Mr. Platt agreed to support him, and he then came to me. I always like to know something about a man when he asks for my indorsement, and in response to my request Mr. Hazel submitted the most remarkable recommendations I ever have seen.

"He produced letters from every judge in the eighth judicial district, a district whose bench compares favorably with the bench of any district in the State of New York. These eminent judges

did not merely sign their names to a petition, but wrote letters, cordial, emphatic letters. He had the indorsement of every county judge in the western district of New York. He had the indorsement of every district attorney in the district, and he had the indorsement of more than half the bar of Buffalo, including many of the most eminent lawyers there.

"I recognized the names of men whose standing at the bar I knew well, men who had been retained as counsel in past times by the bar. The name of Spencer Clinton alone would have been enough to decide me. He occupies a place at the Buffalo bar similar to those occupied by Choate and Root in New York; and he is no politician—doesn't know anything about politics.

"When I saw these recommendations, I said very frankly to Mr. Hazel: 'You have the most extraordinary lot of indorsements I have seen in all my life.' I told him that I should support him with pleasure, and I did so. I heard of no opposition to him then. I knew that there were two or three other candidates for the place—lawyers who wanted to be judges—but they had no indorsements except their own letters. I did not ask for any further indorsement of Mr. Hazel, and do not see what more it would be possible to ask.

"The judges who recommended Mr. Hazel so cordially were, some of them, men who had twelve years yet to serve; some who had just been elected; some who were about to retire by reason of the age limit, and, even if I were disposed to hunt for selfish motives in the actions of some of the ablest and most irreproachable judges in the State of New York, it would be hard to suspect a selfish motive in such cases. . . .

"As to the opposition to Mr. Hazel, I think it originated in politics. A man who has been active in politics, so active as to become the party leader in his county, can not aspire to office without arousing political opposition."

CONGRESS, THE TRUSTS, AND POLITICS.

THE defeat of the anti-trust constitutional amendment in the House on Friday of last week and the passage, the next day, of the strong amendment to the Sherman anti-trust law, has called out some remark, both Republicans and Democrats accusing each other of "posing" on the trust issue for political effect. The vote for the constitutional amendment fell 36 votes short of the two thirds necessary for the passage of an amendment to the Constitution, most of the Republicans voting for the measure, and most of the Democrats against it. The *New York Mail and Express* (Rep.) says that the amendment proposed "is interesting chiefly because of the panic it has created among the professional anti-trust agitators." It adds:

"How has it been received by the anti-trust contingent? They have rushed into caucus in terror and dismay and pledged themselves to oppose it to the bitter end. It has frightened them into hysterics, and they are falling over one another in a wild stampede to get away from it, thus presenting a characteristic exhibition of old-fashioned Democratic cowardice and deceit."

On the other hand, the *Brooklyn Eagle* (Ind. Dem.) declares:

"If the Republicans had a two-thirds majority in the House, to propose such an amendment to the Constitution, they would not propose it. They are now moving to do what they know they can not do and what they would not move to do, if they could do it. Their purpose is to point to a solid Republican vote in favor of an impossible proposition and to a Democratic opposition to it on principle, in the hope that a large proportion of unthinking citizens will conclude that one party opposed the trusts and the other party befriended them. Children do that sort of thing, but in their case is the excuse that they do it sincerely, impulsively, and unintelligently. When grown-up men do the same thing insincerely, deliberately, and with a clear realization of its emptiness, the action may be called politics, but it is better entitled to be named humbug."

The bill which passed the House with only one dissenting vote on Saturday of last week is described as follows in a Washington despatch in the *New York Journal of Commerce*:

"The bill amends the Sherman anti-trust law so as to declare

every contract or combination in the form of a trust or conspiracy in restraint of commerce among the States or with foreign nations illegal, and every party to such contract or combination guilty of a crime, punishable by a fine of not less than \$500 nor more than \$5,000, and by imprisonment of not less than six months nor more than two years. It provides that any person injured by a violation of the provisions of the law may recover threefold damages. The definition of 'person' and 'persons' in the present law is enlarged so as to include the agents, officers, or attorneys of corporations. For purposes of commerce it declares illegal all corporations or associations formed or carrying on business for purposes declared illegal by the common law; provides that they may be perpetually enjoined from carrying on interstate commerce and forbids them the use of the United States mails. It provides for the production of persons and papers, confers jurisdiction upon United States circuit and district courts for the trial of causes under it, and authorizes any person, firm, corporation, or association to begin and prosecute proceedings under it."

An amendment to the bill, offered by the Democrats, providing that nothing in the act shall be construed to apply to trade-unions or labor organizations, was also adopted by a large majority (260 to 8).

The solid Democratic vote for the bill is thus explained by the Washington correspondent of the *New York Journal* (Dem.):

"The Democrats started out with the purpose of securing the passage through the House of a bill that would be thoroughly effective in curtailing the powers of the trusts, but with the feeling that a step in that direction is better than no action at all, and therefore determined to vote for the measure framed by the Republicans, which measure, however, the Republican Senate is never expected to pass."

The Washington correspondent of the *New York Tribune* (Rep.) charges the Democrats with insincerity in their support of the anti-trust measure. He said in his despatch telling of the vote:

"The outcome of the contest which the Democrats had courted has been most disappointing to all factions of the opposition, and to-night they are bitterly accusing and railing against one another. The only crumb of comfort any of them can find is a hope that if the bill passed to-day shall become law it will be declared unconstitutional by the Supreme Court of the United States."

"In view of this week's performances of the minority in the House of Representatives on the subject of trusts, the action of the Kansas City convention on the same subject will be awaited with anxious misgivings by Demo-Pop Congressmen, and with somewhat eager curiosity and interest by Republicans."

Mitigation of Siberian Exile.—Admirers of Tolstoy may incline to regard it as more than a coincidence that within a few months of the appearance of his book assailing the cruel injustice of a system which sent innocent men and women to

exile in Siberia, the Russian council should adopt a law providing that no one shall be exiled to Siberia without judicial inquiry. The *New York Sun* says of the measure:

"By the new law in the great mass of cases transportation to Siberia is wholly abolished. In all cases judicial inquiry must precede exile; and those convicts who are sent to Siberia will not be left, as heretofore, at the most distant outposts guarded by Russian soldiery, to engage in enforced labor in the mines or to pick up a living as best they can, but will be placed in prisons to be built at once for their reception. The indiscreet victims of their own opinions, dissenters from the orthodox faith, advocates of a constitution for the state, cranks of all kinds shouting for 'reform' will no longer be herded by thousands with hardened criminals and marched in the common chain gangs over the bleak route of exile."

The *Chicago Times-Herald* calls this "one of the most notable reforms of the times," and the *Philadelphia Times* says that "this act by the young Czar is on a par with the abolition of serfdom by his grandfather." The exiles have hitherto numbered more than 20,000 a year; and in 1893, it is said, half of the exiles were sent out on orders of the administration, without hearings in court.

TOPICS IN BRIEF.

WHAT Kentucky needs is a movement to teach the young idea not to shoot.—*Puck*.

It will be a mean trick to play on the Democratic politicians if the Boers surrender before election.—*The Chicago Record*.

CHILLING.—It was a cold day for Tammany when the ice monopoly was uncovered.—*The Rochester Democrat and Chronicle*.

MR. PLATT does not really agree with the Supreme Court's decision that an office is not property. He knows better.—*The Springfield Republican*.

It is now the manifest destiny of the civilized nations to protect the Chinese from themselves, and take the country in payment.—*The Philadelphia Ledger*.

A MAN was arrested for making a silly speech in the national House of Representatives on Saturday, but that was because he made it from the gallery instead of the floor of the House.—*The Chicago Daily Press*.

THE following two stanzas of a parody on "America," contrasting the condition of Hawaii, which has free trade with the United States, with that of Porto Rico under the tariff, appear in the *San Juan News*:

My country, 'tis of thee
That set Hawaii free,
Of thee I sing!
I am a slave no more,
I've dumped the load I bore
And ceased to kneel before
A queen or king.

Land of the brave and just,
Land of the sugar trust,
How sweet to be
Held up outside the gate
And made to pay the freight—
I tell you what, it's great
And tickles me!

LETTERS AND ART.

LE GALLIENNE'S CRITICISM OF KIPLING.

RICHARD LE GALLIENNE, at the opposite extreme from Rudyard Kipling in mental and physical fiber, has joined the army of critics of the author of "The Absent-Minded Beggar," in a volume in which he calls Kipling "the captain voice of a certain Tory reaction," claiming that Kipling is the leader of a

MR. RICHARD LE GALLIENNE.

materialistic school, the head of a retrograde movement which he says is only temporary in its vogue and one of the mysterious ways in which progress often works.

What Mr. Le Gallienne says is not new, but derives interest from a certain piquancy of style characteristic of most of this writer's sayings.

Of Mr. Kipling's poetry the critic says:

"What, then, is the truth about Mr. Kipling's poetry of 1899? It may, I think, be gathered from the running comment I have made in the previous pages. It is

that Mr. Kipling is master of captivating sing-song, a magician of catches and refrains. Of melodies that trip and dance, and gaily or mournfully or romantically come and go there has perhaps been no such master before him in English; and he is this largely because he has had the wisdom to follow Burns, and with many of his ballads to popular or traditional airs, which must be allowed their share in the success. He is, so to say, the Burns, not of steam, but of the music-hall song:

"And the tunes that means so much to you alone—
Common things that make you choke and blow your nose,
Vulgar tunes that bring the laugh that brings the groan—
I can rip your heart-strings out with those."

Mr. Le Gallienne says Mr. Kipling's lyre is a banjo, which he is very fond of strumming.

Of Mr. Kipling's stories, he claims that the style is largely journalistic; that two main purposes run through all the short stories, one the celebration of the romance of the English Government in India, and the other the romance of commerce throughout the world. He continues:

"Perhaps the quality that first struck one in reading Mr. Kipling's stories was their exceptional reality while you read them. That, and the extraordinary knowledge not only of the details of human life, but of its less speedily learned moods, complications, and significances; knowledge, too, that even in a generation so inured to marvelous boys was made the more astonishing by its precocious acquirement. . . . It was evident that Kipling had read deeply in the book of human life. He really did know an astonishing number of things about men and women, white and brown."

But Mr. Le Gallienne thinks Kipling's tales are easily forgotten.

"The stories are full of surprises, but one great and disappoint-

ing surprise is the facility with which we forget them. Paper and print have seldom, if ever, produced so magic-lantern-like an impression of reality. One is the more surprised to find how skilfully they elude the memory. Out of all the one hundred and thirty-one stories there is not more than a dozen of which a normal memory can recall the features, and numerous as the characters are to which we have been introduced, there are certainly not a half a dozen which we can differentiate."

But while Mr. Kipling has written little that wholly pleases Mr. Le Gallienne, the latter admits the significance and the world influence of the author of "The Recessional." He thinks that altho Mr. Kipling is not to be held accountable for the prevalence of the war spirit, he is largely responsible for its glorification:

"Corresponding in no small degree to the present contempt in France for the intellectual—that is, for those who regard human life as something more than brute force, brutal rivalries, and brute pleasures—we are in the thick of one of the most cynically impudent triumphs of the Philistines the world has seen. All that should be meant by civilization is a mock. The once kindly fields of literature are beneath the heels of a set of literary rough-riders. All the nobler and gentler instincts of men and women are ridiculed as sentimentality. All the hard-won gains of nineteenth-century philosophers are thrown to the winds; and for the minor ameliorations of science we have to pay with the most diabolical development of the foul art of war. . . . Mr. Kipling is not a lonely voice crying to-day what all will feel to-morrow. He is the voice of the tide at its height. Yet if the mood creates the voice, the voice powerfully reinforces the mood. There is a captaincy in expression, and such is the responsibility of the voice."

Mr. Le Gallienne's chief objection to Kipling that he is the leader in the glorification of physical force, but in Kipling's stories the critic sees many healthy morals and examples of genuine heroism. He thinks Kipling one of the few real humorists of the age. He continues:

"Who, knowing what war is—and none knows better than Mr. Kipling—shall deliberately glorify war, horrible always, but ten times more horrible to-day, however brilliantly, humorously, persuasively, he does it, is an enemy of society, and the more brilliantly he does it the greater is his crime. . . . As a writer Mr. Kipling is a delight; as an influence he is a danger. Of course the clock of time is not to be set by gifts ten times as great as Mr. Kipling's. The great world movement will still go on, moving surely, if slowly, and with occasional relapses in the direction it has already taken, from the brute force to spiritual enlargement. But there are influences which speed it along and others that retard it. It is to be regretted that Mr. Kipling's influence should be one of those that retard."

The Most Popular Books During May.—The six most popular books during the past month in the United States, as reported in *The Bookman* (June), were as follows:

1. To Have and To Hold. By Miss Mary Johnston.
2. Red Pottage. By Miss Mary Cholmondeley.
3. Resurrection. By Count Tolstoy.
4. Janice Meredith. By Paul Leicester Ford.
5. When Knighthood Was in Flower. By Edward Caskoden.
6. Richard Carvel. By Winston Churchill.

Of these all are novels, it will be noted, and all but the second and third are by American authors, and deal with historical themes. In the list for April "Janice Meredith" held the third place, "When Knighthood Was in Flower" the fourth, "Richard Carvel" and "The Gentleman from Indiana" the fifth, and "Resurrection" the sixth. It is notable that Count Tolstoy's new novel is pushing steadily to the front of the list. The vitality of Caskoden's pre-Elizabethan romance, first published over a year ago, is also remarkable.

The ten most widely read books in England for May are:

1. The Transvaal from Within. By J. P. Fitzpatrick.
2. From Cape Town to Ladysmith. By G. W. Steevens.
3. A History of South Africa. By W. B. Worsfold.

4. The Natal Campaign. By Bennet Burleigh.
5. Mr. Thomas Atkins. By E. J. Hardy.
6. Toward Pretoria. By Julian Ralph.
7. On the Eve of the War. By Evelyn Cecil.
8. The War to up to Date. By A. H. Seafie.
9. The Farringdons. By Ellen T. Fowler.
10. Joan of the Sword Hand. By S. R. Crockett.

The English list, it will be noted, is as rich in war literature as the American list is in fiction. Our British cousins, in fact, have only two novels among their most popular books, and these are at the bottom of the list. America is represented in the list only by Mr. Julian Ralph.

MR. HOWELLS ON THE GENESIS OF THE MODERN HEROINE.

WRITING a work of fiction without a heroine is like giving the play of "Hamlet" with Hamlet left out. There has been no sudden demand that the novelist must have a man and a woman as the central characters around which the plot must be woven; it has been a slow evolution, beginning long before the advent of what we call the novel form. The modern heroine has her ancestry. W. D. Howells writes in *Harper's Bazar* (May 5):

"We may amuse ourselves, if we choose, in tracing resemblances and origins; but after all, the heroines of English and American fiction are of easily distinguishable types, and their evolution in their native Anglo-Saxon environment has been, in no very great lapse of time, singularly uninfluenced from without. They have been responsive at different moments to this ideal and to that, but they have always been English and American; and they have constantly grown more interesting as they have grown more modern."

Simplicity, thinks Mr. Howells, is the stamp of lasting work, and it is this which gives De Foe the right of being classed as a modern writer. His English is pure and life-like. Mr. Howells says:

"De Foe was of a vastly nobler morality than Fielding, and his books are less corrupting; they are not corrupting at all, in fact; they are as well intentioned as Richardson's, which sometimes deal with experiences far from edifying in order to edify. He is a greater, a more modern artist than either of the others; but because of his matter, and not because of his manner or motive, his heroines must remain under lock and key, and can not be so much as named in mixed companies. De Foe's novels can not be freely read and criticized; only his immortal romance is open to all comers, of every age and sex, and it is a thousand pities that 'Robinson Crusoe' has no heroine. We must not begin to study our heroines of nineteenth-century fiction with him, tho, esthetically and ethically, nineteenth-century fiction derives from him in some things that are best in it, especially in that voluntary naturalness and instructed simplicity which are the chiefest marks of modernity."

In Richardson's "Clarissa Harlowe," Mr. Howells sees the

portraiture of the Ever-Womanly which is for all times and places. He continues:

"The form of the novel in which she appears, the epistolary novel, is of all forms the most averse to that apparent unconsciousness so fascinating in a heroine; yet the cunning of Richardson (it was in some things an unrivaled cunning) triumphs over the form and shows us Clarissa with no more of pose than she would confront herself with in the glass. It is in her own words that she gives herself to our knowledge, but we feel that she gives herself truly, and with only the mental reserves that a girl would actually use: there is always some final fact that a girl must withhold."

This gradual growth in personality which is effected by the change from the objective to the subjective state finds a more marked advance in Oliver Goldsmith's works. Mr. Howells writes:

"It can hardly be claimed that Goldsmith was a greater imagination than Richardson; but he was certainly a greater artist. He had the instinct of reticence, which Richardson had not, and it is not going much too far to say that the nineteenth-century English novel, as we understand it now, with its admirable limitations, was invented by Oliver Goldsmith. The novel that respects the right of innocence to pleasure in a true picture of manners, and honors the claim of inexperience to be amused and edified without being abashed, was his creation. He did not know himself, perhaps, how wonderfully he was prophesying, in 'The Vicar of Wakefield,' the best modern fiction of England and America."

"He does not portray the incidents or characters which Richardson studies with a pious abhorrence, or Fielding with a blackguardly sympathy. His realism stops short of the facts which may appal or which may defile the fancy. It contents itself with the gentle domestic situation of the story and its change from happiness to misery through chances none the less probable because they are operated by the author so much more obviously than they would be now by an author of infinitely less true inspiration. Such an artist would not now accumulate disaster upon Dr. Primrose's head so clearly with his own hand; disaster has become much more accustomed to the affliction of fictitious character and makes its approaches with the indirectness and delays noticeable in the actual world. Neither would such an artist have employed means so little psychological as the good man's sudden loss of fortune and his swift precipitation to misery by the wretch who breaks the heart of his daughter, and spoils the joy of all those harmless lives. Happily for the finer art of our time, the betrayer does not now imaginably find his way into the family of a country clergyman with the intent to dishonor and destroy it; but even in the brutal time when such things were justly imaginable the author spares us the worst with a sort of prophetic sensibility. The fair Olivia is indeed eloped with if not quite abducted; things could not be otherwise managed in that day without defiance of the traditions alike of fiction and of fact; but she stoops to folly only through a mock marriage, and this in the end, as is well known, proves a real marriage, thanks to the twofold duplicity of the wicked lover's agent, who, for purposes of his own, has had the ceremony performed by a real clergyman. Her tragic fate gives her a sort of dignity not innate in her; and in her potential relenting toward the ultimate disaster of the scoundrel who has so cruelly misused her, she has the highest charm of the Ever-Womanly—at least to the Ever-Manly witness."

In the conclusion of this first article on the heroine of fiction, which is confined to a discussion of the progenitors of our modern type, Mr. Howells says of this early period:

"It was the age of moral sentiments, and to have them at hand was the sovereignest thing against temptation from without and within. Heroines used to express them whenever the least danger threatened, and sometimes when they were in perfect safety. Under instruction of the good Samuel Richardson they sought the welfare of themselves, their lovers, and their correspondents in formularies prescribing the virtues for every exigency, and praising right conduct with a constancy which ought to have availed rather more promptly than it did. But neither of the girls in 'The Vicar of Wakefield' is very profuse of them, and

WILLIAM DEAN HOWELLS.

this marks either a lapsing faith in their efficacy, or a rising art in the novelist. Goldsmith, at any rate, confines the precepts and reflections to the father of his heroines, as he might fitly do in the case of the supposed narrator; Richardson, or rather the epistolary form of his novels, obliges his heroines to make them. Yet he was a great master, and in spite of his preaching a great artist. He was a man of a mighty middle-class conscience, and in an age not so corrupt as some former ages, but still of abominable social usages, he could not withhold the protest of a righteous soul, tho he risked rendering a little tedious the interesting girls who uttered it for him."

And of the group of women who followed, such as Fanny Burney, Maria Edgeworth, and Jane Austen, he writes:

"The most beautiful, the most consoling of all the arts owes its universal acceptance among us, its opportunity of pleasing and helping readers of every age and sex, to this group of high-souled women. They forever dedicated it to decency; as women they were faithful to their charge of the chaste mind; and as artists they taught the reading world to be in love with the sort of heroines who knew how not only to win the wandering hearts of men, but to keep their homes pure and inviolable. They imagined the heroine who was above all a nice girl; who still remains the ideal of our fiction; to whom it returns with a final constancy, after whatever aberration; so that probably if a composite photograph of the best heroines of our day could be made, it would look so much like a composite miniature of their great-great-grandmothers in the novels of these authors that the two could not well be told apart."

"THE SLUM MOVEMENT" IN FICTION.

THE great success of Mr. Richard Whiteing's "No. 5 John Street" has directed attention to the history and characteristics of this school of fiction, which endeavors to portray under the form of the novel what Mr. Jacob Riis has so eloquently set forth in his social study, "How the Other Half Lives." This school forms the subject of two recent articles, one on "Fiction and Philanthropy" in *The Edinburgh Review* (April); the other on "The Slum Movement in Fiction," by Miss Jane H. Findlater, in *The National Review* (May). The writer in the former periodical, while admitting the surpassing merit of Mr. Whiteing's pictures of life in the East-of-London slums, thinks that his contrasting pictures of "high life" deserve only ridicule. He says:

"We gather that, as a preparation for dealing with the life of the very poor, Mr. Whiteing himself followed the course which he attributes to his hero, and lived for some weeks in a squalid lodging-house such as he describes. His description of it and of its inmates suggests, indeed, that this was the case. The scenes which he puts before us have all an air of reality—the unimpassioned precision of sketches made on the spot; nor are they, like so many descriptions of the same kind, overcolored. The inmates of the lodging-house are represented with the same conscientious skill, and the pictures which he gives us of them show that he has not merely an observing eye, but a something very much rarer—that faculty of an observing mind which has its roots in dramatic and imaginative sympathy. He presents them to us as living beings, who, like all other of their species, are partly good, partly bad, ignorant about many things, shrewd about many others, and who find that life, even among the most unfavorable circumstances, has in it elements of interest, gaiety, and enjoyment. They have all of them, moreover, an individuality which is the stamp of truth, and which vividly illustrates the fact, so often forgotten, that the poor, like all other classes, are a very heterogeneous body; that they think about life and take life in very different ways; and that unity of feelings and opinions, social, moral, or political, is no more produced by a similarity of bare floors than by a similarity of floors covered with Turkey carpets.

"When we turn, however, from Mr. Whiteing's picture of the lowest class to his corresponding picture of the highest, every one of the commendations which we have just bestowed on him must be withdrawn. He is himself very severe on the folly of those philanthropists who think that they know what the life of

the poor is from occasional visits to the slum or the laborer's cottage. Such persons, he says, see poverty from the outside only. To understand it they must see it from the inside, and experience it as the poor themselves do. In dealing with the fashionable world Mr. Whiteing himself occupies the precise position which he attributes to these philanthropists. Whatever knowledge of the fashionable world may be his, it is obviously a knowledge that comes from the outside only—possibly from occasional glimpses of it, but mainly, we should be inclined to conjecture, from a study of gossiping newspapers and of Ouida's earlier novels."

The writer argues that "the whole of Mr. Whiteing's case is founded on a misconception"; that altho society is darkened by many evils, which Mr. Whiteing is right in deploring, his diagnosis of their nature is incorrect. The critic takes the familiar view of the *laissez-faire* economists, that "the moral nature of mankind has never fundamentally changed from the dawn of history to to-day," and that therefore the selfish will be selfish and the cruel will be cruel still. An unjust and degrading environment, in Mr. Whiteing's view, is responsible for a perversion and poisoning of human traits that are naturally wholesome and true, and that need only the sunlight of equal justice and opportunity in order to blossom forth. But, in the comfortable philosophy of the writer in *The Edinburgh Review*, things are pretty well as they are. Suffering is not so widespread or so acute after all; and Mr. Whiteing, Edward Bellamy, and similar writers see life in a lurid and misleading light. The people in John Street are used to their conditions, and do not find them so bad as we should. Indeed, they rather like them, we infer.

Miss Findlater mainly confines her attention to classifying and tracing the evolution of "slum novels." The *London Academy*, commenting on her article, arranges her statement of the literary descent of this type of fiction in the form of a genealogical pedigree, as follows:

Charles Dickens	(<i>Oliver Twist</i>).
Charles Kingsley	(<i>Alton Locke</i>).
George Gissing	(<i>The Nether World</i>).
Rudyard Kipling	(<i>Badalia Herodsfoot</i>).
Arthur Morrison	(<i>Tales of Mean Streets</i>).
W. S. Maugham	(<i>Lisa of Lambeth</i>).
W. Pett Ridge	(<i>Mord Em'ly</i>).
Clarence Rook	(<i>The Hoodigan Nights</i>).

It will be noted that Miss Findlater in this list makes two serious omissions—Mr. George Moore's "Esther Waters," and Mr. Whiteing's recent novel. Kipling's slum story, she thinks, first gave the present "brutal school" its inspiration and vitality. Contrasting the earlier slum fiction of Dickens with the later developments, she writes:

"It is not in detail so much as in purpose that the difference lies. As I have said, Dickens from the outset is moralizing; and that is what no modern author would dare to do for a moment—because no one would read his books if he did. The awful retribution of sin, the hard way of the transgressor, is not what we wish to hear about in 1900, whatever the public of earlier days liked. It is much more to our taste to read of the triumph of the transgressor and the total defeat of innocence by inexorable fate. If any 'modern' had undertaken to write *Oliver Twist's* memoirs, the story would have put on quite another complexion; Oliver would never have been allowed to extricate himself from the snares of Fagin, but would have gone deeper and deeper into the meshes, spite of youth, and endeavor after good, and mothers' prayers, and everything else; for nowadays we must be 'relentless,' come what may. *The Moral*, in fact (using the expression in its Victorian sense), is extinct; we recognize the uselessness of asserting that 'good always triumphs' in the end, or of denying that the wicked are often much more prosperous than the righteous; so we have stopped writing stories to that effect, and the pendulum has of course swung too far in the opposite direction. Still, the public taste holds firmly to the old convention, as you may see exemplified at the theater any and every night. The villain is always hissed; the audience

has nothing but applause when the virtuous hero is successful; it is only in our books that we reverse this law of taste. . . .

"It was in 1890 that Gissing brought out that extraordinary book, 'The Nether World.' This man would seem to have been in hell. Other men crawl to the edges of the pit and look over at the poor devils that writhe in its flames—he has come up out of it, and now, like the man of the parable, would testify to his brethren lest they too enter that place of torment! As no one else has ever done—I would almost venture to prophesy as no one else will ever do—Gissing writes the tragedy of Want."

Then came Kipling with his "Badalia" in 1892-93, followed later by Arthur Morrison, Maugham, Pett Ridge, and Clarence Rook. These latest writers deal less in "exaggeration," thinks Miss Findlater, and depict the "wild joys and excitements" of slum-life. According to this school, there is little to deplore in the life of the promising young Hooligan—at any rate so long as he keeps on the safe side of Newgate and the gallows, and is able to use his hands—and his fingers. There is "not much want; no dulness; plenty of excitement; no hard work."

THE OUTLOOK FOR ART IN AMERICA.

A GREAT French painter has recently said that America will shortly give the Old World a second renaissance in art. Mr. William Ordway Partridge, the sculptor, thinks this is a tremendous dictum but one that may well be pondered. Until the Chicago World's Fair other nations did not take our art efforts seriously. That supreme effort has made us a potent factor in the art history of the age, and changed the views of European critics toward American art.

Mr. Partridge, writing in *The Criterion* (May), says that we are on the threshold of a new era; like the Greeks we have reached a high state of civilization and are free men. But he declares:

"America's contribution to the world of art will not be that of Greece. Miracles, as Lowell has said, can not be encored. We tried that once, and produced an insipid pseudo-classical art. Do not let us make the mistake, equally fatal, of copying the art of France, or Japan, or indeed of any nation. We need make no undue haste. At our present rate of development—with immunity from wars, and the earnest desire, seen everywhere but dimly understood, to have what is beautiful—and under the new educational influences, benign and far-reaching, one may dare to prophesy that within three-score years we can and must produce an art which will be second to no other.

"Lately, under a strong inspiration, we have produced an important work—the Dewey or Naval Arch. This inspiration sprang from the intense patriotism of the people, from their pride in the magnificent achievements of America's seamen. The arch is a forcible illustration of the fact that all art worthy of the name has its foundation in patriotism. No less an authority than Coleridge said so, in talking of art in England. It should be as easy for us in our own land, as it was with our cousins across the waters, to produce a national art that shall be and is distinctive. They succeeded because they gave to their art the enduring form that results from the working out of their own problems, and a refusal to borrow of other nations. People who will not face and conquer their own difficulties will never produce anything in art that is inherently great, for out of effeminacy and lack of courage no great thing ever rose. Absolute sincerity and the self-reliance of the Anglo-Saxon, which is as dominant to-day in America as it ever was in Britain, can and will make for us a distinctive and noble American school of art.

"While there are many to be mentioned who are the makers in America of the twentieth-century school, we can select some who will easily hold their own with the great artists of the Old World. These are Inness, St. Gaudens, French, Blashfield, Warner, and the chief makers of the Naval Arch. The late George Inness has been recognized for the past fifteen years as one of the great landscape painters of the world. St. Gaudens is spoken of in Europe in the same breath with the masters of modern sculpture, and since Daniel French produced his great memorial relief of 'Death

and the Sculptor,' he has scored another tide-water mark in the history of our development in that art.

"Olin Warner's fountain in Portland, Ore., must be put in the same class with St. Gaudens's Shaw memorial and French's relief spoken of above, and we can also include in this class the works of Blashfield and Inness.

"Let me define, now, what that class stands for, and how it is related to the art of the time and of the world. Before these works were produced our sculptors and painters were given over to the copying, sometimes consciously, but for the most part unconsciously, of foreign masters. Story, Hart, Powers, and, among the painters, those who formed the Hudson River School, produced soulless, lifeless works, which—call them pseudo-classical, or what you will—are in the line of wax-works and painted tapestry, inspired by no genuine enthusiasm and awakening no inspiration in the beholder. They had not caught the *Zeitgeist*, the spirit of the time, and were far away from the main stream of our life. Their art was a mere abstraction, born of the dilettanteism of Florence and the Orient.

"In the works of the men we have mentioned, however, and we might name many others, we can not help grasping a new intent or *motif* which is in line with our best men in literature. We may call it the study of character, the writing of life upon the human face—a sympathetic modern note, which has never fully been expressed before. It was foreshadowed by Donatelli and by Luca della Robbia in the Renaissance, but the time was not then ripe for the fuller realization of the interdependence of man upon his fellow. Character, the spirit, the ideal, these find some complete expression in the new school of sculpture. Here we are concerned with the dreams, the hopes, the thoughts which mold the man. It is a distinct movement in the line of art for the people or for so termed popular art."

FICTION AND THE PUBLIC MIND.

THE great demand for the historical romance which has arisen in comparatively so short a time has set many to wondering what is the cause of this rapid change of the public taste from the fiction of character analysis and social problems to tales of heroic adventure. Writes Maurice Thompson in *The Independent* (May 17):

"Some critics have thought that these changes are to be referred to the influence of certain master-minds whose natural bent was in the direction which they forced the popular taste to take. Others have accounted for extreme and sudden reversals of prevailing literary and artistic currents on the ground that the spirit of the world has its cycles of movement, its rings of growth, like those of a tree, and that the prevailing aspiration of civilization controls the movements of the master genius, who does no more than give artistic utterance to that aspiration."

But however deep this movement is, it is certain that it has come, and the outlook for the future suggests a possible literary revolution. For Mr. Thompson hints that the period of "introversion directed mainly upon diseases of the social, domestic, political, and religious life of the world" may have run its course. He says further:

"The public mind may be tired of contemplating the irremediable weaknesses and ancient corruptions to which human nature is heir. The time may be at hand when in the economy of the world's organism there must be a renewal of that substance of life and character which is fed through the imagination. Science has overflowed its boundary, and for many years past has been sophisticating fiction and poetry and insinuating itself into the very pores of religion. Probably this overflow has a limit, just where we can not say, and it may be expected that when the limit shall be reached there will be reflux and undertow. At the present moment the air, so to say, is full of those indefinable indications of a great general change in the trend of public curiosity and taste."

Commercial interests tend toward tales of adventure rather than the commonplaces of life, and, thinks Mr. Thompson, it may be that recent changes in the world's history "have set all minds more or less to feeling out for precedents and examples by which

to measure the future's probabilities." A few years ago Zola, Tolstoy, and Ibsen held undisputed sway; now we find a return to the historical work—to the field of Scott, Dumas, Dickens, and Thackeray. He continues:

"We may not predict the extent of the revolution, or the outcome of it. Art is long, it is just as fixed and just as fitful as human nature, just as mobile as human taste, just as sensitive to conditions of civilization as the thermometer to the air's temperature. If the map of the world and the atmosphere of civilization are changing radically, a corresponding change in art should not be surprising. Will the new point of view and the new attitude of genius insure to us a fresh interpretation of history through the historical romance, the historical drama and poems taking, from a new starting-point, a course similar to those of Homer, Dante, Milton, and Hugo? Of course, in order to be vital and enduring the new romantic wave must not be a mere return to the recipe of a dead age. A revival of romance to be important must be a new aspiration of civilization, not a mere indifference to a form of art with which taste has become satiated and cloyed."

In conclusion, Mr. Thompson points out that if commercial returns are a true criterion, public taste in America now demands the historical novel rather than any other form of literature. Referring to the five or six books of this character now most popular, he points out that "not one of them owed anything to the theory or processes" of realism. "Not one of them is a masterpiece. They are simply good stories, in the main most takingly told." He continues:

"Art may be making its way through an ancient barrier to a channel in which the best of what we know as realism and the highest essentials of imaginative vigor may join and combine for a new and great revival of true greatness in the novel, the romance, and the drama."

AMERICAN COLLEGE SLANG.

IN anticipation of a dictionary of student language about to be published by the American Dialect Society, Prof. Eugene H. Babbitt, of Columbia University, has gathered together in a recent article some of the most singular and amusing examples of slang in vogue in the American college of to-day. Of course, the college student uses the same language in general as his brother who stays at home; but the peculiar college environment has produced, in addition to this, a large number of distinctive words. Indeed, something like a thousand verbal forms are defined in the new dictionary edited by Professor Babbitt. Writing in *The Chautauquan* (May), he says:

"The student is likely to have in circulation most of the slang current among all persons of his age, and he may have some which is peculiar to students, or even to particular institutions. The latter, of course, belongs to a discussion of student language, but the former does not, except in so far as it presents distinctive features. It does this to some extent. There is a certain style, or flavor, so to speak, in general slang as heard among students which one accustomed to it misses in outsiders. It comes from the higher average of mental alertness and quickness of comprehension among students. It may be described as a better taste in the use of slang, if one may use the term; a seizing of what is really effective metaphor, and less of a tendency to use what is merely grotesque. Furthermore, the high average of mental alertness allows more daring metaphor to be used, and there is a tendency to carry this to an extent which reminds one of Shakespeare's young men, or in extreme cases finds parallels in the Norse skalds. For instance, the term *nigger heaven* (in a theater) is well known and has a patness which keeps it alive in common parlance. Some students extend this into *Ethiopian paradise*. It is said of an eccentric person that he has 'wheels in his head.' The student goes on and calls said head a *bicycle factory*. A good-looking young negress is a *charcoal lily*. At the college commons the request is heard to 'drive the *keifer* this way.' This means to pass the smaller sized milk-pitcher. From

the same place comes, as an instance of slang only possible in the student environment, *semi-weekly review* for the hash, or *Hercules* for the butter. To say of a long walk that it is 'as much as a *parasang*,' or that a person who has gained a point over another 'got into him several *parasangs*,' appeals with excellent effect to one who has read Xenophon."

Among many students of the languages, one of the necessities of life is the literal translation. Various words are used for this. "Horse" and "pony" are the older words for this convenient means of linguistic locomotion; later words are "animal," "bicycle," and "wheel"; doubtless we shall soon have "automobile." A shelf of such books is a "stable," and a gathering of students all riding on the same good-natured beast is called a "race-course." Other curious college usages are indicated by especial words. Dr. Babbitt writes:

"The fact that work is a serious matter is shown by words like *bummer* and *bull*, applied to the man who wastes your time by prolonged calls when you want to work; by the custom of *sporting the oak*, or the answer 'busy' to a knock; and by the term *time-eater* for a course requiring much study. . . .

"The custom of coeducation gives a large and sometimes amusing vocabulary. From the institutions for females alone only a few terms came which were not in vogue elsewhere. These are all words pertaining to eating, with one exception, *swain*, from a girls' boarding-school, meaning a male acquaintance. But the institutions for both sexes give many words, most of them, of course, referring to the tendency of young people to fall in love and get married, which manifests itself wherever they may be, perhaps no more in college than elsewhere.

"The female student is known as a *co-ed*. This word serves as noun and adjective; the verb to *co-educate* means to converse with a person of the opposite sex. *Hen* is a common term for the female student. It is used in various compounds, such as *hen-medic* for a female medical student, *hen-roost* for a dormitory for women (*quail* and *quail-roost* are common variations); at Cornell, Sage College is the name of the women's dormitory, and an inmate is a *sage-hen*, while a male student who calls there frequently is a *sage-rooster*. *Calico* or *calic* is a sort of generic term for the female sex and is used in various connections; *e.g.*, to *take calic* is to escort a lady to a place of entertainment or social function; a *calico course* is a course which is much attended by 'hens,' or in which their presence makes the social element prominent; this term is also used figuratively for a flirtation or love affair more or less serious. A *co-educational* walk is one made of two planks with rough stones between, far enough apart to prevent too close proximity of two persons using them. A cushioned window-seat (or sometimes a hammock) is known as a *spoon-holder*. A *cottage course* is the term used when a young couple leave college, before graduation, to get married."

NOTES.

A CERTAIN English publishing house received not long ago three letters addressed severally to "William Cowper, Esq.," "P. B. Shelley, Esq.," and "Miss (sic) E. H. Browning." At this rate, it seems that the publishers may soon usurp the field of Mr. Andrew Lang, and produce a *real* series of "Letters to Dead Authors."

AMONG the spring publications, "The Last Lady of Mulberry" introduces a new figure in the literary world. Mr. Henry Wilton Thomas, the author of this novel, has found in the Italian quarter of New York, where he has placed his plot, a rich, comparatively unworked field. Mr. Thomas's grasp of local color and his pleasing boldness of touch have met much critical recognition.

DRAMATIC critics seem to agree that Miss Johnston's "To Have and To Hold" will make a successful play. They think that the unerring instinct of Charles Frohman has obtained for him the best thing in the dramatic world at this moment. Many actresses have been proposed to fill the rôle of *Joslyn Leigh*, and *The Evening Sun* (New York) suggests Mary Mannering as the American actress ideally fitted for the part.

SHAKESPEARE as a figure in fiction is not so very uncommon. Besides the unpublished romance by Mr. Lang in which the bard is said to speak (in blank verse, a reader of *The Academy* (London) calls attention to the fact that the bard appears in "Judith Shakespeare" by the late William Black; in "The Jolly Roger," by Hume Nisbet; in "Master Skylark," by J. Bennett; and in "Shakespeare and His Friends," published anonymously in Paris in 1833.

SCIENCE AND INVENTION.

THE TOTAL ECLIPSE.

ALTHO it is yet too early to announce whether any noteworthy additions to our scientific knowledge have resulted from observation of the recent total solar eclipse, the accounts in the daily press make it evident that conditions on the whole were favorable. Probably no total eclipse was ever observed by so many trained astronomers. In this country North Carolina was a favorite region. At Wadesboro were four groups of observers, respectively from the Smithsonian Institution, Princeton University, Yerkes Observatory, and the British Astronomical Association. Professor Hale, of Yerkes Observatory, is reported to have said that never before in the history of the study of eclipses were preparations for observing every detail of the phenomenon on anything like so large a scale as those made at this place. At Barnesville, Ga., the eclipse was observed by Professor Updegraff, Dr. T. J. J. See, Professor Lord of Ohio State University, and others. At Norfolk, Va., were observers from the United States Weather Bureau, Harvard, and Yale. Two hundred and fifty thousand persons saw the eclipse from this point, including the President of the United States, who was on board the despatch-boat *Dolphin*. Rutgers College sent a party to Winnsboro, S. C., the Lick Observatory one to Thomaston, Ga., and Harvard and the Massachusetts School of Technology to Washington, Ga. In fact, the whole belt of totality was strewn with trained users of telescope, camera, spectroscope, and polariscope. The press despatches all pronounce the weather to have been perfect. The correspondent of the New York *Sun* thus describes the preparations at Wadesboro, N. C.

"The eastern sides of the hills on which this beautiful little Southern town stands has from a distance the general appearance of being fortified. It bristles with astronomical artillery. The polished tubes of great telescopes gleam in the sun like brass field-pieces, and the glittering surfaces of many mirrors, in the brilliant light which has shone all day, keep up a heliographic play upon the green underlying hills which stretch in a magnificent sweep leagues and leagues away to the horizon. If one did not know that it was only to bombard old Sol with personal questions that all these batteries were drawn up, some of the ordnance would look formidable enough. For instance, the Smithsonian gun, with its five-foot bore and barrel 135 feet long, stretched out horizontally and about five feet from the ground, looks as tho it should be able to hurl earthquakes crashing against the defenses of the moon. Then close beside is a similar piece of scientific ordnance of the Yerkes Observatory, 62 feet long. From these monsters the weapons range all the way down through all grades of telescopes, big and little, to field-glasses and opera-glasses."

The following paragraph gives an idea of the size of some of the photographic apparatus used:

"The Yerkes telescope camera is 62 feet long, the same length as the Yerkes telescope, to which it will be attached after its use here. The Smithsonian telescopic camera is 135 feet long. Both are built on the same plan as the great telescopic camera on view at the Paris Exposition, and which is larger than the tower of Notre Dame Cathedral. These enormous cameras are in a horizontal position about five feet from the ground, and the image is reflected into them by a mirror four inches thick which is adjusted by clockwork to follow the movements of the sun."

Of course the principle of division of labor prevailed. Thus, at Wadesboro, for instance, Prof. C. A. Young, the veteran Princeton spectroscopist, confined his attention chiefly to the green spectrum line identified with the corona and believed by physicists to be the same as the solar "line of 1474." Unfortunately, for some unexplained reason, he was not able to get a sight of this line at all. Dr. Miller, of the Case School at Cleveland, observed only what are called the "flash lines," that sud-

denly appear and disappear just before totality. Professor Hale, of Yerkes, made only bolometer observations on the heat radiation of the corona, and Professor Barnard occupied himself solely with coronal photography. Among the most interesting observations were those on the curious "shadow-bands" that accompany totality, which have not been closely investigated before. The results of the Rutgers party are thus described in the New York *Evening Post*, May 28:

"In observing the shadow-bands, two assistants watched closely a white sheet spread on the ground, four-square to the points of the compass. They were instructed to place long rods along the bands and note the direction of the movement. The direction of the rods thus placed was afterward carefully measured by Professor Breazeale with a compass. The observations of the assistants were confirmed by other members of the party standing near-by. They unite in testimony to the reality of the bands, their rapidity of movement, and general wavy character, some being straighter than others. While easily observable, they required close attention on account of their fineness. Their distance, estimated, was from one to two inches."

The bands were photographed successfully by Professor Langley, of the Smithsonian. Their direction of motion differed in different places and is thought to be connected in some way with atmospheric conditions.

THE INDUSTRIALIZATION OF ALCOHOL.

A NOVEL suggestion for the decrease of alcoholism is made in *La Science Française* (May 11), by the editor, M. Emile Gautier. His idea is that use of alcohol in the arts and for industrial purposes may be made to supplant its consumption in beverages. M. Gautier's article, which is entitled "The Supreme Vice," is only one evidence among many of the attention which scientific men in France are giving to the recent increase of drunkenness in that country, and of their realization of the importance of putting a stop to it. After nearly a page of statistics, which we need not repeat here, M. Gautier goes on to say:

"Doubtless the progress of alcoholism is in direct ratio with the quantity of alcohol consumed. But quality is a more important factor still. Our fathers drank as well as we—possibly even more than we. But in those days alcoholism was practically unknown; in any case it limited its ravages to a few isolated victims, so that it did not threaten the whole fabric of society. . . .

"Now that chemistry has taken a hand, the same is not true. How many so-called cognacs and alleged 'fine champagnes' are only commercial alcohol—from which neither the aldehyds nor the furfural have been extracted—more or less adroitly flavored with artificial 'bouquets'!

"Last, but not least, there is absinthe, the horrible absinthe, mother of madness, crime, and death . . . which may be regarded as bottled epilepsy.

"The thing to despair of is that we can see no means of counteracting all this. . . . The immense difficulty of the problem may be conceived when we remember that the equilibrium of [French] national finance is assured only by alcohol, for alcohol alone pays five hundred millions of our budget. Alcohol, in other words, is, as it were, the only plank that stands between us and drowning. What would become of our treasury if the homicidal consumption of alcohol should diminish by half—or should even decrease slightly?

"There is, perhaps, a means of saving our race, in spite of all this, while protecting the interests of all—it is the industrialization of alcohol. The day when alcohol can replace petroleum in the heating and lighting industries, and in the cheap production of energy, the day when we shall gain more by emptying it into our stoves and motors than into human throats, will be a day when just so much material will be taken from the drunkards, and it is my belief that the death of alcoholism will then be very near.

"From this point of view, which is not at all paradoxical, in my estimation, the example of Germany is encouraging. Like France, Germany produces alcohol in enormous quantities, for

from her 12,500 rural distilleries came in 1897 no less than 60,000,000 gallons of alcohol made from apples alone!

"But that which is the ruin of France has made the fortune of Germany. Why? Because the Germans, instead of getting drunk on their alcohol, have decided to make it work for them. Thus they have gained the acknowledged control of the world's market of chemical products and dyestuffs, of which, thirty years since, France had a monopoly.

"Here is something to remember and think about.

"But who could have foreseen that the automobile, as a great consumer of hydrocarbons, may some day have a rôle to play in the fight against alcoholism?

"Truly, everything comes to pass—and all is in everything!"
—*Translation made for THE LITERARY DIGEST.*

SCIENTIFIC KITE-FLYING.

A POPULAR account of the recent uses of kites for scientific purposes, as in aerial photography, weather indication, or military signaling, is contributed to *The Home Magazine* by Theodore Waters in the form of an account of a visit of the writer to William A. Eddy, of Bayonne, N. J., who is one of the chief experimenters with kites in this country. Mr. Waters describes Mr. Eddy as "literally submerged in kites," and goes on to say:

"He has dozens of them. Some are taller than a man could reach upward and wider than he could stretch with both hands outward; others are small—one, in fact, is just the size of Mr. Eddy's opened hand. He made this small one and raised it just to show that a kite of any size can be flown. The big muslin-covered nine-foot specimens are the most interesting. Stacked against the wall they look unwieldy, but their natural element is the air, and they go up into it with the readiness and ease of great birds. A boy with an old-fashioned long-tailed kite exerts more energy in flying it than does Mr. Eddy with his big tailless affairs. The 'unwieldiness' is only in looks. They are easily handled. . . .

"'Come,' he said, after some introductory remarks, 'we will go

A VIEW OF BATTERY PARK AND UPPER BAY.

out and take the temperature of the upper air.' He picked up a self-registering thermometer and a reel of heavy cord and went out to the greensward near his house. The reel was attached to an old soap-box, which served both as a stand for it and as a seat

for the kite-flyer. This was placed at one end of the field, while the line or cable was paid out about one hundred yards. The kite was tied to the end of the line and the thermometer was hung by a string of its own a few feet from the kite. While I

held the kite high in the air, Mr. Eddy grasped the cable halfway between the reel and the kite, shouted to 'let go,' and ran perhaps twenty feet. The great kite careened to the side and dived apparently to the shelter of a near-by fence, but missed it neatly, and, describing a great arc, sailed swiftly upward, the thermometer swinging like a pendulum. Mr. Eddy paid out the line rapidly until the reel spun round and the thousand-foot mark was reached. Then he secured the reel with a bolt and sat down on the box to rest. The thermometer stopped swinging after a while, and the kite, looking small enough now, floated steadily, like a soaring bird. But it was pulling on the line like a young horse, and the weight which held it down was by no means too great. After a while the kite-flyer pulled the thermometer down to the ground, and asserting that the upper air was slightly warmer than the surface air, he made a highly mathematical calculation, and announced finally that the weather would be 'fair and warmer' the next day.

"'I suppose,' said Mr. Eddy, 'that the greatest amount of utility in kite-flying will be obtained by the Weather Bureau. It is only by the increase of our knowledge of the upper regions that we are going to be able to say with certainty what subsequent weather conditions will be like. It is impossible for observers to ascend and make records, and kites furnish the cheapest and most available means for sending automatic instruments into the clouds. The Washington officials are constantly sending up recording instruments on kite lines.'"

In response to an inquiry regarding the detection of distant thunder-storms, Mr. Eddy replied that this was done by means of Leyden jars sent up on the kite-string. Sparks are drawn as in Franklin's experiment, only more complicated apparatus is used, and the experiments require fine weather:

"'Do you mean that you get lightning from a clear sky?' [asked the reporter].

"'Oh, yes. The air is always full of atmospheric electricity. You may draw sparks when there is not a cloud above the horizon. The nearer you are to a thunder-storm, however, the greater will be the intensity of the atmospheric electricity. Thus I can always tell by the length of the spark how far off the

thunder-storm center is located. By observing whether the sparks get longer or shorter after an hour or two, I can tell whether the storm is approaching or going away from us. But I will send up a Leyden jar and you may see for yourself just how much atmospheric electricity there is around us."

The experimenter not only made good his word by drawing lightning—in the shape of short sparks—from a clear sky, but even worked a small motor with the celestial electricity. This motor, which of course could not be used in practise, consisted of a toothed wheel which received the sparks successively on its teeth, turning a little at each impact. Said Mr. Eddy:

"The electricity we get from the clouds is not the same precisely as that produced by the dynamo. That is, it is electric current of course, but it is manifested in a different way. To be sure, one can not be certain that atmospheric electricity will not be utilized eventually. Tesla is working in this line, and has made some startling announcements of what will be accomplished with what he calls the 'earth's charge'; and when we think of the wonderful things that have been accomplished during the past half-century it would really seem more conservative to state that the impossible is possible than that it is not. Rather a paradox to be sure, but true enough in its point. So, while I see no way of utilizing lightning for power purposes, except by the use of gigantic collectors, yet some one may hit upon a plan for doing it."

The direct pulling power of a kite-string has already been utilized in some ways. Of this Mr. Eddy says:

"Wagons have been pulled at a very swift pace by kites. So have boats. But whether the pull can be utilized to operate a stationary engine will have to be proved by experiment. I think it is quite feasible. . . . At Brenton's Reef Lightship experimenters were able to pass a 200-fathom cable out to sea by means of a kite, and later they sent this same cable to a previously determined spot on the shore. . . . A kite was [also] made to tow a buoy from North Brother Island to Riker's Island, in New York harbor. These kites were steered in almost every direction by means of guide-lines. This fact that kites can be 'controlled' makes them invaluable for life-saving purposes. As a matter of fact, they can be steered across the wind with as much facility as a yacht. It is possible, even, to steer a boat almost directly against the wind for a certain distance if the propelling kite is rightly controlled. So, if there be a wreck on the coast, and the wind is blowing obliquely inshore, a boat with a life-line attached and rudder properly fixed may be made to go out to the wreck if the start is made some distance up the beach, and the kite is adjusted to fly across the wind. The kite will go inshore at an angle, but the boat, like a tacking yacht, will go obliquely outward."

Mr. Eddy regards attempts to make "kite-ascensions" as dangerous. He says of these:

"Since I can not always hold down my own kites when I have several in tandem, and therefore have to use mechanical means for drawing them in, it is plain that they would make capital lifters of men. But I would not trust myself to be lifted by them, not even a dozen feet above the earth. . . ."

"But there are other experimenters less timorous than I. There are traditions of the ancient Japanese sending men aloft on kites, and several modern observers have made ascensions."

"Captain Baden-Powell, of England, now Colonel, whose brilliant defense of Mafeking compensates Englishmen for all their defeats in the Boer war, made a daring ascension in June of 1894. He reached an altitude of 100 feet, made observations, and came safely to the ground. Hargrave, the Australian, allowed himself to be pulled up sixteen feet by the box-kites which he invented. That was in November, 1894. Lieutenant Wise, U.S.A., caused himself to be lifted over Governor's Island during January, 1897, and Lamson, of Maine, ascended in June of the same year. All of these observers had sent up dummies or weights to test the lifting power of their kites before the final ascensions were made, so that little beyond an added human interest was gained by these ascensions."

Among other kite-flying wonders exhibited by Mr. Eddy are

the now familiar aerial photographs taken by kite-supported cameras, and the "vistascope," his own invention. The kite takes up an optical contrivance in which, by means of a telescope, the observer can view from the ground the surrounding country as if he were himself in the lofty position of the kite. After an exhibition of various ways in which kites can be used for signaling, Mr. Eddy stated his belief that kites will be used in future for wireless telegraphy. To quote his final words:

"The distance messages can be sent by the Marconi method depends directly on the height of the vertical wire from which the ether waves start forth. Now a kite can be used to hold up a vertical wire over two miles and a half high, an altitude already reached at Blue Hill Observatory, near Boston. Two of these wires hung from kite-strings should make possible communications over very long distances. In fact, there really seems to be no end to the uses to which kites may be put. New ideas suggest themselves every day, and all are connected with the vital departments of human life. The art, on the other hand, is quite in its infancy. Altho kite-flying was an ancient Japanese achievement, the science of the business was never worked out until recently, because of the great difficulty of flying tail-kites in variable winds of variable velocity. If we make as rapid strides in the future as we have in the past, we shortly shall come upon a world of wonders of which the public reckons nothing at present. We are on the edge of it now, and at any time we may make the discovery which will give us a vista of the country beyond."

MOSQUITOS AND MALARIA—A CRUCIAL TEST.

FROM June till October next two English physicians—Drs. L. W. Sambon and G. C. Low—are to live in the most malarious district of the Roman Campagna. They are to dwell in a mosquito-proof hut, and their confidence in the theory that malaria is contracted only through inoculation by the mosquito is so great that they have no fear of the deadly Roman fever. If they are well and strong in October they will have demonstrated the truth of a theory that may save thousands of lives and

MOSQUITO-PROOF HUT ON ROMAN CAMPAGNA.

turn many a miasmatic region into one of health and safety. If they perish, on the other hand, those who believe with them in mosquito-inoculation will probably maintain that a stray mosquito or two succeeded in getting into their hut with his malarial poison, and there will be plenty of other observers to repeat the experiment with a still more insect-proof dwelling. The details of the experiment were described as long ago as March 15 by Dr. Manson in an address at the Colonial Institute, London. Says *The British Medical Journal* (May 12), in a report on the subject:

"He said that a hut, such as would be suitable for the habitation of Europeans in tropical Africa, was to be erected in the most malarial part of the Roman Campagna. The hut was to be furnished with wire-gauze door and window-screen and other devices to render it mosquito-proof. Two skilled observers and their two servants were to live in this hut from June till October of this year—that is, during the entire malarial season. They would be at liberty to go where they liked during the day, but from an hour before sunset to an hour after sunrise they were to be in the hut. If they escaped fever, Dr. Manson said this would

be a proof that by very simple and inexpensive means the human body could be protected from the malarial germ, for to sleep but for one night unprotected in the place selected for the experiment was regarded by the Romans as certain to result in the contraction of a malarial fever of a virulent type. The object of the experiment is not so much to afford additional proof of the doctrine of the transmission of malaria by mosquitos as to give the public an object-lesson that will carry conviction and supply a principle of action as regards the means of protection to be adopted against malaria. Mr. Chamberlain has shown the greatest interest in the matter and has made a grant of money to defray the cost of the experiments."

The accompanying illustration shows the design of the hut that is to be used. To quote again:

"The principal points to be kept in view in the construction of such dwellings are warmth in winter, coolness in summer, perfect ventilation, with every provision for the rigorous exclusion of mosquitos.

"To comply with these requirements Messrs. Humphreys, Limited, have designed a house, the roof of which overhangs the walls to the extent of some 3 feet around the entire building and reaches to within 8 feet of the ground. The window openings are thus protected from the sun's rays, and to guard against mosquitos there is a permanent wire-gauze screen of no fewer than seventeen meshes to the inch; the entrance is likewise protected, having double doorways with a mosquito-curtain fitted between them.

"In regard to ventilation, Messrs. Humphreys have provided that a space about 18 inches deep shall be left open around the entire house immediately under the overhanging eaves (where the cool air collects). This opening is fitted with wire gauze similar to that provided for the windows, and a further precaution against the entrance of the mosquito is taken by having similar wire gauze fitted in the ventilating panels let into the ceilings of all the rooms. The floor is composed of best yellow tongued and grooved boards; the outer walls are covered with inodorous felting, boarded externally with specially struck rusticated rebated boarding, which when painted presents a fairly agreeable appearance. The roof is constructed of tongued and grooved boarding covered with patent wire-wave roofing felt, which is not only watertight, but also airproof, thus preventing the escape of the cool air which at night will find its way into the air-tank created by this form of roof. By a special treatment the black appearance which a felt roof usually presents is entirely done away with, and the roof is quite white.

"If the result of the experiment is to show that by shutting out mosquitos malaria also is shut out, we understand that it is probable that the Colonial Office will direct that dwellings similar to the one here described be constructed for all colonial servants in Africa. It is likely that this example will be followed by the Government of India."

Dr. Sambon, one of the two observers who are to live in the hut, spoke as follows about the approaching experiment, in an interview printed in the *London Express*:

"My companion and I feel just like guinea-pigs. You know we are going over there simply to be experimented on; we shall not be allowed to take any quinin or other precaution against illness—only against mosquitos. We are to mix freely with the people in the Campagna, and practically all of them have malaria. They are trying to reclaim some of the less infected parts of the plain, and these people are the laborers. They're not Italians—Italians refuse to go there—but peasants from Normandy and the south of France, who come there great, strong, lusty fellows, but last only a little while, dying, or becoming so weak with disease that they have to go home. And they never get well. That's the worst of malaria; it comes on slowly, clings to a man, and, when it finally goes, leaves him open to all sorts of diseases. In Italy two million suffer from it every year. Of these fifteen thousand die, and this is an enormous number, considering that we have a specific treatment for this fever—7.75 for every thousand attacked."

New Experiments on Carnivorous Plants.—The nepenthes, or pitcher-plants, have long been considered and described as carnivorous, but it is now asserted by M. Rapell

Dubois that this is not so. If the liquid collected from the "pitcher" be sterilized it has no digestive properties, and he therefore attributes the pseudo-digestion of the open pitcher to the action of microbes. "The question of the digestive power of the liquid," says *Cosmos*, "was thus decided by him in the negative. Nevertheless, M. Vines has recently attacked M. Dubois's conclusions. He has, he reports, obtained digestive phenomena after adding to the liquid one per cent. of cyanhydric acid, which prevents the action of the microbes. From researches of M. E. Couvreur on the question, it results that M. Vines mistook for real digestion the formation of an acid albuminoid by fibrin in an acid medium. The acid introduced to stop the action of ferments had itself therefore a digestive action. The results noted by M. Vines could have been obtained entirely apart from the addition of any ferment, and the opinion of M. Dubois is the correct one."—*Translation made for THE LITERARY DIGEST.*

Elevator Disease.—The constant riding up and down in an elevator may give rise to serious heart trouble, if we are to believe Dr. R. H. Brown, a Chicago physician. A recent elevator runaway was accounted for by a sudden attack of heart failure, which temporarily paralyzed the elevator man's arm, so that he could not manage the lever. According to Dr. Brown this trouble is very common among persons who run elevators, especially in lofty buildings. He says: "The sudden ascent and descent and often the shock of a too hasty stop soon tell on the action of the heart when this vocation is followed at an altitude of a mile above the sea level. Of course, the faster the elevator goes the more aggravated will be the heart trouble of its manipulator, and in a high building the chances of serious results to his health are more certain than in a lower building. The air at the top of the shaft in a 'sky-scraper' is lighter than at the bottom, and the rapid change from one altitude to the other made so often has a most serious result. It can not be otherwise. The ordinary transient in this part of the world is affected most uncomfortably by walking upstairs at a fair speed. The ascent in an elevator at many times that speed does more harm. The guests at the hotel or the visitor to the public building does not notice it much, but the pilot who remains in the elevator for hours at a time, day after day, is permanently injured in due time. I was an interested visitor to the State Capitol on Saturday. But a few hours before the accident at the Brown Palace Hotel I was conversing with the pilot of the State Capitol elevator on this very subject, and he told me that he was already feeling the effects of his vocation, and was at times during the day obliged to leave his post and secure the services temporarily of some other state employee to do his work until his heart resumed its normal action. This is the same story told me everywhere I go. It is one of the threatening fatal results of what we call 'modern improvement,' which, in other words, is the refined manner of self-torture and risk of life and health in order to do something a little faster and thus make a few dollars more than we otherwise could do. There is a point of speed beyond which as a matter of protection to life, limb, and health, elevators and all other vehicles of locomotion should not be allowed to go. The mad rush in this country, of which the frightful speed of the elevator and the bicycle 'scorcher' are typical, must stop somewhere. The fatal results of these things are most apparent."

SCIENCE BREVITIES.

"It is perilous to say anything in favor of alcohol," says a recent writer, commenting on the discussion to which Atwater's experiments have given rise, "as misrepresentations and exaggerations are the certain results. All Professor Atwater may say to qualify his remarks as to the utility and advantage of this agent as a food will not prevent his being quoted as an advocate of its steady use as a diet. That he desires this is not to be supposed, hence his position as an honest investigator in this subject has its disadvantages, but they seem to be unavoidable."

OYSTER INFECTION.—The dangers involved in the use of oysters and the clams due to infection of these bivalves by sewage are again pointed out in a recent number of *The British Medical Journal*. "The oyster lives upon diatoms (bacteria obtained from the slime covering the sea bottom and the stems of seaweeds). Typhoid fever germs have been found both in the oyster juice and in the stomach and other portions of the body of the oyster. Many epidemics of typhoid fever have been traced to the use of infected oysters. It would seem much safer and wiser to leave the oyster to attend to its business as a scavenger of the sea, instead of terminating its usefulness by swallowing it, alive and kicking, germs and all."

THE RELIGIOUS WORLD.

THE METHODIST CONFERENCE AND ITS WORK.

THE twenty-third Quadrennial Conference of the Methodist Episcopal Church, which came to an end at Chicago on May 29 after a session of four weeks, is regarded as perhaps the most noteworthy since the days when Methodism was divided over the question of slavery. It was not only the largest in the history of the church, but it has effected many radical changes in the laws and polity of the denomination. One important change only of those proposed—the removal of the ban on amusements—failed of passage. Among the last subjects considered by the conference was the appointment of trustees for the proposed great Methodist institution of higher learning at Washington, to be known as the American University. Among those named and approved was President McKinley.

The scenes of disorder which prevailed on several occasions during the consideration of important subjects, when tumult and angry debate for the moment seemed to obscure the religious character of the assembly, have been severely commented upon by some journals of other denominations, especially those of the Roman Catholic and Episcopal faith. One defender of the Methodist conference has recently pointed out, however, that whereas the occasional disorder at the conference was merely similar to that of the ordinary political convention, the scenes at the great ecumenical councils of Nicaea and Constantinople, where the most sacred doctrines of Christian theology were formulated, including the divinity of Christ, violence and even bloodshed prevailed. Mr. Henry Frank, in an article on "The Making and Unmaking of the Creed" in *The Ideal Review* (New York, June) quotes from Dean Stanley's "Christian Institutions" (p. 289) an account of the Council of Constantinople, in which the well-known incident occurred of one archbishop (Flavian of Constantinople) being dashed to the ground in the council chamber and then kicked to death by another archbishop and by an excited mob of ecclesiastics.

The Churchman (Prot. Episc., May 26) finds in the conference much to encourage those who desire a closer union of the great divisions of Christendom:

"A generation ago it would have been incredible, a decade ago it would have seemed strange, that sectarian division, the founded on the inevitable limitations of the human intellect, should be pronounced at such a conference to indicate 'serious defects in Christian knowledge and character.' This conference recognizes such honest differences of opinion as inevitable, but difference of opinion, it says, should not imply alienation, and rivalry is a dishonor to the Prince of Peace. Their bishops, therefore, in their address to the conference, propose 'to seek opportunities to express Christian fraternity and cooperation.' They do not look forward to speedy organic union, tho they would be willing to accept the historic episcopate, if that were 'intended only to designate a form of church government which has had wide extension through many centuries.' . . . They, for their part, believe that the church, the one body of which Christ is Head, consists of all who acknowledge Him as Lord and Savior. Now, there is a sense in which this is true, and the interests of visible unity in the Catholic Church will be promoted by frank recognition of it."

Commenting on the results, already to be observed, due to the equal representation of laymen and clergy in the conference, *Zion's Herald* (Meth. Episc., May 23) says:

"The laymen, by virtue of the magic of equal numbers, feel that what they say will command a more respectful hearing. And it does. There are quite a number who have had wide experience in the practical affairs of life, and they speak with authority and assurance when they address the body. They plainly feel the power, opportunity, and responsibility of equal representation, and have grappled with the problems of the church in a

way that promises well for its future welfare. And if the members of the conference feel the quickening of latent interest and powers by equal representation, what may be said of the effect produced on the men of the church at large? It is logical that they, too, should feel the thrill of a greater degree of authority, opportunity, and responsibility.

"In this conference the laymen have been careful, conservative, and business-like. Many of them are forceful speakers. They insist upon business-like methods in doing the business of the church. The inquiry into the management of the publishing business is due to the aggressiveness of the laymen. The action disposing of one of the subsidized papers, and practically saying that it must prove its right to live by getting along without outside help, was due to lay influence. They argued from the business standpoint. It was a wise action."

THE PRESBYTERIAN GENERAL ASSEMBLY AND CREED REVISION.

THE General Assembly of the Presbyterian Church (North) which has just adjourned at St. Louis has, in the general opinion, closed one period of doctrinal strife and trial through which the church has been passing since the heresy cases of Profs. Henry Preserved Smith, Charles A. Briggs, and Arthur C. McGiffert first came up some years ago. Altho one of the most conservative of all the Protestant bodies, the Presbyterian church, in the opinion of many judges, is now beginning a period of doctrinal revision and readjustment which will enable it to fulfil its mission with a renewed spirit and increased effectiveness. The St. Louis assembly took two radical steps, one an administrative change of much importance, the other relating to doctrinal questions. Of the significance of these the *Philadelphia Press* (May 29) says editorially:

"As in most large bodies meeting infrequently, the conduct of the General Assembly's business is practically in the hands of its committees. These committees have been appointed by the moderator. The moderator is led or guided by the small group of men who give their entire time to the government of the Presbyterian Church. This group is, and always has been, intensely conservative in its view. The new plan provides for the appointment of assembly committees by a nominating committee. In all bodies those who give attention to its business will always have more weight in it than those who do not. The group which has so long managed moderators will doubtless continue to manage the new nominating committee; but its task will be more difficult, and a nominating committee will be more open to the influence of new currents in the church.

"These set toward a revision of the creed. The same assembly which has sought thus radically to alter the future organizations of assemblies has ordered a revision committee. This is not the first. It will not be the last. But revision is inevitable. The Presbyterian Church began it with Prof. H. P. Smith, a decade ago. His trial was not opened before Professor Briggs's trial was under way. Professor Briggs disposed of, Professor McGiffert appeared. He left, and before comments were over Dr. Parkhurst had made his declaration of independence. Ten years ago he would have been tried. Twenty years ago he would have been excused at the least. Neither will happen now.

"Over thirty years were needed from the time the Presbyterian Church turned out Dr. Barnes before the entire church had accepted his theology as satisfactory. It will take less time to adjust the action, interpretation, and confessions of the church to meet present needs and close the lamentable series of heresy trials for ten years past. Creeds are made by men. They change with them. No one claims them to be infallible—least of all Protestants. No one believes in an 'inerrant manuscript' for a creed, and the belief in one for the Bible will slowly adjust itself to the knowledge of the truth."

It is believed that the relative strength of the conservative and liberal parties will be clearly revealed before the meeting of the next General Conference in New York next May, when the committee on creed revision, after having learned the mind of the local presbyteries throughout the country, will hand in its report

to the assembly. The two opposing views within the church are fairly represented by the *Philadelphia Presbyterian* and the *New York Evangelist*. The former (May 23) says:

"Various specimens of a new creed for our church are being put on the market. One is the 'Articles of Faith' of the English Presbyterian Church, and the other is the 'New Evangelical Catechism.' These are given prominence and urgency by *The Interior*; but if nothing more definite and valuable than these are to be submitted to our presbyteries for consideration they will fall flat and stale upon the Presbyterian public. They will not stand the test of careful criticism and will never carry enough votes to secure their adoption. They are at best compromises, and would put the Presbyterian Church at a disadvantage in view of her past deliverances on important fundamental questions, and because of their defective character in several particulars, as expressions of what she has heretofore maintained as her full and abiding faith. Neither ultra-conservatives nor ultra-liberals will be satisfied with such formulations, and they would prove strong enough to prevent their ratification.

"But the new-creed movement has a far more faith-minimizing tendency. It means only a minimum of truth-affirmation. It calls for merely generalizing statements. The idea seems to be to give the ministers and people as little as possible to believe, so as to bring in all shades of opinion and build up our church on broader lines. For instance, one presbytery suggests the Lord's Prayer as a creed. Dr. Parkhurst regards the declaration, 'God so loved the world that he gave his only-begotten Son, that whosoever believeth in him should not perish, but have everlasting life,' as sufficient. Another agitator suggests that our 'one Confession be the fatherhood of God and the brotherhood of Man.' This is belittling the whole subject, but shows what absurd ideas in regard to it prevail among innovators upon old-fashioned Presbyterianism.

"But our church still has positive convictions. It represents something distinctive. It stands for witness-bearing. According to its genius it must have more in its creed than that which is common to all denominations. It has a peculiar life of its own and must maintain a distinct development. It is the product of ages of belief, culture, and service, and will go to pieces if it loses its distinctiveness of faith and order. Its chief right to live as a denominational organism is its creed and polity, which have made it a blessing and a power in the world; nor is its mission ended as a distinct religious agency; it is still needed as an educating, dominating, and saving agency. Mankind would be the poorer without it, and there could be nothing to take its place along lines where it has accomplished great things for the home, for the state, and for the race.

"The more the new creed is discussed, the more the difficulties in its way multiply. It means so many changes, and the harmonizing of so many conflicting views, that it seems neither wise nor politic to commit our church to its preparation, especially when we are in the midst of agitation, and when so much work is to be done by our ministers and members at home and abroad."

In *The Evangelist* (May 24), Prof. Douglas P. Putnam, of Princeton, who is a moderate liberal, and a believer in predestination, writes:

"It is rapidly ceasing to be a question of expediency and becoming the imperative duty of the church to provide herself and give to the world an entirely new statement of her faith. Under our present terms of subscription I have, personally, no trouble whatever with our Confession as it is. It is only when I come to its use with others that I find my difficulty, and if a creed is not for use, I can not conceive its right to be. . . .

"What is a creed but an instrument of work, or a weapon of spiritual warfare, forged out of the inexhaustible mine of God's Word? The ordinance which called together the Westminster Assembly of Divines, two hundred and fifty years ago, declared that there were 'many things in the liturgy, discipline, and government of the church which do necessarily require a further and more perfect reformation.' (Can not the same thing be said of our church standards now?) This ordinance further asserted that some things were 'a great impediment to reformation and growth of religion.' (Can not this also be truly asserted of the Confession for present use?) What are these statements but a recognition of the fact that the tools with which they were at

work needed repairing? And when they attempted such repair of their thirty-nine 'Articles of Religion,' after working over fifteen of them, they set them all aside, and forged out of the Word of God entirely new implements for their spiritual warfare, better adapted to the work immediately before them.

"That the Westminster Assembly did not regard its work as above all possibility of imperfection, is sufficiently attested by the statement which they put into the Confession that 'All synods and councils since the Apostles' times may err.' Is it not clear that history is repeating itself in the present situation as to confessional revision? The attempt to repair the old tools ten years ago has failed, just as the similar attempt failed two hundred and fifty years ago. And manifestly it is becoming the church's duty to provide herself with the very best implements possible for her aggressive work. The revision train is certainly on the side track, and will stay there. *The New-Creed* movement is on, and the church will not be satisfied until her faith is rewritten. This faith is surely Calvinistic, because that which we mean by 'Calvinistic' is Scriptural, and it alone is truly reasonable.

"It may be said that the present is not a propitious time for creed-making, that there is too much controversy in the church and too much of personality would enter into the work. But who does not know that it is in the midst of controversy, when men's minds are at white heat, that convictions, political, social, and religious, are formed and the best opinions are shaped? The truths of Scripture, like the metals in nature, need the fiery blast and the furnace heat to fuse and temper them, and cast them into the best forms for use. The only question is as to whether the controversial heats in the church are yet sufficiently intense to fuse and recast the truth."

A PROPOSED NEW PROGRAM FOR THE GERMAN ROMAN CATHOLICS.

IN our issue for December 30 reference was made to the scheme for a federate union of the nearly four dozen Protestant state churches in Germany as proposed by the veteran professor of theology at Halle, Dr. Beyschlag. An alleged Catholic counterpart to this plan, aiming at the organization of a national German Catholic church for the empire, with more or less independence from Rome and with a friendly disposition toward Protestantism that even surpasses that of the Old Catholics, comes from a Roman Catholic author of some note in a work entitled "*Der Katholicismus am Scheidewege*" ("Roman Catholicism at the Parting of the Ways"). The Munich literary journal *Odin* publishes twelve propositions of the author, and from this source we reproduce for what it is worth the following outline of this curious scheme, which will doubtless surprise the Roman authorities as much by its naïveté as by its novelty:

The Pope is to acknowledge Rome as the capital of the Italian kingdom, and is to receive the sum of money which the Government of that country has offered him since 1870. In turn the Pope discards the right of bestowing the rank of nobility, or titles, or orders.

Each pope is to be selected from a nationality different from that of his predecessor. The Jesuit order is to be permitted to die out and no novices are to be admitted. The property of the order is to fall to the papal chair.

The Catholics of Germany are to constitute a German national church with relative independence. The primus is to be the Archbishop of Cologne.

Every ten years a national Catholic Congress of Germany is to be held in Cologne in the Dome. The only official church language in the country is to be the German. Correspondence with the Pope and with the cardinals is to be carried on only in this tongue. Decrees from Rome are to have authority only when sanctioned by the primus of the country.

Provisions are to be made for the education of the clergy in accordance with the needs of the times. Free Catholic universities, after the model of those in existence in England, are to be established. The German college in Rome is to be discontinued. German priests are to be educated in the fatherland and in the spirit of patriotism. All are to study in German universities,

just as do the Protestant clergy. All mechanical religious exercises are to be abolished. A new breviary in good German and a new German translation of the Bible based on the version of Luther are to be prepared.

The Roman Index of Prohibited Books is to have no binding authority for the Germans. A German Index for the church of the empire can be made, but this to serve only as a warning. Everybody is to be guided by his own conscience in selecting what books to read. All indulgences are to be removed from the prayer-books, and everything that may tend to show forth the glory and the greatness of God, no matter what the commands of the church hitherto have been, is to be studied, for example, such things as Hindu and other Oriental philosophy.

Protestants are to be recognized as Christians of an equal standing, *i.e.*, as true members of the Catholic Church, and to be treated as such. He who attends the services of the Evangelical Church shall be considered as having heard the mass. A cooperation of the clergy of both churches is desirable in the interests of peace and a better understanding. The church press is to cease its bitter polemics. Catholic text-books are not to be allowed to bring perversions of the truth, and are to admit the weaknesses of the church in the past openly. As a visible sign of recognition, the German Emperor is to be crowned, after the ancient manner, in the Dome in Berlin, with the crown of Charlemagne. He is himself to place the diadem on his brow, but is to be anointed by a legate of the Pope. The Emperor, by virtue of his office, is to be the regular protector of the church, and to guarantee to the Pope his position and security. The ecclesiastical and the secular heads are to labor hand in hand.—*Translation made for THE LITERARY DIGEST.*

WAS THE AUTHOR OF HEBREWS A WOMAN?

TO the old yet ever-new question as to the authorship of the Epistle to the Hebrews, Professor Harnack, of the University of Berlin, in a lengthy discussion in the first issue of the new theological journal, *Zeitschrift für neutestamentliche Wissenschaft und die Kunde des Urchristentums*, sets up the novel theory that the many answers which have during more than fifteen hundred years been given to this vexing and perplexing problem are all incorrect, and that the best of historical evidence points to the fact that the chief if not sole author of this letter is the Priscilla of the Acts, the wife of Aquila. The run of thought in this article of the famous German savant, an international authority on New-Testament and early Christianity problems, is substantially the following:

In some respects the investigation of the Hebraic question has made decided progress in recent times. Especially through the researches of Professor Zahn, of Erlangen, has it been practically established that this letter was addressed originally to a small band of Christians in Rome, the only undecided matter in this connection being the question whether these were necessarily converts from Judaism or might also have been Gentile Christians. Zahn inclines to the former view, but the probabilities are in favor of the latter. At any rate, the heading "To the Hebrews" is not authentic.

Virtually no progress, however, has been made in determining the authorship of the letter. Origen already despaired of a solution when he declared that "only God knew for a truth who had written this letter." Zahn expressly declares that his investigations have led him to the same results. There are, however, excellent reasons for believing that Priscilla and Aquila are the authors, especially the former, and that Luther's guess, who thought of Apollos, was in so far correct as it made the letter a product of the Pauline circle of friends, but he was mistaken in the identification of these exact persons. The reasons why the probabilities point to Aquila and Priscilla is because on this hypothesis *all* of the characteristic features of the letter can be readily explained; and, secondly, too, because on this basis the loss of the name of the writer can naturally be accounted for. In the New Testament there are six passages that speak of this noteworthy couple, and from these passages it appears that they were both prominent in the instruction and conversion of Apollos, and that in general they were very active in the extensive mis-

sion enterprises of the whole church of that period. Paul expressly declares that not only he but "all the churches of the Gentiles" were indebted to them. Their activity must have been almost as widespread as Christianity was at that time. And a further comparison shows that in this work the leadership belonged rather to the woman than to the man, as her name is more than once placed before that of Aquila.

The following eight reasons can be assigned for ascribing the Epistle to the Hebrews to this couple and especially to Priscilla:

1. This letter is the production of a highly cultured and skilled representative of the Christian cause; and this Aquila and Priscilla were, as is evidenced by their teaching even the Alexandrian Apollos.

2. The letter is written by a person who belonged to Paul's circle of friends; and this was especially true of these two.

3. The writer stands in intimate relationship to Timothy and knows that he is his equal in rank. Of Priscilla and Aquila we know that they labored together with Timothy in Corinth for eighteen months as missionaries and teachers, and then joined him in Ephesus.

4. The author of Hebrews wrote his letter after the death of St. Paul, and probably some time after this event. Priscilla and Aquila were certainly yet living when Paul wrote the last document which we still possess from his hands (2 Tim. iv.), and there are no reasons for doubting that they lived two decades after his departure.

5. The author of this Epistle must at one time have been a member of a smaller band of Christians in Rome (a house congregation), and must have occupied a high rank in this circle, probably that of a teacher. In his letter he still feels himself to be a member of this band and talks to his readers in the manner of a companion with authority. Priscilla and Aquila came originally from Rome and after a number of years returned to that city and there became the head of a household congregation, and at a later period again left Rome. This combination of historical facts explains at once what was hitherto enigmatical in the relation that existed between the writer and his readers.

6. The Epistle to the Hebrews is the work of a single writer, but back of the author stands a closely connected communion, indicated by the repeated "we" of the letter, and the noteworthy exchange and interchange of this "we" with the "I." All these conditions are well met by the position occupied by this teaching and preaching pair.

7. The most paradoxical feature in connection with the Epistle to the Hebrews is the fact that the church has lost altogether all tradition as to the name of the writer. If Barnabas or Luke or Clemens or Apollos had been the writer, this loss could not be naturally explained. If, however, these two were the authors, or especially Priscilla had been prominent in the composition, then the disappearance of the name can be explained without any difficulty whatever, and an excellent reason can be assigned for the suppression of the name when the letter was sent out from Rome in the beginning of the second century. For a good reason the letter could not be sent out to the churches as the production of a woman. Paul already in several of his letters had expressed himself unfavorably to the prominence of women in the churches, but had made exceptions to the rule, as is indicated by his judgment of Priscilla. In post-apostolic years more rigorous views against the teaching of women in the churches prevailed. This condition of affairs explains why the name of this couple was suppressed, and the thoroughness of this suppression can be best explained on the hypothesis that not the husband but the more gifted and active wife had the chief part in the composition of this letter.

8. But we are not confined to generalities in this matter. We have actual historical evidence to prove that in the early period of the church systematic efforts were put forth to suppress the prominence of Priscilla in the primitive church, and that even a letter which she had sent out was declared to have been not from her pen and was ascribed to another author. The details of this matter, based on changes made in a number of Greek New-Testament manuscripts, have been given in the Reports of the Prussian Royal Society of Sciences, January 11, 1900.

A combination of these facts and data makes it at least possible and indeed probable that Priscilla was the writer of the Epistle to the Hebrews, possibly in conjunction with her husband Aquila. Should anybody take offense at the idea that a New-Testament book is the production of a woman's pen then too must he take

offense at the fact that St. Paul recognized this same woman as his coadjutor. At any rate, of the many theories concerning the authorship of Hebrews none explain all the facts, both those of a positive and those of a negative character, so well as the supposition that Priscilla penned this letter.

THE ARCHBISHOPS' DECISION ON RESERVATION OF THE SACRAMENT.

ALTHO the question of the legality of reservation was first argued before the Archbishops of Canterbury and York in July, 1899, it was only last month that they rendered their decision, or, more properly, their "opinion." The English correspondent of the *New York Churchman* (May 26) gives the following summary of this document:

"The Archbishop of Canterbury begins by saying that reservation has three forms, first, for administration to sick persons dwelling near-by, who may communicate during the service in the church; second, for sick persons who may communicate at other times during the same day; and, finally, for any case of sudden emergency during a week or more. Dr. Temple then rehearses the requirements of the rubric, the practices of the early church, and the changes at the Reformation. 'To say that the Church of England may not discontinue an ancient practice which has led to abuse is to say that the church must not profit by experience.' It is true that the chief object at the prohibition was to prevent external acts of devotion, but even the administration direct from the church at the time of service gives opening to this abuse. On the other hand, the administration of the Holy Communion to those who are too ill to understand what they are doing is certainly not to be desired under any circumstances. 'The Holy Communion is not to be treated as if it worked like a magical charm, without any cooperation on the part of the recipient. . . . But there are, no doubt, cases in which the sick person is fully conscious, and is able to follow a short service not exceeding a few minutes and to make an act of faith, and yet is not really fit for more.' Here the minister may plead the law of necessity and may 'shorten the service to the length which medical direction prescribes,' using the Consecration Prayer, the Words of Administration, and as much before or after as may be. If that is not possible, the sick person can not be regarded as capable of receiving. To those clergymen who protest that they must celebrate fasting, the archbishop replies that 'to treat fasting before receiving the Holy Communion as a rigid obligation which is to interfere with ministerial duties, or with the comfort of the sick, is quite alien from the spirit of such teaching.' And in support of this he cites St. Chrysostom."

The opinion of the Archbishop of York does not differ materially from that of his brother of Canterbury.

Naturally, the decision is the foremost subject of religious interest and discussion in the English press. The secular papers in general are disposed to welcome the decision, tho *The Daily News* declares that the reply of the archbishops "satisfies neither the Erastian nor the sacerdotalist." Most of them, including *The Times*, think that a change in the law might profitably be made sanctioning reservation for communion of the sick and dying. *The Spectator* discountenances disobedience, but would like to see the law altered. *The Guardian* admits that the archbishops have declared the present law, but thinks that a national church should hesitate to condemn or ignore a practice so widely followed in the universal church. Lord Halifax, the leader of the High-Church party, writes to *The Pilot* that "the laity will not consent to run the risk of dying without the sacrament. Reservation can not be given up."

In the Protestant Episcopal Church in America reservation is practised in many churches, and adoration of the sacrament of the altar—a somewhat different matter—is not uncommon, as in the churches of St. Mary the Virgin and St. Ignatius, New York. The American church is, however, not directly affected by the archbishops' opinion, but naturally American Episcopal interest in the subject is keen. The view of the *New York Churchman* is

similar to that of *The Guardian*, quoted above. *The Church Standard* (Philadelphia, May 26) says:

"The official opinion of these two most reverend gentlemen is of no legal effect, since it is not delivered in a judicial capacity, using the word judicial in the legal sense. Its value, such as it is, is this, that however it may be regarded by the law of the state, the opinion of the archbishops, so given, is the deliberate and 'godly judgment' of the men to whom the Church of England expressly commits spiritual authority in questions of doubt pertaining to such matters. Whether it was worth while to deliver another judgment, of which it could be predicted with certainty that it would change no man's opinion, and affect no man's official conduct, while it would lead to not a little crimination and recrimination, is doubtful. The judgment itself is one of those matters in which the American church may have a sincere interest, but by which she can not be directly affected, since it is of no effect whatever outside of the Church of England."

Christian Work (undenom., May 24) thinks that neither party in the church can claim a victory:

"The ritualists are practically told to go ahead and agitate in opposition to the declared law of the church. The cumulative force of three notable decisions—that of Archbishop Benson in the Lincoln case, that regarding incense and lights, and now this last one on the question of reservation—undoubtedly has impaired the confidence of the laity that they may look to the church authorities to enforce the law. Dissent and discontent have found expression in the public prints consequent upon the last decision, so that the time seems to be approaching when the irreconcilable opposition between the Protestant and the Catholic party within the church must compel each to go its own way. At least that is the outlook at the present time."

RELIGIOUS NOTES.

THE prominent part taken by the Rev. Dr. A. J. F. Behrends in the recent Conference on Foreign Missions has drawn especial attention to his death shortly after the adjournment of that gathering. It is thought that the criticisms to which he was subjected on account of his famous speech on "comity" between Christian denominations may have hastened this event. Dr. Behrends, who was born in Holland in 1835, had been pastor of the Central Congregational Church in Brooklyn since 1884. Among his works are "The World for Christ," and "Socialism and Christianity."

A novel experiment in church activity is to be made by the First Christian Church of Columbus, Ind. Instead of spending a considerable sum of money on a steeple, the congregation has decided, in planning for its new church, to erect a simple edifice with a roof-garden on top. During the hot summer months service will be held here amid the scent of flowers and under the waving branches of palms and other trees. Groves and elevated places are believed to have been the primeval places of worship, and this new plan from Indiana appears to be a reversion to the customs of the Babylonians, the early Hebrews, and the Druids.

THE statement recently made in these columns concerning the relative numerical strength of the Anglican Church in England and Wales as compared with the Free Church bodies—based on an estimate lately made in a non-conformist English journal—is believed to be inaccurate in some respects, although correct in its main argument, namely, that the Church of England is no longer the church of the majority of the English people. Exact figures are not obtainable, however, as no official religious census has ever been taken. According to "Whitaker's Almanack," the estimated membership of the Church of England is 11,000,000, out of a population of about 22,000,000 in England and Wales. This is partly based on the fact that the Church possesses 6,200,000 sittings.

THE Edinburgh *Scotsman* expresses surprise that the American Presbyterians should wish to discipline ministers who reject the clauses in the Westminster Confession which relate to the total depravity of man, the eternal damnation of non-elect infants, and the unending pains of hell. Few Presbyterians in Scotland, it says, trouble their heads about the clause in the Confession to which Dr. Hillis recently referred. Indeed, the Presbyterians of both Scotland and England have for some time possessed a revised form of the Confession, from which these features are eliminated. A religious writer, commenting on this fact, lately remarked that just as there are Roman Catholics who are said by their fellow churchmen to be "more Catholic than the Pope," so in this case American Presbyterians appear to be more Calvinistic than the land of Knox and the Covenanters.

THE "Old First" Presbyterian Church on Fifth Avenue and Eleventh Street, New York, which for some time has been struggling to raise an endowment fund that would enable it to maintain itself down-town, has just reported that this fund has now reached nearly \$76,000. The same problem has confronted all the Protestant down-town churches, owing to the up-town trend of population. The Roman Catholic Church of the Transfiguration, where Dr. De Costa lately lectured on the subject "From Canterbury to Rome," was once an Episcopal church, and Dr. De Costa called attention to the fact that since the Roman Catholics moved in no less than twelve Protestant churches had abandoned the densely populated district comprised within a radius of five blocks. The Episcopal Church of the Ascension, which is doing a widely useful institutional work in the region below Washington Square, is also making a strenuous effort to raise an endowment fund in order to maintain itself in its present location for all time.

FOREIGN TOPICS.

HOW THE BOER "COLLAPSE" IS VIEWED IN EUROPE.

WITH both the Boer republics seemingly in the grasp of Lord Roberts, the European press are asking whether there will be any more serious resistance to the British arms. In England the war is regarded as practically over; but on the Continent many critics incline to the opinion that most of the Boers,

THE CONQUEROR.

JOHN BULL: "What do I want with a twig? Give me the whole tree."
—L. B. Berlin.

or enough to make a strong stand, at any rate, will not give up without another determined struggle. Captain Allum, the Norwegian military *attaché* in the Transvaal, writes of the Boer tactics, in the Copenhagen *Politiken*, in the main as follows:

President Steyn, at a meeting of the commanders, declared that it was useless to occupy strong positions in future. The English, he thought, had learned to maneuver in such a way as to render these positions useless, especially as the British have a great advantage in point of numbers. It is, therefore, best to

KRUGER TWISTED THE LION'S TAIL, AND—
—South Australian Critic, Melbourne.

An Afrikaner correspondent of the Amsterdam *Han-*
delblad admits that large numbers of the Free-Staters have deserted. He writes:

"The old pioneers, who know what it is to be under the yoke of the Briton, and who have made the Free State what it is, will

continue to fight. The younger, grown up in luxury and ease, and not knowing what it means to be under the Englishman's heel, followed their elders into war from a sense of duty only. Many of these are returning to look after their families and property. Hence the many prisoners lately taken, and the abandonment of strong positions, for what commander would attempt to hold a position with half-hearted troops? But these desertions will not end the war. The Transvaal may be congratulated upon this sifting of its forces. . . . What the Transvaal troops lose in numbers will be gained in quality and uniformity of purpose."

Dr. Albrecht Wirth, who is said to have the distinction of not having written an erroneous statement in his many articles on South Africa, hazarded the opinion in an article a few weeks ago that the Boers would yet make their best fight. He wrote in the main as follows:

Until the occupation of Bloemfontein the Boers were overconfident. Much work that could have been left to women was done by young men. At the end of February there were still 7,000 men who had never yet been called out. In Johannesburg balls were given and cricket was played, in Pretoria articles intended for the Paris Exposition were being prepared. But the very fact that the Boers had not exerted themselves to the utmost shows that their strength is not exhausted. I still believe that England has no army capable to overcome the Boers if the latter choose to fight. The troops sent over the Beira road will accomplish little if anything. Once before in Afghanistan Roberts made a quick march to the enemy's capital, but he had to retire and leave the Afghans to themselves. I still believe that only the appearance of a third party will end the war.

Prof. Hans Delbrück, the editor of the *Preussische Jahrbücher*, in which the above appeared, nevertheless believes that Dr. Wirth greatly overrates the Boers. "They have done their best," he says, "but they are, after all, only farmers." He attributes their success to the inferior quality of the British army, and even doubts if the British army in South Africa ever was as strong as

SHYLOCK IN SOUTH AFRICA.

"There is no power in the tongue of man
To alter me; I stay here on my bond."
—Lustige Blätter, Berlin.

it is described to be. Certain it is that it is very difficult to obtain reliable information on this subject. Nor is there any uniformity in the estimate of the British losses. The statements range between the government report—24,000 up to the end of April—and 70,600, as given in the *Cape Times*.

W. T. Stead, in the *London Review of Reviews*, says:

"The Boers do not propose to fight any more pitched battles. Their one object is to harass, embarrass, and worry the invading army, heading it everywhere possible, but never staying to fight a general action or to risk capture. It is Parthian policy—with this difference, that these modern Parthians have to cope with an army whose lines of communications are both more extended and more vulnerable than those of the Romans."—*Translations made for THE LITERARY DIGEST.*

FOREIGN CRITICS ON OUR COLONIAL TROUBLES.

THE South African war has largely diverted international attention from the difficulties we experience with our own possessions. Criticism on the Continent has long since been spent. Anglo-Saxon promises of independence, good government,

and freedom are not treated as anything more than mere words by some of our foreign critics. The postal scandals in Cuba and the long duration of the war in the Philippines, however, are bringing out some flings at American "imperialism." The London *Saturday Review*, which persistently refuses to give space to communications setting forth the exploitation of British India, says:

"Civil-service clerks who were receiving at Washington \$1,200 to \$1,500

HOW THE SPANISH CONCEIVE THE NEW SITUATION.

PRESIDENT MCKINLEY: "Here is liberty for you."
—Don Quixote, Madrid.

a year are now receiving in Cuba as much as \$4,000, charged of course on the revenues of the 'liberated' Cubans. But the post-office accounts are the most instructive of all. Director Rathbone, who has charge of all the postal affairs of the island, is receiving \$6,500 per annum, he has \$5 per diem for his living expenses, he lives in a house in the Cerro for which Cuba pays the modest rent of \$3,000 a year. The revenues of the island also supply him with a carriage and horses, coachman, footman, and servants. Altogether it is stated that this gentleman lives in republican simplicity on \$16,000 a year from the Cuban revenues. We are far from saying that he is not well worth the money, but it is not surprising that many underpaid civil servants in the United States are eager to take up the white man's burden in the 'liberated' lands."

The greatest interest, however, still centers in the Philippines. Many foreign papers, like the *St. Petersburg Zeitung*, are grateful for the precedent established by the Americans. "It is in future," says the paper, "only necessary to invade Anglo-Saxon territory, declare it annexed for the sake of humanity and civilization, and deny the rights of belligerents to the inhabitants who resist. They will be merely rebels and bandits." According to the accounts of European merchants in the Philippines, the time when live Filipinos will cease to protest against American rule is still distant. The Paris *Temps* goes so far as to declare that American accounts of engagements are absolutely unreliable, as our officials never mention a serious reverse. A manifesto published by Aguinaldo which reads to the following effect is regarded with much sympathy by some of the European press:

What the object of the Americans really is may be gathered from the utterances of Mr. Beveridge, who calls us barbarians, modified by contact with a degenerate race. He tells us in plain terms that we are like cattle, and invites young Americans to exploit us, which, as he thinks, could be done with little capital. The God of the Americans is the dollar alone. Their talk of humanity, freedom, civilization, and progress is valueless. Business profit is all they want, never mind the cost in blood.

A story is going the rounds in the continental papers that an

act of tyranny equaled only by Gessler has been performed by an American officer at Pagsanjan, not far from Manila. The American flag was hoisted on a public road, and passing natives were beaten by the American soldiery "if they did not do obeisance to the hated emblem of tyranny." Complaints were not considered, altho even some of the American papers in Manila thought this too much. The Manila correspondent of the Hong-kong *Overland China Mail* advises the wholesale butchery of Filipinos as the only means to accelerate predestined Anglo-Saxon domination in the islands. He nevertheless says:

"But in all this we are counting without our friend the enemy. He is partially provided for, it is true, by declaring him to be an outlaw and treating him as such, but the rainy season is approaching and then the insurgents have the big end of the horn. During the dry season we can operate against him to our heart's content; we can move artillery, cavalry, infantry, and stores, and we can strike him morning, noon, and night. In the rainy season all this transportation becomes a thousand times more difficult and about all the American army can then do is to sit on a cracker-box and watch it rain, while the insurgent, used to the rains and able to move without the impedimenta required by our soldiers, will have many good chances to practise his guerilla tactics of fighting. Just what they will do during the rains is problematical; we have plenty of evidence that they are organizing and preparing for activity after June, and it is known they have recently received fresh supplies of arms and ammunition from an outside source. . . . Some of their leaders still believe their future independence hangs on the election of Bryan; they fail to realize that his most favorable statements concerning their cause and future is nothing more than political stock-in-trade, launched with the intention of catching votes at home and not with the intention of an ultimate fulfilment should he be elected President."

Whatever the "insurgents" may do, the majority of British papers believe that the military operations will go on. The London *Spectator* says:

"Our friends across the water are not the kind of men to give up any project because it takes time and money, and to be beaten in a piece of work in which the English always succeed will gall the national pride. They will, we conceive, resolve 'to worry through' as they did in the Civil War, and will come out at last on the other side, having spent no doubt more millions and more lives than were at all necessary."

The only complaint in England is that many Americans should censure Britain's efforts to humanize and civilize the Boers by the same methods. The Newcastle *Chronicle* says:

"Senators sympathize with the Boers. But what about the Filipinos? We suppose it never occurred to our good-natured friends in Washington that they are a struggling people too. A counterblast to the proposal submitted to the Senate would be a proposal in the House of Lords that the English Government should offer its friendly offices to bring the war in the Philippines to a speedy conclusion. . . . General Otis, the American commander, told an interviewer the other day that as many troops as he had now would be needed for at least a year, and perhaps longer. An even more gloomy view of the situation in the Philippines is taken by Judge Canty, who recently visited the islands as representative of the Minnesota state government. 'Many competent military experts,' he says, 'have declared that it will take an army of half a million men ten years to suppress the insurrection.' Since, then, the Filipinos are more troublesome to the Americans than the Boers are to us, our excellent cousins might fairly be asked to cast out the beam from their own eye before bothering themselves about the mote in ours."

The Newcastle *Chronicle* is an out-and-out "jingo" organ, publishing statements from correspondents showing that Boer sympathizers are easily knocked about by Englishmen in the United States, but its influence is greater than that of many metropolitan papers.

The Shanghai *Ost-Asiatische Lloyd* relates that business is at a standstill in the Philippines. There are no imports, it says,

except for the American army, and the Filipinos will not allow exports. Attempts have been made to open some ports, but only with the result that an extensive trade in arms and ammunition was carried on. The Filipinos do not want the Americans, it avers, and only force can keep them in subjection.—*Translations made for THE LITERARY DIGEST.*

IN THE FAR EAST.

THE disturbances about Peking and the landing of foreign troops are being watched with considerable anxiety by the press the world over, and are considered as sparks that may perhaps ignite the great powder magazine of the far-Eastern question. In view of these recent events the comments of the latest British, Russian, and Japanese papers to reach this country are of considerable interest and significance. Russia's acquisition from the Korean Government of the site for a naval depot at Masampo, about half-way between Vladivostok and Port Arthur, is believed by the foreign press to give the Russians a great additional advantage in the far East. The *London Times* observes that "these recent developments in Korea have taken place while it was supposed that the power of the British empire was hampered by the war in South Africa," and it is generally supposed that Russia will still further strengthen her position in Asia, much to the detriment of British prestige. The *Westminster Gazette* says:

"Russia, we are often told, is the peace-keeper of the world, and The Hague Conference is witness to her enthusiasm in the cause of international good-will. In courteous and Christian language she invited us all to mend our manners and modify our ambitions. Yet her love of peace is not inconsistent with a business-like alacrity to reap advantage from other people's wars. At the beginning of the year a well-known Russian diplomatist was asked if there was any danger that his country would attempt to interfere with our proceedings in South Africa. 'Interfere?' he replied. 'Why in the world should we do anything to alter a state of affairs which is so eminently to our advantage?' The longer Great Britain is kept occupied in South Africa, the better for us. It would be madness to intervene.' The public can judge for themselves how much of the wisdom of this world there was in that answer. . . . We can not suppose that even the present Government was unaware of what was going on in Korea. The warnings have been many and urgent and, if the time has gone by for effective protest, we must suppose that they made up their minds that nothing effective could be done. If so, they were at least well advised not to enter again upon a policy of threats and withdrawals. We can not do everything, and we have our hands full in South Africa. Nevertheless, the debit side of the South African balance-sheet is growing apace."

The *Calcutta Times of India* moralizes on Russia's wickedness. "British representatives," it says, "never make use of that shameless mendacity which is resorted to by Russia to obtain new territory. England is never immoral in her actions, but our principles stand often in our way." All English papers hope that Japan will remonstrate, but Japan does not seem inclined to attack Russia without help. In fact, Japanese politicians seem to doubt if it is wise for the Japanese to oppose Russia in everything. According to the *Tokyo Nippon*, Viscount Watanabe, ex-minister of finance, recently expressed himself in the main as follows:

Japan should promote friendly relations with both Russia and Great Britain to further her own interests, without giving particular preference to either. Japan can not altogether abandon Korea, but neither can Russia. But Korea is not worth the cost of a war to either power. The main object of interest is and remains China. If China is to be divided, Japan must insist upon an equitable share. That China can maintain her integrity is quite unlikely.

The *Hongkong Overland China Mail* says:

"In a sense, Japan has more to lose by Russia's presence and

predominance in Korea, Manchuria, and North China than Great Britain. . . . Leaving out of consideration Japan's ultimate position in the far East, it is self-evident that the Japanese are smarting to counteract Russia's aggressiveness. Marquis Ito may try to make the world believe that the feverish anxiety of Japanese statesmen to place the army and navy on a substantial footing is prompted by fear of interference with Japanese commerce—that the Japanese are merely taking precautionary measures for defensive purposes. If Japan thought she could aim a successful blow at Russia to-morrow, the blow would be struck. She is not overconfident; but her statesmen are preparing for the day—perhaps not far distant—when Russia's policy will clash with Japan's interests."

According to the Japanese press, however, no immediate action is planned. The *Tokyo Yoruichi Choho* says:

"Our Government seems to know that a war with Russia is inevitable sooner or later, and do not hesitate to make every possible sacrifice in order to equip our army and navy to such a degree of efficiency as, when such a time arrives, will leave the stability and honor of the empire unhurt. Such war preparations are being constantly made in Europe nowadays, and if Japan is making one there is in it nothing particularly strange to be wondered at or to cause an anxiety that the relations between Japan and Russia are strained to breaking-point."

The Russian press has more than once hinted that the relations between Russia and Japan would be more satisfactory if Great Britain did not interfere. The *St. Petersburg Novoye Vremya* says:

"In the strained relations between Japan and Russia the influence of a third power can be traced, and it is not necessary to be convinced that the interests of the third power in question do not harmonize with those of Japan. Pulling chestnuts out of the fire for doubtful friends is not worthy of the far-sighted Japanese politicians."

The *Kessiya* boldly admits that the present is the most favorable time for pushing Russian interests. It says:

"An energetic policy has now every chance of success. Japan is not likely to disturb us; her ally, England, hardly yet knows how to escape the entanglement into which she has run in South Africa. England can not even pay subsidies, she needs every penny of her money, and Japan's finances are not in the best condition, owing to scant harvests. Germany can easily be won by promises of non-interference with her own plans. England would stand anything rather than be forced to stop her butchery in South Africa. Now is the time for action. When the wish of all civilized humanity is fulfilled, and the South African struggle has come to an end, the situation may be less favorable for us."

Meanwhile the time for extensive internal troubles seems to have really come for China, and the powers are ready to interfere at a moment's notice. The *Berlin Ost-Asien*, a monthly published under the auspices of the Japanese embassy to Germany, describes the situation to the following effect:

The Manchu or Conservative Party fight for the preservation and observance of the old laws and customs. Foreigners they regard as barbarians or animals, whom it is well to kill or get rid of by any means. They will not learn, being convinced that they have nothing to learn from others; nor will they hear of the innovations or improvements of foreign devils. They are the bitterest enemies of the Christians, and are responsible for the persecution of missionaries and converts.

The conscientious conservatives really believe that China is the most powerful empire in the world, and that it is the light of creation; they are utterly incapable of realizing that their sun is setting; in every change they scent danger. They have so far succeeded in rendering of no value the concessions made to the reformers and to foreigners.

Among the Manchus are many who are conservatives only through personal interest. Such are those who have passed a state examination, and have obtained government employment. They understand well enough that the present condition of affairs can not continue, and that a change would be for the benefit of their country; but they object to a change which would call into office those with European culture, for they fear, and rightly, that they would be swept out of their positions under a system which would put an end to the trickery and chicanery of the present régime.

The Reformers, or Cantonese, consist of those whose aim and object is the progress of their country. They see that the intro-

duction of foreign culture and improvements in the laws would aid in the development of China, and might give it new life, whereas the present condition is the stiffening before death.—*Translations made for THE LITERARY DIGEST.*

LORD SALISBURY ON THE NEED OF BRITISH DEFENSE.

LORD SALISBURY'S speech before the Primrose League, in which he declared that the Transvaal war is responsible for much ill feeling against England, which may sooner or later lead to war, and asked Englishmen to prepare for the defense of their homes, by strengthening the military defenses, as their navy alone is not sufficient, has stirred up a great amount of comment abroad.

The London *St. James's Gazette* thinks that the navy is still the most important if not the only effective weapon of Great Britain. It says:

"In what sense did his lordship [Salisbury] mean that blows at the heart ruined the naval power of Spain, Venice, and Holland? But leaving aside academic discussion and historical examples, which must be widely chosen and thoroughly defined in order to be of value, there can be no doubt that a blow driven home to the heart will kill any organism. The question for a naval power, however, is just 'Where is the heart?' Lord Salisbury seemed at least to take it for granted that with us it is on the land in this island of Great Britain. . . . When, however, it comes to invasion by an army, our position in the world is gone, even tho we cut the invader to pieces. We live by importing food for which we pay by sending out coal and manufactured goods. This we can do only by ruling on the four seas. The enemy who can come to invade can come to stop our commerce, which under penalty of death we must not let him do. Our place in the world depends on this, that we can keep up an unshaken grip on the four seas and yet make our power felt by great fleets all round the world. When the day comes that we have failed even for a week, to do both, the British empire, as it is now, will have become a thing of the past. Every shilling we spend for home defense should go to ships and not to forts."

The London *Lloyd's Weekly* has another form of criticism for the Premier's utterances. It says:

"But indignation comes in when the head of the most powerful ministry of modern days, looking to the possible dangers that may threaten the empire in the future, calmly repudiates the responsibility of government to make provision in the matter of defense. He advocates the introduction of a system of national rifle practise, and says that 'the duty must be done by the population themselves preparing to take part in the struggle for liberty and independence, and themselves provided and endowed with the practise and knowledge which would enable them to take part with success.' Instead of a government to govern, a war office to conduct the operations and prepare for war, we are to have parochial rifle corps, the patriotic duty of managing and drilling which is to devolve upon the Primrose League. If the British people wish to remain great, Lord Salisbury says they are to seek to become 'such a nation as the Swiss are.' Blundering utterances of this character are altogether beyond criticism."

A few papers, such as *The Westminster Gazette*, the Manchester *Guardian*, and most of the trades-union papers in Great Britain, and the Calcutta *Statesman*, and Toronto *Weekly Sun*, to mention Colonials, would prefer a less defiant attitude, and even suggest that Great Britain has herself to thank for the dislike with which she is viewed. The most pointed utterances of this kind come from Prof. Goldwin Smith, who writes in the last-named paper as follows:

"What is England's attitude toward the community of nations? Is it not one of isolation and menace? Can the world be expected to acquiesce without a murmur in the claim of one overweening power to the empire of the sea? Is not the declaration that the colonies of Great Britain in all parts of the world form a band pledged to support the imperial country in every quarrel, right or wrong, likely to excite general resentment and alarm? What is the language of the British press? . . . Venice, when she was

the great sea power, assumed an attitude of selfish isolation, pursuing at the same time a course of unscrupulous aggrandizement. The consequence was the League of Cambray. No object that has ever been assigned for this South African war was worth the universal odium which Great Britain has drawn upon herself by using the gigantic power of her empire to crush the independence of a petty republic."

Other nations show irritation rather than fear in consequence of the menacing attitude of Great Britain. Nepotism and consequent incapacity, corruption, and the unwillingness to punish the guilty are charges laid against the British administration. The British army is valued rather "below par" and the quality of the navy is doubted. Lord Salisbury's utterance are, therefore, regarded as extremely injudicious. The Amsterdam *Handelsblad* writes in the main as follows:

One can not help wondering if it is really the Premier of England who speaks thus. When Stread suggested the possibility of war with France, he was ridiculed. Lord Salisbury says the whole world is ready to attack Great Britain. Yet he has not the courage to take precautions, as that would cost money. It is to be doubted that the aged statesman believes himself what he says when he declares that shooting-clubs would increase the value of his countrymen as fighters. He mentions Switzerland as an example. But the comparison is only correct in so far as the British Foreign Office, like that of Switzerland, does not accomplish anything brilliant. Moreover, militia of the Swiss type would only be valuable if Britain's military organization were, in comparison, as good as that of Switzerland.

The Germans, tho described by some British papers as the real enemy, content themselves with describing Great Britain as an impotent braggart, and assume that, from the statesman's point of view, it is best to preserve the "power by courtesy," as Bismarck called England. Echoes of British threats are heard chiefly in France and Russia. "England has chosen," says the Paris *Temps*, "her policy is to be one of right above might, of brutal force above moral influence."

The Paris *Journal des Débats* declares that England is indeed in a position of isolation, but it is not splendid. This brutal attack upon the independence of two small communities of European race, it says, has shown the world the real value of British "humanity and civilization." The same paper says further:

"It is clearly shown how very intolerant is the doctrine of imperialism which at present reigns on the other side of the Channel. It is all the more dangerous as it pretends to be disinterested, and refuses to other peoples their freedom under the pretext of liberating them. 'We know that we are about to give to South Africa the only chance it has of peace and prosperity.' He asserts further that England made war upon the Boers in their own interest. The British are conceited enough to be dissatisfied, shocked, in fact, because the Boers prefer their independence and their flag to the advantages which the British conquerors promise them. This imperialist sentiment, this hankering for a mission of violence and intolerance to the rest of the world is no less intolerant than our own Jacobinism at the end of the eighteenth century, which pretended to regenerate people whether they wanted it or not."

The St. Petersburg *Novoye Vremya* believes that Lord Salisbury knows well enough that every honest man understands England's "thieving propensities," and explains the attitude of continental governments as follows:

"For the sake of peace the governments are silent. War is a dreadful thing, and the fear of war stays their hand, but that does not mean that they consider England's cause as just. . . . Lord Salisbury has shattered the hopes of the friends of peace. The Boer war has not taught England the error of her ways, and her isolation will be more complete than ever. It is impossible for her to find a trusty friend."

The *Stiel* fears that the sentiment of the nations will sooner or later be too strong for the governments to curb it. The *Kurier* criticizes the hard-heartedness of the British, who, giving no heed to the suffering they have caused, think only of the money the war has brought into circulation. The *Rossya* says:

"Europe is quite able to do more than protest. She can threaten effectively, especially Russia. England can not hurt Russia, as the latter has no colonies that could be captured or devastated. Moreover, Russia has many accounts to settle with England and the time to settle them is now. When the English have destroyed the Boers, they will probably improve their military system, and bloody war will be necessary where mere threats are sufficient now."—*Translations made for THE LITERARY DIGEST.*

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

In regard to the proposed railway in the Azores, Consul Pickereil sends from St. Michael's, February 19, 1900, original and translation of the contract about to be let for the building and equipping of a modern narrow-gage railway to connect that city, Ribeira Grande, and Furnas, a local resort noted for its hot springs. Mr. Pickereil says:

"I desire to express thanks to Mr. William Clinnie, now of New York, an engineer of known ability in works of this and similar character, and also Mr. Joan de Moraes Pereira, a native of this place and professor in the high schools of this city, for the very complete and intelligent manner in which they have done the work of translation. The best and most enterprising citizens fully believe that the enterprise will be a success. Under the law by which this railroad was authorized, it will be useless to make a bid for more than that given in the estimate of cost. This observation is based on the decision of the original maker of this contract after considerable discussion, and is the opinion of others well versed in Portuguese laws. I believe that Americans would have an equal chance with other foreigners in obtaining the contract, and would be pleased to have an opportunity to assist any who may desire to make a bid. The proposed contract (the full text of which is filed for reference in the Bureau of Foreign Com-

merce, where it may be consulted by interested parties) is summarized below:

"The junta general of the district of Ponta Delgada is authorized to grant the construction of a railroad between the cities of Ponta Delgada, Valle das Furnas, and Villa da Ribeira Grande. If no offers can be accepted, the junta is authorized to construct the road on its own account.

"The contracting company is to construct a road starting from the vicinity of the custom-house in Ponta Delgada and running along the coast, past S. Roque, Livramento, Atalhada, Lagoa, Agua de Pau, Ribeira, Cha, Praia, Villa Franca, Ribeira das Tainhas, and Ponta Garca, to Furnas; and a branch line to Ribeira Grande from Pranchinha, running near Rabo de Peixe. The plans are to be approved by the Government, and shall include the general plan of the road, with stations, water, courses, and roads crossed, buildings and other accessories; a longitudinal profile giving distances and grades; cross sections showing the type of road; detailed plans of construction; and an explanatory report. The company is to keep the line and rolling-stock in good order and is to construct a telegraph line. After the road is completed, the company shall within one year mark out the road in kilometers and make a cadastral plan, with description of the same, and deliver one authenticated copy to the Government and another to the junta general. The road is to have a single line, except at stations; the width at the upper surface of the ballast shall be 3.2 meters (7.2 feet), whether in embankment or excavation. The width of the line shall be 4 meters (10 feet 1.2 inches). The radius of the curves shall be 100 meters, except for sidings. The rails are to weigh not less than 20 kilograms (44 pounds) per meter. They must be made in accordance with the latest improvements. The sleepers must be of iron or some wood that holds spikes securely. The road is to be fenced. Platforms must be provided at stations, and viaducts, bridges, etc., must be of stone, iron, or brick. Gates must be provided at all level crossings.

"The Government concedes to the company the exploitation of the road for ninety-nine years, the charges for transportation to be approved by the Government. It shall then become the property of the junta general. After the expiration of the first fifteen years after the completion of the line, the junta shall have the power to redeem the concession, on the basis of the net earnings of the road during the preceding seven years. The junta guarantees to the company an annual net return up to 5 per cent. in relation of the cost of each kilometer constructed, including interest and amortization of capital; but the actual sum paid by the junta shall in no case exceed 4 per cent. of the cost. When the net proceeds of the line exceed 4 per cent. per annum, half of the excess shall belong to the junta until the sums advanced by the said junta in respect of the guaranty of interest are repaid, as well as interest at the rate of 4 per cent. The company shall have exemption from imports general or municipal for twenty-one years after the beginning of the work; in this exemption are not included transportation and stamp taxes imposed on the fares for transportation of passengers and goods as laid down in existing legislation. No special contribution of any kind shall be levied on the railroad during the concession. The company can import free of duty, for six years, rails and fastenings, switches, material for bridges, locomotives, carriages and cars, machinery, tools, etc., used in the construction of the line. Lands belonging to the Government which may be necessary for the construction and working of the road are conceded gratuitously. The Government is to assist the company in making expropriations of land that may be necessary.

"The company is to deposit in the treasury 50,000 milreis as a guaranty of the fulfillment of this provisional contract, pending its authorization. If the contract is approved, the company shall within a month increase the deposit to 100,000 milreis, short in money or bonds of the Portuguese public debt. This deposit can be withdrawn only when the company has done work to the value of double the deposits. The surveys and technical details of the project and works of construction shall be prepared and presented for approval within one year from the date of the definite contract. The construction of the railroad shall begin within sixty days after the project is approved by the Government, and the road must be open for traffic within four years.

"The junta shall appoint engineers to inspect the construction of the road. The company can, with the approval of the Government, transfer its rights to another company or individual; but if the latter is foreign, there must be a clause in its statutes to the effect that it renounces privilege of nationality.

"The basis of the licitation shall be the sum of 21,300 milreis, island money, at which is calculated the maximum per kilometer of the cost of construction."

A report recommending the construction of the railroad, attached to the documents transmitted by Mr. Pickereil, says that the total population served by the road will be 60,364, and calculates the gross earnings in the first years as 90,000 milreis, of which 50,000 milreis will be for passengers and 40,000 milreis for goods.

THIS CUT GLASS BOWL

is eight inches in diameter and three and a half inches high. It is cut glass—hand cut (not acid), hand finished, hand polished, which guarantees its perpetual brilliancy. The glass from which it is made is the very best it is possible to produce. The bowl is thick, heavy and deeply cut. It rings clear as a bell. A brilliant ornament for sideboard and dining table.

\$4.50 Express Prepaid

to all points east of the Mississippi River; add 50 cents extra for points beyond. Its equal cannot be purchased for less than \$6.00.

Any dissatisfied purchaser may return it at our expense and have the money back without question.

It is sold at this price solely to introduce a new way of selling cut glass—direct from factory to consumer. It introduces us to you. Catalogue mailed free.

BRILLIANT CUT GLASS COMPANY,
42 Murray Street, New York.

Reduced Prices on Suits and Skirts.

In order to reduce our stock of Spring and Summer materials, we will make to order fashionable suits and skirts, at great reductions from former prices. PERSONALS.

THE true story of how Admiral Dewey got his assignment to sea duty in 1897 and thereby became world-famous is thus narrated by *Success*: Before the Spanish-American war broke out the air in Washington was full of excitement for the officers of both the army and the navy. Active service was in prospect at last,—and everybody wanted to go to fight. The naval men in particular grew restive, for they saw chances ahead. They were in the habit of dropping into a business office on Sixteenth Street, situated nearly midway between the clubs and the department buildings. It was there, one afternoon, that Dewey, Porter, and a few others fell to discussing the prospects of war and their own chances. Porter was an Annapolis graduate who had gone with the South at the outbreak of the Civil War. He was the first Confederate officer to come over the side of Farragut's flagship after the fight at Mobile, and Dewey and the other Annapolis boys aboard the flagship were the first to greet him. They have been friends ever since. Well, on this particular afternoon, Dewey was lamenting the fact that he would soon be on the retired list, and that if he did not get a trip of sea duty, he would die in his bureau. "Why don't you try for it?" said Porter.

"I have," he replied, "but they won't change the seniority rule. I am doomed to grow old in this plagued bureau,—while I know I could do something if I once got a whack at the Spaniards."

"Go to Proctor," suggested the ex-Confederate, "he stands well with the people down the street."

"Off Dewey trotted to see the Senator. The Senator called on Secretary Long the next day.

"No," said the Secretary, "I can not do such a thing; he must take his turn. Every one wants to go, even the retired folks."

But Senator Proctor went straight to the President.

"Do you want this very much, Senator?" the President asked.

"Yes, because George Dewey is from my State, and he says the chap that gets the first chance to give the Spaniards [hades] will be able to whip them and settle the dispute."

"All right," said the President, "I'll order it done." And he did.

CAMILLE SAINT-SAËNS, the brilliant French composer, is extremely near-sighted. One evening at Paris he was at a party, when the host asked him to play something. He for a long time refused to do so, but being earnestly pressed he took his seat at the piano. His hair was tossed back, his eye gleamed with excitement. Now he would bend over the piano, then he would throw himself back; and all the while his fingers would run over the keys as he extemporized in the most brilliant fashion. The company were delighted. After an hour pleasure gave place to weariness. Two hours afterward some of the guests began to leave; their example quickly became contagious, and by degrees nobody remained in the room except the master of the house (the hostess had long since gone to bed). Saint-Saëns, more inspired and more tumultuous than ever, utterly unconscious of the incidents around him, played on as fast and as frenzied as ever. At last, about 1 A.M., seeing Saint-Saëns playing with more ardor than ever, the master of the house, completely overcome with fatigue, became desperate, and, laying his hand on the composer's shoulder, said: "I beg pardon, my dear sir, but pray are you not a little fatigued?" Saint-Saëns replied, without leaving the piano, "Not in the least!" and, to show how fresh he was, struck into a new improvisation with wilder enthusiasm than ever. The host gave up, stole out of the room, and went to bed. At daybreak Saint-Saëns rose, gravely bowed to the tables and chairs, and went home, completely ig-

A Prosperous College.

The Western College, Oxford, Ohio, has just issued its catalogue for 1899-1900. The catalogue shows a large number of new elective studies in all departments. The faculty numbers twenty-six. The students are from twenty-one different states and countries. The complete list of students shows an enrollment of one hundred and seventy-three. The tone of the catalogue is scholarly and Christian. This catalogue should be in the hands of all who are interested in higher education for women.

A POINT WELL MADE

is a great satisfaction, when on your lead pencil; but the aggravation of its snapping off, as soon as put to use, is often much greater than the incident warrants.

This exceedingly annoying occurrence can be avoided by using

DIXON'S
AMERICAN GRAPHITE PENCILS

Their tough, smooth leads don't break or scratch when in use.

Made in all styles, covering the whole field of pencil use.

THEIR GRADE NEVER VARIES.

Ask for them at your dealer's. If not obtainable mention *Literary Digest* and send 16c. for samples worth double.

norant that the chairs and tables had been for hours his only audience.

THE following anecdote about Lord Kitchener is told by the war correspondents:

While Lord Kitchener was engaged in suppressing the Pretoria rebellion he ordered the destruction of a certain farmhouse. Not seeing any signs of his orders being carried out, he rode over with his staff and found an interesting situation. In the doorway of the doomed farm stood a pretty young Dutch girl, her hands clasping the door posts and her eyes flashing fire from beneath her dainty sunbonnet. The Irish sergeant in charge of the party of destruction was vainly endeavoring to persuade her to let them pass in, but to all his blandishments of "Arrah, darlint! Wishee now, weeshla," etc., the maiden turned a deaf ear, and a deadlock prevailed.

Kitchener's sharp "What's this?" put a climax to the scene. The girl evidently guessed that this was the dreaded chief of staff, and her lips trembled in spite of herself.

Kitchener gazed sourly at her, standing bravely, tho' tearfully, there, and turned to his military secretary. "Put down," he growled, "that the commander's order with reference to the destruction of Kitchener's farm could not be carried out, owing to unexpected opposition. Forward, gentlemen!"

MORE OR LESS PUNGENT.

The Retort Courteous.—"Why do you wag your beard so constantly?" inquired the impudent dog of the goat. "Because I chew," replied the goat. —*Cleveland Plain Dealer.*

The Highest Form.—A school teacher lately put the question: "What is the highest form of animal life?" "The giraffe," responded a bright member of the class. —*Tribune.*

Financial Stringency.—DICK: "I lost \$5,000 in less than half a minute last night."

PETER: "How did it happen?"

DICK: "I proposed to Miss Bullion, and she said 'No.'" —*Chicago News.*

At the Dinner-Table.—"Georgie, don't stare at Mr. Crumley that way. It isn't polite." "I was just waitin' to see him pick up his glass of water, ma. I heard pa tell you that he drinks like a fish." —*Cleveland Plain Dealer.*

He Felt Put Out.—"How do you suppose Mr. Quay felt when he heard the result of the vote in the Senate?" asked the observant boarder. "I suppose he felt put out," replied the cross-eyed boarder. —*Pittsburg Chronicle-Telegraph.*

Heard in London.—SMYTHE: "Haven't seen dogs in an age."

WOODFALL: "He's on the race-track now."

SMYTHE: "Newmarket?"

WOODFALL: "No; Pretoria." —*Chicago News.*

How to Grow Good Fruit.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticulture Society, at Lenox, Mass. The address bore chiefly upon spraying and general culture of orchard and field crops, how to do it cheaply and good, and how to obtain the most profit from your labor in the easiest manner. The address is quite lengthy, about an hour's talk. It will not be sent to the disinterested. Owners of fruit trees, stating if at all interested in fruit culture, will get this book. Had this address been placed on the market in book form it no doubt would have sold at a good price. The full address, profusely illustrated, in pamphlet form was intended to be sent to fruit growers and owners of estates, free for the asking, but to prevent imposition by the curious and disinterested, the book will be sent to fruit growers, or owners of estates, enclosing fifty cents, to the Lenox Sprayer Company, 30 West Street, Pittsfield, Mass.

Immediate Relief from Rheumatism

Mr. W. H. Jenkins writes from Topeka, Kan., under date of August 3rd, 1898:

GENTS:—Several years ago I was crippled with rheumatism, and for six weeks I was unable to do business of any kind, and in that time I have expended nearly \$3,000. I had given up all hope.

My mother saw your advertisement, and we ordered one bottle of your Tartarothine, which gave me immediate relief.

I have recommended your medicine to a number of parties in this city, who have had chronic rheumatism for years. One of them, a lady 68 years of age, is now doing her own work. So far your medicine has not failed to make a cure.

In conclusion your medicine is just as represented, and has entirely eliminated the disease from my body.

Tartarothine is supplied in bottles containing 30 doses at \$1.00 and can be obtained of all druggists or post-free by mail. Pamphlets with Testimonials sent FREE.

One Idea of Strategy.—CAPTAIN: "What is strategy in war? Give me an instance."

SERGEANT: "Well, strategy is when you don't let the enemy discover that you are out of ammunition, but keep right on firing."—*Exchange.*

Even Sooner.—FOSTER: "Do all your employees drop their tools the instant the whistle blows?"

PLYER: "Oh, no, not all of them. The more orderly ones have their tools put away before that time."—*Barbar.*

Extreme Cases.—"Brethren," said Parson Black, earnestly, "dere am some folks in which de still, small voice ob conscience keeps a-gettin' stiller an' smaller, until at las' it 'd habber 'dard de deaf an' dumb langwidge if it wants ter attract deir attention!"—*Pack.*

Repertee.—After a recent ecclesiastical gathering, as the clergymen were trooping into luncheon, one of the most unctuous observed: "Now to put a bridle on our appetites." "Now to put a bit between my teeth," retorted the Bishop of Winchester, Dr. Randall Davidson.—*Exchange.*

Not a Tragedy.—"Strike!" The Irish girl gazed steadily at the big strapping fellow with the oak stick. "Strike!" Again her high-pitched voice rang out. "Strike!" This time he dropped the stick and ran. It was not a threatened tragedy; it was merely a girl in the grand-stand sitting as umpire.—*Chicago News.*

Satan Pushed Him.—MOTHER: "So you have been at the jam again, Adolphus?"

SON: "The cupboard-door came open on itself, mother, and I thought—"

MOTHER: "Why didn't you say, 'Get thee behind me, Satan'?"

SON: "So I did, mother; and he went and pushed me right in!"—*Broadway Life.*

Prayer Unnecessary.—At one time, during the border war (says Mrs. Julia Ward Howe to her "Reminiscences"), John Brown had taken several prisoners, among them a certain judge. Brown was always a man of prayer. On this occasion, feeling quite uncertain as to whether he ought to spare the lives of the prisoners, he retired into a chamber near at hand, and besought the Lord long and fervently to inspire him with the right determination. The judge, overhearing this petition, was so much amused at it that, in spite of the gravity of his own situation, he laughed aloud. "Judge —," cried John Brown, "if you mock at my prayers, I shall know what to do with you without asking the Almighty!"—*Exchange.*

IT IS easier to imitate than to originate. In White Lead the standard brands only are imitated. The "so-called" White Leads, — mixtures of Zinc, Barytes, etc., are branded "Pure White Lead," "Strictly Pure White Lead," etc., in imitation of the genuine; otherwise these misleading brands could not be so readily sold. The brands in the margin are genuine.

FREE For Colors use National Lead Company's Pure White Lead Tinting Colors. Any shade desired is readily obtained. Pamphlet giving full information and showing samples of Colors, also pamphlet entitled "Uncle Sam's Experience With Paints" forwarded upon application.

House: Sundry Senate amendments to the naval bill, including the provision for armor, are rejected.

May 30.—House: One hundred and ninety private pension bills are passed.

May 31.—Senate: The sundry civil appropriation bill is passed.

June 1.—Senate: The Cuban extradition, general deficiency, and emergency river and harbor bills are passed.

House: The anti-trust bill, amending the Sherman law, is passed by a vote of 273 to 1.

OTHER DOMESTIC NEWS.

May 28.—Eclipse of the sun is successfully observed.

The United States Supreme Court decides that Admiral Dewey and his men are entitled to prize-money at the rate of \$200 for each man on the Spanish ships at Manila, instead of the \$500 claimed by them.

May 29.—The President nominates Brigadier-General Elwell S. Otis to be major-general in the regular army, in place of General Merritt, who retires on June 16.

The quadrennial General Conference of the Methodist Episcopal Church ends its session which lasts for one month.

May 30.—Memorial Day celebration is held with the usual ceremonies.

Major-General Otis arrives from Manila.

May 31.—The strike still continues in St. Louis.

June 1.—The Navy Department has decided to reestablish the European station under command of Rear-Admiral Frederick Rodgers, with the battle-ship *Albatross* as flag-ship.

June 2.—The Naval War College at Newport, R. I., is opened.

June 3.—Two requests for the impeachment and removal from office of Mayor Van Wyck have been made to Governor Roosevelt.

Problem 477.

By MAX FEIGL.

First Prize *Tägliche Rundschau* Tourney.

Black—Eight Pieces.

White—Ten Pieces.

White mates in two moves.

Problem 478.

By E. PRADIGNAT.

First Prize, *L'Espece* Tourney.

Black—Eight Pieces.

White—Nine Pieces.

White mates in three moves.

Solution of Problems.

The Rev. C. I. Taylor, Dr. H. H. Chase, and C. L. Luce, Linden, Mich.; Dr. W. A. Phillips, Cleveland; N. L. G., Colgate University, and Mrs. Dr. P. got also 4/5.

A Consultation Game.

We begin a series of games today which ought to be interesting and instructive. The special features are these:

(1) The move to be made will be that of the majority; (2) Notes or comments by the players and others. As the first of these games we give the opening moves of the Jerome Gambit. The author of this Opening, Mr. A. W. Jerome, Springfield, Ill., writes that in offering this Opening he has an interested motive, *to test the soundness of the Gambit, and to furnish a basket, perhaps five pecks, of fun.*

THE JEROME GAMBIT.

White.	Black.
1 P-K4	P-K4
2 Kt-KB3	Kt-QB3
3 B-B4	B-B4
4 B x P ch	K x R
5 Kt x P ch	Kt x Kt
6 P-Q4	

As Mr. J. says, "Here is where the fun begins." We will give the first of the comments:

(a) This is a very risky opening and can not win against a player of equal strength. At the same

time, Black must make the proper defense. In all games of this kind, White, in a sense, presupposes that Black will make a false move.

Send Black's 6th move, with reasons for making it.

Manhattan and Franklin Match.

The fifth annual team-match between the Manhattan Chess-Club of New York and the Franklin Chess-Club of Philadelphia was played on Memorial Day, in New York City, and resulted in a tie, each club scoring seven points. The score is as follows:

Franklin.	Manhattan.
Reichelm..... 1/2	Samuels..... 1/2
Young..... 0	Hynes..... 1/2
Kemeny..... 0	Lipschutz..... 1/2
Voigt..... 1/2	Hodges..... 0
Hampton..... 1/2	Schmitt..... 1/2
Harrelson..... 1/2	Etlinger..... 1/2
Newman..... 1/2	Delmar..... 1/2
Markowski..... 1/2	Kochler..... 1/2
Griffith..... 1/2	Rosenthal..... 1/2
Shapiro..... 1/2	De Visser..... 1/2
Mager..... 1/2	Isaacson..... 1/2
Kaiser..... 1/2	Halpern..... 1/2
Smart..... 1/2	Hochman..... 1/2
Firm..... 0	Raubitschek..... 1/2
Total..... 7	Total..... 7

The Composite Game.

Ray Lopez.

White.	Black.
1 P-K4	P-K4
2 Kt-KB3	Kt-QB3
3 B-Kt5	Kt-KB3
4 Castles	Kt x P
5 P-Q4	P-Q4
6 Q-K7	P x P

A. H. Weitbrech, Denver, sends White's 7th move, B-K K5.

Mr. W. doesn't tell us why he makes this move, which is not in any sense a proper continuation. In fact, it destroys the whole purpose of the Ray Lopez attack.

The Paris Tournament.

Marshall, the young American, has had a very large feather placed in his cap by winning a game from Champion Lasker, and drawing with Tschigorin. If the Brooklyn Boy keeps up his present pace, he will finish among the leaders.

At the time of going to press the score stands:

Draw Lost	Draw Lost
Emery..... 2 6	Mieses..... 6 3
Born..... 5 4 1/2	Morphy..... 4 2
Didier..... 6 0	Pillsbury..... 7 1/2
Janowski..... 7 1	Rosen..... 1 8
Lasker..... 7 1	Schlechter..... 4 4
Marcel..... 6 2	Shawalter..... 4 1/2
Maroczy..... 6 2	Sterling..... 3 7
Marshall..... 6 1	Tschigorin..... 4 3
Mason..... 2 6	

Brooklyn beats Chicago.

A team-match on twelve boards was played by telegraph, on Memorial Day, between the Brooklyn and Chicago Chess Clubs. Brooklyn won 4, drew 5, and lost 3. One game was unfinished.

Characteristics of Chess.

We have received a very interesting article from Lieut. Col. Cyrus Sears, Harper, Ohio, and we regret that we can not, for want of space, give it in full. Colonel Sears is nearly seventy years of age, and began playing Chess five years ago. He says that while he realized that he had Chess-talent enough to enable him to get great "comfort and pleasure from the matchless game," yet he was not composed of "the stuff of which champions are made."

"One of the chief points of interest in Chess is its practically exhaustive illustrative character." . . . "I am persuaded that in Chess-playing, or anything else, a few years of diligent study and practice will place any one on his maximum level, above which he can not climb. A penitulum must be content to swing anywhere within, but can not go beyond, its length."

"It has been figured that a game of Chess admits of countless billions of different moves and combinations. . . . Yet it is doubtless true that at any stage of a game there is but one best move. Each move will prove good, indifferent, or bad as not only immediate, but remote, consequences

are considered. . . . So also in the game of human life: at every stake there are countless moves for hand or brain,—bad, indifferent, and good,—and one, only one, best. The problem is for the player to select and make his best move as nearly as he can, for move he must; and he is liable to suffer or prosper ever after according to the move he makes. . . .

"Verily, according to its players Chess illustrates all styles, moods, stratagems, and tricks of trade and business; all varieties of generalship, from the most cautious and conservative to the daring, reckless, daredevil style, that frequently wins by unmitigated audacity; all kinds of warfare, from bushwhacking to the most carefully planned and skillfully executed campaigning." . . .

"I spent several years working very hard and diligently trying to make money. If I had hired a man at \$100 and board per month to play Chess with me, and had attended strictly to the business of Chess, I would have been financially better off." . . . "In regard to the time I have 'fooled' away on Chess, at this the eleventh hour of life, I not only have no regrets, nay, on the contrary, I am much disposed to apply the philosophy of David Harum, and declare to all younger lovers of this matchless game: It is not the time I have spent in playing Chess that I regret; but the Chess I might have played and didn't."

Not an Unpleasant "Check!"

At the annual dinner of the London City Chess-Club, Sir George Newnes presented a check of £50 to Mr. Blackburne. This check is the national testimonial to the great master as the representative of England in the numerous tournaments in which he had competed during nearly thirty-eight years.

Fred H. Bell, Windsor, Ontario, Canada.....	10.00
Mrs. D. A. Calne, Central Mills, Ala.....	1.00

\$125.57

The above list contains only those contributions received prior to June 11. They have been forwarded to Messrs. Brown Brothers & Company, 59 Wall Street, New York, who are custodians of the fund received by the Committee of One Hundred.

WHAT CONGRESS HAS DONE.

THE record of the first, or long, session of the Fifty-sixth Congress, which came to an end last week, arouses characteristic sentiments among the Democratic and Republican press. The Cincinnati *Enquirer* (Dem.) thinks that the record has been "disgraceful" and that the "congressional abdication" to the executive "has been complete." To the Rochester *Democrat and Chronicle* (Rep.), on the other hand, it seems that "all in all, the session has been characterized by industry, by firmness and sagacity on the part of the majority, and by such results in legislation as demonstrate anew and with convincing force that in Republican principles lie the hopes of this nation for continued progress, prosperity, power, honor, championship of human rights, and leadership in spreading the blessings of liberty and civilization."

The newspaper comment is directed alike at what Congress

has done and what it has left undone. The most noteworthy matters that were accomplished, in the view of both Republican and Democratic papers, were the following:

Enactment of the gold standard law.
Enactment of the Porto Rican tariff and civil government law.
Establishment of a form of government for Hawaii.
Provision for schools and civil government in Alaska.
Enactment of the "Free Homes" law.
Provision for the addition of two battle-ships, three armored cruisers, and five submarine boats to the navy.
Provisions for a government armor plant in case the Secretary of the Navy can not buy armor at a reasonable price.

Copyright by E. K. New York

NELSON A. MILES.

Promoted to be a Lieutenant-General.

Enactment of a law providing for the extradition of persons in the United States charged with committing crime in territory under the control of the United States.

The exclusion of Brigham H. Roberts from the House and W. A. Clark and M. S. Quay from the Senate.

The promotion of Nelson A. Miles, commanding the army, to be a lieutenant-general.

The confirmation of John R. Hazel, of Buffalo, to be a federal judge.

The passage of about 200 private pension bills.

Appropriations of over \$700,000,000.

Other matters that were mooted were:

The shipping subsidy bill.
The Nicaragua canal bill.
Provision for civil government of the Philippines.
Ratification of the Hay-Pauncefote treaty.
Reduction of the war-revenue taxes.
A Pacific cable.
Resolutions of sympathy with the Boers.
Reciprocity arrangements with France and other countries.
Reform of the consular service.
Reorganization of the army.
Legislation against the trusts.

The New York *Times* (Ind. Dem.) selects as the two features of the session which are "of the greatest interest to the nation on the verge of a national election," "the discretion accorded to the

executive in the trying business arising from the results of the Spanish war, and the establishment of the gold standard. In both," it believes, "Congress has been in sympathy with the real sentiment of the country, and there is not the slightest reason to doubt that the coming election will show it." The *Philadelphia Press* (Rep.), after remarking upon the rejection of Roberts, Quay, and Clark as "a moral triumph for the law, the Constitution, and free and pure elections won by the Republican Party," goes on:

"A session which was marked by this wholesome defeat of polygamy in Utah, the machine in Pennsylvania, and bribery in

Montana, has as its most noteworthy achievement in legislation the uncompromising enactment of the exclusive gold standard. Here again men doubted if a Republican Congress would be equal to its convictions. It was, Political expediency called for delay and a temporizing policy on the currency. Principle and right demanded action. The statute enacted went further than any one anticipated. It established the gold sole standard.

SERENO E. PAYNE, OF NEW YORK.
Republican Leader in the House.

It divided the note and fiscal departments of the Treasury. It re-funded the national debt. It widened the national banking system. It provided for maintaining the gold standard in perpetuity, tho Mr. Bryan declares that, if elected President, he will overturn it, as he undoubtedly would. No law could protect the gold standard against a hostile President and hostile Secretary of the Treasury.

"Carrying out its earliest policy, the Republican Party in the Congress just closing opened to free settlement all lands purchased of Indian tribes. The direct loss to the Treasury is great. The indirect gain will be greater. Nothing has been so profitable to the United States as a whole as the policy of free land sales to actual settlers. A policy as liberal was adopted toward pensioners, whose aging years are made easier by the Grand Army pension act.

"But while these liberal measures were enacted, no lavish appropriations were permitted. River and harbor appropriations were excluded, tho the eve of a general election is the usual season for a rush of such local grants. Public buildings were restricted. Various costly schemes, public and private, general and local, were either excluded altogether or fell between the Senate and House—passed by only one body. Lastly, the first sound steps were taken in a colonial policy. The principle was established, in the face of public clamor and partizan outcry, that the limitations of the Constitution do not extend to newly annexed territory. Hawaii was given its organic law. Porto Rico was provided with the largest measure of self-government possible and a liberal grant in aid of its development. The Philippines are left for future disposition.

"These are noteworthy results. The country will ratify them at the next election and history will approve them. Moreover, the three men excluded from seats in the past session, Messrs. Roberts, Quay, and Clark, will not appear for admission in the next session."

Not to all the press, however, does the record of Congress appear in this rosy light. The *Baltimore Sun* (Ind.), for example, says:

"Among the sins of omission of this Congress is the failure to

reduce the war taxes. A surplus is piling up in the Treasury, but the Republican majority in Congress has refused to lighten the burdens of the taxpayers, doubtless with the view of accumulating an immense fund to carry out the imperial projects of the Administration. The reciprocity treaty with France was not ratified, altho it was distinctly to the advantage of American consumers. The protected interests objected, and as they are all-powerful the Senate yielded to their demands. The bill providing for the reorganization of the consular service, a meritorious measure approved by the business interests of the country, was allowed to die a natural death. The Hay-Pauncefote Treaty, providing for the neutrality of the Nicaragua canal, was held up in the Senate by the advocates of an interoceanic canal owned, controlled, and fortified by the United States. The House passed a canal bill, but the Senate postponed action upon canal legislation until the next session of Congress.

"The country is to be congratulated that the Republicans did not have the courage to force action by Congress upon the shipping subsidy bill. This measure is designed to enrich a few ship-owners at the expense of the taxpayers. It provides for an extravagant system of bounties to be paid out of the national Treasury. The measure was favorably reported in both Houses, but was not pressed to a vote. There is little doubt that it will be enacted into law if the Republicans control the next Administration. Action has been deferred to prevent the Democrats from making the bill a campaign issue. In the closing days of the session the House passed an amendment to the Sherman anti-trust act, but the Senate referred the amendment to its committee on judiciary. The Republicans in the House also voted for a constitutional amendment giving Congress the power to regulate and control trusts. The Democrats opposed it and the amendment failed to receive the two-thirds vote necessary for its adoption.

"With the exception of gold-standard legislation the record of the Republican majority in Congress is not one which will add to the strength of the party. It is a record of phenomenal extravagance in appropriations and of surrender to the trusts and protected interests, especially in the matter of the Porto Rican tariff and the reciprocity treaty with France. Judged by the work of this Congress the party richly deserves defeat next

JAMES H. RICHARDSON, OF TENNESSEE.
Democratic Leader in the House.

THE TERRIBLE ONSLAUGHT OF CONGRESS ON THE TRUSTS.

—The Detroit News.

November, altho there is an element in the Democratic Party which, by advocating an extreme policy, seems bent upon perpetuating McKinleyism and continuing the Republicans in power for another period of years."

An anti-expansionist's view of the record of Congress on the Philippine problem is seen in the following comment from the *Springfield Republican* (Ind.):

"As for the Philippines, Congress has simply 'scuttled.' Judge Taft went to Manila expecting the passage of the Spooner bill, yet even that measure has been abandoned. The Filipinos are called upon to disarm and submit to the authority of the United States, yet Congress, which alone can define their political

status or promise anything to them in the future, refuses to speak, and leaves the President under the vague war power an absolute despot over 10,000,000 people, their lives and property. And Congress has done this in the face of Dr. Schurman's emphatic statement that 'nothing could so much contribute to an adjustment of our Philippine troubles' as an 'authoritative declaration' by this Congress. If that be true, the failure to make a declaration of policy toward the Filipinos is a

JOHN R. HAZEL, OF BUFFALO.
Confirmed as Judge of the United States Court of
the District of Western New York.

political crime of no slight magnitude. The war there continues, and is likely to go on indefinitely, because nothing has been done to satisfy the legitimate rights and aspirations of the Filipino people."

The promotion of General Miles to be a lieutenant-general is approved by many on the ground that the general commanding our army ought not to be of lower rank than lieutenant-general; but several papers think that the way in which the promotion of General Miles and the promotion of Adjutant-General Corbin to be a major-general were passed (as a "rider" to the military academy bill) was anything but dignified or commendable. The *New York Evening Post* (Ind.) says of these promotions and of the confirmation of John R. Hazel, of Buffalo, to be a federal judge (considered in these columns last week):

"No arguments can be brought out which will make the advancement of Corbin and Miles other than a most severe blow to what little there is left of the merit system in the army. It serves notice on every young officer that the true way to high rank is by the path of the politician, of the Washington bureaucrat, and of the unblushing seeker of easy positions in the vicinity of high personages, and will correspondingly

discourage every officer who strives to rise by attention to duty and devotion and self-sacrifice in the field.

"Hazel's appointment simply means that, so long as Mr. McKinley is President, the two Republican Senators from a State can secure the filling of any office by any man upon whom they can agree, no matter how grossly unfit he may be. The President will comply with any demand from the senatorial pair, and then the rest of the Senators will stand by their two associates."

The appropriations made by this session of Congress are considered in the following paragraphs from the *Philadelphia Ledger* (Ind. Rep.):

"The appropriations made by the first session of the Fifty-sixth Congress reach the enormous total of \$709,729,476. This includes the sum of \$131,247,155, estimated to be incidental to the war with Spain, leaving \$578,482,321, or what may be designated as the ordinary appropriations made during this session for the support of the Government during the fiscal year ending June 30, 1901. This is an increase of \$49,747,242 over the appropriations for the year 1898, which immediately preceded the Spanish-American war, and an increase of \$62,637,127 over the appropriations for 1897. Included in the outgo for the next year is the new and large item of \$9,000,000 for the census. The principal increases in the old items of expenditure over those of the year 1898 are: Navy, \$7,081,916; pensions, \$3,981,350; postal service, exclusive of recently acquired island possessions, \$17,782,900. . .

"The ordinary appropriations for the next year, that is to say, those exclusive of the \$131,247,155 for war account, reach \$578,482,321. The figures are startling in comparison with those of the years preceding the troubles with Spain, and mark the departure from the economical government, which all parties in their ante-election promises pledge themselves to maintain. Congress, so far from responding to the reasonable request of the business world to be relieved, at least in part, of the burden of the internal revenue of war taxation, to the end that annoying exactions may be ended and the large sums collected by the Government may be kept in the channels of trade, has greatly increased the ordinary expenses of Government, and the remission of war taxes is apparently relegated to the distant future."

THE SOUTH AFRICAN SITUATION.

IN spite of the repeated declarations of the Boer leaders that the war is not yet over, the American press, pro-British and pro-Boer alike, agree that farther resistance by the Afrikaners will only postpone, by useless bloodshed, a result that is inevitable. "The war is not yet over," Secretary of State Reitz is re-

THE FORMER TRANSVAAL - PRETORIA.

ported to have said in an interview last week in the railroad car which has become the Boer capital. "Guerilla warfare will continue over an enormous area," he went on; "we intend to fight to the bitter end, and shall probably retire upon Lydenburg, where we can hold out for many months"; and President Kruger is reported to have added: "Yes, it is only now that the real struggle has begun. I fear that there will still be much bloodshed, but the fault is that of the British Government. The time has passed for us to talk. We have done plenty of that, but it has done us no good. There is now nothing left for us to do but to keep on fighting, to keep on fighting!" Mr. Wessels, of the Boer Commission in this country, said last week that "the fight will continue." From now on, he added, "the burghers will pursue much the same tactics adopted by the Filipinos. We may surrender, but we will never be conquered."

The report that the Boers have torn up twenty-one miles of the railway on which Lord Roberts depends for his supplies leads many papers to believe that the British troubles are not yet done. The London correspondent of the Associated Press says: "The rapidity of the advance of Lord Roberts can not have permitted him to accumulate large reserves of stores. Therefore an interruption of the railway, even for a week, must embarrass the army, and may bring the forward operations to a standstill. This raid on the railway, the strenuous opposition to General Rundle, and the nimble escape of Commandant-General Botha's division have forced the War Office observers to the reluctant conclusion that the war is not yet over, altho even the occasional civilian Boer sympathizer can not see how the Boers will be able to do anything to change the result."

Most of the newspapers comment upon the situation as if the

conquest of the two republics were already an accomplished fact; altho one or two strongly pro-Boer papers say, like the *Springfield Republican* (Ind.), that the capture of Pretoria "no more ends the war than the capture of Philadelphia by the British brought our own war for independence to an end. There are no signs that the Boer army intends to disintegrate or surrender." The *Boston Transcript* (Rep.), however, remarks that "great nations have many times regained their captured capitals, but the Transvaal is not in this category." The Boers, it adds, "have fought their fight well. They ought, in the interests of the 'humanity' which they have failed to 'stagger,' to read the handwriting on the wall for what it is, the indelible decree to which they must bow."

AMERICA AS A HOME FOR THE BOERS.

AS it becomes evident that the Boer territory will soon be under British rule, a number of suggestions are heard that the Boers be invited to make another "trek," this time to America. The *Philadelphia Times* says:

"Why should they not come to the United States? Here are millions of vacant acres. Among the plateaus of Colorado may rise a second Pretoria. In Arkansas a delightful climate and 14,000,000 acres can be theirs for the asking. The governor of Arkansas will say so. Already the Union Pacific Land Company has offered one million acres in the Platte River valley, and will bear the expenses of enough colonists to settle it. Where can there be found a more practical philanthropy than thus to hold out the hand of welcome to a despairing people? The wealthy Holland Society of New York will promptly take steps to direct the exodus. The Boers will be welcomed here because they will make good citizens, and assimilate with the foreign races already represented on the frontier. Here they will find true liberty—civil and religious. If that be what they sought to attain for themselves, they need never go to war to possess it."

"Since the day that slavery was abolished, the United States has been the haven of all manner of distressed and disappointed men. Without arguing the question whether the Boers are likely to be oppressed or not, grief at the failure of ambitions for which so many gave their lives renders new homes in a new land desirable. Far better that they come here than trek once more into the wilderness."

The *New York Herald* says: "There are millions of acres of unoccupied lands still included in Uncle Sam's national domain. They could not possibly be occupied with a braver or better people than these God-fearing, liberty-loving descendants of old Holland."

Richard Harding Davis, South African correspondent of the *New York Herald*, asked President Kruger how the Boers would look at an offer of a hundred acres of land in America to each burgher. He replied: "We thank you for the generous offer of land; but the burghers are determined to fight for their own land and independence to the bitter end." In spite of this unfavorable reply, however, a belief is entertained by the *St. Louis Globe-Democrat* and other papers that "whether the majority of the Boers remain in their own land under the British domination or not, it is reasonably certain that many of them will be found among the annual influx of immigrants to this country hereafter." The *Globe-Democrat* notes that conditions of discontent and rebellion in other lands, such as Ireland, Austria, Hungary, and Italy, have always been followed by extensive emigration to America; and continues:

"The quantity, the fertility, and the cheapness of the

LORD ROBERTS AND THREE OF HIS STAFF.

A snapshot of four prominent officers taken by the correspondent of the *London News and Army Illustrated*. Lord Roberts at the railway station in Bloemfontein consulting with Lord Kitchener, Colonel Rochfort-Boyd, and Major Bailey.

lands in the United States, coupled with the freedom from oppression and the opportunity for every one to carve out his own destiny in his own way, was the chief consideration which impelled immigrants to come to this country when the conditions in their own land were no longer bearable. Millions of acres of public lands still remain in the United States, and other millions of acres can be obtained at low figures. Nearly all the States west of the Mississippi and some of those east of the river have lands which can be got so cheaply as to be an attraction for settlers from all over the world. In the list of immigrants landing on the shores of the United States are some from almost every country in the world, tho the two little republics of South Africa have thus far contributed but slightly to the total. A change in this particular is likely to take place now. A large part of the next great trek of the Boers from the Orange Free State and the Transvaal will undoubtedly be to the Western States of the American republic."

The *Washington Star* thinks that the transportation companies may be encouraging the Boer immigration idea from selfish motives, and condemns the agitation as unwise; and the *Chicago Chronicle* believes that the Boers are far more likely to stay in South Africa than they are to emigrate to so distant a land as ours. Other papers think that they may emigrate to some of the German South African territory.

THE CRISIS IN CHINA.

THE revolt of the "Boxers" in China, which daily assumes more and more threatening proportions, has become a leading topic in the American as well as in the European press. "The center of international interest," says the *New York World*, "now shifts from South Africa to China." On Monday of last

week Minister Conger cabled to the State Department at Washington that the "Boxers" were pillaging and murdering outside of Peking, and, moreover, that the Chinese Government was making only half-hearted attempts to suppress the rebellion. This news is confirmed by the Peking correspondent of the *London Times*, who declares that the Chinese General Nieh, with

to land there. On the other hand, Japan is said to be already driven to the last limits of endurance by Russia's actions in the East, and to be rapidly mobilizing her fleet and assuming a militant front. Reports of fighting between the "Boxers" and the imperial armies, with a loss of hundreds of lives, come from both Tien-Tsin and Peking. The powers are taking an aggressive stand, and threaten to send 10,000 troops to Peking to quell the rebellion, if necessary. The damaged railway line between Tien-Tsin and Peking is being repaired under supervision of the foreign admirals at Taku.

The American newspapers are full of the liveliest speculation as to the outcome of these grave developments. The interest of America in the struggle is increased by the fact that there is talk in diplomatic circles of the United States being requested to take a leading part in the settlement of Chinese problems. The Washington correspondent of the *New York Journal of Commerce* says:

"There might be a disposition on the part of all the powers to turn to the United States as the safest guardian of the mutual interests of all. The sincerity with which Secretary Hay urged the policy of the open door upon the powers and the equality of treatment accorded to all nations in the Philippines would afford the assurance of the impartiality and enlightened policy of the United States. Such a mission would not be courted by the Administration, but it might not be possible to refuse it, from the

REAR-ADMIRAL KEMPF,
Commanding our naval forces in China.

EDWIN H. CONGER,
United States Minister to China.

his troops, was actually recalled by the imperial Government and condemned for firing on the "Boxers." On June 5, Admiral Kempff, commanding the flag-ship *Newark*, reported that he had landed fifty more marines, in addition to the hundred already sent. The gunboat *Helena* has been ordered from Manila to China, and there are now twenty war-ships in Chinese waters representing the powers. A Shanghai despatch states that 600 marines have already been landed from the British fleet. The Russian troops, of which there are 14,000 at Port Arthur, and 11,000 more near Tien-Tsin, are also very active, and Russia is represented as making an open bid for the privilege of doing police duty at this time, in the hope that such action will strengthen her hold on the Chinese empire. A despatch from Tien-Tsin dated June 5 states that 500 Russian troops are about

And the verdict will be suicide, of course. — *The Denver News*.

point of view of students of diplomatic problems, if it were imposed by the united voice of such antagonistic governments as those of Great Britain, Russia, Germany, and France. The Government of Japan would undoubtedly support cordially any proposition which made the United States the guardian of the neutrality of the Orient."

It is generally assumed that the long-anticipated "break-up" of China is now at hand, but most of the American press think that the United States ought not to feel itself compelled to join the European powers in the scramble for the pieces, altho the *Springfield Republican* sarcastically remarks that "the only logical thing for Mr. McKinley to do, in order to vindicate his expenditure of blood and treasure in the Philippines according to the principles of commercial imperialism, is to take his slice of China." The *New York Evening Post*, however, says: "If the Chinese Government confesses itself unable to suppress internal disorder, we must join the other powers, not in attempting to reform or govern China, but in trying to rescue our own countrymen from the fury of an irresponsible mob." The *Baltimore American* also declares that "the United States should be absolutely neutral while the scramble continues." The *Philadelphia Times* maintains that "it is to our interest to keep China undivided, but subject to some kind of foreign administration or influence that will make it also safe." The *St. Louis Globe-Democrat* says: "America is especially interested in preventing the dislocation of the Chinese empire, which Russia is suspected of desiring. With the United States in this endeavor will stand England, which has its hands free on account of the virtual close of the South African war, and it is believed that Germany is with England on this issue. Nobody supposes there is any formal agreement between the United States and either of these two powers beyond the necessity for the defense of their citizens in China and the preservation of the empire, but there are so many elements of uncertainty and embarrassment in the situation that the outcome will be awaited with interest by the entire world."

A PROPOSED SHOTGUN POLICY FOR THE NEGRO.

THE present wide discussion of the relation of whites and blacks was given a new turn last week by the speech of Thomas Fortune, editor of the *New York Age* (Afro-American), before a meeting of blacks in Brooklyn. In an address that was received with enthusiastic shouts of approval by his hearers, Mr. Fortune is reported to have said:

"No man has any respect for a coward, and the great trouble is that most of the negroes are a lot of curs. When they and their people are discriminated against, insulted, and outraged they should demand an eye for an eye and a tooth for a tooth. They should be brave and ready to follow their leaders of courage whether they led to Calvary or to a West Virginia scaffold where John Brown died in behalf of the negro.

"If the negro can't be a man in the South he should leave there, but if he proposes to stay there he should stay as a man and fight his way up. I propose to start a crusade to have the negroes of the South leave that section and to come North or go elsewhere. It is useless to remain in the South and cry 'Peace! Peace!' when there is no peace.

"I believe in law, but if the law can afford us no protection then we should protect ourselves, and if need be die in the defense of our rights as citizens. The negro can't win through cowardice, but as soon as he strikes the first blow for his freedom it will echo around the world, and the world will respect us. I am not for any compromise: there can be no compromise in a life-and-death struggle.

"It has been said that we should make friends of the Southerners, but we must not make friends with any man who would deprive us of our rights as men and as citizens. The only way to get even with the Southern white man is to get even with him

with a bludgeon. If the South wants peace and prosperity let it deal squarely with the negro. If it will not, then the negro must protect himself, as not even God has any respect for a coward."

"There are now 10,000,000 of us, with 2,000,000 fighting men, and there will come a time when they will get at the throats of the white men who have tried to wrong and outrage us as citizens."

Interviews with negro clergymen in New York and Philadelphia show that they do not agree with Mr. Fortune on the wisdom of this plan. The *Washington (D. C.) Colored American*, however, says: "What would 10,000,000 of white people do, were they persecuted, outraged, and discriminated against as negroes are? Only the ashes of great cities would be left to reply!"

Newspaper comment seems to agree that Mr. Fortune has hurt the cause of his race by his speech, far more than he has helped it. The *Brooklyn Eagle* says that "such a foolish speech as Mr. Fortune made with impunity in Brooklyn would, if delivered in the South, rouse just the race hatred which would, more powerfully than anything else, stand in the path of negro progress," and the *Hartford Post* declares that "the man who gives to the colored people such advice as Mr. Fortune imparted yesterday is not their friend, but their foe." The *Philadelphia Bulletin*, too, thinks that such talk "only serves to inflame still further the animosity of the more lawless elements toward the black man." The *New York Times* observes that "for good or ill the whites and the blacks in the South must live together, and the men, white or black, who try to breed strife and bad blood and violence between them are bad men, doing a bad work. They should be condemned and repressed by the sensible and right-minded men of either race as public enemies of a peculiarly odious kind."

THE REPUBLICAN VICTORY IN OREGON.

PAPERS of every political complexion agree that the Oregon election last week, which the Republicans won by a margin of 8,000 or more, was an event of considerable political significance. The campaign, it is said, was fought out on the issues of expansion and the currency, and as Oregon was considered a doubtful State, the Republican papers are greatly elated over the result. The *New York Tribune* (Rep.) says of Oregon:

"It is a State in which the silver folly long had great influence, a State smitten more than most others by the Populist epidemic, a State fronting on the Pacific and more liable than almost any other to be unfavorably affected if any invasion of cheap Asiatic labor should come through the nation's back-door. What State in the Union which can be called even fair fighting-ground is likely to object to the great policies of the Administration if Oregon does not?"

"All things considered, the election in Oregon appears to leave the Democrats without reasonable hope of obtaining electoral votes from the Pacific States. Even in that section which has the strongest direct interest in pending questions of foreign policy the Democrats appear to have chosen an issue on which they have not one chance of gaining anything, but many chances of losing votes."

The *New York Evening Post* (Ind.), which has often assailed the Administration, especially on its expansion policy, admits that "the result must be considered an indorsement of the policy of the McKinley Administration in this respect. The far Northwest appears to favor this policy more warmly than any other part of the country, and the Republicans in the neighboring State of Washington expect to profit by an appeal to this feeling next fall. The probabilities now seem strong that Bryan will not be able to carry Washington again this year." The *Richmond Times*, one of the papers which left the regular Democratic ranks in 1896 on account of Mr. Bryan and his silver views, expresses a sentiment found in many other Gold Democratic papers when it remarks that "if the men who insist upon making William J.

Bryan the next Democratic nominee for President can not learn from the Oregon election that it will be fatal to do so, then we fear the case is hopeless, indeed."

Perhaps the most interesting view of the election, however, is the one taken by the followers of Mr. Bryan. The *New York Journal* (Dem.), in the light of the Oregon result, admits that if the democrats lose New York State next fall, they will lose the election. "The Oregon election has made clear," it says, "that the Democracy can not safely count on any electoral votes this year from the Pacific coast," because "the Pacific States are for expansion." Five electoral votes that Mr. Bryan received in 1896, therefore, it says, are "to be looked for elsewhere, in addition to the 48 Bryan lacked of a majority in 1896." These 53 necessary votes, it figures, can be had by carrying Kentucky and New York and, in addition, Connecticut, New Jersey, Maryland, or West Virginia. But let the Democrats lose New York, it declares, "and, as the Oregon election shows, they are gone."

The *Chicago Chronicle* (Dem.), too, agrees that the far Western States are lost to Bryan, and that "if the Democratic candidate for President is elected this year it will be by regaining the great formerly Democratic States at the East. . . . As long as the Republicans retain New York, New Jersey, Connecticut, Maryland, and Indiana they will elect their Presidential candidates."

Some of the other state elections between now and November 6 are listed as follows by the *New Orleans Times-Democrat* (Dem.):

"After the Oregon election there will be a rest for some months. North Carolina holds an election August 2, when the fate of the suffrage clause disfranchising the negroes will be known—and there does not appear to be much doubt that the amendment will carry. Alabama will elect August 6, Arkansas September 3, Vermont September 4, Maine September 10, and Georgia October 3. There is no element of uncertainty in any of these States. North Carolina, Alabama, Arkansas, and Georgia will all go Democratic by large majorities, and Vermont and Maine will equally go Republican."

MR. BRYAN ON THE ISSUES OF THE CAMPAIGN.

SILVER, the trusts, and imperialism are, according to Mr. Bryan, the three great issues upon which the campaign of 1900 will be fought; and on each issue, he declares, the Democratic Party is on the side of justice and the common people, while the Republican Party represents the plutocracy. "The issue presented in the campaign of 1900," he writes in the June number of *The North American Review*, "is the issue between plutocracy and democracy. All the questions under discussion will, in their last analysis, disclose the conflict between the dollar and the man—a conflict as old as the human race, and one which will continue as long as the human race endures."

No hint that the silver question is a "dead issue," or that it will be relegated to the rear in the coming campaign, is seen in Mr. Bryan's article. Indeed, he gives it first place in the discussion. After reflecting upon the "duplicity" and "deception" practised by the Republican leaders in their handling of the money question, Mr. Bryan goes on:

"The contest between monometalism and bimetalism is a world-wide contest—a contest which must go on until silver is once more a money metal equal with gold, or until the gold standard becomes universal. He takes a very narrow view of the subject who considers merely the present volume of money in this country. It is true that we have largely increased our supply of gold in the last three years (the Republicans neither promised nor expected the increase), but the action of England in placing India upon the gold standard is likely to cause a drain on the gold supply of the United States and of European countries. The gold blanket must now be stretched to cover nearly

three hundred million people in Southern Asia, and China has yet to be considered. After six thousand years of search and saving, the total volume of gold and silver money is about eight billions, nearly equally divided between the two metals.

"Upon this basis of metallic money rests a large volume of paper money, and upon the various forms of money rests the world's indebtedness.

"Those advocates of the gold standard who know the real purpose and scope of the gold-standard scheme desire to contract the basic money to one half its present volume. This would enormously enhance the value of each dollar, represented by money, notes, and bonds, and would enormously oppress the producers of wealth."

Next comes the trust issue, which no one seems to consider either a dead or dying question; and here, too, Mr. Bryan be-

A FROZEN ARGUMENT.

—Harper's Weekly.

lieves that, "as on the money question, the line is drawn between those who believe that money is the only thing to be considered and those who believe that the people have rights which should be respected." Private monopoly he declares to be "indefensible and intolerable," for "the power to control the price of anything which the people need can not safely be entrusted to any private individual or association of individuals, because selfishness is universal and the temptation to use such a power for personal advantage is too great."

One of the favorite arguments which the Republicans bring against their opponents is that the Democrats, while continually crying out against the trusts, have no practical remedy to offer. Here is the remedy that Mr. Bryan proposes:

"While state legislatures can do much, congressional action is necessary to complete the destruction of the trusts. A State can prevent the creation of a monopoly within its borders and can also exclude a foreign monopoly. But this remedy is not sufficient; for, if a monopoly really exists and is prevented from doing business in any State, the people of that State will be deprived of the use of that particular article until it can be produced within the State. Instead of shutting a monopoly out of one State and leaving it forty-four States to do business in, we should

shut it up in the State of its origin and take the other forty-four away from it. This can be done by an act of Congress making it necessary for a corporation, organized in any State, to take out a license from the federal Government before doing business outside of that State, the license not to interfere, however, with regulations imposed by other States. Such a license, granted only upon evidence that there is no water in the stock of the corporation, and that it has not attempted and is not attempting to monopolize any branch of business or the production of any article of merchandise, would compel the dissolution of existing monopolies and prevent the creation of new ones.

"The Democratic Party is better able to undertake this work now than it was a few years ago, because all the trust magnates have left the party. The Republican Party is less able than ever before to make a successful war against the trusts, because it numbers among its membership all the trust magnates it ever had, and in addition to them it has all the Democratic Party formerly had."

But while many newspapers and political leaders think the silver issue dead, and while the Republican leaders, in Congress and out, are trying to show that they abhor the trusts with as bitter a hatred as any Democrat can, there is a third question that has the merit of being at the same time alive and a matter of wide difference of opinion. "The Philippine question," says Mr. Bryan, "is even plainer than the trust question, and those who will be benefited by an imperial policy are even less in number than those who may be led to believe that they would share in the benefits of a gold standard or of a private monopoly," and here again, he remarks, the Republicans "dare not outline their policy." He goes on:

"If the Filipino is to be under our domination, he must be either citizen or subject. If he is to be a citizen, it must be with a view to participating ultimately in our Government and in the making of our laws. Not only is this idea negated by the McEnery resolution but it is openly repudiated by every Republican leader who has discussed the subject. If the Filipino is to be a subject, our form of government must be entirely changed. A republic can have no subjects. The doctrine that a people can be kept in a state of perpetual vassalage, owing allegiance to the flag, but having no voice in the Government, is entirely at variance with the principles upon which this government has been founded. An imperial policy nullifies every principle set forth in the Declaration of Independence."

"The theory that our race is divinely appointed to seize by force or purchase at auction groups of 'inferior people,' and govern them, with benevolent purposes avowed and with trade advantages on the side, carries us back to the creed of kings and to the gospel of force."

"Lincoln condemned this doctrine with characteristic vigor in a speech made in 1855. He said that it was the old argument employed to defend kingcraft from the beginning of history; that 'kings always bestride the necks of the people, not because they desire to do so, but because the people are better off for being ridden.'"

"One of the great objections to imperialism is that it destroys our proud preeminence among the nations. When the doctrine of self-government is abandoned, the United States will cease to be a moral factor in the world's progress. We can not preach the doctrine that governments come up from the people, and, at the same time, practise the doctrine that governments rest upon brute force. We can not set a high and honorable example for the emulation of mankind while we roam the world like beasts of prey seeking whom we may devour."

Mr. Bryan believes that the republic is in serious danger. "No nation has ever traveled so far," he says, "in the same

space of time, from democracy to plutocracy as has this nation during the last ten years"; yet he believes, too, that the time of "deliverance from the Pharaohs who are enthroning Mammon and debasing mankind" is at hand.

LETTERS AND ART.

THE POET LAUREATE AND HIS MAFEKING ODE.

THE glee with which the critics and the press pounce upon each poetical product that falls from the pen of Mr. Alfred Austin is now so familiar a phenomenon that we expect it as a matter of course upon each occasion of this nature. Mr. Austin has, once more—in the popular view—thrown himself open to opprobrium through the appearance of a poem on the relief of Mafeking. The verses, as originally telegraphed to the American press, were as follows:

Loud yelled the bullet's
ping,
Sharp flashed the sabre's
sting,
As on to Mafeking
Sped we with force
meet,
While the brave garrison,
Steady by trench and
gun,
Faltered not, no, not
one,
Living on horse-
meat!

ALFRED AUSTIN.

Oh! when they saw us come,
Drubbed well was every drum,
And shrill the life's tum-tum
Poured till the ear split!
Grimly the foe retired;
Nathless he frequent fired,
Till beaten, moody, mired,
His van and rear split!
As pressed the foe more near,
Only with naked spear,
Ne'er knowing what to fear,
Parley or blench meant;
Forward through shot and shell,
While still the foremost fell,
They with resolute yell,
Stormed his intrenchment.
Then when hope dawned at last,
And fled the foe aghast,
At the relieving blast,
Hard in the melly;
Oh! our stout, stubborn kith,
Kimberley, Ladysmith,
Mafeking wedded with
Lucknow and Delhi.

These four stanzas of the poem, which as a whole first appeared in the *London Times*, were cabled to the *New York Sun*. The character of these lines led some of *The Sun's* contemporaries to hazard the opinion that the verses were in reality a parody penned by one of that clever paper's "bright young men." The poem has at least afforded pleasure, even if of a melancholy nature, to the pro-Boer press, which finds comfort in the thought that Mr. Austin's ode is a fitting one for the occasion. The *Washington Post*, for instance, says:

"If Tennyson's splendid poem, 'The Charge of the Light Brigade,' was an adequate and faithful tribute to the magnificent valor of the English at Balaclava, Mr. Austin's degraded gibberish is, comparatively speaking, quite as worthy of its subject in this instance. If in poetry Tennyson is to Austin as an eagle to a mousing owl, so, in morality, is this war in South Africa to the charge of the six hundred at Balaclava as the foulest highway plunder to the most shining deed of chivalry. . . . But let no one say that Mr. Alfred Austin is not the proper laureate for

England at this time. History shows us that great emergencies have always evolved the man for the occasion. Alfred Austin, as England's laureate, while 300,000 British troops are engaged in exterminating 30,000 Boer fighting-men, represents, perhaps, the most suitable arrangement that could possibly have been made. Indeed, it may be said that his pathetic drooling helps to soften the outlines of the infamy."

Even the editor of *Harper's Weekly* prods Mr. Austin's Pegasus in the following fashion:

"The only deplorable result of the raising of the siege of Mafeking was the inspiration it has given the poet laureate of England to show how poor a hack is the Pegasus he rides. We imagine that Baden-Powell himself, when he reads Mr. Austin's lines about his achievement, will feel sorry that Mafeking has been relieved. There is, after all, something in life beside which death hath no terrors."

On the other hand, the English papers for the most part take the ode as a serious contribution to the literature of war, and *The Times* and other papers comment on its "stirring lines." Among the purely literary journals, *Literature* in particular comes to the defense of the laureate. It says:

"The man who scrambles to the top of the tree naturally attracts the arrows of criticism. To criticize our generals and our poet laureate has become a favorite pastime of the press. Mr. Austin's poem on 'Mafeking,' in *The Times*, certainly gives some opportunity for this pastime. The rime here and there is a little weak; the word 'with' occurs twice at the end of a line. 'Kith' used by itself, divorced from 'kin,' is archaic, and the spear in the hands of the Boer is an anachronism. One critic objects to the poet riming 'Cecil' with 'wrestle.' It is not a perfect rime, but in Drayton's 'Ballad of Agincourt,' upon which the laureate has modeled his meter and his rime, there is much the same sort of manipulation in order to bring in the proper names—'ran up' riming with 'Fanhope.' Two blacks do not make a white, but turn again to 'The Charge of the Light Brigade,' which is also similar in its meter to 'Mafeking.' There we have 'hundred' riming with 'blunder'd,' 'wonder'd,' and 'thunder'd.' . . . The fact is that as a rule the poets are much less particular about correct riming than their critics are. The English vocabulary is peculiarly poor in rimes, the average number to each word being about three as against more than double the number in French and Italian. In challenging comparison with Drayton the modern war poet is at a disadvantage, inasmuch as war is not nearly so picturesque a subject as it was in Drayton's or even in Tennyson's time. He can, of course, seek refuge in the dialect of the camp and treat his readers to the details of the barracks and the battle-field. But Mr. Austin is not one of those who offer cheap realism as a substitute for the picturesque. His latest poem—with all its faults—is true to the tradition of Tennyson and the older poets of stirring times, inasmuch as it founds itself on the models of classical literature."

Ruskin's Will.—It has been said Ruskin inherited greater wealth than any other notable writer in English literature. By the will of his father, Mr. John James Ruskin, of the firm of Ruskin, Telford & Domecq, importers of wine, Ruskin became possessed of an estate of £200,000. Yet when he died this spring, the gross value of Mr. Ruskin's estate was sworn to be £10,660 7s. 2d. The difference between these sums represents the extent to which Mr. Ruskin carried his love for his fellow man and his sincere attempt to put into practise some of his theories of social reform.

By his will of October 23, 1883, Ruskin, after appointing his executors, said:

"I leave all my estate of Brantwood aforesaid and all other real estate of which I may die possessed to Joseph Arthur Paliser Severn of Herne Hill, in the County of Surrey, and Joanna Ruskin Severn, his wife, and to the survivor of them and their heirs for their very own, earnestly praying them never to sell the estate of Brantwood or any part thereof, nor to let upon building lease any part thereof, but to maintain the said estate

and the buildings thereon in decent order and in good repair in like manner as I have done, and praying them further to accord during thirty consecutive days in every year such permission to strangers to see the house and pictures as I have done in my lifetime."

All his unpublished manuscripts, memoranda, diaries, and other papers not specifically disposed of in his will he left to Mrs. Joanna Ruskin Severn and Prof. Charles Elliot Norton, of Cambridge, Mass., to be dealt with as they should see fit. Valuable gifts of books, mineralogical cabinets, and drawings were bequeathed to the Bodleian Library at Oxford, to be kept apart and known as "the Ruskin Gift."

A WAGNERIAN MUSIC DRAMA BY A RUSSIAN.

IF Russian critics are to be believed, a new operatic masterpiece, constructed on Wagnerian lines, has just been added to the international repertoire. In music, the Russian composers have been credited with profound originality, the Wagner's influence has been felt and acknowledged. Now, however, one of the younger composers, C. Uferov, has applied all the essential principles of the German music drama in a work on the story of Antony and Cleopatra. Like the master, Uferov has written his own libretto in verse, and has endeavored to make the music thoroughly characteristic, dramatic, and expressive of the actions, scenes, and emotions portrayed. The music drama does not depart from the facts of history, the psychologic rather than formal truth is aimed at. It is in four acts and a prolog. An elaborate analysis in the *Novoye Vremya*, by M. Ivanov, a leading critic, gives the following details about the opera, already translated into French:

In the prolog, there is no dramatic action; but the music is rich, beautiful, and brilliant. Cleopatra, arrayed in splendor, is seen sailing up the Cydnus in a gorgeously decked galley to meet Antony. The people are gathered on the shores and express their admiration and joy in song. The sailors on the galley respond. Antony meets the Queen in the harbor, the moving scenery being so arranged as to illustrate her progress. Antony at once yields to her fascination.

The first act is laid in Alexandria. Antony and the Queen are at a banquet, and the former is urged to quit Egypt and return to Rome. But he can not tear himself away and yields to the entreaties of Cleopatra. In this act there is a fine hymn to Cleopatra and Oriental dance music, as well as an *ensemble*, which, tho somewhat "Italian" in character, is required by the dramatic exigencies of the music drama. The second act represents a "triumph" to Antony at Alexandria, and the music is naturally of a majestic character. Antony is informed that the Senate had declared war upon Egypt and deprived him of power. Victory for Antony is predicted by the priests, provided Cleopatra accompanies him. There is general enthusiasm and rejoicing.

In the third act Antony's fortune changes. Cleopatra is accused of treachery to him, and he is plunged into grief and despair. An interview with Cleopatra follows, then the summons to the engagement. The music in this act is highly poetical and significant. In the fifth act—in two scenes—the Egyptian army deserts Antony; he kills himself; but before dying he is carried into Cleopatra's presence and a scene of reconciliation ensues. Suffering, love, and death exalt the crimes of the hero and heroine, and the music glorifies them. There is a most impressive funeral march in this act.

As in Wagner's music dramas, Uferov has resorted in this tragedy to "leading themes," descriptive of the characters, emotions, and situations. There is not so much repetition of the themes as in Wagner. Each is modified, developed, and transfigured in accordance with the mood of the moment. The development is "logico-melodious." The melody itself furnishes its own contrast. The result is a remarkably organic and vital relation between the action and the music. Like Wagner, again, Uferov does not try to round out his numbers and to provide set

melodies. The critic says that the music has grandeur, grace, freshness, and beauty, and that the orchestration is rich, sonorous, and imposing. Grand opera, he continues, has been enriched with a work which reveals both poetic and musical gifts, and he hopes that the universal interest in the subject, which is a common heritage, coupled with the solid merits of the tragedy, will insure it a speedy hearing in the musical centers of the world.—*Translation made for THE LITERARY DIGEST.*

TENNYSON AS A LITERARY ARTIST.

PERFECTION of expression has often been regarded as the most striking characteristic of Tennyson's verse. The method by which the late poet laureate arrived step by step at his mastery of poetic form is made clear in Mr. Churton Collins's critical edition of the "Early Poems" of Tennyson, just published. *The Westminster Gazette* (May 21) gives the following illustrations of the way in which Tennyson, as described by Mr. Collins, touched up his lines and substituted excellence for mediocrity:

"The alteration in the couplet in the 'Dream of Fair Women'—

One drew a sharp knife through my tender throat,
Slowly,—and nothing more,

into

The bright death quiver'd at the victim's throat;
Touched; and I knew no more.

is described as magical, while the slight change in the verses.

'To J. S.,'

A tear dropped on my tablet as I wrote,

into

A tear dropped on the letters as I wrote,

corrects what Mr. Collins describes as 'one of the falsest notes ever struck by a poet.' Again, in 'Locksley Hall' a 'splendidly graphic touch of description is gained by the alteration of 'droops the trailer from the crag' into 'sings the trailer.'

"Tennyson took great care with his phraseology, and there is a striking instance of this in 'The May Queen.' In the 1842 edition 'Robin' was the name of the May Queen's lover. In 1843 it was altered to 'Robert,' and in 1845 and subsequent editions back to 'Robin.' There is an alteration in 'Cenone,' Mr. Collins points out, which is very interesting:

'Till 1854 this was allowed to stand:

The lizard, with his shadows on the stone,
Rests like a shadow, and the cicala sleeps.

No one could have known better than Tennyson that the cicala is loudest in the torrid calm of the noonday. . . . At last he altered it, but at the heavy price of a cumbrous pleonasm, into "and the winds are dead."

Tennyson also, we are told, allowed many years to elapse before he corrected another error in natural history. In 'The Poet's Song,' in the line

The swallow stopped as he hunted the bee,

the 'fly,' which 'the swallow does hunt, was substituted for what it does not hunt for very obvious reasons.'

"Some curious examples of Tennyson's putting common things in an uncommon way, which led him into 'intolerable affectation,' are likewise given by Mr. Collins:

"Thus we have 'the knightly growth that fringed his lips' for a mustache, 'azure pillars of the hearth' for ascending smoke, 'ambrosial orbs' for apples, 'frayed magnificence' for a shabby dress, 'the secular abyss to come' for future ages, 'the sinless years that breathed beneath the Syrian blue' for the life of Christ, 'up went the hush'd amaze of hand and eye' for a gesture of surprise, and the like. One of the worst instances is in 'In Memoriam,' where what is appropriate to the simple sentiment finds, as it should do, corresponding simplicity of expression in the first couplet, to collapse into the falsetto of strained artificiality in the second:

To rest beneath the clover sod
That takes the sunshine and the rains,
Or where the kneeling hamlet drains
The chalice of the grapes of God.

These peculiarities, Mr. Collins reminds us, are less common in the earlier poems than in the later; 'it was a vicious habit which grew on him.'

or bad pen, his rapid or tardy flow of thought. His writing instantly reflected his mental attitude and pictured his sensitive organization. His handwriting, like that of the majority of men, was at its best between the twenty-fifth and fortieth years of life. In some instances, his penmanship was remarkably beautiful, but as time went on it deteriorated, and altho to the last it retained its elementary characteristics, it became more and more difficult to read. The manuscript of 'Dr. Grimshawe's Secret' is, for the most part, as Julian Hawthorne avers, 'hardly to be deciphered save by flashes of inspiration,' while other manuscripts less rapidly written are easily made out. 'The Blithedale Romance' is an example of his best workmanship, and bears on its pages few of the corrections which mar the appearance, while adding to the interest, of many of his manuscripts. . . .

"The handwriting of Whittier was as beautiful as his own moral influence. Without further early educational advantages than those offered by the 'district' school, his methods of production were the most painstaking and scholarly, and even in his latest years his writing was a pleasure to the eye and an example to all careless and indifferent laymen.

"Lowell, the master of an exquisite and finished style, was also master of an elegant and graceful handwriting. Systematic, particular, and critical in all his methods, the charm of his work found fitting expression in his delightful workmanship.

"Bryant wrote a clear, concise, and rather business-like hand, as may be seen by the example shown.

"The handwriting of Holmes was eminently fair, uniform, and legible, and almost to the last retained its firm, clear, and pictorial quality. His manuscript was neatly and carefully prepared, and bore traces of only an occasional correction."

Of two great British novelists of a past generation Miss Ticknor writes:

"Dickens's crabbed writing must, especially in later years, have proved very hard reading for the compositors. His signature, as may be seen in the example of his writing, is particularly indistinguishable, and might be translated into almost anything by one who did not know that it stood for Charles Dickens; indeed, an edition of his works, which was issued with a facsimile of his autograph upon the cover, was dubbed by the book trade the 'Snarleyow' edition, on account of suggestive resemblance presented by the great author's signature. . . . He expended much time and energy upon the preparation of his manuscripts, writing and rewriting a thought many times before its expression satisfied him. Friends who were with him during this process of construction were surprised at the apparent smallness of copy which each day's setting seemed to have produced. Those familiar with the original manuscripts of his works, many of which he had bound and kept at his home at Gad's Hill, describe them as full of interlineations and alterations. In his description of 'Dickens-Land,' Mr. Whipple remarks that 'some put blood in their ink, some water,' and he might have added that the author in question made use of 'indigo,' as a marked peculiarity of Dickens was his invariable use of blue ink. He would write with no other kind, and wherever he went his bottle of bright blue fluid accompanied him. Even the briefest note transcribed during his stay in America was indited in his favorite blue ink, which he had brought with him across the Atlantic, having no confidence in the ability of American ink-makers. . . .

"Penmanship was with Thackeray one of the fine arts, and he was wont to affirm that if all trades failed he would earn sixpences by writing the Lord's Prayer and the Creed in a space the size of that coin. He greatly delighted in fashioning exquisitely penned little notes, which were embellished with the characteristic pen-drawings which he could so cleverly produce. He also enjoyed puzzling a correspondent by writing in so small a hand that the letter could not be read without the aid of a magnifying-glass. The use of a pen was to Thackeray such an absolute pleasure that he would wholly disregard some vital business or important engagement in order to produce a few artistically traced lines in just the manner he desired, or to complete a fanciful pen-and-ink sketch which happened to express some passing thought."

And of George Eliot she says:

"Her correspondence was attended to wholly by her husband, Mr. Lewes, who also transacted all business with her editors and publishers. Even her most personal letters were almost invari-

ably written by him, so that letters and notes in George Eliot's own chirography are exceedingly rare. The extract given is from a note to an intimate friend, and exhibits her clear, fine hand to good advantage."

VERGA, AND THE BIRTH OF THE ITALIAN NOVEL.

THE novel, which has become the most distinctive form of literary expression in the present age, just as the drama was the distinctive literary *genre* in the Elizabethan days, has for the most part developed a well-marked national type in each of the leading countries of the world. We have, for instance, the French novel, the English, the Russian, the Scandinavian; and the past year has seen a surprising birth of the American spirit in fiction. The Italian novel, however, like the Spanish, has long been under certain disadvantages of environment. Owing to the vast political, artistic, and literary predominance of France in Southern Europe, where it has so long held the hegemony of the Latin races, the Italian and the Spanish novelists have been overshadowed and have largely turned to Gallic writers for models. The greatest of Italian novels, Manzoni's "I Promessi Sposi," has no national tradition, and even Ariosto's marvelous poem-novel, "Orlando Furioso" is founded on the knightly legends of France and England. But with the birth of Italian unity and with political and religious freedom, a fermentation began which has resulted in the development of a national type, as represented in such well-known writers as Verga, D'Annunzio, Matilde Serao, D'Annunzio, Capuana, and Fogazzaro.

A writer in *La España Moderna* (Madrid), whose article is translated in *The Living Age* (May 26), calls attention to the fact that even this new school of Italian fiction is a distinct offshoot of the naturalistic school of Zola. He says:

"It is true that naturalism is out of fashion to-day, but Zola's work still produces its effects. The Italian writers, helped by their own good sense and by their own good taste, kept themselves free from overexaggeration, contenting themselves with adopting the standard of naturalistic simplicity that has made the representation of life, in all its various forms, and the environment of the individual, as well as of groups of humanity, more accurate and realistic. Before Verga reformed the Italian novel after the model of French naturalism, the most audacious writers exaggerated, in the spirit and in the letter, the latest tendencies as well as the social and sentimental antitheses of romanticism. Dumas *fils* was a great leader of Italian minds until Zola's art unfurled its victorious banner. Even Verga, in his first novel, showed himself to be a docile, passionate imitator, of the romantic-aristocratic art of the author of 'La Dame aux Camélias.' But, influenced by the new formulas, he became converted at once into a strong and rigid naturalist. . . . In truth, there is no novel more impersonal than 'Malavoglia.' The author has effaced himself completely from the book, and there remain in action only the characters who see with the eyes, think with the brain, and speak the rude language of fishermen. 'Malavoglia' is more than a *tour de force*, it is a true revelation. . . .

"With 'Mastro-don Gesualdo' the Italian novel enters with flying colors into the grand kingdoms of human truth. There is not in any work of Zola a more vast or profound observation than that contained in this novel and in 'Malavoglia.' The first steps having been taken, it was easy to advance along the open road. Both behind Verga and at his side there has surged a throng of creators of 'the Italian novel' which is worthy of occupying a most honorable and well-earned position in the literary history of the world."

It is announced that James Lane Allen has written a new story which is entitled "The Reign of Law, a Tale of the Kentucky Hemp-Fields." *The Book-Eater* (June) says that "the hero is a representative of the lowest stratum of Southern society, and the heroine sprang from the highest. The story is of the mingling of their lives and fortunes—a general idea which formed the mainspring of Miss Glasgow's recent novel, 'The Voice of the People,' and of Mr. Robertson's 'Red Blood and Blue.'"

SCIENCE AND INVENTION.

SOME OPTICAL ILLUSIONS IN THE EXPOSITION.

A PROMINENT citizen of New York City, recently returned from the Paris Exposition, condemns it roundly in a published interview as being at present chiefly a collection of "Bowery lake shows." In this somewhat sweeping phrase he doubtless includes those features that are to the casual visitor the most interesting in the Exhibition, as well as some that command the admiration of the scientist for their ingenuity. Among these latter are a number of panoramas that give the illusion of motion

FIG. 1.—STEREORAMA VOYAGE FROM BONE TO ORAN. THE SPECTATOR IS REALLY AT REST WHILE THE SCENERY MOVES.

so perfectly that they are said to be absolutely realistic. These are described in *La Nature* (Paris) by M. G. Mareschal, part of whose article we translate below. Says this writer:

"Panoramas are numerous at the Exposition; they are everywhere to be met with; but all have not the same importance, and some are dioramas that exhibit the products of a particular country, like that of Serajevo, which fits in so charmingly at the end of the Bosnia-Herzegovina pavilion. At the Alpine Club we find a demi-panorama, showing the mass of Mont Blanc seen from the Mer de Glace, and several small dioramas of the Vosges, the Dauphiny Alps, the Pyrenees, etc. . . .

"The Marchand expedition is not all shown in one entire diorama; we find in the corridors interesting scenes of detail. Among complete panoramas we may mention those of Scheidegg: the Swiss Village; that of Madagascar, in the midst of the exhibition of this colony; and that of the Tour of the World, whose interest does not correspond with the importance of the building that shelters it. . . .

"In general, in nearly all the installations of this kind of spectacle, one feels that the space is limited, and the scenery at the background, being too near the spectator, does not give a complete illusion of reality.

"We have mentioned so far only the pictures—those that go no further than the ordinary panoramas with which we have so long been familiar; in others the exhibitions have ventured to extend the illusion and give the impression of movement. For this purpose they have had recourse to an optical illusion well known to travelers who, being in a train at a standstill, are persuaded that they have started, when they see an adjoining train move in the opposite direction.

"That the effect may be produced, it is sufficient that the eye should not be able to make any comparison with the ground or with objects at a distance; the visual ray should be limited to the objects in motion. This principle has been applied in different ways: in the stereorama the spectators are supposed to be travelers in the cabin of a boat; in the Trans-Siberian they are in the cars of a railroad train; the cineorama supposes them to be in the basket of a balloon; and in the mareorama they are on the bridge of a transatlantic steamer, which has all the motions of rolling and pitching. In all of them it is really the scenery that moves."

In the stereorama or "Sea Poem," by Messrs. Fraucovich and Gadau, we are told, the spectator is placed, as shown in Fig. 1, in a sort of dark semicircular chamber; his view is limited by a series of windows in a thick wall. Looking through one of these, the spectators see passing the whole of the Algerian coast from Bone to Oran. The variations in weather, the state of the sea, and the scenic features of the coast are all rendered with great fidelity. To quote again:

"The background is all painted on a cylindrical surface, as with panoramas generally. This rests on a circular platform of a diameter much greater than its own, so that there is a wide border all around it. The whole arrangement may be represented roughly by a high hat. It is furnished with wheels which run on a circular rail, and is moved slowly by an electric motor. . . . On the wide border already mentioned have been arranged concentrically forty vertical steel bands (see Fig. 2) supported by iron rods and rising slightly one above the other. On these bands are painted waves, and to them are fixed models of ships. To reproduce the smoke of the steamers a very ingenious artifice has been employed, consisting of sheets of very thin glass properly painted and placed one behind the other.

"This arrangement of the part of the panorama nearest to the public is wonderfully successful. It harmonizes as well as possible with the background and gives a remarkable effect of relief, so that the whole effect is startling in its truth.

"The Trans-Siberian Panorama put up by the International Sleeping-Car Company . . . is presented in a peculiarly interesting fashion. The spectator finds himself in a real car belonging to the company; there are but three of these, but they are 20 meters [65 feet] long, and contain salons, dining compartments, smoking-rooms, bars, sleeping compartments, etc. . . .

"To give the visitor the impression of a real journey, all that is of interest in the trip from Moscow to Peking is caused to pass before him—9,574 kilometers, which can be traversed in five days when the road is completed; at present it reaches only to Lake Baikal. . . .

"From a railroad train all points of the landscape do not appear to move past with the same speed. The roadbed, which is nearest, flies past very swiftly; next, the bushes and shrubs that border it move a little less rapidly; the more distant houses, trees, etc., are still slower, and finally the distant objects pass very slowly indeed. This effect has been aimed at in the panorama: in a great ditch that extends the full length of the build-

FIG. 2.—THE STEREORAMA, SHOWING METHOD OF PRODUCING THE ILLUSION.

ing has been arranged machinery that moves four sections of the landscape at different speeds."

These different sections are shown by illustrations. The section representing the roadbed is a horizontal strip of cloth, on which has been glued sand and pebbles and which moves at the rate of 1,000 feet a minute. The section representing bushes by the side of the track moves about 400 feet a minute, the one representing the middle distance 150 feet and the furthest only about 20 feet a minute. The scenery represents the chief cities along the route, including Moscow, Omsk, and Irkutsk, as well as the shores of

the Baikal, the great Chinese Wall, and finally Peking. The whole journey takes 45 minutes; but two trips are never exactly alike, for the speeds of the different scenic sections being different, the combinations of the four are never precisely the same, and an indefinite variety of landscape thus results.—*Translation made for THE LITERARY DIGEST.*

CURES FOR OLD AGE.

THE point of view from which old age is regarded as a disease and remedies or palliatives are sought for it, is characteristic of recent science. No miraculous fountain of youth is now sought for; but an attempt is being made to identify the bodily alterations that constitute physical old age and to ascertain whether they may not be affected by medical treatment. Metschnikoff's old age serum, so widely exploited in the sensational press, was an example of one of these attempts. The Russian physiologist believes that in old age what he calls the "nobler" cells of the organism are devoured by coarser cells, and that we can retard this process by the injection of serum from more youthful organisms. M. S. Marinesco, a more recent investigator still, disagrees on some vital points with the Russian scientist. He regards the aging of the cell as a normal result of its growth—a failure of equilibrium between its elements. The weakened cell may be devoured by antagonistic cells, but these are not the "macrophages" or coarse white cells of the blood, as maintained by Metschnikoff. M. Marinesco's original paper was read before the Paris Academy of Sciences, and an abstract, from the author's own pen, appears in *Cosmos* (May 12). He says:

"According to Metschnikoff, senile atrophy is the result of inner phenomena of the cells, of a strife between the elements of the tissues, a strife in which conjunctive tissue comes off the victor and in which the larger cells [macrophages] compass the destruction of the nobler elements, which are incapable of self-defense. The means of arresting this senile degeneracy would be the destruction of the macrophages by an appropriate serum."

This suggestive belief of the Russian scientist determined M. Marinesco, so he writes, to take up the study of the death of the nerve-cell. With this intent he has examined cells from the spinal cords and brains of individuals from sixty to one hundred and ten years old, and is now convinced that the modifications that constitute old age in the nerve-cell consist not only of diminution of the cell-body, but also of more interesting changes in its interior, of which some are visible under the microscope. He goes on to say:

"It is well known that in its normal state the nerve-cell contains in its interior geometric elements strongly colored by certain pigments. In the aged person, especially when dying at a very advanced age, these elements are reduced in volume and number; sometimes they change into granulations, and this final alteration, which I have named 'senile chromatolysis' * has its chief seat around the cell-nucleus. Besides, the [cell] contains a quantity of a pigmentary substance which is a product of disorganization of the cell itself.

"As the person grows older, this substance increases, and thus reduces the nutritive and respiratory capacity of the nerve-cell. The number of prolongations of the cell is considerably less than in the normal state, and their ramifications have disappeared. Finally, the volume of the cell diminishes in variable degree, amounting sometimes to actual atrophy. In a great number of preparations . . . I have never found macrophages destroying the nerve-cell; senile atrophy is therefore not due to the invasion of the nerve-cell by phagocytes. This is not the case, however, in certain diseased states; I have maintained since 1896 that when the vitality of the cell is suddenly lowered, it is being devoured by other cells to which I have given the name of 'neuronophages.'"

There is, therefore, according to this author, a strife between cells in old age, but only in diseased old age, and the combatants

are not the same as asserted by Metschnikoff. M. Marinesco holds that there is a special nerve-destroying tissue which is present in the body from the embryonic period, but which is retarded and antagonized in health by the action of the nerve-tissue. He believes that the nerve-cell secretes a peculiar substance that prevents the excessive development of its antagonist and thus preserves "nutritive equilibrium" in the central nervous system. Many of the facts of disease confirm him, he says, in this opinion. He goes on to say:

"We may say in general that when the achromatic substance of the nerve-cell loses its vitality, the nerve-destroying cells wake from their slumbers, multiply, and attack the nerve-cell. . . ."

"The age and death of the nerve-cell are inseparable from its life and functions. Like the organism of which it is a part, the cell appears, grows, declines, and dies. The reason for this growing old must not be sought in a strife between the elements of the nerve-centers, but rather in a lack of chemical synthesis in the cell itself. The normal edifice of the cell is maintained by equilibrium between the synthesis of growth and functional destruction. When this equilibrium is broken, . . . the disorganization of the cell follows. . . . To prevent these manifestations of old age we must stimulate the chemical synthesis of the nerve-cell by a dynamogenic substance. Among such substances the serum of young animals, . . . as proposed by Metschnikoff, may stimulate the enfeebled energy of the noble elements and retard in a certain degree the oncoming of old age."—*Translation made for THE LITERARY DIGEST.*

VEGETATION AND GOLD DEPOSITS.

IT is contended by some authorities that vegetation in the neighborhood of gold deposits may dissolve the precious metal to such a degree that the deposit may become impoverished. Dr. E. E. Lungewitz upholds this theory in *The Engineering and Mining Journal* (April 28), and also states his belief that vegetation in past ages has played an important part in the deposition of "placer" gold. He notes that chemists have long suspected that gold might slowly dissolve in surface water, but that no analysis had been able to demonstrate this, owing simply to the fact, as the author believes, that the solution is almost infinitely weak. Dr. Lungewitz argued that if the surface water contained dissolved gold, it would naturally be drawn up by the roots of trees. He says:

"We assume that if gold is dissolved by surface waters it ought to be found in trees which are growing in the neighborhood of lodes or on placers. In a similar way we knew sea-water to contain iodine before it ever was detected in it, because this element was found concentrated in certain sea plants from which it was extracted on a large scale. In my investigation trees were felled and cut into pieces of convenient size. After this the bark was removed with about one inch of the outside wood. These pieces were placed upon a clean sheet of corrugated iron and fired. The ashes, which yet contained grains of charcoal, were collected and assayed. . . ."

"In the first sample of wood ash I obtained, gold was undoubtedly present, but its quantity was so small that an estimation of its amount was out of the question. The reason was, as I found out later, that my workmen had taken it easy and had felled one of those rather rare soft-wood trees. The next ones felled belonged to the so-called ironwoods, the ashes of which gave returns varying from \$0.10 to \$0.40 gold per ton. . . ."

"So far only the parts of the trunk near the roots had been used for these experiments. To see in which part of the tree the maximum of gold was to be found, the same experiments were carried out with larger part of the branches, and here I obtained the most interesting results. These parts were richer in gold than all others previously tested. The increase was not everywhere the same, but the highest result I obtained was \$1.17 per ton of ash. The percentage of ash in the wood of tropical trees has never been determined."

Dr. Lungewitz regards it as proved that gold is dissolved by

*Greek *chroma*, color, and *lysis*, a dissolving.

the surface waters traversing a gold formation. The solution must be so weak that nothing but the osmotic action of millions of cell-membranes is able to concentrate it sufficiently to precipitate the gold, and the gold in this solution must be in such a combination as to withstand the reducing action that untold numbers of cell-membranes and cell-contents must exert. What is the substance in the water that is able to dissolve the gold in this way? Dr. Lungewitz leaves its identification to future investigators, but he states chemical facts that lead him to the conclusion that vegetation must be held responsible for it. That this action continued through long years may have a disastrous effect on some gold deposits, and that it must have built up others by transferring gold in a state of solution, he regards as certain.

CROSS-EDUCATION.

THIS term is applied by Prof. E. W. Scripture of Yale to the curious results that appear in certain cases where practise or exercise with a limb or organ develops not only that particular limb or organ, but also the corresponding one on the opposite side. In an article on the subject in *Uplinton's Popular Science Monthly*, Professor Scripture asserts his belief that the discovery may have important bearing on educational methods. He says that his attention was first called to the phenomenon during experiments on the strength of the hand as measured by compression of a rubber bulb. It was found that after practising the right hand alone nine days, with a gain of about 70 per cent. in strength, the left hand, which had not been practised at all in the mean time, gained about 30 per cent. The same result appeared in other experiments, and was found to have been noticed by other investigators. Thus, Prof. Oscar Reif, who holds the chair of music in the Berlin Hochschule, writes to Professor Scripture as follows:

"In the spring of 1893 I made an experiment with twenty of my pupils. I began by taking the average speed of each hand with the metronome. The average of the right hand was 116 (= four times 116 in the minute) [464 beats], and for the left hand 112 [448 beats]. I gave them exercises for the right hand only (finger exercises, scales, and broken accords), to develop rapidity. After one week the average of the right hand was 120 [480]; after two weeks, 126 [504]; three weeks, 132 [528], etc. After two months the right hand yielded 176 [604]. Then I had them try the left hand, which averaged 152 [608], whereas in November the average was only 112 [448]. In two months' time, absolutely without practise, the left hand had risen from 112 [448] to 152 [608]. A few of my pupils had some difficulty in playing the scales in parallel motion, but were able to play them in contrary motion.

"The tenor of my work is that in piano-playing the chief requirement is *not* that each single finger should move rapidly, but that each movement should come at exactly the right time, and we do not work only to get limber fingers, but, more than that, to get perfect control over each finger. The source of what in Germany is called *Fingerfertigkeit* is the center of our nervous system—the brain."

These facts, says Professor Scripture, require further investigation; if practise of one hand educates the other hand, will it not also educate the foot? Again, if practise of one hand develops strength in other members of the body, may it not also develop their dexterity? If development of will power in one direction effects a development in another direction, why may not this be extended to the higher forms that go to make up character? To quote further:

"The outlook begins to be stirring on account of its vastness. If the last principle be admitted, there seems no argument against the claim that some forms of manual training, such as lathe work and forge work, are just the things to develop moral character. By the same reasoning we would be obliged to admit the often-made argument that training in Latin, Greek, and mathematics furnishes a means of general mental development. If we admit

the principle, we find ourselves at once involved in important educational controversies. However we may think in respect to these questions, it is plain that it is worth while to climb a ladder which has such an outlook at the top. Let us begin.

"In the first place, the fact of cross-education is established. Let us ask in what this education consists. On this point some curious observations have been made by Prof. W. W. Davis, now of Iowa College. The subject of the experiment began by raising a five-pound dumb-bell by flexing the arm at the elbow; this called into play chiefly the biceps muscle for lifting and the forearm muscles for grasping. This was done as many times as possible with the right arm, and then, after a rest, with the left arm. The subject then entered upon a practise extending from two to four weeks; this consisted in lifting the weight with the right arm only. At the end both arms were tested as at the start.

"The results were strange enough. . . . All subjects had gained power in the unpractised left arm, three of them largely and three slightly. All but one had gained in the size of the unpractised left biceps. Strangely enough, those who had gained most in power had gained least in size. The case was quite similar in regard to the girth of the forearm. The gains in power were unquestionably mostly central—that is, in the nerve-centers—and not in the muscles. Yet there was also a strange but unquestionable gain in the size of the muscles at the same time.

"We have arrived at the second step of the ladder, which is: The gain by practise which shows itself in cross-education consists in a development of higher nerve-centers connected with the two sides of the body. We must next ask: Is this effect of practise confined to the symmetrical organ, or does it extend to other organs? This question was answered by a peculiar experiment."

This experiment consisted in educating the feet to tap on a telegraph key, and its results, Professor Scripture tells us, show that the effects of such practise are unquestionably transferred to all parts of the body. He believes that sooner or later we shall be able to show that development of those forms of the will involved in simple muscular activities does also develop the more complicated forms that express themselves in mental acts. To quote again:

"It has long been claimed that sports, games, and manual occupations are among the best developers of character. Football develops solidarity of feeling and action; running rapids or cross-country hunting develop coolness in danger and promptness and firmness of judgment; wood-turning requires boldness and foresight; forge work requires regulation and reserve of power, and so on. This is no place for an account of the psychology of sports and occupations, but if the reader has ever tried any of these things and failed he will easily recognize the lacking mental quality.

"Yet there has never been but one attempt, as far as I can learn, to organize a system of manual occupations on the basis of this principle. The success of the attempt furnishes, I believe, the still-lacking laboratory proof of the principle itself. I refer to the remarkable experiment of Mr. Z. R. Brockway, superintendent of the Elmira Reformatory.

"Most of the young felons sent to the Elmira Reformatory are set to learning trades, by which they can support themselves on leaving. Those, however, who are too stupid to even learn the simplest trade are put into a manual-training school, in the hope that their brains can be sufficiently developed to enable them to keep out of the prison or the asylum. Those who are so stupid that they have difficulty in learning the alphabet or in counting their fingers are put into a kindergarten, where they practise on letter blocks and sticks and straws."

The results at Elmira plainly indicate, Professor Scripture asserts, that manual training may develop the mind. This, he says, is only one instance of the utility of cross-education, which he believes will come to be recognized as a powerful factor in all kinds of training. He concludes:

"When manual-training schools organize their courses on the principle of adapting the exercise to the ability to be developed, we shall have abundance of similar proof. When these facts have been incontestably established, there will be a means of satisfying the complaints of those who are constantly attacking

our schools because they develop intellect and ruin character. 'What is the use,' say they, 'of teaching children to read and think if you do not make them honest and truthful? How is it better for the community to educate liars and thieves merely that they may lie and steal successfully in business and politics, where they can not be caught, rather than to leave them in the slums, where the police can get them?' The accusation is bitterly unjust in many ways, but its force can be met by introducing a system of character-building based on a careful study of the means of developing truthfulness, honesty, carefulness, persistence, bravery, courage under defeat, and the other qualities that go to make up a true man. The foundation of this system is to be found, I believe, in the *principle of character-building by motor activity*.

"The ladder of cross-education will be slowly climbed by psychological investigators; if they find at the top a principle of such value and wide application, surely the climb will have been worth the time and trouble."

WOMEN'S AND MEN'S BRAINS.

THAT man's brain is proportionately larger than woman's is shown, according to an article in *The Nineteenth Century*, by a study of the most accurate measurements. The author of this article, Alexander Sutherland, is a believer in the equality of the sexes, and had formerly asserted that man's brain is no larger in proportion to his body than woman's in proportion to hers. The prevalent contrary notion, he believed, was a fallacy that could be disproved by statistics. The result of his investigations, however, has been to convince him that the generally received idea is correct. Mr. Sutherland made comparisons, as far as possible, between men and women of the same height and weight. In 102 men and 113 women between 64 and 66 inches tall the brains of the men averaged 46.9 ounces, those of the women only 41.9 ounces, a difference of 12 per cent. in the men's favor. When 21 small men were compared with 135 women of equal height the difference was 6 per cent.; in still another case it was 9 per cent. in the men's favor. The same difference appears when men and women of the same weight are compared. Says Mr. Sutherland:

"There are 91 men and 116 women whose bodies were between 30 and 39 kilograms. The brains of the men weighed 1,348 grams and those of the women 1,206, which gives the men an excess of 11 per cent. There were 206 men and 123 women whose body weights lay between 40 and 49 kilograms. The brains of the men averaged 1,362 grams, those of the women only 1,215. Here the men have the advantage by 12 per cent. Between 50 and 59 kilograms there were 148 men and 50 women. The men's brains averaged 1,370 grams, the women's only 1,245. The excess is 10 per cent. in favor of the men."

Of course this does not touch the question of quality, and Mr. Sutherland assures us that science can not yet answer this question. Says *The Times-Herald* (Chicago) in discussing Mr. Sutherland's article editorially:

"So far as investigations have gone there seems to be no essential difference in the way the brains are made or in the materials that are used. Under these circumstances then, would size of itself indicate an advantage? Possibly, because the brains of intellectually great men are larger than the average. An examination extended to eighty-five world-famous characters showed a difference of 9.3 per cent."

Mr. Sutherland, however, does not allow his results to drive him from his conviction that the sexes are intellectually equal. He says:

"If it be true that the female brain is less by 10 per cent. in its proportion than the male brain, and if it could in consequence be demonstrated that the average woman has 10 per cent. less of intellectual capacity than the average man, it still has to be remembered that even then 90 per cent. of the women are the equals of 90 per cent. of the men. On a little consideration this will seem to imply that the average man has to recognize about 40 per cent. of the women as being his superiors in intellect."

ELECTRICAL HORTICULTURE.

THE results obtained by culture under the influence of electric light were described to the readers of *THE LITERARY DIGEST* several years ago. The method has made such advances that the growing of lettuce for salads, in spacious greenhouses with the aid of electric light, is already carried on as a profitable industrial pursuit near Chicago and elsewhere in this country. The use of electric currents for stimulating vegetation, which was discussed in these columns about the same time, still remains unsettled. A communication on this subject, made by a Russian engineer, V. A. Tyurin, before the St. Petersburg Electro-Technical Society, contains some information on the work done in Russia by Spieshneff and Kravkoff. We quote an account from *Nature*, which says:

"The former experimented a few years ago on three different lines. Repeating well-known experiments on electrified seeds, he ascertained once more that such seeds germinated more rapidly, and gave better fruit and better crops (from two and a half to six times higher) than seeds that had not been submitted to preliminary electrification. Repeating next the experiments of Ross—that is, burying in the soil one copper and one zinc plate, placed vertically and connected by a wire, he found that potatoes and roots grown in the electrified space gave crops three times heavier than those which were grown close by on a test plot: the carrots attained a quite unusual size, of from ten to twelve inches in diameter. Spieshneff's third series of experiments was more original. He planted on his experimental plot, about ten yards apart, wooden posts provided at their tops with metallic aigrettes connected together by wires, so as to cultivate his plants under a sort of network of wires. He obtained some striking results, one of which was that the growth and the ripening of barley were accelerated by twelve days. Quite recently M. Kravkoff undertook a series of laboratory experiments upon boxes of soil submitted to electric currents. The temperature of the soil was raised by these currents; its moisture decreased first, but began to increase after a course of three weeks (the same increase of moisture was also noticed by Fichtner); and finally, the amount of vegetable matter in the soil was increased by the electric currents. With what is now known upon the influence of micro-organisms upon vegetation, further research on similar lines is most desirable and very promising."

SCIENCE BREVITIES.

THE annual meeting of the National Academy of Science at Washington, D. C., was recently brought to a close with the announcement of the award of the Barnard medal to Wilhelm Conrad Roentgen, the discoverer of the x-rays. The medal is presented only once in five years, and is given to the person making the most important scientific discovery during that period. The award was unanimously approved by the members.

"THE testimony of witnesses to drownings on various occasions needs to be collected before it can be stated as the usual fact that there is a rising to the surface three times," says H. Retabew in *Popular Science News*, June. "The human body in life, or with the lungs inflated, naturally floats, as every one knows who has learned to swim, or even to keep his mouth above the surface of the water; and one to whom this discovery has come can float face up without moving hand or foot. But how soon a frightened victim of accident can gulp enough water to drive the air out of his lungs is another question. Undoubtedly, it has become a tradition everywhere that the drowning rise three times, and every reporter of an incident or every story-teller thinks he must give spice to his tale by talking of 'rising the third and last time,' at which crisis the rescuer is always supposed to seize and save the victim."

YELLOW VISION AFTER SNAKE-BITE.—Richard Hilbert mentions the various conditions attended with the phenomenon of colored vision in *Memorabilia*, April 1. So far as he is aware, his is the first report of seeing yellow after snake-bite. The following abstract of his narrative is given in *The Medical Record*: "A young girl, walking barefoot in the fields, fell with a piercing cry that she was bitten on the toe by a snake. The snake was seen by others. An hour later, when brought to the office, blood could be squeezed from the wound near the nail. The next day there were stiffness and pain, besides the symptom that all light-colored objects appeared bright yellow. A bluish discoloration of the skin, extending over the abdomen, required fourteen days to disappear. It was seven and a half weeks before the child was well again. It would be interesting to learn whether in tropical countries, where snake-bite is more frequent, yellow vision is a common symptom."

THE RELIGIOUS WORLD.

HAS HELL BEEN OBLITERATED?

DANTE and Milton, to whom hell was a more absorbing subject of thought than the earth itself, would doubtless be astonished at the spectacle of a modern doctor of divinity writing a long article in a leading review to question the very whereabouts of this region. There has been a remarkable change of late years with regard to future punishment, writes the Rev. Dr. George Wolfe Shinn (in *The North American Review*, June). Formerly sermons and religious books were full of references to hell, and terrible appeals were made to flee from the wrath to come. Jonathan Edwards, like many other Puritan divines of preceding centuries, so vividly portrayed the terrors of the place of darkness and despair that strong men sometimes screamed out during his sermons. The writings of the early fathers also are full of allusions to hell. Now, however, remarks Dr. Shinn, we hear little or nothing of it in Protestant circles except in the sermons of a few clergy of the old school. "The belief in hell as a place or condition of punishment has been the belief of Christian people from the beginning of Christianity to our own day. Now, almost suddenly, certainly with remarkable unanimity, men have wellnigh ceased to talk about it."

This very notable change in theology Dr. Shinn attributes, in part, to the great liberalizing influence which Beecher exerted over many preachers and laymen. The movement, however, began much earlier, in the Universalist body, which came into existence here in 1770, as a counterblast to the old "blue" Calvinism, with its glowing descriptions of the nether world. A still more widespread influence is attributed to Dean Farrar's well-known book entitled "Eternal Hope." It found at once a sympathetic audience prepared to receive it; and all replies, such as Dr. Pusey's "What Is of Faith?" were in vain. "Evidently," says Dr. Shinn, "many in the religious world wanted to get rid of hell." In place of it, indeed, came a very curious compromise, "second probation." Still another most ingenious effort to find a substitute for the plain hell of Christian theology is the recent doctrine of "conditional immortality," which teaches that "men who do not possess the sanctifying, renewing, immortal Spirit must perish, either at death or some time after death." Immortality is, in this view, a special gift to all souls who are united with Christ by faith. Adherents of this doctrine boldly claim that the Christian writings nowhere speak of immortality apart from Christ.

These varying views and theories, thinks Dr. Shinn, indicate that Christian eschatology at the close of the nineteenth century is in a most unsettled condition. Only uncertain sounds proceed from the pulpit. Hell has lost its terrors. Has hell passed away? Dr. Shinn thinks that, in the truest sense, it has not. He says:

"The appeals to fear have wellnigh ceased, and yet there is no fact which we are so compelled to see as the fact of retribution. The law of retribution works in our present life. We become aware of it in our earliest infancy, and we never become developed in character until we have learned to fear that which is evil and to shun the consequences of sin. There is a sense of righteousness in all men, and all men know that unrighteousness brings punishment. It is fair to assume that what holds good in the present life, that what is a part of man's very structure here, will continue hereafter. We may give up entirely the notion of a material hell, but we can not give up the doctrine of retribution. Suffering must follow sin, and therefore to appeal to fear is not only legitimate, but it is in accordance with the structure of man's nature. Let us grant that the descriptions of hell are figurative. Let us admit that men have blundered in accepting as literal what was intended to be figurative. Let us grant that there is no material lake of torment. Yet, after all, is there not something back of the imagery? Is there not something real—so

real that men may well strive to escape it? Can it be well with him who passes hence in his sins?

"If we are asked for reasons for believing in future retribution, we need not dwell upon the thought of divine sovereignty showing its detestation of sin by punishment. That view has been brought out with frightful distinctness in Puritan theology. Rather let us call attention to the fact which forces itself upon the notice of even the least thinking of men. It is this: *Men are condemned by themselves.* . . . What, then, has become of hell? It has not been obliterated. It can not be obliterated. Retribution exists as an awful fact back of all figurative language. Men in our day have overlooked retribution in seeking to get rid of materialistic notions concerning hell. The time has come to recall the awful fact of retribution. But it must be done discreetly, and always with those exceptions in mind which so greatly modify it. . . . We do know that there is retribution for sin—for sin unrepented of and unforgiven. Whether that retribution continue for one year, or for a thousand years, or for eternity, it is not material to decide. He who dies in sin passes on to be judged for the deeds done in the body. Having rejected the offers of mercy here, he must meet penalty there. The man who dies impenitent and unforgiven finds his retribution.

"Judgment, like the gift of life, is immediate. It is not to be looked for only in the future. It is now. Future judgment is no arbitrary act. It is not something which springs from laws to be set in motion hereafter. It is the working out of laws under which we are now living. If we sin wilfully now, we must suffer for it. If we pass hence with a load of unrepented and unforgiven sin, judgment must surely follow us wherever we go. But it is not a new judgment; only a continuation of a judgment begun here; something inseparable from sin. Why should we fear to speak of a judgment to come when we know that a judgment has already come? True, the present judgment is not in every instance that which brings bitter anguish, but it is just as real as if men groaned in agony. It is a separation from goodness; a loss of spiritual power; a falling below the ideal. When men's eyes are opened, they may see that the loss of what they might have been, and their degradation through sin, is indeed the visitation of penalty."

TOLSTOY'S EXCOMMUNICATION.

THE Count Tolstoy has been for many years only nominally a member of the Orthodox Russian Church, he is reported to have received the news of his recent excommunication by the Metropolitan Antonius, of St. Petersburg, with sadness, perhaps because he regards the hostility of the Russian prelates and the Holy Synod as a manifestation of an unchristian spirit in the church of to-day. The order was in the form of a private circular edict—somewhat similar to that lately issued by Cardinal Vaughan in relation to the English heretic, Dr. Mivart—commanding all the clergy to refuse to Count Tolstoy recognition as an orthodox churchman. No priest is to absolve him or give him communion, nor is he to be given burial in consecrated ground, unless "before departing this life he shall repent, acknowledge the orthodox doctrine, believe, and return to the church." It is said that the three Russian metropolitans—those of St. Petersburg, Moscow, and Kieff—desired a public proclamation of the count's heresy, but that the synod feared the wrath of the Russian masses, with whom Tolstoy is very popular. The *Boston Transcript* (May 24) thus comments on the event:

"Immediate provocation for Count Tolstoy's excommunication, which has seemed impending for many years, was undoubtedly found in that portion of his latest novel, 'Resurrection,' in which he openly attacked the Orthodox Russian Church. Nor, indeed, was it simply Russian orthodoxy, but Christian orthodoxy everywhere that he submitted to a scathing review. In this book more emphatically than ever Tolstoy showed that he revered Christ, but despised Christianity as currently accepted. Christ, he said, had forbidden the very things continually being done in churches, especially 'the meaningless much speaking' and 'the blasphemous incantation over bread and wine,' and that He had also 'in the clearest words forbidden men to call other men their master and to pray in temples, saying that He had come to de-

stroy them and that one should worship not in a temple but in spirit and in truth.' . . .

"But long before this Count Tolstoy had provoked the thunderbolt by his published utterances. Especially in his book entitled 'My Religion' he had made a candid confession of his creed and of the steps by which he was led from orthodoxy to infidelity, and then to what his enemies style the heterodoxy of his later opinions. Born and baptized in the Greek Church, he had abandoned all belief in anything by the time he was eighteen. 'For thirty years I was a nihilist—not a revolutionary Socialist, but a man who believed in nothing,' he wrote. He grew disgusted with all mankind and with himself. Then a revulsion came. He reached the conclusion that as life was contrary to reason he ought not to reject a faith contrary to reason. He then went through the forms of a return to the Greek Church. He accepted its ordinances, but he could not force himself to accept its dogmas. Nor could he accept the dogmas of any other church. He accepted Christ, not as a God, but as the author of the wisest system of philosophy ever put forward by man. He rejected the entire doctrinal framework of the Christian scheme of redemption. He had little faith even in immortality. He believed as little in the despotism of the Russian Government as in the despotism of the Russian faith. He declared that the sum of all the evil possible to the people if left to themselves could not equal the sum of the evil actually accomplished by the tyranny of church and state."

DR. RICHARD SALTER STORRS.

THE death of Dr. Storrs, who at the time of his retirement last winter had been for fifty-three years pastor of the Congregational Church of the Pilgrims, in Brooklyn, is the most serious addition to the necrology of American Protestant Christianity since the death of Mr. Moody. Dr. Storrs had already

reached the advanced age of seventy-nine, and owing to ill health due to a serious fall early last autumn, his death on June 5 was not altogether unexpected. The *New York Times* says of him and his long ministerial career:

"The Rev. Dr. Richard S. Storrs was an historic figure in the ecclesiastical world of America. His death removes from the American ministry one of its most scholarly lights, and by it Brooklyn loses a citizen honored and beloved for more

THE LATE REV. DR. R. S. STORRS.

than half a century. The last of an extraordinary group of Brooklyn ministers, he was not alone a local force spiritually and secularly, but a man of recognized importance in the entire Christian world. He was scholar, orator, man of affairs, and a historian of authority, as well as pastor. Dr. Storrs represented in Brooklyn for fifty-three years the tradition of the conservatism and the rhetorical elegance of the Puritan pulpit of New England. During much of that period, in a neighboring church—Plymouth—Henry Ward Beecher stood for the opposites of these pulpit ideals, the radical thought, the reforming impulse, and the genius for impassioned oratory. In all his preachings Dr. Storrs kept in touch with the Scriptures, and their teachings were the foundation of his utterances. New England born and bred, he lived according to the precepts of the Pilgrims, and he preached as he lived. His greatness lay in broad and humane scholarship. Pos-

sessed of an alert and vigorous mind, he treated his themes with a delightful thoroughness and clothed his thoughts in beautiful and fitting speech.

"Richard Salter Storrs, D.D., LL.D., was descended from a long and illustrious line of New England clergymen. His father, Richard S. Storrs, was for sixty-two years pastor of the First Congregational Church of Braintree, Mass.; his grandfather, who also bore the name of Richard Salter Storrs, was pastor of a Congregational church at Long Meadow, Mass., for thirty-three years, and his great-grandfather was a chaplain in the patriot army during the American Revolution. Dr. Storrs, the late pastor of the Church of the Pilgrims, was born at Braintree, Mass., August 21, 1821. He was graduated at Amherst College in 1839, and for a short time was engaged as a teacher in Monson Academy. It was apparently his idea at first to prepare himself for the bar, for he entered the office of Rufus Choate as a student. He abandoned law for theology, however, and entered Andover Seminary, where he was graduated in 1845. He became pastor of a Congregational church at Brookline, Mass., in that year, and in the following year was called to the pastorate of the Church of the Pilgrims. He was installed as pastor of that church on November 19, 1846. From 1848 to 1861 Dr. Storrs was associate editor of *The Independent*. He also gave much of his attention to the Brooklyn Mission Society, and for a quarter of a century was president of the Long Island Historical Society. Dr. Storrs also served as first vice-president of the Brooklyn Institute of Arts and Sciences, and as a member of the Amherst College board of trustees. He was a prolific author, and the large number of his works which have been published give some idea of the energy and industry of his life."

The *Brooklyn Daily Eagle* says of him:

"He could not have been more self-contained, more self-poised, and more self-centered had he been alone in space. Yet his delights, like his duties, were with the sons of men, and his definition of minister was servant unto men, in the name of Him who came not to be ministered unto, but to minister. Words must be inadequate and can only be suggestive that seek to denote him as a personality. The classical simplicity of the antique world, whose qualities were elemental, whose art was immortal, and whose characters were gods, united in him with the alert and the alive intelligence of the modern time of revelation, in which he believed, of learning, in which he was profound, and of altruism, of which he was the very incarnation."

The *Brooklyn Daily Standard-Union*, referring to both Dr. Storrs and the late Dr. Behrends of Brooklyn, whose recent speech on Christian "comity" brought him into such prominence at the Ecumenical Conference on Foreign Missions, says:

"Storrs and Behrends were 'of the people, by the people, and for the people,' and in that fact lay much of their success, their influence, and their dominance over those far as well as near. In this principle is the genius of Congregationalism, and out of it will come its future leaders and prophets, worthy successors of those who have gone before. They come from the people; they claim no divine right of succession; they speak solely as they are moved by the forces which move others; and in this freedom, this independence, and this direct responsibility between humanity and divinity is at once the secret of their growth and power. The duty of those whom Dr. Storrs led and blessed, those to whom his life has been an example and an inspiration, is to stand fast, to preserve all, to maintain the highest ideals, and to work steadily onward and upward, with hope in man and faith in God."

The *Philadelphia Bulletin* calls Dr. Storrs a "model for pulpiteers." It says

"A once noted clergyman of the Congregational pulpit passed away in Brooklyn yesterday in the death of Dr. Richard S. Storrs. For many years he was second only to Beecher in reputation among the great pulpiteers of the City of Churches, altho a man of much different mold from the Plymouth pastor. Indeed, in scholarship, in personal dignity, in the sense of charity and circumspection, and in the fine conception of his professional duty in his relation not simply to the Church of the Pilgrims, but to the public, Dr. Storrs was regarded by some observers as a model clergyman. He had no time and no taste for the tricks of notoriety, but carried himself with the bearing of a Christian

gentleman, and there is no occupant of the pulpit who may not study his long career with profit as an example of the American minister in his best estate."

"SPHERES OF INFLUENCE" OF THE NEW YORK CHURCHES.

THE New York City Baptist Mission Society has lately prepared a chart of the boroughs of Manhattan and the Bronx showing the spheres of religious influence of the leading Christian denominations. In the *New York Herald* (May 14), the following explanation is given of the chart which we subjoin:

"Each square in the chart represents one thousand persons. On the left side of the chart are squares marked off to indicate the membership of the churches of the principal denominations. Directly to the right of these marked-off areas are areas twice the size, which indicate the 'sphere of influence' of the churches, the estimate being that each denomination influences, altogether, three times as many persons as it has members."

"All of the great portion of the chart on the right represents the 543,164 members of the 103 Catholic churches. The member-

"SPHERES OF INFLUENCE" OF NEW YORK CHURCHES.

The chart represents the half of the city's population reached by the churches; the half not reached is not shown.

ship of the other denominations is as follows: First, Episcopal, 121 churches, 65,900 members; second, Presbyterian, 70 churches, 28,766; third, Lutheran, 34 churches, 21,167; fourth, Methodist, 67 churches, 18,511; fifth, Baptist, 30 churches, 16,610; sixth, miscellaneous, 37 churches, 15,145 members; seventh, Hebrew, 46 churches, 10,892 members; eighth, Congregational, 14 churches, 3,018 members.

"With a membership in the 103 Catholic churches, therefore, of 543,164, a membership in all the other 439 churches of 180,009, and 360,018 persons added as being within the 'sphere of influence' of these latter churches, the number of persons within the 'sphere of church influence' according to these figures is 1,053,191, leaving 916,809 persons outside church influence."

"In no other American city," says William H. Brearley, corresponding secretary of the Baptist Mission Society, "may so large a per cent. of the population be classed as habitual non-churchgoers; nowhere else is so large a proportion of the children out of the Sunday-school. I believe the time will come when the columns of the secular New York press will be largely used by the Christian Church to supplement its effort in trying to reach and elevate the submerged million."

It is improbable, however, that the figures here given are more than approximately correct. For example, the recent careful census of the Roman Catholic archdiocese of New York, which includes Manhattan and the Bronx and some outlying towns, but not Brooklyn, gives 825,000 as the number of Roman Catholics; while the diocesan letter of Archbishop Corrigan, written before his recent journey *ad limina apostolorum* at Rome, gives a still higher estimate—1,200,000.

THE CRUCIFIXION AS AN EVOLUTIONARY FORCE.

CHRIST as a mediator between God and man, as a means of reconciliation, as a definite comprehensible fact by which man can communicate with and grasp the unseen, is declared by all Christians to be the most important factor in the evolution of religion. The world had strong, definite, divine personalities before Christ, but none with so many elements in common between God and man, according to the Rev. W. W. Peyton, who writes on "The Crucifixion as an Evolutionary Force" in *The Contemporary Review* (April, May).

Mr. Peyton finds that man's religious sense is not based so much upon the hope of a happy future state, as upon the idea of adjusting himself with God, of making himself as nearly as possible correspond with God. In other words, religion is man's effort to harmonize himself with the spirits back of the universe, and Christ's personality, His death, and His return to God have immensely aided this harmony, which before His time was on man's part a vague, crude, sensuous, often cruel effort, shown in the various forms of sacrifice of the Greeks, Romans, Jews, etc.

But it is the death of Christ that has done so much to harmonize man with God. Over this event love broke out and went straight to common human hearts for the first time—the love which lay in the basal ideas of creation. The crucifixion taught man to love God for the first time, and his whole relation toward creation changed from harshness and fear to tenderness and mercy. Humanity took a new departure:

"The disappearance of sacrifice in the Western world is the outward sign of a new moral force of the unseen universe, which has appeared in our affairs, which closed weary epochs in the ups and downs of evolution, and opened another with a future as yet unspent. It has shifted the center of gravity in the moral world, as the advent of the backbone has shifted the center of physiology. This displacement began with sensitiveness to the forces which Christ carried with Him into the unseen. The abrogation of sacrifice comes with the persuasion to harmony which this new force worked on the unwilling will (of man), and the force more particularly concerned in the persuasion is that of the death of Christ. No committee sitting in Jerusalem, Alexandria, Rome, ordered the abrogation. It was silently canceled by the experience of correspondence with Christ, which drew the human will to the Sovereign will by the drawing love, and which appealed to the errant will which had stored up evil in the years to return by a finer sympathy. The impact of the crucifixion worked the reconstruction so potently that the craving for ceremonial aid wholly ceased."

Mr. Peyton, who, as will be seen from his words concerning sacrifice and liturgic aids to religion, takes an exclusively Protestant view of Christendom, says that the Reformation has been misnamed; it should be called "the Reconciliation." The Church of Rome, he says, had fallen into error, and the nations who had come out of her had substituted ritual and sacrifice for primitive Christianity as the means of harmonizing themselves with the unseen. The Reformation, he says, was a return to the genuine counsel of Christ for reconciliation with the unseen.

And this faith was born in the love awakened in the human heart by the crucifixion. Of this love the writer says:

"In all the religions of the ancient world, it was suspected that love was a root affection in God, as it was seminal in nature; but it was not permitted to rule that tract of time. It would not arrive. In the crucifixion of Christ it came into the sphere of event and influence. An icy air and the hard rock of selfishness were conditions which hindered the growth of the germ which lay in the creation. For reasons we shall never know, humanity required this epoch in its education—a developing process must have its stages."

"With the coming of the Kingdom of Love the longest stride is taken in the education of the race. For it has created the Western man and constructed his ideals and established the new order. Correspondence with love in God—with His sympathy,

tenderness, and compassion—under the spell of Christ's passion, has produced the gentler races. Gentleness is the distinction of the Western peoples, and grades of gentleness distinguish grades of quality among them. This is the dynamic which has been introduced into our world—the Tenderness in the unseen universe. We have found that there is a tending of us, an attention to our case, an attendance on our sin and pain, beautiful intentions, resources of kindness.

"Three hungers are ours—the hunger for bread, the hunger for sex, the hunger for the Infinite; three struggles are ours—the struggle to live, the struggle to get others to live, the struggle to live in God; three loves are ours—the love of self, the love of others, the love of God. The death of Christ has composed them into a large unity, which gives character to the Christian centuries. It has inspired the love of Christ to us and our love to Him, and these are the most specialized affections which have entered into the cosmic process—both of a supersecular character. The historian, the philosopher, the biologist who will understand Western civilization must set himself to the study of the facts of these affections.

"Evolution is history, and it is the history of progress, and it is progress in Love, in the growing perception of the Unseen love and finer correspondence with it. The epochs of European history are presided over by this perception. *First*, there is the incandescent period when this perception drew out the Christian Society which has given distinction to all the centuries; *second*, there was the disappearance of Greek, Roman, and Teutonic civilizations in which love was wanting; *third*, there came the reversion of the Middle Age, or, as Mr. Galton would call it, the Regression to the mean or the average, when the sense of love was clouded and the death of Christ cast a dark shadow over sin and sorrow, and the lapsed faculty borrowed Hebrew and Greek elements and took the alcoholic stimulus of priest, sacrifice, ritual to come into the sanctuary of Love. The dead hand is always upon us; *fourth*, came the revival of the Apostolic time which we call the Reformation, which lay concealed in the majestic gloom of the Middle Ages, which came to the surface in the Waldenses and Lollards, but now conquered a wide area and recovered a clew of the unseen Love and went direct into the sanctuary."

THE AMERICAN UNITARIAN ASSOCIATION.

THE seventy-fifth anniversary of the foundation of the American Unitarian Association, celebrated in Boston on May 20-27, was almost "ecumenical" in character. Besides delegates from all parts of the United States, there were present representatives from Hungary, England, Germany, Belgium, Japan, and India. The association has been the executive arm of the Unitarian societies since its foundation in 1825, and, especially through its publications of Unitarian tracts and books, has been one of the forces of liberalism in America. *The Outlook* (undennom., June 2) says of this meeting:

"The loss of provincialism was as marked, in the audiences, as was the gain in the spirit of unity, in the addresses. It was repeatedly emphasized that the Unitarian Church stood for unity in spirit; that it ought to grow into fellowship with other churches of the Christian name and inheritance; that the Unitarian and Trinitarian Congregationalists, having a common heritage, will inevitably grow into closer sympathy. The spiritual side of these meetings naturally concerned itself with the spiritual feature of Unitarianism. Having liberalized even where it had not converted, what is to be the work of the twentieth-century Unitarianism? The most notable and pregnant utterances were, that religion would become simple, a natural function of human nature—a gospel for the individual, a gospel that will declare that for those who live righteously there is nothing to be afraid of; that the twentieth-century Unitarian Church will be a church of the spirit, a church of hope, faith, and love, a church that will help to ameliorate the condition of the people. Those who heard will not forget the address of that rational mystic, Protap Chunder Mozoomdar, of the Brahmo-Somaj of India, who held his vast audience entranced by his address on God and the universality of the spirit of God."

The Congregationalist (May 31), commenting on the schism which early in the century divided the old-time New England

Congregationalism into two camps of Trinitarians and Unitarians, says:

"Two features are conspicuous in the published addresses connected with the celebration in Boston last week of the seventy-fifth anniversary of the Unitarian organization. One is the absence of criticism of the beliefs of evangelical churches. The other is the positive note of vital Christian faith. This change, as compared with the utterances of Unitarians on similar occasions less than a decade ago, is one of the most remarkable in the religious movement of our time. Dr. Peabody's profoundly spiritual sermon on the Holy Spirit would edify any orthodox congregation. In it he describes the peculiar temptation to which Unitarians have so often yielded, and from which they seem to be escaping. He says:

"The creed of negation constantly solicits us to a fellowship of denial and a policy of obstruction. It is a creed easy to preach and still easier to practise. It encourages the poor conceit of conscious superiority and the barren homiletics of superficial controversy."

"We are confident that, as Congregationalists read these addresses, they will find much less to offend than to persuade them of reviving kinship in Christian faith. The two companies, as President Hyde said, will continue to sail in separate ships, tho, it is to be hoped, within helpful hailing distance of each other."

The Christian Register (Unit.), commenting on the same phase of interdenominational "comity," says:

"We need then make no haste to close chasms and reduce differences; but we do need to desire peace, to fall in with those who are working for righteous ends, to put ideals above expediencies, and to value the ends of action more than the methods by which we attain them. Some of our historic illustrations this week show how bitter and how fierce were the antagonisms that drove our fathers apart. From the eccentricities and blasphemy of the early revivalists to the later methods of Moody and his friends is a distance so great that they do not belong in the same class."

The "Election of Infants" and the Southern Presbyterian Assembly.

—In THE LITERARY DIGEST of June 2 the statement was made (on p. 672) that in the recent General Assembly of the Presbyterian Church (South) "an overture from a presbytery in Brazos, Texas, asking the Assembly to modify the statements of the Confession regarding the eternal damnation of non-elect infants, was reported negatively by the committee to which it had been referred, and a resolution adopted precluding the possibility of any discussion over the Confession." This statement, which was based upon the press reports of the Southern Assembly, and which is, perhaps, correct as to the letter, apparently misconstrues the spirit of the Assembly. We have received several letters on the subject, the purport of which is contained in the following written by Rev. H. M. Perkins, of Seguin, Texas:

"The facts are as follows, as appears from the record of the proceedings of the Assembly:

"W. E. Shive and W. L. Kilpatrick overtured the General Assembly that section 10, paragraph 3, of the Confession of Faith be amended by adding the statement that all dying in infancy are elect infants. Referred to committee of bills and overtures."

The report of that committee shows the following:

ELECT INFANTS.—Overture No. 35: From Presbytery of Brazos, and W. E. Shive and W. M. Kilpatrick, praying an amendment to Confession of Faith, chapter 10, paragraph 3, to wit: All dying in infancy are elect infants, and are regenerated, etc.

"ANSWER.—We recommend that the prayer of the overture be declined, inasmuch as the present language of the Confession can not, by any fair interpretation, be construed as teaching that any of those who die in infancy are lost. Adopted."

It should be observed that section 10 of the Confession of Faith treats of "Effectual Calling," which means *how* souls are saved, and not *who* are saved. Paragraph 3 of that section reads as follows: "Elect infants, dying in infancy, are regenerated, and saved by Christ through the Spirit, who worketh when, and where, and how he pleaseth. So also are all other elect persons who are incapable of being outwardly called by the ministry of the Word."

FOREIGN TOPICS.

CHINESE RESISTANCE TO WESTERN INFLUENCE.

THIS is an era of strikes—miners' strikes, railroad strikes, newsboys' strikes; but the latest and most curious of all is the strike of the executioners in Peking. They complain that they can no longer make a decent living at the rate of twenty-five cents for each head struck off; accordingly they demand half a dollar. The Government refuses to consider the proposition, but the men have been prevailed upon to return to work on the promises that there will soon be an increase of business. This is supposed to mean that it will soon be necessary for the authorities to end the earthly careers of some of the "Boxers." The *Shen Pao* (Peking) describes these "Boxers" as follows:

"They are really a combination of bands of robbers, who change their name quite frequently. They have appeared as followers of the Red Shade, of the Golden Bell, the Iron Shirt, and the Sect of the Great Water. The Union of Peace and Patriotism is their latest name. Their avowed aim is the extermination of the foreigners and the native Christians who support missionaries. They began by attacking chiefly the Catholics, but of late they make no difference between Catholics and Protestants."

The *Figaro* (Paris) remarks that the "Boxers" are rendering but sorry help to the dynasty they profess to serve, as the powers can not tolerate such disorders. The paper expresses itself in the main as follows:

The mass of the people evidently sympathize with these "rebels." The sect is able to carry on its depredations everywhere almost unhindered, and it gathers new members by pretending to be in the possession of charms which ward off bullets. The foreign diplomats agree that high and low officials sympathize with these men, and even the Peking authorities are suspected of favoring the movement, which, it is hoped, will deter the European powers from advancing further in China. But such hopes are futile. It is more likely that the Chinese will be forced all the sooner to adopt something of that Western civilization which they despise.

M. v. Brandt, German ex-minister to China, advises caution in dealing with the Chinese, whom he defends against the accusation of illogical opposition to European progress. He expresses himself in the *Deutsche Revue* (Stuttgart) to the following effect:

A good many harmless creatures in the countries of the civilized West would like to fertilize China with the bodies of its mandarins, in order to prepare the country for Western "progress." They inveigh against the pigtail which the Chinaman refuses to cut off, and they do not know that this pigtail means to the Chinaman progress and reform, for it and the Manchu dynasty are only three hundred years old, and what are three hundred years to a nation with a history of three thousand? "Our own correspondents" and other loafers of different rank who attempt to inform the public regarding China do not, of course, admit that the Chinese can have anything to say for themselves. It would be well for these people to study the speeches of Wu Ting Fang, the Chinese ambassador in Washington, and show greater civility to the Chinese.

China is an agrarian country in the widest and in the narrowest sense of the word, and this is the reason why the Chinese look with contempt upon the merchant, just as the German Agrarians do, who believe that commercial men have no other aim than to rob the farmer of his money. But China is also the land of learned men. Taken as a whole, officials can not succeed without passing strict literary examinations based upon Confucian teaching, of which the religious deference shown to ancestors is the basis. It is not too much to say that the Chinese can not well imagine their country without Confucianism. With these two cardinal points of Chinese characters, interference comes on the one hand from the foreign missionary, on the other from the foreign merchant, and both are held, not unjustly, responsible for the troubles which China has with foreign govern-

ments. The alleged decay of China is not nearly so apparent as most people in Europe imagine. One of the best judges, Mrs. Bishop (*née* Miss Isabella Bird) has shown in her book, "The Yangtze and Beyond," that this decay does not exist as far as the masses are concerned. The mandarins fulfil their many duties on the whole very faithfully. That they receive extra fees, which are not even always regarded as bribes by the people, is due to the system which allows them only the most wretched pay. The mass of the people are very free in China, and rarely come into contact with the official world except when they pay their taxes. With regard to his family life, his business, his pleasures, his daily wants, the Chinaman is the freest citizen of the freest country in the world. Were there half as much interference on the part of the Government or the police in a Chinese city as we stand in Western countries, the people would rise in open rebellion. The Americans alone seem to understand that the trade of China is everything, and that a forcible partitioning of China would hurt trade. It is not wise to describe every petty band of robbers as a "revolutionary party," or to describe the Empress-Regent, who has shown such remarkable ability for forty years, as a tyrant opposed even to sensible reform. There are a few sickly hairs in the Chinaman's pigtail, and it may benefit him to remove them; but he will hardly be grateful if, in order to do so, we pull with both hands at the whole appendage.

Chang Chi Tung, viceroy of Liang Hu, and many other enlightened officials advise reforms, and assist in them; but they expect such reforms to be carried out upon the basis of Confucian principles, which, they maintain, contain every principle of Western learning. For this reason they ridicule the idea that Western learning must be rejected because it is not especially mentioned in Chinese standards. Chang Chi Tung says:

"Chinese learning is moral; Western learning is practical. Chinese learning concerns itself with moral conduct; Western learning with the affairs of the world. What matters it, then, whether Western learning is mentioned in the classics or not, if it teaches nothing repugnant or antagonistic to the genius of our books: if the Chinese heart throbs in unison with the heart of the sages expressing the truth in irreprovable conduct, in filial piety, brotherly love, honesty, integrity, virtue? If government is loyalty and protection, then let government make use of foreign machinery and the railway from morning to night, and nothing untoward will befall the disciples of Confucius."—*Translations made for THE LITERARY DIGEST.*

Japan's View of the Korean Question.—Mingled with the reports of the trouble in China come indications of an increasing strain in the relations between Japan and Russia over Korea. The latest report is to the effect that the Korean Emperor has refused to give an audience to the Japanese Minister, who seeks to make formal protest against Korea's treatment of political prisoners. A Japanese view of the relations between Japan, Russia, and Korea is thus set forth by Kisho Tamai, editor of the Japanese-German journal *Ost-Asien* (Berlin):

"Ever since the Chinese-Japanese war, Japan has steadily pursued the course of military and commercial consolidation; and, as a part of that policy, has steadfastly refused to be drawn into outside matters. She saw the taking of the Sandwich Islands by the United States, and has been an onlooker at the war in the Philippines, all the time maintaining a strict neutrality. The growth of the Russian sphere of influence in Manchuria, as well as that of the United States in the Pacific, has found her self-contained.

"The superficial observer may be surprised at the stand taken by Japan—at her apparent indifference. But, after all, it has been simply the logical course and a development of the thought which is the basis of Japanese politics. Japan has no intention of dividing her strength by mixing in too many matters; but is determined to reserve all her energies for the defense of the most important interests. In other words, her watchword in politics is not 'extensive' but 'intensive.'"

The writer says there are no two opinions in Japan about the

necessity of maintaining Korea's integrity; but he does not look upon Russia's recent actions in the hostile light we might expect. He writes:

"It must not be forgotten that Russia is an autocratic government; and that the ruler has given evidence of his peaceful intentions. Sudden surprises and changes, such as are common in parliamentary countries such as England and France, are not to be looked for from Russia. In addition, Russia, better than any other country, understands the far East thoroughly, and most certainly is aware of the opinion of Japan. This was doubtless why the Russian representative modified his demands for a coaling-station to such an extent that it was evident that he wished to give no cause of offense. . . . We must not lose sight of the fact that in the far East there is plenty of room for both Russia and Japan, and that they do not need to tread on each other's toes. All the same Korea is of such importance, not only as a market for Japanese goods, but for strategical reasons, that it would be impossible to allow either Russia or any other country to take possession. It is easy to see that Russia would not quietly permit England to take the island of Gothland in the Baltic Sea; or allow Germany to have a coaling station and naval depot in the Black Sea. Japan knows that the possession of Korea by Russia would be an attack on her safety. Besides, with a port on the Yellow Sea, and with railroad connection with Peking, Korea is no longer of any particular value to Russia. As, so far, the efforts to arrange spheres of influence in Korea have been successful, we do not think that there is any danger of a conflict on that score now."—*Translation made for THE LITERARY DIGEST.*

A GERMAN SATIRE ON AMERICAN CHARACTER.

UNDER the title, "A Self-Made Man: A Story for Good Little Boys," appears in the *St. Peterburger Zeitung* (a German paper published in the Russian capital) a satirical little sketch written ostensibly "for the American school-reader," and hitting off American character as seen at that distance. The sketch runs in the main as follows:

There was once a little boy and his name was Freddie. He did much for the entertainment of the neighborhood by fishing in other people's private ponds and picking other people's fruits. When he was scolded for it, he would proudly say: "I am a free citizen of a free country." The neighbors wanted his father to whip him, but the father said he would not thus degrade a future President of the United States. Such things could be done only in enslaved Europe. And Freddie grew and prospered. He always attacked boys who were weaker than himself, beat them, and took away their pennies in the name of civilization and humanity. For in Freddie's veins ran strong and pure the undiluted blood of the noble Anglo-Saxon.

One day Freddie's father was told that his son had swindled a friend of the family with a bogus dollar, and had gotten 85 cents change. And the father was deeply moved, and said: "I always knew Freddie would some day be a great man." Then he turned Freddie's pockets inside out and transferred the 85 cents to his own. After that, Freddie was placed with a wise merchant who taught him that two and two make five. Freddie was wiser than he, and learned how to make two and two equal to nine. Then his boss made him a partner. And Freddie was worthy of the trust. He managed to get hold of all the shares and to give his old boss the bounce. And all the people were loud in their praises of Freddie.

Then Freddie bought sugar and sold it at a quarter of its value until he had ruined all competition, when he made good his losses tenfold by raising the price enormously. And all the people praised Freddie.

Freddie built a railroad to ruin the road which ran through his city, and he succeeded, and made the public pay. He oiled the machinery of Congress and worked it so that tariffs excluded everything he wished to sell dear, and there was no competition. And the people still more praised Freddie. All the papers published vile portraits of him; he was called the man of the hour and the Napoleon of finance. Freddie had become a great American.

But Freddie was not proud. He remained the same humble, pious, God-fearing Freddie. He went diligently to church, and when the pastor spoke of the divine blessing which is certain to be showered upon honest work, he would be moved to tears and nod his head in approval.

Freddie still lives. He is busy "making" his fiftieth million. He makes it honestly out of the profits of sales of grain to the starving millions of India. Freddie is the pride of his fellow citizens, and the most shining example of an American self-made man in the most idealistic sense of the word.—*Translation made for THE LITERARY DIGEST.*

THE TROUBLES OF SPAIN.

NEVER altogether quiet, Spain has become the theater of frequent revolts since the war which resulted in the loss of her colonies. The people are extremely unwilling to devote nineteen dollars out of twenty to the public debt, army and navy, while only five per cent. of the revenue is used for public works, education, and the like. The National Union has advised the people to refuse payment of taxes, even at the risk of national bankruptcy. The National Union is credited with republican tendencies. The old Liberals, on the other hand, while opposed to the present Government, are for upholding the monarchy. In Catalonia, the movement for autonomy is gaining strength, as the Catalans have altogether lost faith in the central Government. All these reform movements are anything but favorable to Carlism, which, however, still lives on, being supported by the country clergy. Government organs like the *Epoca* advise the proclamation of a state of siege throughout the country, or at least in the most disaffected parts. The opposition papers have been muzzled. Much may be gathered, however, from the correspondents of foreign papers. The *Neue Zürcher Zeitung* (Zurich) says:

"It is hardly correct to say that Catalonia wishes to separate from Spain. What the Catalans want is separation from Madrid, i.e., a provincial self-government such as Navarre and the Visayan provinces practically enjoy. The Madrid authorities are loth to release the richest province; but it is very likely that they will be forced to come to terms."

The *Frankfurter Zeitung* says:

"Gen. Lopez Dominguez, the nephew and heir of Serrano, sketches well the situation in the following words: 'It is now twenty-five years since the restoration of the dynasty, yet neither party has been able to benefit the country. There have not been any serious internal disturbances during this time, yet Spain is worse off than ever. Her colonial empire is lost, her finances are ruined. Our educational system is far behind that of civilized Europe, public works are utterly neglected, justice is badly administered, the army is dissatisfied, and the Separatists threaten to tear Spain to pieces.' The picture is a dark one, but it is not unjust. Premier Silvela either does not recognize the powers which are ruining Spain, or he is powerless to combat them."

"These powers are on the one hand the upper classes, which live by the state and exploit the people to the utmost; on the other hand the church, which not only participates in the robberies committed upon the people, but prevents all intellectual improvement. Silvela, instead of combating these enemies, allows them to rule with him. No wonder that the upper classes need not fear abolition of their sinecures in the army and navy, in his administration. No wonder that the priesthood resist successfully all attempts to improve the educational standard. Whenever the Cortes endeavored to make a reduction of the countless idlers paid by the Government, the attempt failed. The clergy do not even thank Silvela for his friendship, but threaten to agitate openly for Don Carlos unless all their wishes are fulfilled."

"Spain is the land of unexpected events, and no one should prophesy about her. Yet it seems very unlikely that the Separatist movement in Catalonia will be successful. It is split hopelessly into two camps. One party embraces all the most radical elements, and aims at the establishment of a Social-Democratic

community. The other party, led by the clergy,* aims at nothing less than a clerical model state, to be ruled eventually by the Pope. This division naturally hampers the whole movement."

The *Temps* (Paris) hopes that Silvela will attend chiefly to the reorganization of the finances of Spain. "The poor," thinks the paper, "Spain has great resources, and there is no need to fear that she will be unable to meet her obligations." The *Journal des Débats* (Paris) wonders whether the National Union, which is formed chiefly of members of the trade chambers throughout Spain, will strengthen or weaken the financial standing of the country—a question of no little importance to Frenchmen, as France is the chief holder of Spanish bonds. The Spanish minister of finance suggests consolidation of the debt, in form of a loan of \$240,000,000, at five per cent. As a tax of twenty per cent. will be placed on these bonds, they will be only the old "Spanish Fours" under a new form. The question is whether the Bank of Spain can float this consolidation loan. The *Indépendance Belge* (Brussels) says:

"Are the present troubles the forerunner of that *débaîcle* which has so long been predicted for Spain? We hardly believe it. Spain has passed through many similar experiences of late, and each time the trouble has passed off. We admit that the present causes are grave. The Spanish-American war has exasperated the people. Not only have they not yet consoled themselves over the loss of their rich colonies, but they can not forgive the Government for wishing to maintain a fleet when there are no colonies to protect, and an army when no foreign foe menaces Spain. There will probably be a parliamentary crisis, but we regard the monarchy as safe, as there is no combination among the disaffected elements. Abolition of the monarchy would mean a state of civil war, and the best people are aware of that."—*Translations made for THE LITERARY DIGEST.*

FRANCE AND MOROCCO.

WHENEVER the possibility of a war between France and England is discussed, Morocco is mentioned as the point over which a quarrel is most likely to arise. There is no doubt that the French endeavor to extend their rich and paying empire in northern Africa over the ancient Moroccan sultanate. That Morocco would be able to resist conquest, is doubted; but as other nations besides France are interested in her territory, she may find allies. The *Epoca* (Madrid) is still unwilling to believe that serious quarrels will arise over Morocco. It says:

"Rarely has Morocco been of greater practical interest to us than now. Excepting the Riffian tribes, the people of Morocco regard us with favor, and the Riffians are only nominally under the rule of the Sultan. This good accord is of no little importance, as our interests in Morocco are much greater than many people imagine. Unfortunately, the ever-recurring internal troubles are this time accentuated by foreign complications, as the people in the South are inclined to resist French occupation of disputed territory by a holy war. Some people imagine that the French advance must needs lead to a struggle between France and Great Britain, in which we, as the third interested power, will eventually have to pay the piper. We do not believe in this danger. France and England will come to an amicable arrangement, and the neutralization of Morocco, tacitly admitted by all the powers, will be upheld."

The *Spectator* (London) admits that the whole of Morocco will hardly be absorbed by France unless internal troubles make conquest easy. But should anarchy reign in Morocco, then the powers most interested must come to an agreement. The *Spectator* regards the abandonment of all Morocco to France as out of the question, but is willing to see her hold the lion's share, provided she does not gain a foothold near the Straits of Gibraltar. It says:

*The native Catalan clergy and monks. They have not the support of the Carlists, and but few of the prelates side with them, as these would exercise more influence under Carlist rule.—*Editor of THE LITERARY DIGEST.*

"We believe that an amicable solution may be found if one or two principles are borne in mind. The first of these is that it is impossible for England to expect the rest of the world to acquiesce in her possessing any strong place on the coast of Morocco in the Straits, and so opposite Gibraltar. Europe, whatever may be our historic claims to Tangier, will not agree that a power so strong as England shall hold both sides of the Straits, and so, as it were, put the key of the Mediterranean into her pocket. Very likely we should never use power thus acquired for selfish purposes, but we can not expect the rest of the world to take that on trust. . . . Spain acquiesced without any very fierce struggle in the loss of Cuba and the Philippines, but in order not to be shut out of the Morocco settlement there is hardly any sacrifice she would not make. The third essential principle that must govern a settlement that is to be satisfactory and permanent is that France must have the lion's share. This may seem inequit-

20188

FRANCE: "Our position is well understood,
We don't want to shed people's blood,
(Or engage in a row—
Until after the Show!
So you must stay there and be good!

From *Ull, Berlin* (with metrical legend from *Outlook*, London).

able *per se*, but in reality it is inevitable. France can at any moment send her troops into Morocco and overrun the country. . . . No doubt we could stop her if we thought it worth while to go to war in regard to Morocco; but we do not believe that the nation would agree to war on such grounds. . . . Our suggestion is—and in cases of this kind one can not be intelligible without being specific—that France, Spain, and Great Britain should enter into a treaty setting forth that, if the Moorish empire should break up, the contracting powers would consider that the territory enclosed by a line drawn from, say, Sebu on the Atlantic coast to Melilla on the Mediterranean was within the Spanish 'sphere of influence,' and the rest of the territories of the Sultan of Morocco within the sphere of France, provided always that Spain bound herself not to build any fortifications between Ceuta and Cape Spartel—in order to prevent the closing of the Straits by batteries opposite Tarifa Point—and to keep Tangier and the territory round it for a radius of, say, ten miles as a free port."

The paper ends with the suggestion that, unless France agrees, Spain must come to an understanding with England over the head of France. The *St. James's Gazette* declares that Great Britain can not permit France to carry out her treacherous plans in Morocco, and calls upon Germany to assist Great Britain in enforcing the independence and neutrality of France. The *Deutsche Tages Zeitung* would like to know what could give basis to the hope that Germany is willing to become England's cat's-paw. The French ask what all the fuss is about, as they are only acting strictly within their rights. The *Journal des Débats* (Paris) says:

"We are not invading any of the territory which we admitted to be Moroccan in the Treaty of 1845. We are only policing the territory where the Sultan exercises such shadowy authority that perfect anarchy reigns. It is possible that the tribes there, armed with breechloaders of a somewhat antiquated pattern, will find themselves mistaken if they believe themselves able to resist, as our forces there are pretty strong. The Igli column alone is about 2,000 strong, with sufficient artillery."—*Translations made for THE LITERARY DIGEST.*

MISCELLANEOUS.

WHY LINCOLN BEAT SEWARD FOR THE PRESIDENCY.

COL. A. K. McCLURE has known personally and more or less intimately every President from Buchanan to McKinley. As a politician, editor, and orator he has been an important factor in the making of half our Presidents, and as a historian he writes of all "Our Presidents and How We Make Them." One will read Colonel McClure's book expecting to find an inside knowledge about a number of important campaigns, and he will not be disappointed. Especially interesting (tho not altogether new) is the colonel's statement of the reasons for Lincoln's nomination in 1860. William Henry Seward, then the most eminent member of the Republican Party, was the personal choice of the majority of the delegates in the Chicago convention. But many of his friends feared that he was not available. Colonel McClure gives the reasons for their doubts.

In Indiana the Republicans had nominated Henry S. Lane for governor, in Pennsylvania Andrew G. Curtin. Indiana and Pennsylvania were pivotal States. The results of these two state elections—then held in October—would have an enormous influence upon the subsequent Presidential election in November. Consequently the first inquiry of the Republican leaders outside of Seward's blind devotees was:

"Who can carry Indiana and Pennsylvania?"

Lane and Curtin, who were delegates to the national convention, devoted all their energies to securing a national ticket that would best aid them in their state contests. McClure, as chairman of the Republican state committee of Pennsylvania, was Curtin's right-hand man, John D. Defrees was Lane's. Both Curtin and Lane decided that they could not be elected governor if Seward were nominated for President.

Seward had owed his election as governor of New York in 1858 partly to the assistance of that able and energetic prelate, Archbishop Hughes. Partly because of his gratitude to his Catholic friends, partly because of his broad and liberal views generally, in a message to the legislature he had urged division of the school funds between the Catholics and Protestants. That was the rock on which Seward was wrecked. Had he been nominated, the entire "native American" element of the opposition would have been aggressively against him, and Pennsylvania and Indiana would have been lost not only by the defeat of Curtin and Lane in October, but by the defeat of Seward in November.

"The situation was earnestly presented by Curtin and Lane, and Mr. Defrees and I accompanied them in their conferences with various delegations which were devoted to Seward, but were willing to abandon him, not because they loved Seward less but because they loved Republican success more. I saw several rural delegations from New England States shed tears as they confessed that they must abandon Seward because he could not carry Pennsylvania and Indiana, and certainly more than one third of all the delegations who voted for Lincoln in that convention did it in sincerest sorrow because compelled to abandon their great leader for the sake of victory."

Colonel McClure tells us that the only weakness he ever saw in Lincoln was exhibited during his campaign for renomination and reelection. He was painfully impressed with the apprehension that he might be defeated in the convention, and on a number of occasions McClure heard him discuss the question with a degree of interest that was painful. Even after a majority of all the delegates to the convention had been positively instructed for him, and certainly two thirds of the remainder were publicly pledged to his support, he could not dismiss the fears of his possible defeat.

McClure visited him several times within a month of the convention in obedience to his telegrams, when he discussed only the political dangers which beset him. He insisted that his

name would go into history darkly shadowed by a fraternal war which he would be held responsible for inaugurating if he were unable to continue in office long enough to end it and to restore the Union. We quote from Colonel McClure again:

"The last time I conferred with him on the subject was within two weeks of the meeting of the convention, and I could hardly treat with respect his anxiety about his renomination. He had given close study to the election of delegates, and I called his attention to the fact that a decided majority were positively instructed for him, and that he certainly knew that a majority of the others could not be diverted from him. He had to admit that there seemed to be no plausible reason for doubting the result, but with a merry twinkle of the eye he said:

"Well, McClure, I don't quite forget that I was nominated by a convention that was two thirds for the other fellow."

In conclusion Colonel McClure notes that the most beautiful tribute he ever heard paid to Abraham Lincoln came from the lips of Jefferson Davis. Some ten years after the war McClure visited Davis's home in Mississippi. He never tired of discussing the character and actions of Lincoln, and asked many questions about his personal qualities. After he had heard all that could be given in the brief time at command, he said with a degree of mingled earnestness and pathos that few could have equaled: "Next to the destruction of the Confederacy the death of Abraham Lincoln was the darkest day the South has ever known."

CORRESPONDENTS' CORNER.

Professor Atwater and the Northfield Conference Again.

Editor of THE LITERARY DIGEST:

In your periodical under date of March 3, 1900, is a letter from Mr. W. R. Moody relative to a committee chosen at Northfield, Mass., during the conference of August last, to consider Professor Atwater's attacks upon the temperance teaching of the pulpit, platform, Sunday-school, and public school. In this letter Mr. Moody says:

"I question very much whether the committee was not a self-appointed one and absolutely unemitted to being termed a committee of 'Northfield Conference.'"

In justice to the committee and those who chose it, its members desire to make the following statement:

At the request of many persons in attendance at the August conference, among them prominent members of the New York Presbytery, ministers and laymen of other denominations and many well-known supporters of the Northfield Conference, the late Mr. D. L. Moody announced and presided over a large meeting held in the Auditorium, August 11, 1900. At this meeting an address was given on the subject of temperance education in the public schools and the recent attacks that had been made upon it by Prof. W. O. Atwater as published by the press.

After this address, in response to a request from the audience, a second meeting to consider what could be done was announced from the platform of the auditorium. At this latter meeting, held at the Hotel Northfield, this committee was chosen. It was asked to secure the preparation of a reply to the attacks upon temperance education, and to enlist the cooperation of temperance societies, temperance committees of great religious denominations, and other organizations in making the truth known. As these joined this effort, the committee chosen at Northfield who started the movement, simply for purposes of designation took the name that indicated its origin as "A committee chosen at" not by "the Northfield Conference of Christian Workers," tho as a matter of fact it was chosen by the Conference of Christian Workers if the persons in attendance constitute the "Conference."

Mr. D. L. Moody was not a member of the committee, was in no wise responsible for it or the work it has done. We believe further that Mr. W. R. Moody, by consulting those who know the history of this movement, will see that it is a mistake to say that this was a "self-appointed committee," for, as has already been stated, its members were chosen by those attendants upon the Northfield meetings who responded to the call of the Conference after the address, and who felt that the hour called for prompt and immediate Christian action concerning pending interests.

Believing that we have been acting in the most Christian and legitimate manner and have in no wise compromised Mr. Moody or the Northfield Conference, but have been doing as best we could the work next at hand, as Mr. Moody and his assistants have always enjoined upon us, we stand for truth and temperance in behalf of the public schools, the press, the pulpit, the Sunday-school, and the home.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul-General Guenther, of Frankfurt, on January 19, 1900, says:

"The German *Medical Weekly Journal* recently published an article by Dr. Kallmeyer, of St. Petersburg, with reference to the study of medicine in Russia by women, which contains the following:

"Women physicians have established themselves all over Russia, and even their opponents must admit that they have achieved a respected position. Part of them are employed by the Government and since last year are entitled to a pension. They occupy positions as county physicians, school physicians, physicians for the poor and the municipal ambulance system, etc. A Mrs. Dr. N. Schulz, in the St. Petersburg Institute for Experimental Medicine, is one of the foremost experts in bacteriology, and her lectures are well attended by physicians of both sexes. Miss Dr. Pavloskaja, of the city hospital, Obuchow, and a few other female physicians were last year with the expedition which went to Turkestan under the personal guidance of the Prince of Oldenburg, to combat the pest. They all returned in good health, but their conduct shows a spirit of heroism worthy to be remembered. Dr. Pavloskaja has immortalized herself in another direction. At the right time and in the right manner she succeeded in interesting St. Petersburg society in the establishment of a sanitarium for consumptives, and through donations from private sources and the Imperial treasury the establishment in Taitai, near St. Petersburg, is in operation. Dr. Schwanova has gained distinction for the erection of a sanitarium for children on the Baltic Sea coast."

He also writes on January 19, 1900:

"In 1899, 364 new concerns were incorporated in Germany with a nominal capital of \$120,000,000. This is the largest number and largest nominal capitalization since the memorable year of 1879, when 479 companies were incorporated with a nominal capital of \$311,833,000. The following shows the distribution of capital among the various industries:

"Mining and smelting, \$4,500,000; quarrying, \$6,000,000; machinery, \$60,000,000; chemistry, \$1,500,000; electricity, \$8,000,000; textile industry, \$4,000,000; breweries, \$6,000,000; building trade, \$6,000,000; banking, \$6,000,000; railroads, \$7,000,000; navigation, \$15,000,000."

Under date of January 17, 1900, Vice-Consul Murphy, of Bremen, sends the following translation of a German newspaper clipping:

In 1898, shipbuilding in England was more important than it had ever been before. In 1899 the business was still a little larger. The high figures in 1898 were due to a decrease of business in the preceding year caused by a strike of machine-builders; but this does not explain the continued growth in 1899, which was undoubtedly caused by the continued development of shipping interests.

During the past eleven years, merchant vessels have been launched as follows:

Year.	Steamers.		Sailing-Vessels.		Total.	
	No.	Gross tons.	No.	Gross tons.	No.	Gross tons.
1888	408	715,000	51	50,000	459	765,000
1889	595	1,060,000	90	115,000	685	1,175,000
1890	601	1,060,000	90	115,000	691	1,175,000
1891	641	1,060,000	124	150,000	765	1,210,000
1892	517	841,000	150	200,000	667	1,041,000
1893	435	715,000	97	115,000	532	830,000
1894	549	924,000	61	80,000	610	1,004,000
1895	526	924,000	51	65,000	577	989,000
1896	605	1,115,000	68	85,000	673	1,200,000
1897	545	1,040,000	46	55,000	591	1,095,000
1898	744	1,375,000	37	45,000	781	1,420,000
1899	714	1,414,000	30	35,000	744	1,449,000

In 1899, only 12 small sailing-vessels were built, having an average gross tonnage of 107 tons. These are accordingly hardly worth considering. On the other hand, the average steamship has a gross tonnage of 4,000 tons, the total for the year being nearly 1,400,000 tons.

The English shipbuilders accordingly produced in this one year, exclusive of war-vessels, only one fifth less than the entire steamship fleet of Germany. To this must be added the war-vessels, aggregating 100,000 tons, against 10,000 tons in 1898 and 95,000 tons in 1897. Of the former, 121,000 tons were added to the English war fleet. Most of the remainder were for the Japanese navy (20,000 tons), while 4,000 tons were for the United States. The total output of the shipyards was 1,504,000 tons gross. Of the immense mercantile fleet, 1,409,000 tons were for Great Britain and 100,000 tons for its colonies. Of the remainder, the largest part 100,000 tons, against 37,000 in 1898 was for Germany, which, although it occupies the first place after England in shipbuilding, is nevertheless England's best customer. Austria took 17,000 tons; Norway, 10,000 tons; Spain, 10,000 tons; Denmark, 10,000 tons; Holland, 10,000 tons; Russia, 10,000 tons; Sweden, 10,000 tons. Lloyd's Bureau in London reports also concerning shipbuilding in other countries, and shows a total production of 80,000 tons—namely, 301 merchant vessels and 16 war-ships. For several years Germany has been at the head of this list, being excelled only in 1898 by the United States, owing to the latter's activity in building war-vessels. But Germany is again at the head. The principal countries are shown in the following table:

Country.	Total.		War-Vessels.
	Tons.	Tons.	
Germany	1,409,000	100,000	10,000
United States	1,375,000	37,000	10,000
France	1,210,000	61,000	10,000
Italy	1,041,000	17,000	10,000
Russia	1,004,000	20,000	10,000
Holland	989,000	5,000	10,000
Denmark	924,000	3,000	10,000
Norway	841,000	10,000	10,000
Sweden	830,000	1,000	10,000
Austria	765,000	2,000	10,000

In building merchant ships the United States is this year again ahead, its production being 724,000 tons, while Germany's was 715,000 tons. Furthermore, this estimate is higher than that of the Bureau "Veritas," at Hamburg, which gives Germany only 715,000 gross tons. According to the English estimate, the British production was in 1899 seven times as large as that of Germany. Of the steamships built in England, 9 were of over 10,000 tons gross register, 4 between 9,000 and 10,000 tons, nine between 8,000 and 9,000 tons, 27 from 7,000 to 8,000 tons, 15 from 6,000 to 7,000 tons, 27 from 5,000 to 6,000 tons, and 39 from 4,000 to 5,000 tons. The largest ships launched were the *Oceanic*, of 17,274 tons; *Ivernia*, of 15,000 tons; *Minneapolis*, of 13,750 tons; *Saxonia*, of 12,000 tons; *Saxonia*, of 12,000 tons; *Perle*, of 11,073 tons. Germany produced the *Patricia*, of 12,493 tons; *Grosser Kurfürst*, of 12,500 tons; and 6 other steamers of over 10,000 tons. Of the English shipbuilding centers Glasgow, with 200,000 tons inclusive of war-vessels, remains at the head. Then follow: Newcastle, 200,000 tons; Sunderland, 200,000 tons.

WATCH

for the first gray hair. When it shows, and others follow faster and faster, that is the time when positions are lost and friends drift away. Do not permit this! Self-preservation demands that you should do something to hold your own. Use

Hay's Hair-Health

the unequalled restorer of youthful color

and richness to the hair. Its use can remain unknown for it is not a dye, is colorless, does not stain nor come off on the clothing. It has a delicate perfume, and no other preparation of the kind combines as many

merits with economy of price.

Proper Heating.

"The result is increased utilization of fuel, perfect ventilation and uniform distribution of heat in the room."—WORLD'S FAIR, 1893.

It means that the

JACKSON VENTILATING GRATE

gives more heat with less fuel than any other heating apparatus, that the freshly warmed air which constantly circulates through the room gives healthful warmth, not stuffiness and the stale odor usual in a closed room. The Ventilating Grate can be fitted into any ordinary fireplace, and burns either coal, wood, or gas.

A fireplace is not necessary where the Mayflower Franklin Grates are used.

Drop us a postal card asking for illustrated catalogue "D" which gives description in full of both Grates.

LIQUID AIR AS AN EXPLOSIVE.—Frank H. Mason, consul-general at Berlin, under date of March 9, writes as follows:

"Ever since it was demonstrated that liquid air could be readily produced on a commercial scale, it has been hoped and expected that one of the principal uses to which it would be applied would be that of an explosive material for blasting purposes, particularly in mines, where the new explosive would have the important advantage of safety in handling and of not vitiating the air, like gunpowder or dynamite, by the gases of ignition.

"Some months ago a newspaper report announced that liquid air had been formally adopted for blasting purposes in the government coal-mines of Germany, but inquiry proved that this announcement was at least premature. The fact appears to be that experiments—more or less successful—have been made, especially by Professor Linde, of the Polytechnic High School at Munich, but no formal adoption of the new explosive by the government bureau of mining industries has yet taken place. Among the most systematic and interesting practical experiments thus far made in this direction has been the series of tests lately undertaken by the Vienna Crystal Ice Company in the presence of experts from the Austrian technical committee for the War Department. The liquid air used in these tests was obtained from the Linde Company, at Munich, and shipped to Vienna in open flasks, provided with the Dewar vacuum jacket and packed with felt and cotton wrappings in wooden cases, with a loose cap of felt over the open mouth of each flask. When put up at the laboratory for shipment the liquid contained 75 per cent. oxygen to 25 per cent. nitrogen; but before it had reached Vienna and was used in the experiments, it had lost about half its bulk by evaporation, and what remained contained 85 per cent. oxygen to 15 per cent. nitrogen. The absorbents used in preparing the cartridges were silicious marl (Kieselguhr) and solar oil, and, according to the report, two methods of preparation were employed. By one process the marl and oil were mixed in a wooden vessel, and the liquid air gradually added until a stiff paste was formed, which was packed in paper cartridge shells covered with asbestos. By the other plan, the mixture of marl and oil was put into the cartridge, which was enclosed in a lead case with a layer of felt between, and the liquid air then poured in until the paste was completely saturated. The cartridges prepared by both methods were safe and readily transportable, and their explosive power was tested by firing at the bottom of deep holes bored in rock. The results showed that while liquid air is an efficient explosive, it is less effective than dynamite, gun-cotton, explosive gelatin, or giant powder."

The consul says further:

"The conclusions of the military experts were concisely as follows: Both methods of preparing the cartridges were pronounced wasteful, and in consequence of the rapid evaporation of the liquid air they must be used immediately after being prepared; beyond fifteen minutes the evaporation will so effect the cartridge that it is likely to miss fire, and its strength can not be even roughly guaranteed. On the other hand, the cartridges when freshly prepared are powerful and well adapted to coal and other mining, and, while the large amount of oxygen set free by the firing of successive charges might increase the danger of explosion in the air and gases of the mine itself, the quality of the air for breathing purposes would be definitely improved.

"The net conclusion to be derived from these and preceding experiments in Europe is that, notwithstanding the obvious advantages of liquid air as an explosive for mining purposes, the rapid

deterioration of the cartridges and their varying and uncertain strength are obstacles so serious that, until they can be overcome, its value and application to that use will remain experimental and comparatively limited."

PERSONALS.

MISS HELEN GOULD has discharged her private secretary, says the *New York Telegraph*.

The young woman who was hired to attend to Miss Gould's correspondence seemed to think that her one mission was to exploit Miss Gould, to act as her press agent, in fact, when it is generally known that the one thing Miss Gould least desires is publicity and notoriety. Miss Gould's private secretary had at one time been a newspaper woman, and she never got over her instincts to get a good story into print. She knew that Miss Gould was good "copy," and that distinguished member of New York society could not go visiting a friend or donate a million to some college without having her private secretary send a long account of it to some of her former newspaper chiefs. Miss Gould's patience was taxed to the utmost when she saw recently a carefully tabulated statement of the requests made of her for alms. The 1,500 bagging-letters had been carefully classified, and quite an interesting story about them was prepared for publication. She lost no time in letting her private secretary know that the sooner she got back in the newspaper business the better it would be for her.

Miss Gould has secured a new secretary, one gifted with the golden quality of silence.

In the garden of the Hôtel des Anglais at Mentone, the late Rev. Mr. Spurgeon had an amusing experience. A poor organ-grinder was working away at his instrument, but evidently was evoking more sound than sympathy. Mr. Spurgeon, moved with pity at the want of his success, took his place and ground out the tunes, while the man busily occupied himself in picking up the coins thrown by the numerous company that soon gathered at the windows and on the balconies to see and hear Mr. Spurgeon play the organ. When he left off other guests also had a turn at the machine; altho they were not so successful as the first amateur player had been, when the organ-man departed he carried away a heavier purse and a happier heart than he usually took home.

LONG RECORD RIDING.—The war correspondents in South Africa in their recent despatches have dwelt on the so-called record-breaking performances of the British cavalry in the Transvaal. There was, for instance, the fine ride of the Natal Mounted Carbineers, who rode eighty-five miles in twelve hours over the sun-scorched veldt, or the dash of French's horse for the relief of Kimberley, when the troopers stayed in the saddle for more than seven hours and then rode for five miles at full gallop into the beleaguered town. While these rides are worth boasting of, they can not be classed as record-breakers. Of course, the ride of a body of cavalry in their full equipments, which burdens every horse with nearly two hundred and fifty pounds, must not be compared with long-distance records achieved by single riders in ra-

A GOOD COMPLEXION

Depends on Good Digestion.

This is almost an axiom although usually we are apt to think that cosmetics, face powders, lotions, fancy soaps, etc., are the secrets for securing a clear complexion. But all these are simply superficial assistants.

It is impossible to have a good complexion unless the digestive organs perform their work properly, unless the stomach by properly digesting the food taken into it furnishes an abundance of pure blood, a good complexion is impossible.

This is the reason so many ladies are using Stuart's Dyspepsia Tablets, because they promptly cure any stomach trouble and they have found out that perfect digestion means a perfect complexion and one that does not require cosmetics and powders to enhance its beauty.

Many ladies diet themselves or deny themselves many articles of food solely in order to keep their complexion clear. When Stuart's Dyspepsia Tablets are used no such dieting is necessary, take these tablets and eat all the good wholesome food you want and you need have no fear of indigestion nor the sallow, dull complexion which nine women out of ten have, solely because they are suffering from some form of indigestion.

Bear in mind that beauty proceeds from good health, good health results from perfect digestion and we have advanced the best argument to induce every man and woman to give this splendid remedy a trial.

Stuart's Dyspepsia Tablets can be found in drug stores and cost but 50 cents per package.

If there is any derangement of the stomach or bowels they will remove it and the resultant effects are, good digestion, good health, and a clear, bright complexion.

How to Grow Good Fruit.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticulture Society, at Lenox, Mass. The address bore chiefly upon spraying and general culture of orchard and field crops, how to do it, do it cheaply and good, and how to obtain the most profit from your labor in the easiest manner. The address is quite lengthy, about an hour's talk. It will not be sent to the disinterested. Owners of fruit trees, stating if at all interested in fruit culture, will get this book. Had this address been placed on the market in book form it no doubt would have sold at a good price. The full address, profusely illustrated, in pamphlet form was intended to be sent to fruit growers and owners of estates, free for the asking, but to prevent imposition by the curious and disinterested, the book will be sent to fruit growers, or owners of estates, enclosing fifty cents, to the Lenox Sprayer Company, 30 West Street, Pittsfield, Mass.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

cing trim, such as Count Stahrenberg, who rode one horse over a distance of three hundred and fifty miles in seventy hours, or Baron Cotter, who rode from Vienna to Paris, a distance of six hundred and twenty-five miles, in twelve and a half days. One of the most famous long-distance rides in history was that of King Charles XII, of Sweden, who in 1714 rode from Demotica in Turkey to Stralsund in Sweden, a distance of thirteen hundred miles, in a fortnight. On that occasion the king rode night and day, accompanied only by one officer, both taking care of their own horses and never changing their clothes.

The present South African records were eclipsed as long ago as 1842, when Dick King, a British despatch rider, covered the six hundred miles from Port Natal to Grahamstown in nine days, crossing seven large rivers and numberless smaller spruits on the way. King's ride resulted in the relief of the hard-pressed British garrison of Port Natal, which was then besieged by Boers. Many years afterward, Archibald Forbes, the famous war correspondent, made another South African record when he carried the first news of the battle of Ulundi to the nearest telegraph instrument, riding one hundred and ten miles in fifteen hours to do so.

Thanks to the wide stretches of plains and ceaseless depredations of elusive Indians, the American cavalry and Northwest Mounted Police of Canada, perhaps, have more opportunities for creating records in riding than any other army in the world. Thus the recent record of the Natal Caribbeers was anticipated, but a few years ago, by a troop of United States cavalry commanded by

Captain S. P. Fountain, who rode eighty-four miles in eight hours. Then there was the celebrated half-day ride of sixty miles done by the Texas Rangers at the time of their last unpleasantness with Mexican cattle thieves on the Rio Grande. Another famous long-distance ride stands to the credit of the late General Lawton. As the bearer of certain important despatches in 1860 he rode to General Crook's headquarters at Red Cloud from Sidney, Nebr., covering one hundred and twenty-five miles in twenty-six hours without changing his horse. It is recorded that, altho his mount arrived in fair condition, the rider looked five years older than he did the day before. — *Collier's Weekly*.

SENATOR DEWEY, in *Success* (New York) recently gave this reminiscence of Artemus Ward: "The funniest thing I ever saw or heard was the lecture of Artemus Ward, then quite unknown, on Mormons, delivered at Albany. The audience was fashionable, conservative, and proper in a degree. Ward, discouraged, finally stopped and said, after one of his best things, which had met with no response, 'There's a joke.' Suddenly the fun of the whole entertainment came like an avalanche. The audience began to titter, then to laugh, then to roar, and at the end of fifteen minutes was positively in a hysterical condition." One of Artemus's wittiest remarks was his answer to a telegram: "What will you take for ten nights in San Francisco?" a lecture agent wired him: "Thanks, brandy and water," was his reply.

It is a striking fact that there is not a reigning sovereign in Europe whose family is of the nation over which he rules. The house of Austria is in reality the house of Lorraine, the Hapsburgs being of Swiss origin. The King of Belgium is a Saxe-Coburg. The King of Denmark is a Holsteiner. The young King of Spain is an Austro-Hapsburg. The King of Italy is a Savoyard. The founder of the Bernadotte dynasty in Sweden was a country attorney at Pau, less than a century and a quarter ago, and the King of the Hellenes is a Holsteiner. The British royal family are Hanoverian, and the Hohenzollerns were originally Silesians, being therefore partly Bavarians and partly Swiss. — *New York Commercial Advertiser*.

A Summer Holiday

Do not plan your summer trip before seeing some of the handsome literature issued by the Grand Trunk Railway System, descriptive of the magnificent playgrounds and summer resorts situated in the highlands of Ontario, including the "Muskoka Lakes," "Lake of Huron," "The 10,000 Islands of the Georgian Bay," "The Magnetawan River," and the "Kawartha Lakes." Health and pleasure can be found in all of these unexcelled regions; good hotels, fine steamers on the lakes, good fishing and hunting, a region whose perfect immunity from hay fever is assured, are some of the features which attract the tourist and pleasure seeker to these districts.

A postal card to F. P. Dwyer, Eastern Passenger Agent, 200 Broadway, New York City, will secure, free, descriptive pamphlets full of information, maps, etc.

The natural beauty and diversity of the scenery of the North is unequalled on the continent.

Letters copied while writing

No press; no water; no brush; no work. Any ink; any pen; any paper. Our Pen-Carbon never smuts; our clip holds paper firm. Write with no extra pressure, and our Pen-Carbon Letter Book produces a perfect copy. For letters, bills, etc. Can be used anywhere. If your stationer does not keep it, write for free specimen of work. Address Dept. L., PEN-CARBON MANUFACTURING CO., 145-7-9 Centre St., N. Y.

LIBRARIES

WHY doesn't Jones get down to business methods and buy an AMERICAN TYPEWRITER for \$10? Does he think I am running a puzzle department?

The AMERICAN \$10 TYPEWRITER

As well made as the highest priced machines, but more simple. It has stood the test: seven years without a competitor. "25,000 IN USE" a slogan and sample of work free. American Typewriter Co., 117-119 E. 11th St., New York.

OLD DAGUERRETYPES CAN BE RESTORED to all their original beauty by — Rockwood 1440 Broadway (40th St) for one dollar.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

MORE OR LESS PUNGENT.

Epigrammatic.—"De trouble in dis life," said Uncle Eben, "is dat de voice o' duty can't do no mo'n whisper, while de voice o' pleasure uses a megaphone."—*Washington Star*.

Indifferent.—"The scientists," said the first mosquito, "are charging us with spreading malaria." "Never mind," said the second mosquito; "that won't increase our unpopularity."—*Puck*.

A Falling Out.—"And why did you leave your last place?" "Cook an' me had a fallin' out, mem." "I don't see why you should leave for a little thing like that." "But we fell out o' th' third-story window, mem."—*Cleveland Plain-Dealer*.

He Was Alone.—BENEVOLENT LADY: "You say you have a wife and six children. Where are they?"

BEGGAR: "I'm all alone. My boys are at Harvard, my girls are at Vassar, and my wife is in Paris visiting the Exposition."—*Judge*.

A Dilemma.—MRS. GALLAGHER: "An' phwat'll O' do at all, Moike? This machine only goes up to fifteen shone, an' O'm sixteen shone if O'm an ounce."

GALLAGHER: "Got on twice, Bridget, an' add up th' totals."—*Glasgow Evening Times*.

Equally Horseless.—"Ha!" jeered the bystanders. "The automobile has come to stay! See it stay!" "That's all right," responded the man on the seat, calmly lighting a cigar. "But why should a machine that merely displaces the horse excite the ill-will of asses?"—*Chicago Tribune*.

The Difference.—"Maw, what's de difference between er politician and er statesman?" "Well, honey, a mushroom's good, ain't it?" "Yes, 'am." "And a toadstool is pizen, ain't it?" "Yes, 'am." "And dey bof look alike?" "Yes, 'am." "Des same difference from a statesman to a politician."—*Brooklyn Life*.

Literal.—"Yes," said the young woman, "I find books in the running brooks." "Well," said Farmer Cornsmeal, "them summer boarders littered the place up terrible with them trashy novels last year. Me an' ma done the best we could to burn 'em all in the cook stove, but they do seem to keep turnin' up."—*Washington Star*.

Simply Hadn't Learned Yet.—The Rev. Dr. Queen, observing the janitor wabbling about uncertainly on his new wheel in the street in front of the church, called out: "George, do you ever take a header?" "No, Dociah Queen," replied George, with visible indignation. "I neveh take nothin' strongah'n' cawfee!"—*Chicago Tribune*.

Arithmetically Correct.—OLD GENTLEMAN: "And have you any brothers or sisters, my little man?"

BOBBY: "Yes, sir. I've got one sister an' one an' a half brothers."

OLD GENTLEMAN: "What?"

BOBBY: "Yes, sir. Two half-sisters and three half-brothers."—*Philadelphia Press*.

Tit for Tat.—As a man entered a picture-gallery the attendant tapped him on the shoulder, and, pointing to a small car that followed him, said:

An Up-to-Date Policy.

Charles T. Schoen of Philadelphia, President of the Pressed Steel Car Company, has taken one of the five per cent. Gold Bond contracts issued by The Prudential Insurance Company of America, of Newark, N. J. The policy issued amounts to \$500,000, requiring an annual premium of \$65,270. The settlements under the contract are unique, the heirs of Mr. Schoen having the choice of two options: First \$204,250 in gold; or Second—the Company to issue to the heirs \$250,000 in bonds of \$5,000 each, on which five per cent. interest in gold is guaranteed annually for twenty years by The Prudential, the interest to be paid semi-annually. At the end of the twenty years, the Company then pays \$250,000 in gold as a final settlement, making in all half a million dollars paid by the Company.

Play Whist?

Then You Will Be Interested in This Table.

It is intended for Duplicate Whist. In the illustration, the large cut is the table set up for use. The small disk is the pocket for holding the cards. It is fastened to the bottom of the table and revolves. The dot on the margin shows the spring which controls it. At the side is the table folded. The pocket holds sixteen decks of cards. There are sixteen hands and each player has four leads. After playing a hand, cards are replaced in the pockets, and by touching the spring, a new hand is before each player. The advantages over trays are no lost cards, no errors and a place on which to play. The table is made in oak or mahogany and is a handsome, substantial piece of furniture. Price of each \$6.00, f.o.b. cars, Green Bay, Wis.

INVESTIGATE ITS SPECIAL BOND POLICY.

"Dogs are not admitted." "That's not my dog," replied the visitor. "But he follows you." "So do you," replied the old gentleman sharply. The attendant growled, and removed the dog with entirely unnecessary violence.—*Tit-Bits*.

In Cape Town.—The Cape Town censor sat chewing the stump of a blue pencil. "Dickens," he called to his assistant, "how many Boers did you say our five thousand men defeated?" "One thousand nine hundred and ninety-nine!" responded the loyal Dickens. "Then just turn it around to 1001. It will make many glad hearts, and, besides, Dickens, my brother is a tuning manufacturer in London."—*Chicago News*.

A Question of Surgery.—MR. WAGGER: "Have you moved into your new house?"

MRS. CHANGER: "Oh, yes; but we are not settled yet. The carpenter has to make so many alterations."

MRS. WAGGER: "I thought everything would be just right."

MRS. CHANGER: "So did we. But we found that scarcely one of our old carpets would fit."—*Harpur's Bazar*.

Innovation.—"Yes," said the variety actor, "you've got to hustle these days to keep up with the times. My partner and I have changed our act all around." "As good as new, is it?" "Yes, sir. We recognize the demand for novelty." "What have you done?" "Why, you know that the first thing my partner does when I come on is to hit me with a club." "Yes." "Well, we've rewritten the whole thing. Now I hit him."—*Washington Star*.

At St. Helena.—The shade of Bonaparte came up to where Cronje sat smoking. "General," began the great Napoleon, "of course you came to this island on an English ship." "Quite right, General," responded Cronje. "And did you stand near the rail in bold relief?" "Yes, General." "And your back was turned on the officers?" "I think so, General." "Then the material for the magazines of future generations is assured."—*Chicago News*.

It Was Under Fire.—A friendly magazine editor was talking in pleasant but critical mood to a contributor. He said: "It seems to me you use a faulty figure of speech when you say a 'brave old hearthstone.' How can a hearthstone be brave?" "Well, sir," said the contributor, "the one I am writing about has been under fire for nearly forty years without flinching."—*Chicago Post*.

For a Nerve Tonic

Use Horsford's Acid Phosphate.

Dr. H. M. HANLOW, Augusta, Me., says: "One of the best remedies in all cases in which the system requires an acid and a nerve tonic."

University Preparatory School

Current Events.

Foreign.

SOUTH AFRICA.

June 4.—Six British columns are converging on Pretoria, all of Lord Roberts's army, except one brigade, being employed north of Johannesburg.

June 5.—Lord Roberts sends a despatch from Pretoria announcing the formal surrender, and at the War Office it is said that the British commander entered the city at two o'clock.

A battalion of the Imperial Yeomanry is captured by the Boers near Lindley.

June 6.—The war is now regarded as ended, the next move taken being probably the subjugation of the eastern part of the Free State.

June 7.—About one thousand British prisoners were removed from Pretoria to a point in Eland's valley, in the Transvaal, on the Delagoa Bay railway.

June 8.—General Buller reports the capture of a mountain west of Laing's Nek, which will probably render the Boer position on the Nek untenable.

June 9.—Boer raiders cut Lord Roberts's communications north of Kroonstad.

June 10.—Communications with Lord Roberts are still cut.

OTHER FOREIGN NEWS.

June 4.—**Outrages by the Boxers** continue in China; sixteen Boxers are killed and many wounded in a fight with the Cossack relieving party from Tien-Tsin.

June 5.—**Admiral Kempff** reports the beginning of an engagement at Taku, China, and that he has landed a force of sailors from the *Nashville*.

Philippines: In the island of Tablas, one of the Philippine group, a number of rebels are put to flight, and a large quantity of ammunition captured.

Stephen Crane, the well-known American author, dies at Badenweiler.

June 6.—The situation in China continues serious.

The Japanese cabinet has resigned, and the Marquis Ito is endeavoring to form a coalition ministry.

June 7.—The Dowager Empress of China orders General Neih Si Chang with 20,000 men to protect the railroad at Peking.

Severe fighting with the "Boxers" is reported.

June 8.—**Severe fighting** is reported between the Chinese Imperial troops and the Boxers, with heavy losses on the part of the latter.

Philippines: General Foston discovered in a forest around Luzon almost all the archives of the Aguinaldo government, and a quantity of war material.

June 9.—The crisis in China becomes more acute, and the intervention by the powers is considered necessary; the excitement in Japan over the proposed sending of Russian troops to Peking is increasing.

June 10.—Fifteen hundred foreign troops left Tien-Tsin for Peking.

Domestic.

CONGRESS.

June 4.—**House:** The day is spent in preparation for adjournment.

June 5.—**Plans for adjournment** failed in consequence of a bitter contest between the two houses over the item for ocean surveys in the naval appropriation bill, the House rejecting the agreement reached by the conferees.

June 7.—The first session of the Fifty-Sixth Congress comes to an end. The naval appropriation bill is finally passed.

June 8.—The President issues a commission to General Miles as lieutenant-general, and to Adjutant-General Corbin as major-general.

The Cabinet discusses the situation in China and determines to adhere to the policy of evading entangling alliances with other powers.

The militia will probably be called out, if the St. Louis strike continues.

June 9.—Admiral Kempff is to be reinforced at Taku, China, by the *Nashville* and the *Albatross*.

June 10.—The Rev. Dr. Charles Cuthbert Hall

A Famous Health Resort.

FOR REST AND RECREATION.
FOR HEALTH AND STRENGTH.

THE WALTER SANITARIUM,
WALTER'S PARK, (Wernersville, Pa.)

As to Natural Advantages: On the mountain-side overlooking one of the most beautiful valleys in the world, which as viewed from the Sanitarium, constitutes a panoramic scene of magnificent proportions and surpassing loveliness.

"No Malaria, Mosquitoes, or Dews" is the proud boast of this place. In the matter of air, water, and scenery we really have no competitor.

As to Acquired Facilities, let us note simply:

A main building 300 feet long, five stories in height, of mountain granite, erected by its present managers—several cottages in connection; it is heated by steam and open grate, lighted by electricity, and is correspondingly finished and furnished. It has Hydraulic Elevators, Electric Bells, Sun Parlor, excellent Livery and Dairy, its appliances for treatment are: Baths of varied kinds, Massage, Electricity, Swedish Movements, Oxygen, Vacuum Treatment, with physicians of twenty to thirty years' experience, who carefully prescribe according to the needs of patients.

If you want a restful profitable vacation come to us feeling assured you will have it. If you are sick and have tried the unusual remedies and resorts, write to us stating your case, and we will tell you what we can do for you. Hundreds of so called "Incurables" have found health at our hands. For terms or any particulars, desired, address,

ROBERT WALTER, Walter's Park, Pa.

THE MEDICAL DEPARTMENT

Is in charge of thoroughly educated physicians of long experience. Our chief physician has enjoyed a training and experience with Sanitarium methods extending over a period of more than thirty years, such as is seldom found, while his assistants are equally eminent in their specialties.

THE TABLE

Is exceptionally excellent; the *Cuisine* presided over by a first-class chef, and the service is unusually good. Country milk and cream are in abundance from our own fine Jersey dairy; flesh (not Chicago meat), fish, and fowl of the very best quality supplied in abundance; along with a plentiful supply of fresh fruits and vegetables from our own gardens.

OUR WATER SUPPLY

Walter's Sanitarium is supplied with as pure, sweet, and refreshing water as ever was drunk. We are tempted to say that it is the purest in the world. Chemical analysis proves that it is superior in this respect to any of the noted waters that are found upon the market.

preaches the baccalaureate sermon at Columbia University.

OTHER DOMESTIC NEWS.

June 4.—The President sends to the Senate nominations of the Porto Rican judiciary and executive council.

Governor Roosevelt states that he will take no action in the matter of Mayor Van Wyck's removal until the facts and the law in the ice trust cases are thoroughly investigated.

June 5.—The President sends to the Senate the nomination of General Joseph Wheeler to be brigadier-general in the regular army.

The governor of Missouri has been asked to preserve order and to protect the women in the streets of St. Louis while the strike is in progress.

Rev. Dr. Richard Salter Storrs dies in Brooklyn.

June 6.—Another war-ship will be sent for Admiral Kempff to China.

The Socialist Labor Party nominates a candidate for President and one for Vice-President.

"A Devout Bluebeard"

This book is a truthful satire of the snobbery of the day, together with the follies of churches and their social machinery. The devout Bluebeard is so well portrayed that few will fail to recognize him. It abounds in naturalness and witticisms. If you would rather laugh than cry, read it. May be ordered from any bookseller or will be mailed for one dollar by the

ABBEY PRESS, Publishers, 114 Fifth Avenue, New York.

The Munich International Tournament.

The twelfth tournament of the German Chess Association is to be held in Munich, beginning on July 21. Eight prizes, ranging from 1,000 to 100 marks, are offered in the Masters' Contest. The Prince Regent Luitpold, of Bavaria, has donated a handsome silver cup for the winner of the first prize, and Baron de Rothschild, of Vienna, has given a special prize of 100 marks for the winner of the greatest number of games. The tournament, for which nineteen entries will be accepted, will be played at the rate of five or six rounds per week.

Notes on the Composite Game.

We have received Black's 7th move. H. C. Butler, who played Black's 6th move, sends the following comments: "As you have already pointed out, Black's 5th move was weak; but White apparently did not follow up the advantage. Suppose White had played 5. Kt x P. There are only two lines of play for Black, both of which seem bad: 1. 5. Q-B 3; 2. P-K B 3, and the Kt must go to Q 3 or Kt 4. If to Q 3, 6. Kt x Kt, P x Kt; 7. B x P ch, B-Q 2; 8. B x R. If 7. Kt-Kt 4, 8. B x Kt, Q x B; and the same thing occurs. If 6. B-Q 2; 7. Kt x P, K x Kt; 8. Q-R 3 ch, and White wins in all variations.

"I think that we have right here an example of the benefit of a Composite Game. The gentleman who made Black's 5th move has learned that P-Q 2 is bad, and the player who made White's 6th has learned that Kt x P is the stronger continuation.

Notes like the above would be of interest and value to those who are trying to learn the best moves in the openings and defenses. Black should have played 5. B-K 2.

The Paris Tournament.

Marshall, the Brooklyn Champion, during the last week, beat Pillsbury. At the time of going to press the score stands:

Won.	Lost.	Won.	Lost.
Endy.....	3	Mieses.....	6
Burn.....	1	Mortimer.....	2
Dufur.....	6	Pillsbury.....	15 1/2
Janowski.....	7	Rosen.....	2

The Literary Digest

VOL. XX., No. 25

NEW YORK, JUNE 23, 1900.

WHOLE NUMBER, 531

Published Weekly by
FUNK & WAGNALLS COMPANY,

39 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE LITERARY DIGEST is in receipt of the following contributions to the India Famine Fund:

Previously acknowledged	\$515.32
Citizens of Caledonia, N. Y.	\$5.00
C. S. N., Ithaca, N. Y.	5.00
H. E. Andrews, Portage, Wis.	5.00
Mrs. Minnie Reid French, Keystone, W. Va.	5.00
Blue Ridge Academy, Kennett, Va.	5.00
T. O. Epps, Kingstree, S. C.	5.00
A. P. W., Norfolk, Va.	5.00
James T. Stanley, 514 West 29th St., New York City	50.00
Salem M. E. Church South, Portsmouth District, Virginia Annual Conference	3.45
	\$719.62

The above list contains only those contributions received prior to June 18. They have been forwarded to Messrs. Brown Brothers & Company, 59 Wall Street, New York, who are custodians of the fund received by the Committee of One Hundred.

The contributions of \$15.10 and \$7.35, which were acknowledged in our issue of June 9, should have been credited to Nimmo M. E. Church South, Portsmouth District, Virginia Annual Conference, and to Providence M. E. Church South, Princess Anne Charge, Portsmouth District, Virginia Annual Conference, respectively.

AMERICA'S PART IN THE FAR-EASTERN CRISIS.

THE isolation last week of the international relief force of 2,400 marines on their way from Tien-Tsin to Peking, and their enforced return; the bombardment and surrender of the Taku forts; the reports that the foreign legations in Peking had been mobbed; the anti-foreign risings in remote parts of the empire; the reported appeal of the deposed Emperor to the powers, asking them to remove the Dowager-Empress and declare a protectorate; and many other rumors of what the Empress intends to do and what Russia's game may be, have led the press to believe that a crisis of the most serious character is impending in the Far East—certainly serious for China, and seri-

ous for the rest of the world if the situation is not handled with the most delicate care. The case of Egypt is cited on the one hand to show that Russia may step in to restore order, as England did in the Nile country, and claim the country as its reward; and the case of Turkey is instanced on the other to show that the bickerings of the powers may keep the ancient empire alive even tho it may have lost the inherent ability to resist successfully the forces of disintegration.

The United States, however, has never taken a hand in the diplomatic games played in Egypt or Turkey, and we are confronted at the outset of the Chinese imbroglio with the question whether we shall assume any active part in the arrangements that may be made by the powers for the future of China. It seems to be generally believed that the European nations would be glad to divide up China among themselves, and are deterred by fear of a tremendous war over the division; but the impression appears to prevail, elsewhere as well as here, that the United States will hold aloof from any such partitioning, and will use its influence, if at all, to preserve China as a nation.

The United States forces in the Far East include fifty-five vessels of all kinds, most of them smaller craft, well adapted for service in the rivers of China, and 65,000 soldiers and several thousand marines. As conditions in the Philippines still seem to require the presence there of this force, and as General Otis says that this force can not well be decreased for several years to come, there has been little suggestion that we could use our Philippine forces very extensively in China.

Several papers, however, think that we are being drawn into the whirlpool of world-politics. "Events are moving quickly," says the *Worcester Gazette*, "and it seems impossible to control them. We are drifting with the current, and there is no telling where it will carry us"; and the *Springfield Republican* says in a similar strain: "It is difficult to escape the feeling, after a review of the situation, that the country is drifting, and that the ultimate issue will depend more upon events in China and the demands of various interests at home than upon any policy which the Administration may have intelligently worked out. In a Presidential year Mr. McKinley would naturally hesitate to carry with Bismarckian nerve the imperialistic policy to its logical conclusion. The end is wholly in the dark." The Philadelphia

CAPT. BOWMAN H. MCCALLA

Of the United States cruiser *Nemah*. Captain McCalla was second in command of the international column of marines isolated between Tien-Tsin and Peking, and compelled to return.

Inquirer fears that if we do not take a hand in the game we may find our trade interests in China seriously threatened, and adds: "Perhaps we had better not make too sure that it doesn't matter to us what political ascendancy is established at Peking." The *Washington Times*, too, predicts that "if the Administration carries out its announced policy—which, however, may not be its real one—and confines its interference to the use of a few marines

visible, but absolutely necessary." As the commercial aspect of the situation seems to be considered so important, the following view of our obligations taken by the *New York Journal of Commerce* is of interest:

"As to the magnitude of our actual and possible commercial interests in China there does not seem to be much room for dispute. A country which, under serious drawbacks, has doubled its foreign trade in ten years, and with which the export trade of the United States has increased threefold in seven years, can hardly be said to be a market which we can afford to view with indifference. But, as everybody knows, the Chinese market is still in a rudimentary stage, and the development of the country presents one of the most inviting prospects which any part of the world has to offer to productive enterprise. Such railroad construction as has been effected in China is enormously profitable.

MAP SHOWING PEKING, TIEN-TSIN, PORT ARTHUR (RUSSIAN), AND OTHER PLACES IN THE DISTURBED DISTRICT.

for the protection of Americans and their property, it will be thrown out of court" in the final settlement of commercial privileges. It adds: "This view of the matter is so self-evidently correct that we are not inclined to believe Mr. McKinley will stop at the point his subordinates affect to think he means to." The *Minneapolis Tribune*, indeed, goes so far as to say: "Since the United States has swung out as a world power, with possessions in both hemispheres, and is pushing its trade in all quarters of the earth, it is no longer possible for our Government to remain isolated in handling international questions. Our interests touch those of the great European nations at many points, and many matters must be arranged by joint action. . . . Therefore an alliance with these powers for the specific purpose of regulating and controlling the Chinese situation would seem to be not only ad-

EASTERN CHINA AND SURROUNDING COUNTRIES.

and it seems highly probable that the present outbreak of anti-foreign sentiment is instigated by men who see their chances of levying tribute on trade seriously interfered with by the coming of the iron way. China is naturally a much richer country than India; it has a larger, a more industrious, and a more intelligent population. But in India trade is assisted by good roads, railways, and equal taxation, while in China these advantages are conspicuous by their absence. The result is that the foreign trade of India is three times that of China, while, under similar conditions, it is not at all doubtful that the foreign trade of China would be greatly in excess of that of India. Whether the present trouble be the expiring protest of the conservatism of centuries against the incoming of new ideas or not, it is certain that if the United States is to enjoy its share of the trade that would belong to it with a reformed and regenerated China, it must be ready to take its share in the work of regeneration. It is ridiculous to have our Minister instructed to act energetically in protecting American interests while forbidding him to enter into such concert of action with other powers as might conceivably impair the sanctity of the traditional policy of the United States."

THE WOMAN IN THE CASE.

This Box(h)er movement is all right if it is carried far enough.

A large majority of the press, however, believe that the policy of avoiding entanglement in Old-World affairs is the best policy for the United States at this time. This country, says the *New York Tribune*, has "entered no concert of the powers." It is in cooperation with all, of course, on impartial terms for the protection of foreign property and lives, and it may be trusted to act with vigor and effect to that end and for the maintenance of its just rights. Beyond that there seems to be no occasion for it to go." The *New York Times*, too, says that "to keep out of 'entangling alliances' ought to be, and doubtless is, the purpose of the State Department," and the *St. Louis Globe-Democrat* says: "The United States will enter into no entangling alliances with any European nation or nations on the Chinese or any other question. It declined England's invitation for a joint action in 1823 against the holy alliance, and, in the Monroe warning to that coalition which was issued in that year, established a policy of independent action which will be followed in the Chinese crisis." The *St. Louis Republic* declares that "it would be deplorable indeed were this Government to allow itself to be drawn into a European war with the cause of which it had no concern as an interested principal," and the *Philadelphia Times* says: "We must protect all American interests, but must not be drawn into a war that would have to be waged without sufficient cause and without any expectation of recompense in the way of territory or new trade." So, too, thinks the *Baltimore American*, which says that "the United States, of course, has no interest in the squabble, and no troops to waste in a quixotic effort to help the European powers." "If there is anything left of the Monroe doctrine," says the *Cincinnati Enquirer*, "let us stick to it."

RESPONSIBILITY FOR DISORDER IN ST. LOUIS.

THE continued violence and disorder that have marked the progress of the street-railroad strike in St. Louis has led the press to ask why the rioting and bloodshed were not suppressed and order established long ago. Since May 8, when the strike began, thirteen persons have been killed, sixty-five wounded by bullets, and ninety injured in other ways. Millions of dollars, it is estimated, have been lost by the six weeks' interruption of the city's normal business conditions. As has often been the case in such disturbances, several of the victims of the riotous demonstrations have been innocent and inoffensive citizens, and on two or three occasions the mob has pursued women who rode on the street-cars, torn off most of their clothing and injured them with clubs and brickbats. The strikers disavow these acts, and declare that they are the acts of the city's lawless element, who take advantage of the strike as a time to indulge in violence and riot. Whoever the perpetrators may be, however, the newspapers the country over are demanding that order be restored. There is a widespread impression that Henry Ziegenhein (Rep.), the mayor of St. Louis, and Lon V. Stephens (Dem.), governor of Missouri, have allowed the violence to go on so that they might pose as the friends of the strikers, and catch the labor vote. "Good citizens," says the *New York Evening Post* (Ind.), "are utterly disgusted with both officials, and there is reported to be talk of impeaching each." The *Buffalo Express* (Rep.) says: "If American women received such treatment in the streets of Peking, the whole country would be ready to go to war to punish the barbarians. Yet the politicians of Missouri appear to think that popularity and a continuance in office are to be gained by sympathizing with mobs!"

The *St. Louis Globe-Democrat* (Rep.) thinks that Mayor Ziegenhein can not be held responsible for the disorder, because the St. Louis police force is not under his control. The St. Louis police board, by a recent state law, is appointed by the governor, and all its members are Democrats, save the mayor, who is a

member *ex officio*. He does not attend the meetings, however, because, says *The Globe-Democrat*, he "would have no more weight at the meetings of the board than at a Democratic caucus. That board is a Democratic caucus first, last, and always. It appoints no man to the force who is not a Democrat, or who does not first join the Democratic Club. . . . The mayor, the Municipal Assembly, and the citizens of St. Louis would gladly assist in the direction of the police department. But the police law

IF THOSE ST. LOUIS RIOTERS AND CHINESE BOXERS COULD ONLY BE BROUGHT TOGETHER, HOW HAPPY EVERYBODY ELSE WOULD BE!

—The Brooklyn Eagle.

takes the greatest pains to destroy the last vestige of home rule. The mayor and Municipal Assembly have no more authority or influence in police matters than the presidents of the South African republics have at the British council table." The *Chicago Tribune* (Rep.), however, thinks that if in place of the "spineless mayor of St. Louis there had been a man of resolution, he would have crushed these outrages in a week or two." Nor will the governor be held guiltless, continues the same paper, for "he has been called upon again and again, in a legal manner, to exercise his authority by sending militia to St. Louis, but not a soldier has been sent there. He has thus encouraged the rioters by the knowledge that he would not interfere with them." The *Chicago Times-Herald* refers to Governor Stephens as "a small, mean-spirited politician," and speaks of the mayor as "a cheap, stupid demagogue also."

The *St. Louis Republic* (Dem.) counsels the strikers to join all other good citizens in suppressing violence, because disorderly acts will destroy public sympathy with the strike. As for the governor, *The Republic* says that the people indorse his increase of the police force, and that they will not fail to indorse him if he calls out the militia, as he has been repeatedly petitioned to do. It says: "He need not fear evil to himself or his party. Union labor has declared its enmity to law-breakers. Union labor, like every other class of citizens, admires vigor and boldness." The *Washington Times* (Dem.) censures the governor severely for his failure to call out the militia or take some other effective method of restoring order. It says:

"The great majority of the people of Missouri are Democrats. They owe it to their party, no less than to their homes and country, to repudiate the cowardly, cheese-paring Stephens. They should lose no time in calling mass-meetings all over the State to protest against the disgrace to which they are being subjected before the astonished gaze of the nation by their small-souled governor. This method undoubtedly would stir him to the performance of his duty. Men of his caliber are amenable to the expressed wishes of large bodies of people. By his cowardly course Stephens has shown that he is especially amenable to such expressions. The howls of the mob have frightened him into inactivity. The protest of the masses—with whom, we dare say, he is extremely anxious to be 'popular'—would embolden him to imitate the conduct of a courageous, high-minded man. It would

be still better if he could be impeached and deposed—better for St. Louis, for Missouri, for the nation, and for the Democratic Party."

THE PROPOSED INDEPENDENT DEMOCRATIC PARTY.

THE call for a meeting of the executive committee of the National Democratic Party, otherwise known as the Gold Democratic Party, whose standard-bearers in 1896 were Palmer and Buckner, is arousing interest. It is thought probable that the committee may call a convention to meet in Indianapolis on July 25 to build a party platform and name candidates. The *Boston Transcript* (Rep.) regards this movement with apprehension, and observes that "as many an election has been decided by third-party movements, the managers of the old parties will do well to see to it that the balance of power is not thus carried away from them." General Buckner, who was interviewed in New York last week, said that his party is "stronger, if anything," than it was in 1896, for "while it is true that some who voted for us or for Mr. McKinley have returned to the Democratic fold, we have gained many recruits. We fought for a principle in 1896 and are prepared to make another struggle, if necessary."

Perhaps the most interesting feature of the movement at this time is the attitude toward it taken by the independent papers which find neither McKinley nor Bryan all that they desire. Thus the *New York Evening Post* (Ind.), which can not indorse Mr. McKinley's Philippine policy nor Mr. Bryan's silver policy, declares that the third-party movement "is a note of encouragement to all independent voters," and that "those whose views on the subject of imperialism prevent them from voting for McKinley, and whose opposition to the vagaries of Bryan deters them from supporting him, will hail it with satisfaction, since it promises to give them something positive to work for, instead of leaving them in a merely negative attitude. The *Baltimore News* (Ind. Dem.) also thinks that a standard is needed to which conservative Democrats can rally; and the *Richmond Times* (Ind. Dem.), while declaring that "if the Kansas City convention adopts a platform which a true Democrat can approve of, he must vote for its nominee, even tho that nominee be William J. Bryan," says, however: "If the Kansas City convention should promulgate such a platform as that promulgated by the Chicago convention of 1896, the Gold Democrats would be perfectly consistent in promulgating the Indianapolis platform and nominating two true and tried Democrats to stand upon it." The *Baltimore American* (Rep.), altho disagreeing with these Independent Democrats in matters of political faith, admires them for their independence, and says that "for these men to accept in 1900 what they rejected in 1896 would be for them to stultify themselves ingloriously." It goes on:

"The die is already cast, and the candidate and principles that will issue from Kansas City will be identical with the products of four years ago. Some of the viciousness of the Chicago platform may be submerged for political effect, but the nomination of Bryan will be equivalent to a formal reassertion of the Populist fallacies, run rampant, which drove thousands from the Democratic Party in 1896. This being true, not one of these men can, in consistency with his own honor and his conception of what is right, refuse to do now as he did four years ago, and there is gratification in the knowledge that, like true patriots, they still possess the courage of their deepest political convictions."

Several Gold Democratic papers are lining up with the two old parties. The *New York World*, for example, has declared for Bryan, and the *Brooklyn Eagle*, which indorses the Republican expansion and currency policies, advises the third-party managers "to consider what warrant they have, from old questions, to put a ticket in the field; what will be the effect of an assumption on their part that they have a warrant from new questions

to put one in the field; and how many voters they can carry with them, in case they should conclude to declare against our country and for the friends or apologists here of the enemies of our land in insurgent quarters." The *Louisville Courier-Journal* (Dem.), which supported Palmer and Buckner in 1896, tells of its return to the Democratic camp in the following frank fashion: "There were two courses open to *The Courier-Journal*: either to go straight into the Republican camp, or to fall back into its own camp. It had described the Republicans as the organized rascality, the Democrats as the organized folly of the time. It had declared that in a choice between the fools and the knaves it would go with the fools. And there it is to-day."

Of the Republican papers, the *New York Sun* (Rep.) declares that the movement "is of no practical political significance or importance, save so far as the running of candidates by that faction might prove indirectly beneficial to Bryan," and the *Chicago Times-Herald* (Rep.) says that if the movement this year gains any more votes than it had in 1896, the additional support "will come from the Gold Democrats who cast their ballots for McKinley at the last election, and it will simply help to improve Bryan's chances. Is that what the national committee of the National Democratic Party is driving at?" The *Brooklyn Times* (Rep.) recalls the size of their vote in 1896 (133,148 in a total of 1,923,097), and says that "the Republican Party should be entirely indifferent to what these gentlemen finally conclude to do."

ARE LABOR ORGANIZATIONS A MENACE TO GOVERNMENT?

TWO bitter attacks upon trade-unions, from widely different sources, have recently attracted some attention. One wing of the Socialist Labor Party, in convention in New York City, declares that the non-political trade-unions of to-day, organized by such men as Gompers and Powderly, are simply the allies of plutocracy; and a resolution was passed to the effect that "every member of the Socialist Labor Party who is an officer in a pure and simple British style trade-union shall either resign his office in the union or be expelled from the Socialist Labor Party."

An attack of a very different kind is made by Mr. N. F. Thompson, of Huntsville, Ala., secretary of the Southern Industrial Convention, who in testifying before the Industrial Commission in Washington, maintained that "labor organizations are to-day the greatest menace to this Government that exists inside or outside the pale of our national domain." He further contended that "their influence for disruption and disorganization of society is far more dangerous to the perpetuation of our Government in its purity and power than would be the hostile array on our borders of the armies of the entire world combined." He said:

"That such a menace is real and not imaginary, the most casual investigation of existing tendencies among the laboring classes will show. On every hand and for the slightest provocation all classes of organized labor stand ready to inaugurate a strike, with all its attendant evils, or to place a boycott for the purpose of destroying the business of some one against whom their enmity has been invoked."

Mr. Thompson's views seem to elicit but little favorable comment as yet, tho there are some conservative papers which declare that the view is "a pretty accurate one." The *New York Evening Post* says that his facts and reasons are "quite sufficient to warrant the conclusion that the real crisis of the country is not in the East Indies or the West Indies, but 'in our midst,' and that in reaching out to seize foreign countries, and to introduce civilization and suppress evils among distant 'savages,' we are wasting time, money, and blood which might better be spent in finding a remedy for greater evils at home."

On the other hand, the *Chicago Chronicle* says: "Labor or-

ganizations are beneficent, not to say necessary, where they exist for proper purposes and employ proper methods, and this they are sure to do in the end as a result of discussion, education, and, it may be, occasional collision with the bed-rock of the country as represented by government." With this view the *Detroit Evening News* agrees, asking: "Are these crude, vehement, earnest organizations much more awkward in arriving at their ends than the great powers of the earth? Are they any more unreasonable or exacting? Let Mr. Thompson look about him for a while and ponder."

WHAT THE NEWSPAPERS SAY ABOUT MAYOR VAN WYCK.

THE sensational facts brought to light during the investigation of the affairs of the American Ice Company in New York City have been such as to call forth indignant editorial comment throughout the country. The books of the company, when made public, revealed the fact that large blocks of stock were held by city officials of all ranks, from the mayor down. Says the *Chicago Tribune* (Rep.):

"The scheme of the trust did not stop merely with enrolling the city bosses and the mayor on the stock-books. It reached out

A CHILLY RIDE TO KANSAS CITY.

—The Minneapolis Tribune.

and took in men of power in almost every official quarter in the State. The list runs the whole gamut of official life, legislative, judicial, and executive. Besides the familiar names of the Van Wyck brothers, Croker, Carroll, and all the dock commissioners, it shows that almost a dozen justices of the state supreme court became small stockholders, doubtless by purchase as investments on the advice of politicians. Justice McLaughlin of the court of appeals, the highest tribunal in the State; Corporation Counsel Whalen, the only city official who could be looked to as a safeguard against the acts of a corrupt mayor; and Justice Patterson of the appellate division of the supreme court, all are owners of stock. So are the president of the city council, the commissioner of public buildings, the Democratic leader of Kings County, and many smaller officials."

The testimony of Mayor Van Wyck before the court established the fact that he is a stockholder in the company, a fact which, however, he refused to consider as incriminating. His testimony as to the means by which he acquired the stock is thus summarized in several papers:

Acquired 5,000 shares ice stock, par value.....	\$500,000
"Rock bottom" price alleged to have been paid for them....	250,000
Expected to draw dividends at rate of 10 per cent., or a yearly income of.....	25,000
Borrowed money from the trust to pay for his stock at 6 per cent., a yearly outgo of.....	15,000
Anticipated yearly profit, outside any increase in value of stock.....	10,000
In less than eight years at that rate his stock would have cost him.....	Nothing

It is charged by the accusers of the mayor that in return for these financial privileges he vetoed dock bills which would have been detrimental to the interests of the ice trust. He has also been assailed on the ground that the law forbids any officer of a

municipal corporation to own stock in a company which has direct dealings with the city treasury. Governor Roosevelt is now considering petitions for the mayor's removal on these grounds.

The metropolitan newspapers which have been most active in the crusade against the mayor are Democratic. Indeed, the Democratic press is even more severe than the Republican in condemning the "Tammany plunderers." The *New York Evening Journal* (Dem.) says: "If ever a man earned the contempt of his fellow men, this disgraceful mayor has earned it." The *New York World* (Dem.) says: "His unfaithfulness to his official trust and his unfitness for his office have been shown beyond controversy." The *New York Sun* (Rep.) advises caution in taking action on this matter, and says: "Surmises of wrongdoing are readily indulged in, however, in these days of easy suspicion against public officers, but they should not be allowed to take the place of evidence"; and the *New York Evening Post* also counsels caution. The *Philadelphia Evening Bulletin* (Rep.) affirms that "an official who would thus use the advantages of his position for the purpose of increasing his private fortune is morally unfit to be the mayor of a great American city," and the *Chicago Times-Herald* (Rep.) says: "The revelation of Mayor Van Wyck's complicity in a conspiracy to place New York in the grip of an ice monopoly for his own profit and for the profit of Tammany officials is the most shameful chapter in the history of municipal maladministration in this country." The *Springfield Republican* (Ind.) compares Mayor Van Wyck with Mayor Ashbridge, of Philadelphia, styling them "a precious pair of mayors," who "should be coupled together." "It is likely," says *The Republican*, "that Philadelphia would prove to be, on inspection, a rottener town than New York, and that Ashbridge could give Van Wyck points in betraying the public interests; but there is small choice between them." The *Houston Daily Post* (Dem.) condemns in strongest terms the "licensed rapacity" of the ice trust, and praises the Democratic newspapers that have not hesitated "to expose Democratic and Republican officials alike who connive in schemes of vandalism and open the way to the impoverishment of the masses."

SHALL THE CONGRESSIONAL REPRESENTATION OF THE SOUTH BE DIMINISHED?

MANY Republican papers are suggesting that the size of the representation of the Southern States in Congress and in the Electoral College be diminished to correspond to the decrease of the number entitled to vote in those States by reason of the enactments that bar a large number of the negroes from the polls. Perhaps the strongest argument that has appeared for this radical movement is set forth by the *New York Tribune* (Rep.) in a statistical article from its Washington correspondent, showing the comparative sizes of the white and negro population in the Southern States, the small vote cast, and the large representation in Congress. As regards population he says:

"In 1890 the total black population of the Union was 7,638,360. Of this total 6,839,277 were in the late slave States and the District of Columbia. In the District, which has no representation, there were 75,697 blacks. The black population of the border States, usually included in the term 'South' as covering the late slave section, is not large, as the following figures prove:

Delaware.....	88,427	Missouri.....	150,726
Maryland.....	215,897		
West Virginia.....	32,717	Total, six States..	695,940
Kentucky.....	268,173	Mississippi alone.....	744,749

"It will be seen that there are more colored people in the small State of Mississippi alone than in the entire half-dozen border States. Georgia has a negro population of 858,996, or 164,056 in excess of all the border States. The white and black population

of the remaining eleven Southern States, the South proper, as found in the census of 1890, was as follows:

State.	Whites.	Blacks.
Virginia.....	1,020,122	535,858
North Carolina.....	1,015,382	562,365
South Carolina.....	469,008	582,241
Georgia.....	575,057	658,996
Florida.....	254,991	166,473
Alabama.....	513,710	672,399
Mississippi.....	544,851	744,749
Louisiana.....	555,396	560,192
Texas.....	1,743,511	480,558
Arkansas.....	515,352	294,477
Tennessee.....	1,376,537	430,881
Totals.....	16,579,107	8,112,169

"Thus about two fifths—nearly one half—of the total population of the South is black. Under the 'Mississippi plan' this vast colored citizenship is mainly disfranchised, and it is obviously intended that ultimately it shall be wholly so. The project for new 'constitutions' in Virginia and North Carolina has for its sole object the adoption of so-called legal forms for the suppression of the mass of the black vote. Hence in the above tabulation the border States are excluded, because in all of them the negroes are left measurably free to vote, and they are generally out in full strength."

By the new Southern plan of demanding an educational or property qualification for the franchise, admitting, however, all descendants of those who voted before 1860, practically all the negroes in Mississippi, South Carolina, and Louisiana have been barred from the polls, and those of North Carolina, Virginia, and Alabama seem likely to encounter a similar obstacle within a year. This reduces the vote tremendously, many election districts in Louisiana with populations of from 500 to 2,000 polling only from one to seven votes in the election in April. Yet the representation in Congress and the number of electors in the Electoral College which chooses the President and Vice-President remain the same. This correspondent figures that the eleven States of the South now have ninety members in the House and ninety in the Electoral College, whereas they are entitled to only fifty-five in each. "A little figuring," he says, "proves that the average aggregate vote cast for Congressmen in all the districts of the six Northern States of California, Kansas, Missouri, Ohio, New York, and New Jersey is 37,200, and this is about the average in all the thirty-four States of the North, including the five border States mentioned above." Instead of 37,200 being the average for each district in the following Southern States, however, he finds it to be nearer 5,000, as shown by the following table:

	Total Vote.	Average for Each District.
Arkansas.....	36,920	445
Georgia.....	65,791	597
Louisiana.....	77,990	430
Mississippi.....	75,124	382
South Carolina.....	36,771	432

He then draws the following striking comparisons:

"These five Southern States, casting an aggregate of only 184,602 votes at the election of 1898, sent up thirty-seven Congressmen. The imperial State of New York, which cast more than 1,250,000 votes, has only thirty-four Representatives. The Democratic State of Missouri, which cast 550,000 ballots in 1898, has only fifteen Representatives. Kansas, which cast 285,000 votes, more than 100,000 in excess of the aggregate vote of the five Southern States named, has only seven Congressmen, against their thirty-seven."

"On the vote they cast, the five States of Alabama, Georgia, Louisiana, Mississippi, and South Carolina would be entitled to precisely five Representatives in Congress, that is, on the average of 37,000 votes a district, as shown through the other portions of the Union where there is no obstruction to the free exercise of the elective franchise. Nebraska cast 185,000 votes for Congressmen in 1898; she has six Representatives. That is almost precisely the total vote of the five States ruled by the 'Mississippi plan,' and they would be entitled to six Representatives on the same ratio, an additional one for the extraordinary vote of

Georgia, 65,751, a major fraction over the average for a single Representative. The others all fall below the average requirement for a Representative."

AGAIN THE ARMY CANTEEN.

THE resolutions of the Methodist General Conference, the Presbyterian General Assembly, the Friends' Yearly Meeting in Philadelphia, and the Baptist Home Missionary Society, condemning the army canteen, have had the effect of bringing this subject once more to the front. Two years ago Congress passed an anti-canteen law; but it was so construed by the Attorney-General as to miss entirely the object of those who had urged its enactment. An effort was made in the recent session of Congress to pass another and more stringent law, but the mat-

UNCLE SAM: "I think if I take them away from you both, I'll get better results."
—The Minneapolis Journal.

ter was turned over to a congressional committee, and it is thought likely that it will remain shelved.

The New Voice (Chicago), the leading Prohibition organ, is carrying on an aggressive campaign against the canteen. It says:

"The attempt to rehabilitate the canteen and to delude the public into the idea that it is a beneficent institution hardly needs a line of refutation. The drunkenness and debauchery that have followed that institution everywhere, the undisguisable fact that it does not accomplish a single one of the results claimed for it by its friends; the concurrent testimony of such officers as Howard, Henry, Wheeler, Sternberg, and Shafter against it—all these things are too much matters of public knowledge for these late-day defenses of the army saloon to succeed in deceiving the people.

"The stand taken by the War Department merely shows that the Administration has determined to call 'evil, good' and 'good, evil' and to risk its fate upon that issue, evidently in the belief that it can either deceive the Christian public or that the Christian public cares so little for its professed convictions that its vote can be had for the Expander, any way."

On the other hand, the military journals are equally emphatic in maintaining that the canteens are a bulwark of sobriety, because they tend to keep the soldiers out of the low grogeries and saloons. *The Army and Navy Register* (Washington) declares:

"Against the theories and pet notions of a band of Prohibitionists is weighed the opinion of reputable officers, commissioned and non-commissioned, of the army, and the opinions of their wives, who may be trusted to be quite as honest and thoughtful

of the welfare of the soldier as any band of total abstainers. In the batch of letters submitted to Congress by the War Department on this subject, 908 commanding officers and non-commissioned officers out of 1,000 whose opinions are contained therein say that it has improved the discipline of the army; 739 that it has decreased desertions; 825 that it has lessened the number of trials by courts martial for petty offenses; 906 that it has lessened drunkenness, and 908 that the selling of beer on the posts prevents men from going outside to procure whisky and other strong intoxicants."

Some interesting testimony on the general subject of the value of abstinence from intoxicating liquors for soldiers was furnished at the recent annual meeting of the Army Temperance Association in London. Sir George White, the defender of Ladysmith, who succeeded Lord Roberts as president of the association, was in the chair. The following account is from an editorial in the *New York Evening Post*:

"Gen. Sir George White in his speech said that during his experience as a commander in India he had been 'struck by the marvelously greater number of offenders among men who took liquor than the number among those who did not.' He expressed the belief that one third of the 70,000 British soldiers in India are total abstainers. A letter was read from Lord Roberts, written at Bloemfontein on the 19th of April, in which he said that he supposed there never was a more temperate army than that which marched under his command from the Modder River to Bloemfontein, and added: 'I believe that nothing but good can result from so many soldiers from all parts of the empire being brought together in an arduous campaign, when they see how splendidly our temperance men have borne up against the many difficulties and dangers which they have had to face.'"

"'Temperance-rooms' in barracks received the hearty indorsement of the association. Such rooms have been provided throughout India, and General White bore witness that the result had been 'immense benefit to the forces.' He declared himself thoroughly in accord with the suggestion that the Government should provide temperance-rooms in all barracks. . . . The best weapon for fighting the *ennui* which contributes so largely to immoderate drinking is the provision of agreeable quarters where soldiers can have a good time without recourse to either the outside saloon or an army canteen."

OUR NEW PROSPERITY.

AN idea of the prosperity the nation is now enjoying may be gained from Mr. Ray Stannard Baker's new book, "The New Prosperity," into which he has gathered a sheaf of figures and facts showing the tremendous increase in business in the United States in the past few years. Between 1897 and 1900 European banks of issue gained \$4,000,000 in gold, going from \$1,591,000,000 to \$1,595,000,000. In the same period the United States showed a gain from \$693,000,000 to \$1,016,000,000. The savings-banks statistics showed that whereas the average individual deposit in 1894 was \$369, in 1899 it was \$419. It is interesting to note from Mr. Baker's figures how quickly the unusual prosperity of the country is reflected in the charitable gifts of the wealthy people of the land. For instance, in 1898, Americans gave \$23,984,900; in 1899 the total charitable gifts amounted to \$79,749,956. As it might be expected, the use of luxuries increased among Americans at a tremendously rapid rate along with the advance of good times. A curious instance of this is seen in Mr. Baker's investigation of the piano trade. He found that in the nine States of the Northwest more pianos were sold in six months of 1899 than during the entire previous six years. In the diamond trade he shows that 1897 brought \$2,000,000 worth of diamonds into the country; 1898, \$7,000,000; and in 1899 no less than \$12,175,550.

The general prosperity extends to some unexpected phenomena. For instance, owing to the larger business between the small buyers and the retail stores, the American people were using

\$11,000,000 more of dimes, quarters, and half-dollars in September, 1899, than they had been using in September, 1897. The postal business is not behind in its rapid extension. For the year ending June 30, 1899, 7,000,000 more money orders were issued than in the year 1895, the increased amount coming to \$55,000,000, and the average amount per order had been increased from \$7 to \$7.40.

More curious still, reports from various States show that crime everywhere decreased. Take, for instance, the showing in the single State of Illinois. For the year ending September 30, 1895, during the hard times, 927 convicts were sent to the state penitentiary. In the year ending September 30, 1899, the number was only 506, or hardly more than half. The decrease, he declares, was unquestionably due to lessened idleness. The army of unemployed is no longer an army and no longer unemployed; and there is in consequence less drunkenness and less tendency to crime. Prosperity also brings with it a feeling of hope, and it is now easier to earn a living than to steal it.

TOPICS IN BRIEF.

LIVES of great men all remind us how few of them get into Congress.—*The Philadelphia Ledger*.

THE "open-door" question is gravitating toward a proposition to take the door off its hinges.—*The Chicago Journal*.

A CHICAGO scientist explains that his eclipse pictures were failed, not because the moon moved.—*The Baltimore American*.

LETTERS AND ART.

STEPHEN CRANE: A "WONDERFUL BOY."

THE death of Mr. Stephen Crane, while yet barely thirty, is widely regarded as a serious loss to American literature, one which it can ill afford. Mr. Crane, who had for some time past resided in Surrey, England, had been critically ill for some months previous to his death and had lately been taken to Baden to obtain the benefit of the waters. His best known works are: "Maggie: A Girl of the Streets"; "The Red Badge of Courage"; "The Little Regiment"; "The Black Riders";

THE LATE STEPHEN CRANE.

"War Is Kind"; "The Open Boat"; "The Third Violet"; "George's Mother"; and "Active Service." In three somewhat widely separated lines of fiction—stories of slum-life (especially of the demi-monde), war stories, and tales about boy-life—Mr. Crane attained notable success. By many critics it is doubted whether any one has ever got nearer the spirit of the boy of today than has Stephen Crane in these latter

tales, altho' his fame has been founded more upon his stories of low-life and of war. Whether his fame would ever have reached a higher level is open to doubt, and perhaps critical opinion largely leans to the judgment that his artistic attainment would never have been able to go beyond the extremely clever but impressionistic word-painting of the work already produced by him.

Mr. Crane came honestly by his love of military life. One paternal grandfather was colonel of the Sixth New Jersey Infantry during the Revolution, and ranking major-general of the regular army at the time of his death; while a younger brother of this officer was ranking commodore of the navy—at that time the highest American naval rank. Mr. Crane, in a letter written to the editor of the *Rochester Post-Express* a few weeks ago, gives the following account of his boyhood and early journalistic career:

"My father was a Methodist minister, author of numerous works of theology, and an editor of various periodicals of the church. He was a graduate of Princeton, and he was a great, fine, simple mind. As for myself, I went to Lafayette College, but did not graduate. I found mining-engineering not at all to my taste. I preferred baseball. Later I attended Syracuse University, where I attempted to study literature, but found baseball again much more to my taste. My first work in fiction was for the *New York Tribune*, when I was about eighteen years old. During this time, one story of the series went into *The Cosmopolitan*. At the age of twenty I wrote my first novel—'Maggie.' It never really got on the market, but it made for me the friendship of William Dean Howells and Hamlin Garland, and since that time I have never been conscious for an instant that those friendships have at all diminished. After completing 'Maggie,' I wrote mainly for the *New York Press* and for *The Arena*. In the latter part of my twenty-first year I began 'The Red Badge of Courage,' and completed it early in my twenty-second year.

The year following I wrote the poems contained in the volume known as 'The Black Riders.' On the first day of last November I was precisely twenty-nine years old and had finished my fifth novel, 'Active Service.' I have only one pride, and that is that the English edition of 'The Red Badge of Courage' has been received with great praise by the English reviewers. I am proud of this simply because the remoter people would seem more just and harder to win."

In another letter to the same gentleman Mr. Crane touches on his literary philosophy. He writes:

"The one thing that deeply pleases me is the fact that men of sense invariably believe me to be sincere. I know that my work does not amount to a string of dried beans—I always calmly admit it—but I also know that I do the best that is in me without regard to praise or blame. When I was the mark for every humorist in the country, I went ahead; and now when I am the mark for only fifty per cent. of the humorists of the country, I go ahead; for I understand that a man is born into the world with his own pair of eyes, and he is not at all responsible for his vision—he is merely responsible for his quality of personal honesty. To keep close to this personal honesty is my supreme ambition. There is a sublime egotism in talking of honesty. I, however, do not say that I am honest. I merely say that I am as nearly honest as a weak mental machinery will allow. This aim in life struck me as being the only thing worth while. A man is sure to fail at it, but there is something in the failure."

The *New York Evening Post* says:

"Mr. Crane's mental attitude was that of one for whom there were to be no surprises. His confidence in himself was thorough. His belief in the excellence of his work was complete, but not often expressed; and toward the last he frequently made light of the early style in which he placed too much dependence upon adjectives of color, and in some stories of child life (commenced on board a despatch-boat in the Santiago blockade) he was trying for that finish and nicer use of language which his critics had said he lacked. Notwithstanding a kind of shyness of manner, he was always self-possessed. In the matter of social conduct, few conventions were permitted to interfere with what he felt inclined to do; and as war correspondent, on the top of the encircled hill at Guantanamo and in the field before Santiago, he showed absolute fearlessness of danger."

The *Rochester Democrat and Chronicle* draws some interesting lessons for literary aspirants from Mr. Crane's career:

"In seeking to gather from what Stephen Crane has done indications of what he might have done, had he lived, it is necessary to take into account his youth and his handicaps. He was only a boy when he began to write. He undertook 'The Red Badge of Courage' before he was twenty-one. He was little more than a boy when death stopped his writing forever. He started upon his literary career with no equipment but such literary powers as nature had given him. He had not even the technical equipment that common scholarship gives to a writer. 'The Red Badge of Courage' shows that, at the age of twenty-one, he could never be sure whether or not he was writing commonly correct English. It also shows that he then lacked literary good taste and discrimination. He had to learn as he went along. During all his literary career he seems never to have been free from the necessity of doing a great deal of hack work. For months past he had been suffering from a lingering and enervating disease. His working days were few and far from free of distractions. And yet he wrote 'The Open Boat' and 'The Monster.'"

The Omar Khayyám Fad.—Intellectual England, says Edgar Fawcett, is forever indulging in a fad. Once it was a fad for certain German novelists—especially Auerbach and Spielhagen. Then the Russians had their day—Turgeneff and Tolstoy. Then came the "passionate Browning craze," lasting nearly two decades. Then followed in turn the "Ibsen fanaticism," the "Maeterlinck fever," and the "frantic rhapsodies" aroused by George Meredith. All these fads are dead or dying, says Mr. Fawcett, and the Omar Khayyám fad at present pre-

vails. It also should find an early death, and Omar should be placed where he belongs—"among the wanton flippancies of a materialism crude as savagery itself." Nowhere has the hypocrisy of English ethics, we are told, been more clearly seen than in this fad, and Mr. Fawcett proceeds as follows (*The Journal*, New York) to describe the philosophy of the "Rubáiyát".

"Omar was not only a religious infidel, but he was a sensualist at whom Epicurus, not to mention Horace, would have shuddered. Yet he has been made the fashion, and that is enough for people to bow before him in silliest reverence. The professed lovers of Omar include Episcopalians, Roman Catholics—Christians of almost every type. Ingersoll, that noble and honest thinker, never dreamed of such ruffian heterodoxy as this Persian *bon vivant* has literally reeled off by the yard, nor did the great dead agnostic whom I have just named ever once descend to the shallowness of Omar's utterance. It is all, when regarded seriously, the most pitiable stuff. Commonplace is no word for it, since it merely decorates the obvious in wine-drenched garlands and tawdry spangles. 'Eat and drink, for to-morrow you die,' does not express its dull grossness. 'Get drunk as often as you can, and stay so as long as you can, for there's nothing in life half so profitable,' sounds its true note."

ONE OF SPAIN'S GREATEST PAINTERS.

SPAIN has lost her colonies, but her artistic and literary glories are imperishable, and her pride in them quickens as her military power wanes. A few days ago, the remains of four of her celebrated sons whose bodies have been lying in other than

FRANCISCO GOYA.

Spanish soil were brought back to Madrid and reinterred amid ceremonies attended by representatives of the Queen, the national government, the municipal government, and the Academy, as well as by a numerous populace. Those who were thus honored were Donose Cortés, the political writer and diplomat; Moratin, the playwright; Meléndez Valdés, the poet; and, greatest of all, Goya, the painter. *The Ilustracion Española y Americana* (Madrid) devotes the greater part of its latest number to a description of the ceremonies and of the lives thus commemorated,

and an exhibition of Goya's paintings has since been inaugurated in the building of the Madrid Board of Education.

One of the most satisfactory accounts of Goya's life and work appeared in *The Idler* (London) several months ago, from which we take the following data.

Francisco Goya y Lucientes was born in Arragon in 1746, the son of a peasant-farmer. He studied in the studio of Lujan, a well-known artist, in Saragossa; but his amours and his fiery temper led the young student into sore trouble. He was found one night with a dangerous wound in his back, and thought it advisable to escape further danger by flying the country and taking up his abode in Rome, then the Mecca of all artists. To pay the expenses of travel, he entered the profession of bull-fighting, and from this derived an experience which bore golden fruit later in the series of etchings known as the "Tauromaquia"—bold, passionate delineations of the national sport.

His studies in Rome were of a contemplative nature, most of his time being spent in the galleries. Upon his return to Madrid his fame as a portrait painter was soon made, and his studio was literally besieged. His personality was almost as famous as his art. His ready wit and general attractiveness made him a welcome guest in the houses of the most exclusive aristocracy of Europe, and his reputation for adventurous deeds of gallantry, his bravery and skill in the handling of the rapier, helped to make him the idol of the populace.

He was appointed court-painter, and the way in which he alone was allowed to break the strict rules of court etiquette indicates one phase of his daring character. Being refused admission to the levée on a day of deep mourning, because he appeared in white silk stockings, he asked for pen and ink, and within a few minutes had sketched on the objectionable stockings a number of caricatures of court dignitaries. Then, forcing his way into the reception-rooms, he was called before the King and Queen, who laughingly examined his costume and readily closed their eyes to a breach of good manners which would have meant disgrace to anybody else.

Critical opinion on Goya's artistic work is widely divergent. He has even been compared with Velasquez, and by some his etchings have been rated higher than those of Rembrandt.

But his importance, thinks *The Idler* writer, does not lie so much in the actual performance of his brush as in his principles and methods, wherein lay the germ of modern art. For Goya was the first who, in accordance with the principles of our impressionist school, revolted against the prevalence of line. Light and shade were all-important to him. His etchings are divided into four series: the "Tauromaquia," the "Caprices," the "Proverbs," and the "Disasters of War."

A plebeian courtier; a bitter satirist of human passions and misdeeds, who himself knew no restraint in pursuit of pleasure; an ungrateful, unjust lover of justice; a good husband who was ever faithless to his wedded wife; a loiterer with whom the impulse of work amounted almost to a rage; an ardent admirer of the old masters, yet defying all their rules of art; a pupil, so to speak, of the classics, who became the father of modernity; a deaf musician; a painter of religious pictures and church decorations who scoffed at religious faith—such is the contradictory character presented to the world by Francisco Goya y Lucientes.

Dr. Brandes's Tribute to Paul Heyse.—Upon his return from an extended tour in Germany, Dr. Georg Brandes, the celebrated literary critic of Denmark, writes (in *Politiken*) a sketch of his friend, Paul Heyse, the German poet. Tho Heyse is in his seventieth year, his dark, wavy hair, we are told, has not turned gray. His collected works number twenty-nine volumes, but his productive power is unabated. In German literature, he is, in Dr. Brandes's judgment, undoubtedly the most artistically developed of the older poets and writers. Dr. Brandes speaks in strong terms of Heyse's literary influence upon Denmark, and writes thus of his own personal indebtedness:

"I first learned to know Paul Heyse personally at a time—in

1872—when, attacked, it appeared, by every pen in the kingdom, I found myself in danger of dropping into warfare in defense of my ideals, and when such a policy would only have been loss of time, patience, and strength. The perfect equipoise of his exuberant mind, the quiet, masterful way of his thinking, his wholesome trust in sincere ideals, his imperturbable, faithful worship of and joy in the Beautiful, in fact the encompassing range of his philosophy of human life—these were the superior forces and gifts which I found in Heyse, and which enabled him to rehabilitate my faith in man at a time when I thought I had lost it. Aside from this beneficial influence, the mere charm of his personal friendship proved a godsend to me. Never have I known a man who possessed such a measure of charm with such admirable control of manner, never would I have believed that such a quality of refinement was possible in a man in whom I looked in vain for any trace of the genuine. His passionate appeal in favor of cancelling the lex Heinze enactment [establishing a literary and artistic censorship in Germany], which at present threatens to gag and stifle the expressions of liberal thinking men in Germany, shows that he is still, in this month of his seventieth birthday, as eager and ready for the fray as ever.”—*Translation made for THE LITERARY DIGEST.*

THE HISTORIC ATMOSPHERE.

WHEN an author writes an historical novel, and also writes a critique on what the historical novel should be, there is an added interest in the latter attempt because we can apply to the author his own principles of criticism. Previously to the ap-

pearance of "Janice Meredith,"

Paul Leicester Ford wrote for *The Atlantic Monthly* an article dealing with the elements that make a true American historical novel; now comes Charles Major ("Edward Caskoden"), author of "When Knighthood was in Flower," who discusses in *Scribner's* (June) "the historic atmosphere," which he defines briefly as "the application of realism to historical

MR. CHARLES MAJOR.

fiction." Few persons, argues Mr. Major, go below the surface in reading history, and therefore they are ignorant of the original sources found in chronicles, memoirs, and letters, where the essential life of the period and of the people is revealed. He says:

"If history is to be treated as a science and not as a mere entertaining array of facts, it should be studied from the lower classes upward—not from the top downward. If there is a science of history—and certainly there is—it is but another name for the science of human conduct. If that science has progressed slowly up to the present time, it is because those who have left us the meager historic record that we possess, wishing to glorify kings and mighty personages, have given us only a poor fragment of what was done by the swarming thousands of humanity in bygone days. The source from which facts may be gleaned whereon to base the principles of such a science is the people, who, as individuals, are the medium through which its laws must act; whose composite motives, culminating in national movements, are the net results."

Therefore to find the heart of what people thought and did, we must dig down to the level of every-day life, when the cause, the motives, may be seen as finally culminating in the effect or the historical fact. The small incidents in history do more to give us the historic atmosphere, Mr. Major writes, than acts of parliament and pedigrees of the nobility. When we learn that a wealthy nobleman owned but one feather-bed, which he took with him on his travels and bequeathed in a separate clause of his will; when we learn that a nobleman's relative traveled many miles to claim an iron cooking-pot which was his when the nobleman died, we get some appreciation of what the historian's material is, and of what makes the historic atmosphere.

Having defined the historic atmosphere, Mr. Major continues:

"It can not be created by merely reciting historical facts of the period, unless those facts are essentially incident to the time in which they occurred and probably would not occur in any other time. To select such facts with accuracy, an author should intimately know the conditions of all periods in order to assure himself that the facts which he uses to impart the color of the particular period of which he writes belong to no other period. Few persons have a knowledge so exhaustive; and it follows that one who relies upon a judicious sprinkling of historical facts through his pages to give verisimilitude to his narrative, however interesting those facts may be, will be apt to fail of his purpose, by giving to the time of which he treats an atmosphere that might belong to a dozen other periods. I do not mean that a fact which might have belonged to several periods should never be used in an historical romance, but that it is out of place if used for the sole purpose of imparting atmosphere."

Another method, many authors think, of obtaining historical atmosphere is by the use of the language of the period; but here a danger arises, in the injudicious display of old-time phrases. To scatter words belonging to the "methinks" class throughout the story gives a falseness of tone which is sure to mislead the reader. "The language was not *real* and could not create *realism*."

Great care must be used when referring to chronicles, for errors often exist, due to party prejudice. But Mr. Major reiterates that the true source of history is found in such manuscripts. He says:

"Again, St. Simon gives us many volumes detailing the ceremonious mode of life in the palaces of Louis XIV. and XV., and shows us a condition of affairs that even able-bodied men could not have endured for long. If we are to believe St. Simon, neither Louis XIV. nor Louis XV. could have stooped to a trivial human act—they were always kingly. They were compelled to be kingly, for the rules of their court etiquette absolutely required it of them. Yet we find Louis XIV., at midnight, prowling about the palace in his night-cap, hunting a piece of cold chicken which he knew had been left from supper. The gossiping letters of the Princess Palatine d'Orléans, sister-in-law of Louis XIV., and the still more gossiping memoirs of Duclos, are much better sources from which to learn true court conditions than the elaborate six volumes of gouty old St. Simon. Du Barry's memoirs, which are painfully frank, are full of little facts concerning Louis XV. and his mode of life, which show us unmistakably that conditions existed which were the antithesis of those portrayed by the professional chroniclers of the time. The latter wrote of how matters should have been—of theories. Du Barry wrote of conditions. Henry the Great played leap-frog with his courtiers, and Henry III. found his chief amusement in toying with a return-ball. The Duke of Buckingham, favorite of James I., playfully called His Majesty 'Your Sowship.' And the chambermaids in Whitehall Palace addressed Charles II. familiarly as 'Rowley'—that being the name of a famous horse in the royal stables. Richelieu played 'horse,' and would gallop and trot around the billiard-table, neighing and kicking up his heels. If the latter fact is true, and for it we have fairly good authority, Bulwer has distorted the old cardinal in a way that is pitiable."

"Relative environments must have fostered those little facts, since little facts, quite as surely as great ones, must have prece-

dent conditions. One of those conditions was that kings of past ages were not always kingly, nor royal personages always royal, as our romancers would have us believe. They were quite as much men and women, and a great deal more children, than are we—a strange mixture of simplicity and pomp."

THE MUSICAL ARTIST AND THE MUSICAL MACHINE.

EVERYWHERE the inventor is encroaching upon the province of the artist. The preacher must contend with the stereopticon and the printing-press; the painter must compete with the camera and the lithographic stone; and now the musician, and more particularly the pianist, must "face the music" that issues from numerous self-playing instruments. Dr. Henry Hanchett, writing on this subject in *Music* (June), considers the proper attitude for the artist to assume toward these recent developments. He writes:

"Mechanism is inseparable from playing of instruments, and it is the mechanical part of his playing that demands the incessant practise that enters so largely into the pianist's life. Now comes the machine and offers to save him all that practise, all need of executing himself the mechanical part of his performance, while leaving him as free as ever in the matter of expression. The musician who only knows how it ought to sound without having the skill to make it sound so by manipulating the keys, may now stand on a par with the pianist who has spent hours daily for years in acquiring the technic necessary for that manipulation. On a par, did I say? Where is the pianist so accomplished that he can compete with the machine in either accuracy or velocity? And who can say that any of the qualities of playing in which the machine is inferior to the human pianist are more valuable than the accuracy and velocity in which it is superior? The machine can not apply expression differently to different notes that enter at the same instant. As it plays treble so it must play bass except as regards the duration of the sounds produced. That is admitted to be a serious defect; but it leaves a great range of expression still open to any one who can appreciate the hidden meaning of the composer and knows how to bring it out by the aid of the machine. The machine in tasteful hands not trained in the slightest degree to the technic of piano-playing can probably be made to approach more nearly to the work of the best artistic pianists than can the best chromo to the best painting; and, moreover, the machine can give upon the piano an approximate interpretation of an orchestral score such as no pianist can ever hope to rival for faithfulness or richness of tonal effect."

But music, Dr. Hanchett reminds us, is not the mere making of musical sounds; it is the expression of emotion and artistic ideas. And he adds:

"He only really knows the mind of the composer who absorbs his notes and interprets them by his own voice or fingers. Even the amateur who relies upon the machine finds himself impelled to go to the artist concert that he may there learn the true rendition of the pieces he would play from his perforated rolls. Not long ago it looked as if the silent-practise machine was about to drive the piano teacher from his field, since by the aid of the machine and its methodical use young girls were able to train embryo pianists in technic quite as well as experienced and high-priced teachers could do it; but the technic machine has simply given the artist teacher a better opportunity to do his legitimate work."

The Washington Irving House in New York.—Irving's country residence at Irvington-on-the-Hudson is familiar to all, partly perhaps because "Sunnyside" is the most picturesque of all American literary landmarks, both in situation and in its own quaint beauty. It is not so generally known, however, that on the very edge of New York's main shopping district a house still stands in which Irving lived for many years

—on the southwest corner of Irving Place and Seventeenth Street. In an interesting series of articles on "Historic Homes of New York" in *Truth* (March-April), Mr. Periton Maxwell writes:

"The Irving house was built, for the most part, after designs furnished by the author himself, which, in a measure, may account for its striking individuality and lack of conventionality. About the time the building was completed the name of the thoroughfare on which it fronted was changed to Irving Place. While the front of the house is on Irving Place, the entrance is on Seventeenth Street—another whim of the original occupant. Because he loved to sit in the large parlor, watching with unobstructed view the passing show, Irving would not have a stoop and door cut into the front wall. It is difficult for the modern New Yorker to realize that from this room the author of 'Rip Van Winkle' could watch the boats sail up and down the East River, and, along the road at the foot of the hill on which the house stood, see the coaches, vans, and drays of the awakening metropolis pass lazily along. After his return from Madrid, where he served as American Minister, Irving made his permanent abode at his country home 'Sunnyside,' on the Hudson, living there the year around. The author's city home, however, did not pass out of the hands of the Irving family until many years afterward."

An Illustrious Literary Pedigree.—During the early days of April, 1900, a boy was born in London who—when he learns to talk—can boast of more illustrious literary names to his pedigree than can probably any other person living. Of this *enfant intéressant*, *The Bookbuyer* (June) writes as follows:

"His great-great-grandfather was Lord Byron. Bulwer Lytton was his great-grandfather, while his two grandfathers, the late Lord Lytton ('Owen Meredith') and Mr. Wilfrid Scawen Blunt, are familiar to all readers of modern poetry. The child is the son of the Hon. Neville H. Lytton, who has just passed his majority and who married Miss Judith Blunt last year. The ceremony took place at Zeitoon in the desert, for Miss Blunt's father has a big farm there for breeding Arab horses, while Mr. Lytton has been on Lord Cromer's staff in Egypt. The child forms an interlude in the monotonous succession of women who are the descendants of Byron. The poet left only a daughter, Ada, who married Lord Lovelace. She left two sons (one of whom died unmarried) and a daughter. The second son, the present Lord Lovelace, has taken the greatest interest in Mr. Murray's fine edition of his grandfather's works. Curiously enough both he and his sister, Lady Ann Blunt, have each only a daughter."

NOTES.

It is rumored that S. Weir Mitchell will not allow "Hugh Wynne" to be dramatized, but that he has authorized Langdon Mitchell to make a play from "The Adventures of François."

A LITERARY find has been announced in the shape of a collection of manuscript letters from Tennyson and Arthur Hallam to W. H. Brookfield ("Old Brooks"), written in 1832-1833, shortly after Tennyson left Cambridge.

AMONG the actors and actresses already booked to appear next season in the dramatization of popular novels are Miss Mary Mannering in the title rôle of "Janice Meredith"; James K. Hackett in "Richard Carvel," and Miss Gertrude Bennett in "The Choir Invisible."

HISTORICAL research has brought to light many important facts connected with the storming of Story Point, which have been collected in an historical monograph by Prof. Henry Johnston of the College of the City of New York. Several hitherto unpublished letters of Washington's are used for the first time.

In the recent Shakespeare festival, the "Merchant of Venice" was given at the Memorial Theater, Stratford-on-Avon, with an added interest in Miss Marion Terry's appearance as *Portia*. The rendition of the part is said to have been as strong as that of her sister, Miss Ellen Terry, whose work in that rôle has become world-famous.

ONE of the results of the Cowper centenary is the contemplated formation of a Cowper Society at Olney. Says *The Westminster Gazette* (London): "It is proposed to ask Lord Cowper to be the president of the Society. A number of well-known literary men who are known to be admirers of Cowper are to be asked to take the office of vice-president. The society, after the fashion of the Brontë Society, will aim at a little beyond a modest subscription, which will be covered by a yearly pamphlet of transactions, containing matter of interest to all the admirers of the poet."

SCIENCE AND INVENTION.

LONG-DISTANCE TELEPHONY.

A DISCOVERY that may greatly increase the limits of successful telephony has been made by Prof. M. I. Pupin, of Columbia University. The investigations that led up to it have been carried on for several years, but the results were first made public at the recent meeting in Philadelphia of the American Institute of Electrical Engineers. The meaning and possible consequences of Professor Pupin's work are thus set forth by a correspondent of *The Sun* (New York, May 20):

"In the transmission of electrical energy over conducting wires where the distance between the receiving and transmitting points

is sufficiently great, such as is the case in long-distance telephoning and telegraphy, we have wave transmission, in which the term electrical wave implies that the energy which at any moment is stored up in the medium surrounding the transmission line is distributed periodically over the line. Now these electrical waves which are sent out from the transmitting apparatus have a certain wave-length, which in the case of an impressed electromotive force with a frequency of six hundred vibrations a

PROF. M. I. PUPIN, OF COLUMBIA UNIVERSITY.

second would be about eighteen miles. The waves traveling out from their source gradually lose their energy, and as they proceed along the line the amplitude of both current and potential becomes less. This Professor Pupin terms attenuation.

"If the electrical waves on a telephone conductor corresponding to the vibrations of the human voice are unevenly attenuated the voice is consequently distorted and what is termed defective articulation results.

"Such difficulties caused by the attenuation of the waves have long been experienced, and the deficiencies of the Atlantic cable for rapid work were early prophesied by Sir William Thompson in a mathematical paper. Oliver Heaviside of England, the well-known mathematical physicist, pronounced a theory favoring the use of wave-conductors of high inductance, but while this was satisfactory for a mathematical discussion, it did not indicate how such a conductor could be constructed, and none of the experiments to determine this fact was successful. Professor Pupin became interested in this question some years ago and first attacked the problem from a mathematical point of view, reaching a solution which he has since verified by extensive experimentation. He found that if inductance coils are introduced along the line at intervals determined by a formula the result will be to diminish the attenuation of the waves and to increase the current. Having reached this mathematical solution, Dr. Pupin proceeded to perform a series of experiments which have shown a remarkable coincidence in their results with those obtained by purely theoretical considerations."

In order to experiment along this line, a very long cable was required; but a laboratory substitute was made by Professor Pupin by a combination of condensers connected in series. By studying the action of this under varying conditions, he was able to plot a curve showing the attenuation of the transmitted waves

and to observe the effect of different devices for lessening this attenuation. The result is that in the laboratory of Columbia University there is now the equivalent of a cable 250 miles in length, over which one may telephone without the slightest difficulty. "When it is remembered," writes the *The Sun* correspondent, "that forty miles is considered the greatest length of cable it is possible to use in telephone practice, one can appreciate the improvements that Dr. Pupin's method will occasion." It will serve also to increase the limits of long-distance conversation over air lines, as well as to diminish the cost of the wire, which at present must be copper and therefore costly. The new scheme will be of great advantage with submarine cables, which at present can be worked only at very low rates of speed and are entirely unsuitable for telephony. The correspondent closes by saying: "Just what tests in the field will be made by telephone engineers of this method, it is not yet possible to say, but the paper elicited much interest when read at Philadelphia before the institute, and it is probable that trials on a large scale will shortly be undertaken."

This account lays stress on the commercial results of Professor Pupin's discovery. In his paper at Philadelphia, however, he laid the chief emphasis on the theoretical part of the discovery. *The Electrical World* (May 26) speaks of his paper as the most important presented at the meeting. It points out the fact that previous experimenters have endeavored, by placing inductance coils along a telephone line, to improve its efficacy, but have failed because they worked haphazard. Professor Pupin has figured out the theory of the action, with the result that he is able to put his coils in the exact places where they will lessen the attenuation of the waves.

POISONING SEA-FISH WITH SALT.

THAT a marine creature can be poisoned with salt water seems a manifest absurdity; yet we are assured, on the strength of very recent experiments, that pure salt acts as a violent poison to fish, and that it is only the other constituents of their native element that prevent its so acting in sea-water. Says the *Revue Générale des Sciences*, in an account of the experiments just mentioned:

"The innumerable animals that live in the sea are in permanent contact with strong salt water containing not exclusively, but chiefly, chlorid of sodium; many of them die in a few minutes when they are put into fresh water. Man adds to his food large proportions of this same salt, and is incommenced if deprived of it. Sea salt thus seems to be of use to many living organisms and indispensable to some. M. Jacques Loeb announces very interesting experiments that prove that this chlorid of sodium, when purified and freed from the other salts that accompany it in the sea, is a violent poison for sea creatures. Perhaps it might also be poisonous to man if he did not take into his system also with his food and drink a certain quantity of potash and lime salts, which are its antidotes.

"Loeb takes small marine fish, newly caught, of the genus *Fundulus*, and puts them into a solution of pure sodium chlorid, containing the same proportion of this salt as sea water; at the end of twelve hours all the fish are dead. If this salt solution be diluted with distilled water, the fish live longer, the length of the time being in ratio to the extent of the dilution. . . . They live indefinitely if they are put into sea water, even if 5 per cent. of pure chlorid of sodium be added to it. The chlorid of sodium must, then, act as a poison; but sea water must contain antidotes to it."

The experimenter, in searching for these antidotes, found that the chlorids of magnesium, potassium, and calcium, even in small proportions, diminished the poisonous action of the salt, and that in certain proportions the two latter rendered the solution able to sustain life as if it were natural sea water. The

same results were obtained with many other marine creatures. To quote again:

"Here are interesting facts whose theoretical importance is considerable. They show us very strikingly the part played by the mineral composition of the surrounding medium in vital phenomena; they reveal the unexpected fact that pure sodium chlorid is a poison, as are the chlorids of potassium and calcium, while the mixture of these three bodies in the proper proportions is, on the contrary, favorable to the preservation and development of certain living creatures.

"Loeb believes that the metallic ions of these salts form combinations with the proteid substances of the protoplasm; that these combinations are quite easily dissociable, so that in the presence of a pure salt, such as sodium chlorid, the sodium ion takes the place, in the protoplasm, of the potassium, calcium, and magnesium ions, giving compounds that are not capable of sustaining the life of the organism. These, of course, are but hypotheses; Mr. Loeb promises to establish their correctness by a series of experiments. His study of the toxicity of sodium chlorid is the first of this promised series."—*Translation made for THE LITERARY DIGEST.*

ELECTRICAL CONDUCTORS AND DUST.

EVERY one has noticed how electrical wires and fittings gather dust. According to A. A. Campbell Swinton, who writes in the *London Electrician* (April 27), this is largely due to electrostatic attraction. He says:

"Within a week or two of my entering into occupation of the office and using the lights it was observed that, whereas the three flexible cords connected with one switch remained clean, the two cords on the other switch were rapidly accumulating dust. The latter were repeatedly dusted, but the effect always repeated itself. At present, after some five months' use, while the one set of three cords are still comparatively clean, never having been dusted, the other set of two cords are thickly covered with an aggregate of dust particles, which in some places project fully one quarter of an inch from the cord. Further, while the plaster of the ceiling in the case of the set of three cords is absolutely white, and the ceiling roses at the ends of these cords retain their original color, the ceiling immediately above the set of two cords is blackened with a well-defined broad dark line, while the ceiling roses that serve these two cords are also covered all over with a dark deposit.

"Now for the reason of this strange phenomenon. It is very simple. In the case of the set of three pendants the flexible cords and ceiling roses of which do not become dirty, the switch is in the positive pole. In the case of the other set of pendants, whose cords and roses become covered with dust, and which even blacken the ceiling with which they are not in contact, the switch is in the negative pole. Now, as is well known, the negative conductor in the street mains has a tendency to earth itself to an extent which is sufficient to cause the negative lead to be always almost at the same potential as earth. Consequently the positive conductor is always at nearly 200 volts potential above that of earth, and therefore above that of the dust particles present in the atmosphere. . . . The dust is therefore caused to deposit upon the cord and upon the ceiling rose by electrostatic attraction. . . .

"From the point of view of the wiring of decorated rooms in a town with an atmosphere like London, the matter is of very considerable importance. . . . In dry places, where it is desired to keep electrical wires and fittings clean, I have no doubt that in an atmosphere such as we have in this great city, switches should always be placed in the positive conductor, so that the exteriors of such fittings and wires should remain as far as possible at earth potential."

Mr. Swinton's conclusions are discussed by the *New York Electrical World and Engineer* (May 19), which comments editorially on his paper. It says:

"Mr. Swinton shows that the cleaner of the two wires was much nearer to the earth's potential than the other, and that consequently the darker wire was able to attract dust particles to itself by a slow process of feeble electrostatic attraction.

"The explanation appears to be satisfactory. The electrostatic effects due to a pressure of only 110 volts is readily appreciable upon an ordinary gold-leaf electroscope, and in connection with 220-volt, 500-volt, or series arc-light circuits, the electrostatic effects increase rapidly. It has been proposed at different times to cleanse the air supplied to dwelling-rooms of dust particles by subjecting the incoming stream to a powerful electrostatic stress. The plan does not seem likely to thrive, because the simpler alternative of drawing the intake through a sieve of cotton wool answers the purpose probably as well, if not better; unless the electrified air has also to be ozonized."

SCIENTIFIC FAITH-CURE.

MOST physicians recognize the influence of the mind on the body, and use it when they are able to do so. The trouble is that such influence must usually be secured by indirection of some kind, either by an acted lie, as when bread pills are administered, or by the aid of some variety of credulity or superstition. In an article in *La Science Française*, M. Gabriel Prevost advocates what he calls the education of the will, so that each person so trained may have power within himself to exert on his own body the influence of his mind, so far as it may be exerted at all. This would seem to be a modified form of Christian Science, divested of what the opponents of that cult call its absurdities and anomalies. M. Prevost, however, does not propose any system of will training, and so those persons who have ready-made systems, no matter how objectionable to the scientific mind, will doubtless continue for the present to hold the field in what psychologists insist is merely treatment by auto-suggestion. Says M. Prevost:

"The English have given the name of 'faith-healing' to a combination of phenomena whose complete explanation has hitherto eluded all the efforts of the physiologists.

"By what unknown means does will-power act on the organs of the human body even to preserving them or restoring them to health in case of morbid derangements? Is it through the blood, or through the nerves? At what limits does its effective power cease? No one has yet answered these questions; but when facts that bother official science are produced, it too often adopts the more convenient method of denying them *a priori*.

"One example will bring us to the very middle of our subject. . . . A child afflicted with chorea or St. Vitus's dance is brought to an obscure charlatan. By methods evidently ridiculous, the operator inspires in the patient the idea that he is cured. And, in fact, the child sees that the disorder in his movements stops; the chorea is gone.

"The papers have recently been telling of the prowess of a Venezuelan, who has been curing rheumatism and gout by the simple imposition of hands. The facts are indisputable. . . .

"Now we certainly do not care to advertise all the 'fakirs' without diplomas who are exploiting the credulity of invalids . . . but faith-healing exists all the same, and opposes its real and disconcerting facts to the theories of the old Pharisees of the conventional schools.

"In 1899 a young physician, Dr. Tiffaut, in the introduction to his doctoral thesis on 'The Illegal Practise of Medicine in Bas-Poitou,' enumerated numerous celebrated cures wrought by the will-power of the credulous. We may say that ten folio volumes would not have been sufficient for a complete list. We believe that he understands this, for he says with Charcot, whom he quotes: 'Faith-healing seems to me to be an ideal method, for it often works when all other remedies have failed.' . . .

"Very timidly we propose the following theory: The nerves, instruments of sensation, are the immediate cause of suffering in all cases, and the mediate cause in three quarters of sick persons: whenever a morbid state is dependent upon them, the will power can exert on them a powerful action, either for defense of the organism or for a possible cure—always with the understanding that we know absolutely nothing about the mode of action of the will on the nerves. . . .

"We must note in the first place that all practical cures made by quacks on subjects other than neurotics have no chance of

success except when the person operated upon has complete faith in the operator."

The writer here reminds us that in certain cases the faith need not be directed toward an operator, but toward the spontaneous action of the subject's own will. There can be no "magnetism" nor hypnotism here, he says, but only an education of the ego, rendering it, so to speak, the master of the substance and operation of the organs, even so far as to alter physiological conditions. An example is the case of President Kruger's amputation of his own thumb, and M. Prevost relates several other similar instances. The writer comes finally to the following stated conclusions:

"1. There is an undeniable action of the will on the organism, whose mode of transmission has hitherto eluded scientific investigation. If we did know it, we should perhaps hold the key to the problem of life. Very likely it will never be known.

"2. This action may, according to circumstances, be anesthetic, defensive, or curative. A vigorous education of the will would increase the vitality of the individual in large measure. It would aid in bestowing health and longevity. An imaginary invalid is still an invalid, as Dr. Monin has told us. . . .

"3. As much in the interest of invalids as for the purpose of snatching them from the clutches of all kinds of sorcerers, wizards, and healers, physicians ought to read a little book written by Dr. E. Laurent entitled 'The Medicine of the Mind,' in which he advises his brother practitioners not to overlook the action of their patients' wills. . . . Dr. Bouchut also says: 'Moral medicine will probably play as great a part as physical medicine, and therapists ought to make use at the same time of the resources furnished by both physical agents and moral force.'

"We shall certainly never lose sight of the reciprocal influence of mind and body—but we ought to be prouder of dependence on our own will powers than of reliance on a poultice."—*Translation made for THE LITERARY DIGEST.*

IS SUICIDE ON THE INCREASE?

THE investigations of Sir John Sibbald in Scotland do not bear out the prevailing opinion that suicide is increasing. Statistics have uniformly shown an increasing suicide rate, but this, according to Sir John, is due to two factors which, as reported in *Knowledge* (April 2), are as follows:

"The state of public feeling as to suicide has changed; the belief that an act of suicide necessarily involved disgrace has greatly diminished since suicide has been recognized to be, to a great extent, the result of mental disease; and, in consequence of this change of opinion, efforts to conceal its occurrence have correspondingly decreased. That is one reason. The second is that as suicides have increased, accidents have decreased. In the only case where suicide, by the strict police and registration machinery under statute, is now impossible to be concealed, viz., by hanging, the rate during that period is unchanged: it stands fixed at 16 per cent. in Scotland and 26 per cent. in England. That is an important fact. But turning to the suicides by the other methods—poisoning, wounding, and drowning—it is found that almost exactly as these rates have increased, the rates for accidents from the same causes have decreased. Similar results are shown from the English statistics—that the total increase in the rates of suicide by wounding, poison, and drowning is exactly counterbalanced by a total decrease in the rates of accident from the same causes. Accordingly the alleged increase of suicide is not proven."

Sir John's paper was read before the Edinburgh Royal Society, and the discussion that followed in that body brought out some curious facts. To quote again from *Knowledge*:

"Dr. Clouston, one of the highest authorities on mental diseases, . . . mentioned a very curious fact—that the average rate of suicide between the ages of fifty-five and seventy is greater than that between fifteen and fifty. He stated his decided opinion that sexual influences mainly accounted for the difference. He showed that up to fifty a man or woman is, or should be, full of life, vigorous, and healthy, consequently possessed of a strong

desire for the reproduction of the race; and that while possessed of that feeling he or she had no desire to die, but rather a strong desire to live. On the other hand, in the later years the body became less vigorous, the blood less easily inflamed, and consequently sexual feeling became less strong, and the wish to live gradually passed away and the tendency to suicide became stronger.

"Dr. Clouston was also of opinion that excess of alcohol led to a condition of brain which frequently led to suicide. It was not so much worry as drink that was the prevailing incentive. Alcohol, overindulged in, produced the paralysis of the great human vital instinct of self-preservation.

"Sir John Murray instanced another aspect of suicide, and related a curious spectacle of which he was a witness a good many years ago in China. A large number of youths were being examined for some Chinese degree. The examination was held along the bank of a river, each candidate having a small temporary booth fitted up for him on the bank. The opposite bank was lined with thousands of spectators; and when an unlucky candidate failed to pass, he was expected to walk into the river and end his disgrace.

"It was pointed out by Dr. Clouston that German authors held that the Roman Catholic portions of their fatherland did not show so many suicides as the Protestant part. There they had the moral and religious element coming in, which prevented men and women from committing suicide, even when they were diseased and felt suicidal. And Sir John Murray expressed his opinion on this that it would always hold good that in those countries where they had individual responsibility, as they had in all Protestant countries, for opinions and for religious beliefs, there necessarily they would have a disturbance more frequently resulting in suicide than in the Roman Catholic faith, where they had the firm idea of corporate responsibility."

MEDICAL INSTINCTS OF ANIMALS.

NO instinct is more marked than that of self-preservation. In animals it is so strongly developed that it often simulates medical knowledge, or perhaps in some instances is actually a substitute for it. An interesting article on this subject is contributed to the *Denver Medical Times* by Dr. James Weir, of Owensboro, Ky. Dr. Weir begins by telling us about the therapeutic instincts of the honey-bee. When attacked by diarrhea (a disease to which under certain conditions it is very prone) the bee, he says, will immediately begin to suck astringent pieces of the dogwood, poplar, wild cherry, or hickory, and will soon effect a cure. Indeed, in winter, when bees become sick with this disease, they will readily drink a decoction of wild-cherry bark if it be placed in the hive. Bees seem to know that filth is a source of disease; hence, when ill in winter, they select a spot, as far from the combs as possible, at which all of the sick members of the hive deposit their dejecta. As soon as warm weather arrives the accumulated filth is removed and the spot carefully cleansed. In summer all excrementitious matter is deposited without the hive. About the common crayfish Dr. Weir notes the following facts:

"Crayfish are frequently the hosts of innumerable little parasitic leeches (*histiobdellæ*) which, strange to say, only become parasites, and thus harmful to their hosts, when their number has increased to such an extent that they can no longer live natural lives. As long as they are few in number they are of distinct benefit to their host, the crayfish, for they eat the unimpregnated eggs and dead embryos, thus keeping the other eggs and embryos in a healthy state. But as soon as their number becomes so great that the decomposing eggs and embryos are no longer a sufficient food supply, the mutualists become parasites—they begin to devour the healthy eggs and embryos. The crayfish, which carries her eggs beneath her tail, can tell at once when this state of affairs exists, and will straightway set in motion very effective measures for freeing herself from her harmful visitors."

Dr. Weir believes that many of the higher animals have dis-

covered and use a materia medica that is not recognized by human physicians. Thus, he says:

"Dogs will seek out and devour the long, lanceolate blades of couch grass (*triticum repens*) when they are constipated; horses and mules will eat clay when they have 'scours'; cattle with the 'scratches' have been seen by me to plaster hoof and joint with mud, and then to stand still until the protecting and healing coating dried out and became firm. I saw a cow not long ago break the thin ice on a pond and treat her itching joints to a mud poultice. Several travelers and hunters of big game declare that they have seen elephants in the act of plugging shot-holes with moistened clay! Cats will go miles when they are feeling 'under the weather' for a dose of catnip (*niépeta*). A gentleman recently informed me that, a short time ago, after a severe snow-storm, he was hunting rabbits, when he saw his house cat plowing through the deep snow some distance in advance of him. He thought at first that she was out on the same business as himself, *i.e.*, rabbit-hunting, but soon concluded that something of much greater importance had impelled her to abandon the warm kitchen on such a cold and inclement day. He resolved to follow her, and this he did for three miles, until she entered a neighbor's garden, where, after scratching in the snow, she soon uncovered a bunch of catnip. This she at once proceeded to devour! Surely a great and abiding faith in medicine must have dwelt in the bosom of this animal!

"The saliva of mammals, with the single exception of man, seems to have a distinct curative action. Of course much of the beneficial results following the continual licking of wounds by animals is due to the resulting cleanliness; yet, beyond the mere matter of cleanliness, there is an undoubtedly curative property in their saliva. Dogs, cats, cattle, rodents, monkeys, *et al.* lick their wounds when they can get at them, and soon effect cures.

"It sometimes happens that animals contract wounds on their bodies which they themselves can not get at; then, as I have frequently observed, some good Samaritan in the shape of a fellow dog, cat, or monkey will step in and treat the wounds as tho they were personal."

Dr. Weir tells us that the monkey, in a state of nature, when surrounded by an inexhaustible materia medica with which, as the author believes, it is intelligently acquainted, very often treats with success the various ills to which it is subject. Even in captivity, when handicapped by its surroundings, it is able to combat certain diseases intelligently, or successfully to treat an injury. Dr. Weir closes with the following anecdote, which is one of many that confirm his belief in this respect:

"In 1882 there was an exhibition at the St. Louis fair grounds a magnificent specimen of the dog-faced ape, or chacma. This animal was very large and powerful and at all times treacherous, deceitful, and 'possessed of the devil,' as his keeper often declared. His malignant disposition caused him to be confined in a strong cage and separated from the other monkeys. There was a strong board partition between his cage and that of a number of smaller monkeys of various genera and species which dwelt together in amity and peacefulness—a 'happy family.'

"The chacma discovered a small crack in the board partition and, by diligent use of his sharp teeth and powerful fingers, had enlarged it until he could thrust his hand through. After he had severely injured one of the smaller monkeys, which he had caught by darting one of his paws through this opening, the attendant stopped the hole by nailing a piece of board over it on the small monkeys' side of the partition.

"One of the nails came entirely through the boards and protruded an eighth of an inch into the chacma's cage. One day, while this last-mentioned creature was dashing about his den in one of his unaccountable fits of rage, he ran against this nail and scratched his shoulder. He stopped at once and began to examine the hurt with his fingers. He then went to a corner of his cage where there was a box of clean sawdust, and, seizing a handful, pressed it on the bleeding scratch. In a few moments the bleeding ceased, and, when the blood dried, there remained over the wound a coating of sawdust and dried blood which effectually protected it against the attacks of flies; consequently it soon healed."

Direct Photographic Positives.—The discovery of Prof. F. E. Nipher that over-exposed photographic plates are sensitive to x-rays was recently noted in these columns. Professor Nipher announces also that any photographic picture that is greatly over-exposed may be developed in ordinary light, and will then give a positive picture. He writes to *Science*: "A plate which should for ordinary work have an exposure of a second and a half for street or outdoor photography may be exposed for two hours. When developed with a weak hydrokinone by the light of a lamp, it gives a beautiful positive. The lamp is preferable because one can manage the degree of illumination. If the plate is held too near the lamp it will dissolve a picture already appearing. If held too far away the plate begins to fog. By moving toward or from the lamp the proper illumination may be soon secured. It is remarkable that a street scene taken in this way shows not a moving thing on the streets. Street-cars passing every two minutes, wagons, horses, pedestrians, all have apparently vanished without leaving a trace upon the plate. But the fixed objects are shown perfectly, with their proper shadows and high lights. In this way lantern-slides and transparencies may be made directly without rephotographing from a negative."

New Discoveries about the Nerves.—Much recent progress in the physiology of the nervous system is connected with the so-called "neuron" theory, according to which the nerve-cells are separate individuals and allow the nervous impulse to pass only when their branches are intimately interlaced. In sleep these branches are supposed to contract, so that connection is cut off between the brain and the outer world. Now, if some experiments recently described by Martin Fischer are reliable, the data on which this theory rests are false. His work is described in a brief note in *Modern Medicine* under the heading "The Overthrow of the Neuron Theory." From this we learn that Fischer's observations were made by using a new method of staining the cells, by which they could be observed much more clearly than has before been possible. Fischer is quoted as making the following assertions: "It is now an easy matter to see that the nerve-cells are not separate individuals, but frequently anastomose with each other"; also, "the relation of two cells is not always one of mere contact only, but one of actual connection between the protoplasm of one cell and that of the other." As a general result of his investigations, Fischer arrives at the following conclusions:

"1. The neuron theory, in so far as it claims the absolute independence of the neurons, is an untenable one.

"2. The dendrites, which are generally believed to have but nervous function, may have also nutritive function, if such an inference is permissible from the existing anatomical relations, which show some of the dendrites embedding themselves in the walls of the capillaries."

SCIENCE BREVITIES.

"If a spray of liquid air is applied to the skin," says *Omnica*, "the part at once becomes anemic and perfectly colorless. If the application is made only for a few seconds, the color as quickly returns and the skin is congested for some minutes thereafter. Within much less than a minute's time, by means of a spray, the part is frozen as hard as ice, but, strange to say, in a few minutes circulation returns without injury to the tissue, providing the part is not in the end of some extremity. There is no pain in the application excepting at the very beginning; but there is a slight burning or tingling. It also completely anesthetizes the part to which it is applied without freezing it solid."

THE acceptance by Dr. Pritchett, superintendent of the Coast Survey, of the presidency of the Massachusetts Institute of Technology, is an instance, we are reminded by *The Popular Science Monthly*, of "the fact that the only promotion possible to men of science or university professors is an executive position. The type of the German *Gelahrte*, still current in literature and on the stage, is not common in America. The modern methods of advancing science—the laboratory, the observatory, the museum, the expedition, with their complex equipment—demand administrative ability of a high order. Science has been able to supply presidents, not only to the great technical schools, but also to Harvard, Johns Hopkins, Stanford, and other universities. Still, it is unfortunate that the man of science can not look forward to promotion in the direction of his own work."

THE RELIGIOUS WORLD.

THE PASSION PLAY OF 1900.

THE general impression carried away by those who visited the Ober-Ammergau Passion Play this year seems to have been, as in preceding years, one of awe and admiration for the intense realism and passionate simplicity of the actors.

The correspondent of *The Daily News* (London), in his description of the last scene, says:

"The whole play, from the beginning, early in the morning, until four in the afternoon, leads up to the one great scene of the crucifixion, which the spectators, whose attention and feelings have been worked upon all day, are so absorbingly interested in that no one thinks of being tired. But even the most skeptical and indifferent are stirred to the depths.

"The crucifixion is a triumph of realism. The chorus, wearing black mantles instead of gaily colored ones, announces that the terrible moment draws near. The beats of the hammer as the Redeemer is nailed to the cross are heard from behind the curtain, which parts to show us Golgotha, and the two thieves tied to their

rough cross-beams with ropes, while Christ, the nailed to the cross, still lies on the ground. At last the cross, which is of enormous height, is raised. It is an awful moment. Lang plays this most important portion of his part to perfection. The suffering, well-nigh intolerable, is expressed so well that one is completely under the influence of it. All the pathetic words we

know so well, the prayer for those who torture Him, the words of consolation to the thieves who suffer death with Him, the awful cry of one forsaken of the Father, the last terrible words of relief, followed by the last falling forward of the head—all this excites the utmost human sympathy. The women and many of the priests present weep as if they were all really before the greatest tragedy of the ages. But perhaps the most pathetic part has still to come. Joseph of Arimathea has gone to Pilate to ask permission to bury the body, and he and Nicodemus, with only the weeping women and St. John around, lower Him from the cross. Pictures by Titian and Leonardo pass before our eyes. Joseph stands on a ladder in front. Nicodemus climbs to the top of the cross. Linen a hundred yards long, in two rolls, is wrapt round the body, passed over the arms of the cross, and dropped to the ground, and with this linen the body, the weight of which is borne by Joseph of Arimathea, is slowly and reverently lowered to the ground, and laid by loving hands upon the linen spread out to receive it."

The Berlin correspondent of *The Times* (London) was fortunate enough to be the guest of Anton Lang, the Christus of the play. The sincerity of these peasant folk may be gleaned from the following description which he gives:

"At supper on the evening of my arrival my host, Christus Lang (for the players are locally known by the names of their rôles), sat and talked about the present series of representations

and those of 1880, when, as a child of five years, he had first appeared on the stage among the crowd at the triumphal entry into Jerusalem. As we talked and supped, the bell of the village church began to ring for the Angelus. Lang at once excused himself and, rising from his place, stood in the middle of the room facing eastward, his hands folded and his head bent in silent prayer. The girl who was serving did the same. It was a simple, entirely natural, and beautiful scene in the low-roofed room at twilight and, of course, it recalled Millet's great picture. When the Angelus had ceased ringing Lang quietly resumed his meal and his conversation. The manners of the villagers have still the grace, the directness, and the simplicity of true Highlanders—and that is well. No doubt they have also all the commonplace shrewdness of peasants, and the visitor will do well not to expect to find that the elevation and artistic grace of their weekly performance in the Passion Play have raised them to any marked degree above the level of their fellows. If one strolls into the *Gastzimmer* of one of the inns of an evening, one may be surprised to discern, through the dense clouds of tobacco-smoke, living heads that look as if they might have been the models of Botticelli or Leonardo da Vinci. These heads, with their long, well-kempt raven or fair locks and their *barbes d'apôtres*, are grouped around wooden tables covered with big

Seidel of Bavarian beer. Yet, on the morrow, their owners are going to fill the parts of St. John, or St. Peter, or of Nicodemus, in the dramatic representation of the Passion of Christ."

The same correspondent thus describes the play and its effect:

"Part I. represents the Gospel narrative from the triumphal entry of Christ into Jerusalem to His betrayal in the Garden

of Gethsemane. Part II. is occupied with the trial of Christ before Caiaphas, Herod, and Pilate, including the scourging and final condemnation by Pilate. Part III. embraces the crucifixion, the resurrection, and final tableau representing the ascension. The three parts of the play are divided into eighteen acts, each of which, as well as the final tableau representing the ascension, is preceded by a prolog in verse, sung by the chorus consisting of twenty female and thirteen male voices. The members of the chorus, who advance and retire in two bodies from either side of the proscenium, are robed in white draperies, over which they wear mantles of various hues, cinched and fringed with gold. The choragus, who wears a bright scarlet robe with gold embroidery, generally sings the opening part of the choric hymn, the rest being sung as solo, duet, or chorus by the members of the choir, also known as 'the guardian angels.' Before each of the acts there are *tableaux vivants* representing scenes from Old-Testament history which are typical of the events about to be enacted. During the tableaux, arranged in the atrium in the center of the stage, the song of the chorus interprets the scene, explains its connection with what is to follow, and comments on the impending action of the Passion Play. When the play itself is being enacted the chorus retires into the wings.

"It is impossible to deal, within the compass of a single letter, with the impression produced upon the mind and senses of the audience by the scenes of the gospel narrative dramatically presented in language taken from the New Testament or attuned to its august simplicity. There is, to begin with, the fact that

THE SCENE OF THE CRUCIFIXION.

The Passion Play at Ober-Ammergau. (From photograph by Leo Schwyer.)

the events narrated by the Evangelists are enacted by religious peasants as they originally were in Judea and Galilee. Yet, as if the perspective of time had exercised an enchanting effect, well known to readers of Renan, upon the human actors and their surroundings, the artistic coloring of the representation, down to the actual details and hues of the dresses copied from the best religious art of Italy, gives a 'distant clearness' to the whole drama and impresses it forever upon the memory of the beholder. The realism of the crucifixion is, no doubt, intense, and it strains the mind of the spectator, as it does the physical powers of the central figure on the stage. But that greatest of tragedies could not possibly be presented otherwise. At the first performance of the year 1880 no one who witnessed it will ever forget how the impression was heightened by the cooperation of nature in the bursting of a thunder-storm amid the mountains at the supreme moment of the Passion. Yet to-day, when the three crosses with their living burdens were raised, with the 'green hill far away' as their background, it seemed as if nothing could add to the breathless suspense with which all of us followed those events which no language save that of the Evangelists can ever adequately depict, and it is that language and no other which is employed on the Ober-Ammergau stage at the supreme moments in the development of the divine tragedy. Those who come to this highland village with reverent minds or with senses attuned to the art of the great religious painters will leave it the richer for their experience."

IS ROMAN CATHOLICISM INCONSISTENT WITH INDEPENDENT SCHOLARSHIP?

WHILE the late Prof. St. George Mivart was having his controversy on the rights of individual opinion within the Roman Catholic fold, practically the same problem has come to the front in the Catholic Church of Germany also. In this case, too, the defender of the claim that independent research is perfectly consistent with the spirit and teachings of the Catholic Church is a layman, namely, Count von Hertling, a leading law professor of the University of Munich, and a *persona grata* both in Berlin and the Vatican. On several occasions lately he has enthusiastically advanced his views, and has been as severely criticized by the papers of his own church as well as by the Protestant papers. As president of the Görres Society, the greatest Catholic literary association in Germany, he recently delivered an address entitled "Freiheit der Forschung und Freiheit der Lehre," which has been widely commented upon. He said:

"I claim that the charge made by Protestant scholars against those of the Catholic Church, that the latter are compelled to avoid certain 'uncomfortable truths,' is without foundation, as there can be no such 'uncomfortable truths.' The inner life of the church is established against the attacks of all criticism by the fact that the church stands and will stand through all centuries. Investigations can pertain only to the outward appearances; the judgment as to the inner life of the church is the prerogative of the divinely established office of teaching in the church. But the different phases of appearance, as these have been historically developed in connection with the church, are the proper subject for historical investigation. I do not know what would prevent us Catholic scholars from engaging in free investigations in the domain of history. Many things have already been discarded by the church, without the church losing or decreasing her treasury of faith. The university professor has a right to demand liberty in teaching. For those who would engage in the pursuit of scholarship, there are no limitations except those of inner truth and proper form. . . . Even if we must confess that the scholarship of the Catholic Church has not taken that part in the inner development of the life of the nation which it ought to have taken, it is time now to make a change in this regard. Now more than ever before it is necessary for the Catholic scholar to show that independent research is compatible with Christian faith."

Still more recently has this same scholar, who has within the past few weeks been called to a professorship in a Prussian uni-

versity (Bonn), given emphatic utterance to these convictions in a publication entitled "Das Princip des Katholicismus und die Wissenschaft" ("The Principle of Catholicism and Scientific Research"). In this document he defines the principle of the church as follows: "The recognition of the church as the institution of salvation established by Christ for the welfare of mankind, and the recognition of the teaching authority of the church for the preservation and the promulgation of the truths of salvation entrusted to the church."

Count von Hertling maintains that a true independence of scholarship is perfectly in harmony with this prerogative of the church, and that within its proper sphere science is absolutely free and untrammelled. But no science, not even that of mathematics, can do without the acceptance of certain fundamental facts *a priori*. Some such limitations based upon the divine revelation of truth entrusted to the church must also be presupposed in scientific investigation, which can never, if prosecuted according to legitimate principles, conflict with the "higher reason" revealed to the church.

Von Hertling has found his chief adversary in Dr. F. X. Kraus, the Catholic professor of theology in Freiburg, who in the *Deutsche Literaturzeitung* (No. 1) says in substance:

It must be acknowledged that Catholic science is not as free as it could be and as it ought to be. Only two years ago the authorities in Rome condemned the views of Professor Schell, of Würzburg, for claiming that modern scientific investigation is consistent with true Catholicism. Hertling, too, would no doubt be disciplined if those in authority did not need his influence; for his teachings, if not departures from the dogma, are at any rate deviations from the Jesuitic traditions. The church's position in these matters does not change. Even the condemnation of Galileo has been approved by the Pope, and the approval has never been formally withdrawn; and the papal organ in Rome, the *Civiltà Cattolica*, only recently justified the condemnation. Hertling is mistaken when he thinks that the authorities and the masses of the Catholic Church favor the maintenance of Catholic theological faculties in the German universities, with their extreme liberality in research and instruction. The claim that the eighteen million German Catholics would not permit the abolition of these faculties, as put forth by the Munich law professor, can be estimated at its proper value when it is remembered that for fifty years and more these very same faculties have been bitterly antagonized by leading circles in Catholic Germany, and the strongest influences have been used to prevent Catholic theological students from breathing the free university air and to restrict their education for the sacred office to diocesan seminaries under charge of the church authorities.

The *Germania* (Berlin), the central political organ of Catholic Germany, demands proof from Kraus that Catholic leaders have been quietly working at the destruction of the Catholic university faculties in favor of the diocesan seminaries; and the Protestant *Reichsbote* retorts that such preference for the narrower church institutions has been commanded by the Vatican Council, quoting in support the official report of Ceconi.—*Translations made for THE LITERARY DIGEST.*

The World Movement toward Denominational Union.—The question of denominational union is fast becoming one of the most important questions of the day in all Protestant lands. In Germany, as we have lately pointed out, a strong movement exists for the federation of the state churches, amounting to nearly fifty in number; and federation is one step on the road to organic union. In Scotland, the Congregationalists and the churches of the Evangelical Union—sometimes called Morrianians—amalgamated their forces a short time ago; and the Free and the United Presbyterian churches are to become organically one next October as already mentioned in these pages. In South Australia the three leading Methodist denominations and in

Canada all the various Methodist bodies, have for some years been one. This is an encouraging record.

Besides this measure of union already attained, there are promising movements under way in England. All the great Protestant churches outside the Establishment have for some years had a strong federal organization, as we have several times pointed out. During several years past an attempt has been made to unite organically two of the Methodist bodies—the Princeton Methodists and the Bible Christians. Both are offshoots of the original Wesleyan parent stock, but separated from it on questions of church government. According to the London correspondent of *The Advance* (Cong.), the consummation of this event will be delayed for some years, however, since the two bodies can not agree on the subject of lay representation in the conference.

In America, the recently organized Federation of Churches reports substantial progress, and will begin the new century with bright prospects. The recent success of federate mission endeavors in the great Ecumenical Council in New York, and the deliverances of the Methodist Episcopal General Conference in Chicago last month on the subject of Christian unity, are also regarded as favorable signs pointing to greater comity between the churches. It is significant also that the Protestant body which has made by far the most notable gain in membership during the past nine years is the one which refuses to be called by any other name than Christian or Disciples of Christ. This body, according to Dr. Carroll's latest statistics, in *The Christian Advocate*, gained 477,345 members during that period—a gain of seventy-one per cent.—and has now advanced to the sixth place among the Christian denominations in numerical strength.

THE DISCOVERY OF A "GOSPEL OF ST. PETER."

IN our issue of December 30, 1899, we recorded the discovery, by Prof. J. Rendell Harris, of a composite new gospel named the "Gospel of the Twelve Apostles." Biblical students are now

interested in the recent discovery of a small fragment of what may prove to be the lost gospel of St. Peter to the Egyptians, mentioned by many early Christian writers. The fragment, if a genuine portion of this document, will be a discovery of the highest importance, doubtless even surpassing that of the "Logia" found not long ago by the Egyptian Exploration Fund. From the *New York Journal* (April 29) we quote the following account of this find, which must, however, be accep-

FRONT PAGE OF SECOND FRAGMENT OF NEW GOSPEL.

ted *cum grano salis* until some consensus of opinion has been reached by Biblical scholars:

"It was just a year ago that a number of moldy papyrus manuscripts were purchased in Cairo, Egypt, for the great library of the University of Strassburg, in Germany. When these papyri

were examined it was found that among them were two leaves written in Coptic, the later form of the ancient Egyptian language, and that which was spoken during the early centuries of the Christian era. Prof. W. Spiegelberg, of the Strassburg University, one of the best known Egyptologists in Germany, put the fragments together and deciphered their meaning after an immense amount of labor. Dr. K. Schmidt, an expert in gospel manuscripts and early Christian literature, then studied them and recognized these leaves as fragments of a new and hitherto unknown gospel. Originally the pages were eight inches tall and six inches broad, but none of these were complete. Upon further examination it was decided from the form of the writing and some of the words

BACK PAGE OF SECOND FRAGMENT OF NEW GOSPEL.

used that these pages were written in the fifth century, or somewhere between the years 400 and 500 A.D.; but it was also apparent that they were translations of a Greek original, for many of the words had been borrowed from the Greek. These two facts proved the extremely ancient origin of the manuscript. The scholars agreed that the date of the Greek text must be the second century, which is earlier than the oldest known manuscript of the Bible—that of the Vatican—which dates from the fourth century. . . . Long and deep study led the students to the conclusion that they are part of the lost Gospel to the Egyptians, of which no translation or part has hitherto been found, altho it is mentioned and quoted by early fathers of the church. The fact that it was written in Coptic was strong evidence that this was so. Egypt was the refuge of many Christians during the first and second centuries. It was especially noteworthy that at the top of two of the pages were written Coptic figures meaning 157 and 158. This indicated that they were leaves from what must have been a large book, such as a complete gospel or life of Christ would be. It has not yet been possible to find where the leaves came from or what their history has been during the many centuries in which they have lain hidden, but an energetic search will be carried on."

Among the scholars who have thus far ventured an opinion upon the genuineness of this discovery are Prof. K. Schmidt, of the University of Strassburg, whose opinion is perhaps not wholly unbiassed, since he is one of the discoverers, and the American scholar, Prof. Clifton Harby Levy. The former says:

"After a careful examination of these Coptic fragments I find that they are without doubt portions of a new and unknown gospel. That this gospel was the one referred to by the fathers of the church as the 'Gospel to the Egyptians' seems certain, judging from its form and contents. It is a valuable bit of the earliest Christian literature, the importance of which it is difficult to exaggerate. That it is a translation of a Greek original of the second century seems clear from many indications contained in the text. The style of the Coptic is classical, and the use of certain words, later discarded, proves that the fragments belong to the fifth century."

Professor Levy writes:

"The discovery of genuine fragments of a lost gospel is of great moment, especially when they are portions of one referred to by early Christian writers of authority. Since Professor Spiegelberg and Dr. Schmidt support the fragments by the

weight of their scholarship and acumen, they must be accepted as real portions of the Egyptian Gospel. Small tho the portions are, they still add much to our knowledge of the personality of Jesus, and help to complete the picture of the Founder of Christianity. At the same time these fragments serve to supplement the account given by the accepted gospels, and furnish additional information about the development of Christian thought. It is to be hoped that other parts of this book will now be brought to light, so that they may be compared with existing accounts of the events in Jesus's life. The portion dealing with the scene in Gethsemane, furnishing several modifications of the speech of Jesus on that occasion, is an instance of what may be expected when the other parts of the gospel are found. It is more than probable that the excavators, spurred on by these identifications, will add leaf by leaf, until the gospel is completed."

The following is a translation of the two fragments of the new gospel:

FRONT PAGE OF FIRST FRAGMENT.

—It (the tree) will be known by its
own fruits, so that it will be praised
for its fruits, because
it is more excellent than many fruits of the gar-
den. Verily, give me also thine
power, my Father, with which
—the, who love
—Verily, I
have taken the crown of dominion.
the crown of those who,
living, while they are despised
in their humility, yet unto them
can none be likened. I am become king
through thee, my Father. Thou makest
this enemy subdued before me.
Verily, through whom
will the enemy be annihilated? Through
the Anointed (Christ). Verily, through whom will
the fangs of death be drawn?
Through the only-begotten. Verily,
to whom belongeth the dominion?
It belongs to the Son. Verily, through
whom is all come to pass? Through
the first-born—

—when he then
had finished the whole story of his life,
he turned to us, and said to us:
The hour is come,
when I shall be taken from you.
The spirit is indeed willing,
but the flesh is weak. Wait
now and watch with me.
But we, the apostles, we
cried while we said to him:
Blame us not, O Son
of God. What then is to be our
end? But Jesus
answered and said to us:
Fear ye not, that
I shall be destroyed, but take
still better heart! Fear ye not
the power of death.
Think of all that I
have said to you. Know ye
that they have persecuted me, as they
have persecuted—Ye
now rejoice, that I have overcome the world.
I have—

IGNORANCE OF THE BIBLE.

THE prevalent ignorance of the Bible among many classes to-day, often commented upon of late, has led Dr. Charles F. Thwing, president of the Western Reserve University, to examine college students on the subject. The result of his work he has given in an article in *The Century* for May, entitled "Significant Ignorance about the Bible."

Dr. Thwing selected from Tennyson's works a number of passages containing Bible allusions, and submitted these in an English examination to members of the Freshman class. Later on he gave the same questions to fifty-one young ladies in the Freshman class at a woman's college in the East. The young men were from central New York, northern Ohio, and Western Pennsylvania, and the young women generally from New England. Their fathers were lawyers, doctors, preachers, business men, farmers. All the students were from communities where intelligence prevailed, and all without exception had some church affiliation. Both the young men and young women were of the average college age of twenty. While one young woman answered every question correctly, another made one mistake, and a third but two mistakes, the percentage of correct answers was less than forty-three for the men and a little more than forty-nine for the women. Dr. Thwing's selections were as follows:

1. "My sin was a thorn
Among the thorns that girt Thy brow."
2. "As manna on my wilderness."
3. "That God would move
And strike the hard, hard rock, and thence
Sweet in their utmost bitterness,
Would issue tears of penitence."
4. "Like that strange angel which of old,
Until the breaking of the light,
Wrestled with wandering Israel."
5. "Like Hezekiah's, backward runs
The shadow of my days."
6. "Joshua's moon in Ajalon."
7. "A heart as rough as Esau's hand."
8. "Gash thyself, priest, and honor thy brute
Baal."
9. "Ruth among the fields of corn."
10. "Pharaoh's darkness,"
11. "A Jonah's gourd
Up in one night and due to sudden sun."
12. "Stiff as Lot's wife."
13. "Arimathæan Joseph."
14. a. "For I have hung thee pearls and find
thee swine."
14. b. "Not red like Iscariot's."
15. "Perhaps, like him of Cana in Holy Writ,
Our Arthur kept his best until the last."
16. "And marked me even as Cain."
17. "The Church on Peter's rock."
18. "Let her eat it like the serpent, and be driven
out of her paradise."
19. "A whole Peter's sheet."
20. "The godless Jephtha vows his child
To one cast of the dice."
21. "A Jacob's ladder falls."
22. "Till you find the deathless angel seated in
the vacant tomb."

The New York *Sun* makes the following study of the answers:

"Of the 85 students to whom the examination paper was submitted, a quarter knew nothing of the crown of thorns or of the manna; about 30—Dr. Thwing gives the exact numbers in each case—could not explain the striking of the rock, or the angel that wrestled with Israel, or Jacob's ladder; about 40 could not recall the story of Esau, or that of Ruth, or the mark of Cain, or the angel seated in the vacant tomb. Curiously enough all of the girls but three could tell about Lot's wife and all but ten about the serpent, while 22 men out of 34 knew nothing of either. Hezekiah's shadow floored 75 of the 85. Jonah's gourd stumped 66, while Joshua's moon and Peter's sheet numbered 60 victims each."

"Some amazing examples of wrong answers are given: 'Iscariot

means the cross on which Christ was crucified'; 'Arimathæan Joseph was Christ's father,' and several tell of his coat of many colors; Ruth was 'grieving for her children,' and Jonah's gourd is an 'allusion to the emesis of Jonah by the whale,' one of many ingenious efforts to make the whale story, with which all seemed familiar, fit in with the unknown gourd.

"Dr. Thwing draws the conclusion from these results that the Bible is not read or taught as it used to be, and casts about for causes: He finds one in 'the fact that the world has become a world of books and a world of magazines and a world of newspapers. The world is no longer Puritan England, or Puritan Massachusetts Bay Colony—a people of one book.' He finds others in the decline of family life with the development of the individuality of its members, in the elimination of the Bible from the public schools, and in the decline in attendance at church on Sunday. Family prayers, he asserts, are less common than formerly, the Bible is in many homes opened only once a week, and the Sabbath-school has not taken the place of the family in teaching the facts and truths of the Bible."

RELIGIOUS DENOMINATIONS IN THE SOUTH.

THE Methodists and Baptists of the South, who have their own organizations, forming distinct denominations disconnected in government with the Northern bodies, can between them show nearly 5,000,000 members, outnumbering all the other Christian bodies in that section four or five times over. The regular Baptist Church (South) alone has 1,647,521 members, according to Dr. Carroll's latest statistics in *The Christian Advocate*. It forms the third largest religious body in the United States, only the Roman Catholic Church, with 5,464,474, and the Methodist Episcopal Church (North) with 2,698,810, being larger. The regular Baptist Church (colored) has 1,584,920, and is the fourth denomination in size in the United States, while the Methodist Episcopal Church (South), according to the same authority, has 1,460,272 members and is fifth in rank. *The Interior* (Presb.) remarks:

"Just why Methodist and Baptist preaching should each have a peculiar charm 'way down South,' nobody is able to determine. One church [the Methodist] is Arminian in its doctrine and prelatical in its policy, while the other [the Baptist] is Calvinistic in its creed and Congregational in its form of government: yet these two denominations have almost excluded all others. . . . Had these churches depended upon college-bred preachers they must have died out, since neither denomination has much to boast of in that line in any of the Gulf communities or along the Atlantic, the Baptists least of all. But both churches have in the past made wonderful progress in the evangelization of whites and blacks alike. Even in the largest of the Southern cities, St. Louis and New Orleans, these two denominations show the same predominance they hold in the rural districts of the old slave States. In Virginia alone the Episcopal Church makes much of a show."

The condition of the Presbyterian Church (South), which is numerically the eighteenth denomination in the United States, with a membership of 221,022, does not appear to be more satisfactory than that of the Northern body. Says *The Interior*:

"In a careful study of the Minutes of the Southern Presbyterian Assembly, one is struck with the fact that this, the most conservative of our reformed churches, has precisely the same problems to contend with that beset the pathway of others holding somewhat tenaciously the former modes of expression. We see the same slow but steady decline in ordination, licensures, and confessions; the same multiplication of vacant churches and the same neglect of infant baptism. The Sunday-school membership has also taken a tumble; so that despite the salt of its most astringent Calvinism the Southern church does not appear to have escaped a single one of the trials from which Northern brethren unquestionably suffer. One can hardly say that the Southern church has a plethora of preachers, however, since to make its 1,471 ministers go round many of them hold from two

to six appointments apiece; in the presbytery of Fayetteville, twenty-six ministers acting as stated supplies for seventy-four churches. Even after stretching to the utmost their material it is found that in some of the presbyteries there are more churches marked 'vacant' than filled. The number of ministers received from other bodies is very small, about one half of one per cent., so that this church possesses preeminently a ministry of its own raising. Its isolation nevertheless has not saved it from the apathy which affects all our American denominations to-day."

THE USE OF FORCE BY THE EARLY CHRISTIAN CHURCH.

IN a new work entitled "Christianity and Paganism in the Fourth and Fifth Centuries," by Mr. Ernest N. Bennett, fellow and lecturer of Hertford College, Oxford, a side of church history is treated not very familiar to the general reader, especially one who has forgotten his Gibbon and Milman. The religion of Islam is commonly spoken of as a religion propagated by the sword; but the fact that force, bloodshed, and wholesale coercion formed a very important part of the Christian propaganda in establishing itself over the Roman empire is less familiar. In a review of the above-mentioned work, the *London Weekly Register* (Rom. Cath., May 11) says:

"It is in the times of cruel persecution and worldly weakness that the diviner element in the Church of Christ shines out most unmistakably; in the days of power it is otherwise. No sooner had Christianity emerged victoriously from decadal chastisement than Christian prelates and monks, and even saints, lent their sanction and sometimes active assistance to an unrighteous anti-pagan crusade, in which nothing was respected, not even the consciences of those who differed from them. The aforetime pagan dictum in respect of the Christians, 'Non licet esse vos' ['You are not permitted to exist'], now became adopted by Christians themselves. Wholesale destruction of temples, statuary, and literature, confiscation of property, penal disabilities, and physical torture were employed. Pagan martyrdoms, tho rare, were not unknown. 'In short, it may fairly be said that whatever traces of pity and consideration are found in the treatment of paganism were due, not to the influence of the Christian clergy, but to the prudence or benevolence of the emperors.' Even great churchmen like SS. Augustine, Ambrose, and Chrysostom, betray a vacillating disposition; their ethical teaching is not always consistent, nor does their practise always tally with their theory. Saint Augustine, perhaps, from his deficiencies as an exegete, defends in one place the principle of coercion on his interpretation of Our Lord's words, 'Compel them to come in, that my house may be filled.' There was a decided tendency to eradicate the distinction between unbelief and unbeliefers, to exalt objective truth at the expense of subjective truth and the inviolable rights of the individual conscience. As afterward with heresy, so then with unbelief. Hesitancy to accept Christianity was habitually traced to personal vice, or bad faith and unworthy motives, with little or no taking into account of radical differences of temperament, mental constitution, the abiding influences of education, and the like. In gross attachment to the letter of Christ's sayings they missed the spirit of His teaching, to whom and to whose Father heart-homage alone is pleasing; and in forcibly repressing idolaters they let loose a legion of pestilential hypocrites upon the church."

Dr. TALMAGE, who lately preached in St. James's Hall, London, was asked by *The Puritan* as to the secret of his success in preaching. In reply he said:

"If I had to give one reason, I think it would be this: In my sermons I always aim at helpfulness. Show me a congregation of five hundred people, I do not care where or when, and I will tell you how many of them want help. Every man to-day, no matter how successful he may appear, notwithstanding that his face is always smiling and the cheery word always on his lips, finds a craving for sympathy, strength, and encouragement. Every man, that is, but a fool; for only the fool feels self-sufficient. Men conceal the feeling; they would not confess it to their nearest and dearest, but deep down in their hearts there it is."

The Westminster Gazette remarks that "it would be well perhaps if some other preachers would follow Dr. Talmage in this respect."

FOREIGN TOPICS.

THE FUTURE OF SOUTH AFRICA.

ALTHO the Boers evidently have not yet made up their minds to surrender, even their friends doubt that they can obtain advantages by further resistance, and in Great Britain the war is regarded as practically over. Lord Salisbury has declared that "no shred of independence" is to be left to the Boers, and numerous are the suggestions of suspension of autonomy even in the Cape Colony and Natal, to prevent the Boers from using their majorities there in the interest of their race. *The Standard* (London) says:

"Pretoria advices tell us that the burghers, paralyzed and hopeless, are urging their leaders to sue for peace and open negotiations. They need not give themselves the trouble. The Transvaal is being annexed, as Lord Roberts covers it with his troops; and if any formal declaration is thought desirable it will be made—without requiring or seeking the assent of the deposed Government—by the commander-in-chief at Pretoria. Lord Sal-

come if some perversity does not thwart the farmer. There can be no greater error."

Mr. Courtney, of the Peace Committee, has addressed to Lord Salisbury a warning letter, from which we quote the following:

"A huge and costly garrison must long be maintained in South Africa if this policy is pursued. This freedom-loving nation, whose rulers went to war with the Boers professedly to secure fair electoral rights for Uitlanders, will be seen governing Boers and Uitlanders by military methods which deprive both of all voice or vote in the public affairs of their common country. Mr. Chamberlain declares that this will last until the Boers accept with contentment the loss of their independence. But until that improbable event occurs the inhabitants of all races will be despotically governed, with the ever overhanging danger that before long they will unite in hostility to the Imperial Government. Such a denial of self-government to the two republics would provoke the strongest resentment among the majority of our fellow subjects in South Africa."

But such apprehensions are not expressed by many men of mark in Great Britain or her colonies.

Continental papers doubt that the Boers can ever be forced into the position of vassals. "Another struggle will take place when Great Britain is engaged elsewhere," says the *Alldeutsche Blätter* (Berlin), "and the Boers will yet gain their independence." The German Government shows itself willing to provide an asylum for the Boers in Southwest Africa. The *Post* (Berlin), an official organ, expresses itself to the following effect:

No doubt many of the Boers will be loth to abandon the homes they have made for themselves in the wilderness; but there must also be a considerable number of the best among them who would rather begin over again than remain under British rule. These will be welcomed in German territory. Much of the land in Southwest Africa is stony and arid, but the Boer, like the German, is willing to work hard upon the soil, and he will convert into prosperous districts a region which the Briton despises.

The *Journal des Débats* (Paris) says:

"That Great Britain has gained much by her aggression may be doubted. As the Boers did not destroy the Johannesburg mines, no greater number of English workmen than before will be needed. The mines must be exhausted sooner or later, and as the English are little inclined to farm bad lands, the Dutch, who are the true sons of the soil, must ultimately be in the ascendant, unless means are provided to exterminate them absolutely."

The *Temps* (Paris) says:

"When we remember that the ostensible *casus belli*, as given by the British, was the desire to establish the equality of the races, we are inclined to think that the British Government would pause ere it makes political helots of the Boers. But such expectations would be futile. It would be naïve to expect justice. There is no longer any talk of the suffrage. Chamberlain evidently thinks that to the brutal is given the earth. We should be grateful for his open confessions."

The *Amsterdammer* is not quite sure that Great Britain will be permitted to do as she pleases. It thinks that at the eleventh hour some of the powers may veto the destruction of the Boers. The *Handelsblad* (Amsterdam) says:

"Whatever may be the ultimate outcome of the war, it is certain that nearly half a million of white men in South Africa will do their best to hurt British trade. A telling example is related by a business man in South Africa. He sent his agent to a district where, before the war, the Dutch population was rather opposed to the Afrikaner Bond. The commercial traveler gave vent to the opinion that the war would soon be over, and that the good old Union Jack would soon float over Pretoria. He made a mistake. He was told to pack his samples and never to show himself again! Anything English, Canadian, or Australian will not be wanted by the Boers for a long time to come. The United States will profit, for, rightly or wrongly, the Boers believe that the sympathies of the American people are with them.

Germany is certain to profit, as the German people have made no secret of their feelings.

Secretary Reitz, of the South African Republic, in response to questions asked by the *Kölnische Zeitung*, gives his views on future conditions in South Africa. First, as to the gold-mines, he has this to say (assuming that the British conquest be made complete):

"The British Government has promised the people that the cost of the war shall be defrayed by the Transvaal. When the war is over nothing will remain to the Boers but their farms and houses. So it is evident that they could not pay the cost of the war. . . . The gold-mines, on the contrary, are the richest in the world, so it is evidently from them that the British Government will try to reconquer for the expenses of the war. Before the war is over, the expenses will run up to £100,000,000. At three per cent. interest that means a burden of £3,000,000 per annum. The gold-mines have produced about £16,000,000 yearly, of which amount about one third can be regarded as net profit. That is to say, about one half of the net profits will be exacted by the British Government. And out of whose pockets will this come? Apparently out of the pockets of the shareholders, all of whom are not English—some of them being German, some French. The blow, however, will fall most heavily on Rhodes, Werner, Beit, Eckstein, Barnato *et hoc genus omne*—in other words, on those who have done their best, and have unfortunately succeeded in causing the war."

As to the social and political conditions, Mr. Reitz says:

"The English will be obliged to maintain a garrison of 50,000 men in the Transvaal Republic and the Orange Free State. What an enormous expense that will be can easily be imagined. Should England withdraw her troops, the Boers would soon find means of obtaining arms (for the Transvaal is not Ireland); and the struggle would be kept up not simply for years, but for centuries, and would burst out with renewed vigor whenever there should be a war, or any other favorable chance for a rising. No matter how many times Great Britain should conquer, she would always have a *hereditas damnosa*, a continual source of anger, vexation, and bloodshed.

"And what would be the lot of the subdued republics? Ruin, from every standpoint—moral, personal, and social. A subdued people, a rotten people; for we be to those who have to live where 50,000 mercenaries, such as those of which the English army is composed, are rampant. It is only necessary to glance casually at the medical statistics of any such army to foresee what will follow."—*Translations made for THE LITERARY DIGEST.*

Do the European Residents in Turkey Provoke Conflicts?—Complaint is made in the *Correspondent* (Hamburg) that the Christians resident in Turkey have not yet learned to restrain themselves, especially when they believe themselves protected by the consuls of foreign powers. "Christians," in this case, refers not to the missionaries, but to any citizens of a country under the sway of Western civilization. The *Correspondent* relates the following:

"The Christians on the coast of Palestine have the foolish custom of celebrating Easter by the continual firing of pistols and guns. This almost led to a massacre at Haifa. There has been bad blood between the Christians and Mohammedans of the port for some time past, and the kaimakan (governor), to prevent an outbreak, prohibited this useless burning of powder this year. On Easter Sunday the order was respected, but on the second day several hundred shots were fired. On the third, when the French consul, dressed in his gala uniform, left the Greek church, a mob of 2,500 to 3,000 persons accompanied him, yelling *Vive la république de France!* and a regular fusillade ensued.

"This behavior irritated the Mohammedans, and they made up their mind to celebrate the Mohammedan All Souls' Day, which fell upon April 19, in the same way. The kaimakan prohibited shooting and a parade, but the sheiks came to him to inform him that they could not prevail upon their young people to abandon their project, as they were determined to show that they had as much right as the Christians. The parade took place.

The Christians, fearing violence, had bought the day before all the arms they could get hold of, and had garrisoned a house on the road of the parade with 150 men, determined to accept battle if occasion offered. The authorities, however, were on the alert, and no fight occurred. It could have ended only in a general massacre. But the incident shows how provokingly the Christians act upon occasion, taunting the Mohammedans. They are encouraged in this by the influential and ambitious consuls. When passion has been roused to fever heat in this way, very little is needed to cause an outbreak of fanaticism."—*Translation made for THE LITERARY DIGEST.*

THE CHINESE DISTURBANCES AND THE POWERS.

THE "Boxers," as the English have termed the anti-foreign element now disturbing China, are not without some advocates in Europe, especially among those who habitually distrust England and who look with suspicion upon the talk in some British journals of partitioning China. Thus the *Handelsblad* (Amsterdam) finds reasons for sympathizing with the "Boxers" as follows:

"Some months ago the local authorities were informed by the Peking Government that 'they must not interfere with certain loyal citizens who are banded together in athletic clubs for the defense of their homes and their country.' Undoubtedly the 'Boxers' were meant, and these must have thought that they had imperial protection. No doubt they were right; but viewed from this point the movement becomes mainly a Chinese attempt to organize the people into a militia. Hence they should have the sympathy of right-minded people."

Prof. Goldwin Smith also fears that China is to be the next victim of imperialism. To his protest against American conquests in Spanish colonies and British aggression in South Africa, he now adds a protest against foreign interference with the Chinese. He writes in the *Toronto Sun*:

"It is too probable that China will be the next scene of butchery and havoc in the abused name of civilization. Fighting seems, in fact, already to have begun. If any people in the world have a right to a country the Chinese surely have a right to the country which they are believed to have inhabited for four thousand years. They are at least partly civilized; they are industrious in the highest degree; and tho their general morality may be weak, their industrial morality is exceptionally strong. . . . One thing is clear, all the missionaries should be compelled at once to withdraw to places of security, or, if they choose heroically to remain in posts of danger, should be warned that they do this, as did the early missionaries, at their own risk. It is monstrous that a religion of peace and good will should be made, as too often it has been, in the hands of its indiscreet apostles, a brand for kindling the flames of murderous war."

Such comments, however, are anything but numerous, especially in England, where the necessary break-up of China is thought by many to be probable. Thus *The Outlook* (London) says:

"So grave is the situation created by the 'Boxers' that the powers are landing troops for the protection of their legations, as they did in September, 1898, on the occasion of the *coup-d'état* which restored the Dowager-Empress; and doubtless this measure will as then have the effect of persuading that formidable old lady to say the word necessary to disperse her bullies—this time the 'Boxers'—to their homes. Yet the partition of China may be forced upon the powers, against their better judgment, by the necessity imposed upon them of themselves undertaking the maintenance of a settled peace. This task in its turn will necessitate either *condominium*, which is impracticable, or *partition*, which spells war."

The Spectator suggests that Great Britain should come to terms with Russia. It says:

"If we resolve to make an agreement with Russia, we may be able both to control and guide the Empress-Dowager, and even,

in case of extreme need, to protect the dynasty in its possession of Peking. Between us we can present a front too strong for any 'Boxer' army or any force which the Empress-Dowager is likely to have at her disposal. If, on the other hand, we bicker and quarrel, as every Anglo-Chinese urges us to do, we shall neutralize each other's energy, and the Chinese revolution must work itself out with unknown results. . . . As to the Russo-Japanese quarrel, that is no affair of ours."

A few British journals express regret that the Boer war has seriously affected Great Britain's standing in the far East. Frederic Greenwood, writing in the *London Speaker* on the far Eastern situation, says:

"Lord Salisbury spoke of a 'striking at the heart of England,' of a blow that might bring England to sudden downfall. But tho she has been managed into a position which offers extraordinary temptations to such an attack, her worst enemies would probably think it impolitic to go so far, if sure of success. That is to say, it would be impolitic if successful. Among continental politicians of the higher order the ideal of a ruined England is not an England ruined all at once. A suddenly ruined England would be as suddenly followed by disturbances of every sort, everywhere, too tremendous for contemplation. Downfall for England by successive stages is the desire of England's competitors wherever that desire is directed by patient and intelligent calculation. . . . Nor would it be safe to put quite out of the reckoning another consideration—namely, that tho Russia (and France) may have no idea of taking advantage of our South African embarrassment to raise a greater trouble, they might not be inexpressibly sorry if we raised it ourselves. Therefore it appears that silent endurance should be our chosen part under whatever consequences naturally ensue—in China, Korea, Japan, or anywhere else—from that strange product of imperialism, the South African war. Or is the imperialism the strange thing? Surely, if judged by its fruits; an imperialism which imperils, which casts down, which throws away ten times more with the left hand than it is likely to establish with the right."

The Overland China Mail (Hongkong) takes somewhat the same view of the effect of South African events. It says:

"During the progress of the war, distant as it is from any Chinese territory, and remote as its concerns may be from any Celestial interests, it has been noticeable that the conduct of Chinese officials toward British subjects and British officials has been distinctly changed for the worse by the telegrams narrating the early Boer successes for several months continuously. When the war is over it will not take the Chinese long to alter their attitude (tho what attitude they take is of no importance to us), but what *is* of importance is that we shall by that time have altered ours."

The Globe, a pronounced jingo organ, also declares that "Russia shamelessly uses England's complications in South Africa to ruin British prestige in the far East." *The Star* thinks nothing can be done while the army is engaged in South Africa. *The Morning Leader* says that an untimely British threat would put in motion Russia's armies near the Indian frontier. *The Westminster Gazette*, too, fears that nothing can be done, as Japan is not ready to attack Russia.

The Temps (Paris) does not doubt that the ostensible reason for interference in China, the unsafe condition of the missionaries and other foreigners, can easily be removed, as the Chinese Government will not long resist the determined action of the powers. *The Kölnische Zeitung* (Cologne) thinks the present a good time to obtain better commercial terms from China, with which the powers should be content. It says:

"The Chinese Government is anxious to obtain the consent of the powers to an increase of the tariff for revenue purposes. This revives really the object of Li Hung Chang's mission to Europe and the United States in 1896. The Western powers demand the abolition of all provincial tariffs. Li Hung Chang declared that this could not be granted unless the tariff was increased at least ten per cent. Since then the Chinese Government has granted numerous railroad concessions, and it is clear that sooner or later the railroad engine will altogether abolish interior tariffs."

But at present the concessions of the Chinese Government in the tariff question are merely nominal. The chances are good now to remedy this."

Concerning Germany's interest in the rising of the so-called "Boxers," the same paper says:

"Shantung, the German sphere of interest, is undoubtedly affected by the agitation against foreigners. But the endeavor to picture the rising as specially directed against the Germans, and therefore demanding special efforts on the part of Germany, is futile. Belgian and French subjects chiefly are attacked, and these are now protected by French and German troops."

The *Nouye Vremya* (St. Petersburg) declares that formal partitioning as suggested by the English press is not necessary. Russia will keep order in the provinces which fall within her sphere of interest. The *Tages Zeitung* (Berlin) believes that Germany, being satisfied with Shantung as her share, will devote her attention chiefly to that province without interfering with other powers.—*Translations made for THE LITERARY DIGEST.*

GERMANY AND THE UNITED STATES.

THERE are not wanting influential German-American papers which declare that the reelection of President McKinley spells war with Germany, as in that event even the protection by Germany of her established interests in South America will, they apprehend, be regarded as an aggression, and the Administration will be forced by our jingoes to resent it. In the British Isles and in Greater Britain the possibility of such a quarrel between England's chief industrial competitors is naturally enough a subject of considerable remark. The *Spectator* (London), referring to Secretary Root's recent after-dinner speech (see THE LITERARY DIGEST, May 12, 1900), in which he remarked that "we may have to fight for the Monroe doctrine," says:

"Mr. Root is perfectly right to warn his countrymen. It is said that he has declared his speech to be a purely academic utterance and in no way directed against Germany. No doubt; but utterances are not necessarily untrue because they are academic. Captain Mahan's views on sea-power were purely academic, but, to use the words of a Persian poet, 'by that means a world was affected.'"

A British view of the relations between America and Germany is set forth in the following excerpt from the *Toronto World*:

"It happens that Emperor William is bending every energy to increase the naval strength of the empire, and this, taken in connection with the fact that the German colonization is proceeding with suspicious rapidity in the republic of Brazil, is interpreted to mean that the Emperor is meditating an assault upon the national integrity of Brazil—an assault which the United States would be in duty bound to resist by force. . . . Germany has designs on South America, which is the only continent now available for colonization by the great powers. If Germany is denied the right to acquire a sphere of influence in South America, no other territory will be available for extending the empire. And Germany has the imperial-expansion fever as badly as the United States or Great Britain. The theory that Emperor William is the leading European opponent of the Monroe doctrine is very plausible, and there is little doubt that Secretary Root and the McKinley Administration see in Germany a portending storm-cloud. A sign of the times is Germany's recent decision to limit as far as possible the importation of United States food products."

No evidence, however, is given in the German press or by the utterances of any German officials that Germany desires any rupture with the United States, and the charge that the monarchy is to be restored in Brazil with German help is ridiculed. At present the balance of trade between this country and Germany is largely in our favor, and the Germans will endeavor to render it more nearly equal, they say, by a new commercial treaty; but they deny as worthless the assertion that their withdrawal of subsidies to steamships that bring American agricultural produce to Germany is for the purpose of crippling American trade. They point out as a matter of fact that none of the steamship lines running to the United States are subsidized, the

those running to British colonies are. The official *Reichs Anzeiger* (Berlin) admits the principle of the Monroe doctrine as against the establishment of European dependencies on this continent, and the Emperor has congratulated Brazil upon her independence. Dr. Roman Hieber, a prominent German Brazilian, is quoted by the *Lokal Anzeiger* (Berlin) to the following effect:

The Germans in Brazil have no wish to be placed under the authority of officials imported from Europe. They are in touch and in sympathy with the mother country, but they do not intend to become dependent upon her. But this does not prevent them from aiming at the establishment of a régime which will make the German element predominant in southern Brazil. Since the overthrow of the monarchy, republican tyranny and corruption are the order of the day, and the Portuguese Brazilians have instituted a reign of terror. But the Germans want no interference from outside. They will probably declare themselves independent, joining hands with the Italian element to accomplish their aim. The United States has no right to interfere in this, nor would it be wise to endanger United States commercial prospects by such interference. The outcome of a revolution would simply be the establishment of a state in which the German element is predominant.

There are other indications that, however opposed the Germans may be to an aggressive policy on the part of the German empire, the Germans in South America are preparing to resist any attempt on the part of Great Britain or the United States intended to force their submission to the English-speaking race. The *St. Peterburger Zeitung* says:

"The United States Government is reported to have ordered its consuls in South America to report on the numbers and attitude of the German settlers in South America. It is hardly to be believed that the Washington Government can be so foolish as to meddle with matters which are absolutely no business of theirs. Germans have a right to settle where they please, as numerous as they please. It is notable that the French press also aims to make Germany and the United States enemies. The French have not forgiven the disaster to Spain, and they are anxious to involve the United States in a quarrel with a real power."

The *Koloniale Zeitschrift* (Berlin) is typical of those German papers which return the expressions of our own jingo organs in kind. It says:

"The Americans no longer connect ideas of liberty with the views expressed by Monroe. Materialism, imperialism, and low selfishness are their predominant motives, as the annexation of Hawaii and the Spanish-American war have shown. The Monroe doctrine is a mere phrase, which does not find approval in South America or in Europe. But phrases frighten nobody, and it is doubtful that the Yankees want war for the sake of phrases. The power of the United States is not overrated in Europe as much as in America. The Americans should remember that their offer to take part in the settlement of Crete was met by a pitying smile, and that their hero Dewey became silent when Admiral von Diederichs ordered his ships ready for action. If the United States were actually to uphold the Monroe doctrine, the answer would come from the mouth of cannon."—*Translations made for THE LITERARY DIGEST.*

"The White Man's Burden."—The reign of Queen Victoria has been a reign of peace, in so far as freedom from invasion of the British Isles is concerned; but some forty wars, aside from a number of less serious revolts, have been carried to a conclusion by her subjects since the Queen's coronation in 1837. A list of these wars is given by the *Nieuws van den Dag* (Amsterdam) as follows:

A war against Russia, 1854.
Three wars against Afghanistan, 1838, 1849, 1878.
Four wars against China, 1841, 1849, 1856, 1860.
Two wars against the Sikhs, 1845, 1848.
Three Kafir wars, 1846, 1851, 1877.
Three wars against Burma, 1850, 1852, 1885.
Nine wars in India, 1857, 1860, 1863, 1864, 1868, 1879, 1890, 1897.
Three Ashanti wars, 1864, 1873, 1899.
One war against Abyssinia, 1867.
A war against Persia, 1852.
One war against the Zulus, 1878.
One war against the Basutos, 1879.
One war in Egypt, 1862.
Three wars in the Sudan, 1894, 1896, 1899.
A war in Zanzibar, 1890.
A war against the Matabele, 1894.
Two wars against the Transvaal, 1881, 1899.—*Translation made for THE LITERARY DIGEST.*

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Under date of April 10, 1900, Consul Ridgely writes from Geneva:

American shoe manufacturers, acting upon advice and information furnished them through the department by United States consuls, have of late been pushing for business in continental Europe, and within the past year there has been a real and growing demand for our shoes. This fact has been widely noted on the Continent, and recently Vienna houses began to copy the American article and to flood the market with their imitation goods. I am reliably informed that they copy nearly everything American they can find in the shoe line, and that in some instances they mark their goods "Made in the United States." A leading shoe dealer of Geneva tells me that Austrian drummers miss no opportunity to belittle our goods, at the same time being very careful to possess themselves of anything new they can find for the purpose of copying it. American shoes are giving satisfaction, and unless the Austrian houses undersell our exporters, the latter will continue to increase their business in French Switzerland. If desired, I could procure and forward a pair of the imitation American shoes sent here from Vienna.

The *Confectionair*, a leading organ of the German textile and clothing manufacture, recently contained an article from its regular correspondent at Chemnitz which is of interest to American readers. It says, under the heading "How the Americans cause us Competition with our Own Workmen":

"Year by year, the American textile industry grows and makes our manufacturers look with dire anxiety to the future, for the United States

not only competes with us in its own market, but will at no distant date be a powerful competitor in other markets. Even the most optimistic manufacturers of Saxon textiles do not deny that in some articles they can not approach American fabrics. Such are the sixteen pin lines which were formerly imported into the United States from Germany but are now entirely replaced by the home goods. The question obtrudes itself, How has the rapid rise of manufacturing been made possible in the agrarian Union? The immediate cause was the transplantation of the German industry to the United States."

The writer here gives names of German firms which have established textile factories in various sections of the United States, and adds:

"Aside from these, many of the largest manufacturing firms in the United States have German members or German managers, and the operatives are almost without exception Saxon textile workers. Thus our industry has been deeply hurt. It is a sorrowful fact that Saxon manufacturers have refrained from doing anything to check the emigration of such a vast number of skilled operatives; it is now too late to make up for this omission, the consequences of which are shown in the lack of requisite working force here and the steadily rising capacity of the American industries to take foreign markets from us."

Consul Robert P. Skinner writes from Marseilles, January 15, 1900:

American cotton oil continues to maintain its supremacy in the Marseilles market, in spite of continued agitation in favor of prohibitive, or at least restrictive, duties. The arrival during the year 1899 were slightly less than during the year previous, but prices were firmer. Arrivals during a series of years have been as follows:

Year.	From—		
	United States.	England.	Other Countries.
	Pounds.	Pounds.	Pounds.
1899	104,602,769	3,710,477	504,700
1898	112,611,509	4,791,915	515,801
1897	99,461,189	11,973,180	422,617

The varying prices per 100 kilograms (220.46 pounds) during the last ten years are shown below:

Year.	American Oil.		English Oil.	
	Francs.	\$	Francs.	\$
1890	56.75	\$10.94	56.50	\$10.90
1891	56.50	10.90	54.45	10.51
1892	53.08	10.24	50.95	9.85
1893	70.85	13.67	60.325	11.66
1894	56.910	10.95	53.00	10.29
1895	48.125	9.29	49.45	9.55
1896	44.55	8.55	45.04	8.50
1897	47.60	9.05	47.30	9.28
1898	45.125	8.64	47.05	9.27
1899	44.70	8.51	47.00	9.29

The lowest price recorded for American oil for the past year was 38.75 francs (\$7.47), and the highest 54 francs (\$10.42), the average being 44.60 francs (\$8.60). The December average was 54 francs (\$10.42), the highest of the year. Prices for English oil ranged from 37.50 to 57.75 francs (\$7.24 to \$11.27).

On stock on hand on December 31 amounted to 15,000 barrels of American oil and 2,000 barrels of English oil, as against a total of 42,000 barrels carried over on December 31, 1898.

The arrivals of American oils during the year by marks and barrels were as follows: Prime winter, 12,933 barrels; prime summer white, 6,896 barrels; prime summer yellow, 91,926 barrels; total, 111,755 barrels.

Consul Dickinson writes from Constantinople April 14, 1900:

The freight brought to Constantinople and other Levantine ports by the steamship *Brand*, the last steamer of the Barber Direct Line, indicates a gratifying increase in amount and variety

The "Keeping Cool" Problem.

The problem of keeping cool during the hot weather is largely solved by wearing the proper underclothing. The garments made by the Dr. Jaeger System are of pure wool, which, while it absorbs the vapors of perspiration from the body, prevents the ill effects of any sudden change of temperature. The summer weights are extremely light and still represent the maximum of comfort and protection.

"Health Culture" is a book of information which may be had free by addressing the Dr. Jaeger Woolen System Co., New York City.

BEST & CO

Broken Lines of Boys' Kilt Suits,

Made of percales, galateas, madras and cotton covert; in attractive styles and colors, at greatly reduced prices, 75c., \$1.38, \$2.00, \$2.35.

The perfect style and finish of these suits, combined with their extremely low price, make this sale a rare opportunity for mothers in search of inexpensive, stylish summer wear for their little boys.

60-62 West 23d St.

Reduced Prices on Suits and Skirts.

IN order to reduce our stock of Summer materials, we will make to order fashionable suits and skirts, at great reductions from former prices. One-third has been cut off the price of nearly every cloth suit and skirt in our line, and every wash suit and skirt has been reduced to one-half of former prices; but the quality of materials and workmanship is right up to our usual standard—just as good as if you paid double the money. Order from this Reduced Price Sale as freely as you wish; send back anything you don't like and we will refund your money.

Tailor-Made Suits, \$10; reduced to \$6.67.

\$15 Suits reduced to \$10. \$20 Suits reduced to \$13.34.

Separate All-Wool Skirts; former price \$6; reduced to \$4.

Reduced prices on Bicycle Suits, Separate Bicycle Skirts, Rainy-day Suits and Skirts.

We tell you about hundreds of reduced-price garments in our Summer Catalogue, which will be sent FREE, together with samples of materials, to any lady who wishes them.

Write to-day for Catalogue, and samples; don't delay—the choicest goods will be sold first.

THE NATIONAL CLOAK COMPANY,
119 and 121 West 23d St., New York.

THIS CUT GLASS BOWL

is eight inches in diameter and three and a half inches high. It is cut glass—hand cut (not milled), hand finished, hand polished, which guarantees its perpetual brilliancy. The glass from which it is made is the very best it is possible to produce. The bowl is thick, heavy and deeply cut. It rings clear as a bell. A brilliant ornament for sideboard and dining table.

\$4.50 Express Prepaid

to all points east of the Mississippi River; add 50 cents extra for points beyond. Its equal cannot be purchased for less than \$6.50.

Any dissatisfied purchaser may return it at our expense and have the money back without question.

It is sold at this price solely to introduce a new way of selling cut glass—direct from factory to consumer. It introduces us to you. Catalogue mailed free.

BRILLIANT CUT GLASS COMPANY,
42 Murray Street, New York.

of American products entering these ports. The *Brand* has just started on her return voyage to the United States, having delivered about 2,000 tons of railroad material at Alexandria, intended for the railroad up the Nile, about 800 tons of other products at this port and Smyrna.

The American goods and products delivered at Smyrna, Constantinople, and Salonica include pumps, phonographic goods (nearly 4,500 pounds), leather, rubber boots and shoes, large variety of hardware, cotton cloth, tinware, lamp goods, wooden ware, milling machinery, cotton belting, mowing-machines, chairs and other furniture, clocks, iron bedsteads, one Mosler safe, paints, lard and oleo, domestics, flour, and nearly 1,000 kegs of wire nails.

Since the establishment of the direct line and the consequent reduction in freights, wire nails and a few other articles of American manufacture appear to have taken possession of the Levantine markets. In the opinion of good judges, many other staple articles will be equally popular when once fairly introduced. For the first time in the history of Constantinople, some of the leading stores, notably the Bon Marché and Hayden Brothers, have given orders for a line of American boots and shoes. They are so far superior to those of European manufacture that importers have every confidence in their extensive sale.

The captain of the *Brand* reports that nearly 100,000 tons of railroad material will be used on the Nile Railway during the coming season, and that the bulk of the orders will probably be given to American manufacturers.

Consul Smith sends from Moscow, April 14, 1900, the following data as to publications in Russia: Periodical journals and newspapers issued in the Russian language, 63; in Polish, 63; in German, 12; in Estonian, 11; in French, 8; in Latin, 9; in Armenian, 6; in Hebrew, 9; in Caucasian, 5; total, 179.

PERSONALS.

WHEN Charles Dudley Warner was editor of the *Hartford Press*, back in the 'sixties, arousing the patriotism of the States by his energetic appeals, one of the type-setters came in from the composing-room one day, and, facing Mr. Warner, said: "Mr. Warner, I've decided to enlist in the army." With mingled emotions of pride and responsibility Mr. Warner replied that it pleased him that the man felt the call to duty. "Oh, it isn't that," said the truthful compositor, "but I'd rather be shot than set your copy."

EX-GOVERNOR GEORGE W. PECK, of Wisconsin, author of "Peck's Bad Boy," was running a little country weekly in the pines in the early 'sixties. It was an unimportant sheet save for one column of jokes which Peck wrote each week. This department caught the eye of "Brick" Pomeroy, who was then printing his *Democrat* in La Crosse, Wis., and one day he wrote to Peck, asking him whether he would be willing to go down to La Crosse and work for *The Democrat* at twenty-five dollars a week. Three days later Mr. Pomeroy got this telegram: "I accept your offer quicker than instantly. For heaven's sake don't withdraw it!"—*The Argonaut* (San Francisco).

ARCHBISHOP TEMPLE, of Canterbury, is always

very impatient of bores, especially clerical bores. One of the clergy of his diocese, who had pestered him a good deal recently, wrote an inordinately long letter describing a picture which he proposed to put up in the chancel of the church, and asking permission to do so. By the time his grace reached the end of the epistle his patience was quite exhausted, and he replied on a post-card: "DEAR BLESS—Hang the picture!" The clergyman is still wondering how he ought to regard the reply.—*Exchange*.

GENERAL DE GALLIFFET is the seventh Minister of War in less than two years who has retired from office in connection with the Dreyfus case. The first was General Billot, who went out with the Méline cabinet on June 14, 1898. Then came M. Cavaignac, who resigned on September 6, after Colonel Henry's suicide. He was followed by General Zurlinden, who held on only until September 17. General Channine, who next took over the War Office, resigned after the memorable sitting of October 25. M. de Freycinet stepped into the breach, but he resigned on May 5, 1899. M. Krantz, who had been Minister of Public Works, was then transferred to the War Office, where he remained until the Dupuy cabinet retired on June 12. The Waldeck-Rousseau cabinet was formed on June 23, with General de Galliffet as Minister of War.—*Commercial Advertiser*.

M. LEURET, the French manufacturer of artificial pearls from fish scales, says that he will come to the United States and erect works as soon as he hears of a locality where the right kind of scales can be had in large quantities. It is suggested that a suitable place might be found on the St. Lawrence River, among the Thousand Islands. The scales should be small and have a silver sheen. The brighter they are the higher price they will command. The scales should be removed while the fish are alive if possible. Twenty-five thousand pounds of these scales can be used in a year. It is anticipated that twice that quantity may be used in a few years.—*Tribune*.

THE LATE DUKE OF ARGYLL was known as the "Fighting Cock of the House of Lords." He was always on the aggressive, and even his appearance was that of a man looking for trouble. He walked with his shoulders thrown back, his head erect, his chin in the air, and his orange-colored hair feathering up from his forehead like an eagle-plume. No man, tho he might have spent a lifetime in study and might be recognized as the greatest authority upon a given subject, could state opinions opposite to those held by Argyll without bringing down upon himself the fierce attack of the Scotch "laird." He had more titles of nobility than any other Scotchman. He was immensely wealthy, owning 170,000 acres of land, and, in his own opinion, at least, he was equally fortunate in intellectual ability. He went around with a chip on his shoulder, looking for some one bold enough to dispute his views, and he fought wordy duels with almost every prominent man of science in Great Britain. At any rate he printed articles and books attempting to controvert the views and conclusions of Professor Huxley, Mr. Darwin, Sir John Lubbock, John Stuart Mill, Professor Tyndall, and Sir Charles Lyell. He had the courage of tremendous self-conceit, an arrogant manner, and absolutely no sense of humor. Consequently he always took himself seriously.—*Newark News*.

LINENE Collars and Cuffs

Made of fine cloth and exactly resemble fashionable linen goods. The most convenient, the most comfortable, and the most economical goods made.

No Laundry Work.

When soiled discard. A box of 10 collars, or 5 pairs of cuffs, 25 cts. By mail 30 cts.

Sample collar or pair of cuffs for 6 cts. in stamps. Give size and style desired.

Singer machines are so simple that a child can understand them; they are so strong that a bungler can hardly get them out of order. Every part is made with such scrupulous care, from the best materials, fitted in its place with the utmost exactness, and tested and re-tested so many times before leaving the factory, that it never gets the "fits" which try a woman's patience, destroy the fruits of her labor, and consume her time in vexing attempts to coax the machine to a proper performance of duty. Singer machines are sold directly from maker to user; they are guaranteed by the maker, always ready to furnish parts and supplies in any part of the world, and not by a middleman totally unable to render this service. *Buy a sewing-machine of the Present, and not one of the Past.*

MORE OR LESS PUNGENT.

The Solo.—"Do you think there will be harmony at your next political gathering?" asked the friend. "Harmony!" echoed the host. "The word is too mild. It implies that somebody besides me will have a voice in the proceedings. My friend, it'd be one grand, sweet solo!"—*Washington Star.*

Discomforts of Home Comforts.—"There's a cozy-looking couch, old man?" "Yes, but I never go near it." "What's the matter?" "Well, there are only three pillows that I'm allowed to put my head on, and I can't stand the wear and tear of picking them out from the other seeds."—*Exchange.*

A Cruise Incident.—CHAS. S. TARKER: "What is your own, medium?"

Mrs. NORTON: "Did the woman just about give her age?"

CHAS. S. TARKER: "Certainly."

Mrs. NORTON: "Well, I'm two years younger than she is!"—*Chicago News.*

Overalls.—JIMMY: "Scientific predict dat in two million years dis world will be outin' but a vast ball of fire?"

JIMMY: "Dem scientific say! Yet better dey never predict nothin' 'till dey see a prize fight as a election—dis allus outin' yet can't tell 'em wif a bet or!"—*Post.*

The Wrong One.—Mrs. BRUCE: "Johnny, did the doctor call while I was out?"

LITTLE JOHNNY (stepping on play): "Yes'm. He felt my pulse an' looked at my tongue, and shook his head, and said it was a very serious case, and he left this paper, and said he'd call again before night."

Mrs. BRUCE: "Gracious me! It wasn't you I sent him to see; it was the baby!"—*Tribune.*

Philanthropy.—"What's the matter, my boy?" said the elderly philanthropist, pausing in his morning walk.

The boy who had been digging at the edge of the wooden sidewalk turned a tear-stained face upward and responded:

"I'm huntin' for de penny I dropped t'rough a hole in de walk. My maw'll whup me if I don't find it!"

"Is that all?" the good man rejoined, feeling in his pockets for a coin. "Ory your tears, little fellow. Here's another one, just as good, and here is a nickel to go with it."

With the warm feeling at his heart that invariably accompanies the performance of a good deed he passed on.

The next day, walking abroad at the same hour, he observed a boy digging at the edge of a wooden sidewalk.

"What's the matter, little fellow?" he asked.

The boy turned a tear-stained face upward and said:

"I'm huntin' for a half dollar I dropped t'rough a hole in de walk. Me maw'll whup me if I don't find it!"—*Chicago Tribune.*

A Hospital Sketch.—A little girl five or six years, with big blue eyes that were full of tears, came to Bellevue Hospital the other day. She carried a cat in her arms. The cat had been wounded by a car, and one leg was badly mangled. At the

A Summer Holiday.

Do not plan your summer trip before seeing some of the handsome literature issued by the Grand Trunk Railway System, descriptive of the magnificent playgrounds and summer resorts situated in the highlands of Ontario, including the "Muskoka Lakes," "Lake of Bays," "The 10,000 Islands of the Georgian Bay," "The Magnetawan River," and the "Kawartha Lakes." Health and pleasure can be found in all of these unexcelled regions; good hotels, fine steamers on the lakes, good fishing and hunting, a region where perfect immunity from hay fever is assured, are some of the features which attract the tourist and pleasure seeker to these districts.

A postal card to P. P. Dwyer, Eastern Passenger Agent, 200 Broadway, New York City, will secure, free, descriptive pamphlets full of information, maps, etc.

gate the girl told Tom, the big policeman, that the cat was hurt.

"I want a doctor to he'p it!" she said.

Tom took her to the receiving ward, where there was a doctor who had nothing else to do.

"Here's a case, doc," said the policeman.

"I ain't a"—the doctor began. Then he saw the girl's eyes. "Let me see," he continued.

"Pretty bad," was the doctor's comment. Then he got some knives, a little bottle of chloroform and some bandages. "You must help me," he said to the girl.

She aided bravely, tho it made her very pale to see the sharp knives amputating the leg. In a few minutes it was all over and the cat was partly recovering from the anesthetic.

"Now you can take your kitty home with you," said the doctor.

"It ain't mine," the girl said. "I des found it. Now oo take care of it. Dood-bye." The policeman and the doctor made faces at each other, then sent the cat to the Society for the Prevention of Cruelty to Animals.—*Leslie's Weekly*.

Current Events.

Foreign.

SOUTH AFRICA.

June 11.—General Buller leads his army through Botha's Pass, his object being to occupy Volksrust, and cut off the Boer retreat from Laing's Nek.

June 12.—A force sent south by General Roberts defeats the Boers at Honingspruit, partially clearing his lines of communication.

Sir Redvers Buller forces the Boers to evacuate Majuba Hill and Laing's Nek by a turning movement to the west.

June 14.—Lord Roberts announces the defeat of the Boers under Botha fifteen miles east of Pretoria; the complete defeat of the Boers under De Wet on the Rhenoster River, and the restoration of communication between Pretoria and Bloemfontein.

General Buller occupies Volksrust, north of Laing's Nek.

June 14.—General Buller reports the submission of the Wakkerstroom district.

June 15.—Lord Roberts reports the surrender of Klerksdorp, in the Transvaal, to General Hunter; General Kitchener disperses a force of Boer raiders who attacked the railway in the Free State.

June 16.—Lord Roberts reports the occupation of the town of Rustenburg, in the Transvaal, by a force under General Baden-Powell; General Ian Hamilton routed the rear-guard of General Botha.

OTHER FOREIGN NEWS.

June 11.—The Chinese Emperor issues an appeal to the powers for the deposition of the Dowager-Empress, the establishment of a protectorate, and the non-interference of foreign countries by measures for the dismemberment of the empire.

June 12.—The Boxers attack Pao Ting Fu, Philippines: General Grant reported the capture of a rebel stronghold in Luzon.

June 13.—The Dowager-Empress will not offer any objection to the presence of foreign troops in China.

How to Grow Good Fruit.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticulture Society, at Lenox, Mass. The address bore chiefly upon spraying and general culture of orchard and field crops, how to do it, do it cheaply and good, and how to obtain the most profit from your labor in the easiest manner. The address is quite lengthy, about an hour's talk. It will not be sent to the disinterested. Owners of fruit trees, stating if at all interested in fruit culture, will get this book. Had this address been placed on the market in book form it no doubt would have sold at a good price. The full address, profusely illustrated, in pamphlet form was intended to be sent to fruit growers and owners of estates, free for the asking, but to prevent imposition by the curious and disinterested, the book will be sent to fruit growers, or owners of estates, enclosing fifty cents, to the Lenox Sprayer Company, 30 West Street, Pittsfield, Mass.

A great Remedy for Rheumatism

Mr. J. R. Morse, of the American Trading Company, Front Street, New York, writes: "Your TARTARLITHINE for rheumatism is simply GREAT. I want to present some of it to friends of mine. Please send me half a dozen bottles."

Tartarilithine is supplied in bottles containing 30 doses at \$1.00 and can be obtained of all druggists or post-free by mail. Pamphlets with Testimonials sent FREE.

McKESSON & ROBBINS,
95 Fulton Street, New York,
Sole Agents for THE TARTARLITHINE CO.

PANTASOTE Outwears Leather!

WATERPROOF. GREASE PROOF. STAIN PROOF.

Looks exactly like leather and costs half as much.

Unlike the common imitations of leather, Pantasote does not rot, peel or crack, contains no rubber, cellulose or other dangerous inflammable substances, and is not affected by heat, cold or climate. Made in standard colors, plain or figured.

A piece, 18 x 18 inches, sufficient to cover a chair seat, will be sent for 25 cents.

Sample Free! 15x18 inches, enough to make a Sewing Machine.

Send for 25, stamp with your upholsterer's name. Received the highest award at the Philadelphia Export Exposition over all competitors by recommendation of committee appointed by Franklin Institute.

Caution! There are worthless and dangerous imitations. Genuine goods have "Pantasote" stamped on the edge.
THE PANTASOTE COMPANY
20 Broadway, Dept. 1, New York City.

June 14.—Admiral Seymour's international column has reached Lung Fang, half-way to Peking from Tien-Tsin, its progress being delayed by the destruction of the railway.

The widow of William E. Gladstone dies in England.

June 15.—A dispatch from the French Minister at Peking to his Government says that the entry of the foreign troops into Peking will not be opposed.

The Porte not having replied to his notes, Mr. Griscom, United States Charge d'Affaires at Constantinople, is making oral representations regarding the American claims.

June 16.—From Hongkong it is reported that the foreign legations in Peking have been burned, and the German minister, Baron von Ketteler, killed; five foreign ministers ask for safe conduct and inform the Yang-ti-Yamen that they can have no further relations with the Chinese Government, but their request for safe conduct is curtly refused.

China.—The municipal elections pass off without disturbance.

June 17.—The nations are hurrying troops to China.

Domestic.

POLITICAL.

June 11.—The delegates to the Ohio Democratic state convention favor the endorsement of Admiral Dewey for Vice-President.

June 12.—Governor Roosevelt reiterates his declaration that he will not accept the nomination for Vice-President.

June 13.—Senator Hoar says at Philadelphia that the Administration has no chance for Vice-President.

The national committee hears the contesting delegation from Alabama.

The Ohio Democratic state convention instructs delegates for Mr. Bryan and nominates a state ticket.

June 14.—Several contests were settled by the Republican national committee at Philadelphia, and the Warmoth delegates were ousted from Louisiana.

Democratic conventions select national delegates in Georgia, Kentucky, Missouri, and California.

June 15.—The Republican national committee disposes of all the contests over seats won from Delaware, in which Senator Hanna makes a strong plea for harmony, and another effort is made to settle by agreement.

June 17.—That Governor Roosevelt will probably be nominated for Vice-President is the indication at Philadelphia.

OTHER DOMESTIC NEWS.

June 11.—Admiral Kempff calls on the Navy Department for orders.

June 12.—President McKinley makes a proclamation of the new reciprocity agreement with Portugal, giving the list of articles on which duties have been reduced.

Quiet prevails in St. Louis.

June 14.—Judge Townsend hands down a decision upholding the Treaty of Paris, and declaring that the inhabitants of Porto Rico are foreigners to the Constitution and laws of the United States until their status had been determined by Congress.

June 15.—A new proposition to settle the St. Louis strike was adopted by the men at the instigation of Samuel Gompers, and it is expected it will lead to arbitration.

June 16.—The administration decides to send troops to China from Manila if the alarming reports from Peking are confirmed.

The Navy Department decides to establish a large coaling station at San Diego, Cal.

The War Department issues orders for the retirement of Major-General Wesley Merritt on account of his reaching the age limit.

For Abuse of Alcohol

White.	Black.
1 P-K4	P-K4
2 Kt-KB3	Kt-OB3
3 B-Kt5	Kt-KB3
4 Castles	Kt x P
5 P-Q4	P-Q4
6 Q-K5	P x P
7 B-Kt5	

C. P. Morphy, Duluth, sends Black's 7th move, B-K2.

Mr. Morphy gives his reasons for making this move: "In the event of White retreating the B, we have gained a move, while if he exchange Bs, I think our position at least as good as White's if not superior."

B-K2 is better than Q-Q3, as it develops and defends at the same time.

The Consultation Game.

We are sorry that so far only nine persons have shown an interest in this game, by sending Black's 7th move; and five of them, so it seems to us, did not make the best move for Black. The strength or weakness of the Jerome Gambit depends on Black's 7th move; but a weak move here does not prove anything. The benefit of a Consultation Game is the opportunity it gives for analysis of some opening, thus showing the best continuations. It is, in a certain sense, a problem for the time being. We shall give Black's 7th move in our next issue. We think it best not to give the move sent by the majority, but, after giving the several moves sent, select as the move the one which, in our opinion, is the best.

A False Move.

The penalty for a false move is, usually, to move the King. A curious case was brought to our notice lately. In the course of the game White had moved his K. After a while he moved it back to Ksq. Then, as the game proceeded, forgetting, as he averred, that he had moved his K, he attempted to Castle. In doing this, he touched his R first, and when Black called his attention to the fact that he could not Castle, he moved his K as the penalty. Now, his K move, at this juncture, was a better move than that of his R, and Black objected to this. The matter was submitted to us, and we judged that White must move his R, not as a penalty for the false move, but because in attempting to Castle he touched his R first. If, when the move is legitimate, a player intending to Castle touches his R first, his opponent can stop the Castling, and compel him to move his R. The reason for this is that a player intending to Castle touches his R, and in moving it he may see that the R move is better than Castling, and make a move he did not intend to make. When he touches his R first, his opponent does not know that he intends to Castle; but if he moves his K two squares, there can not be any doubt as to the move he intends to make.

The Paris Tournament.

LASKER WINS.

The score at the time of going to press is as follows:

Won.	Lost.	Won.	Lost.
Brody..... 3	11	Mieses..... 9	6
Burn..... 9	5	Mortimer..... 2	13
Daher..... 1	14	Pillsbury..... 11½	3½
Janowski..... 9	6	Rosen..... 3	12
Lasker..... 14	1	Schlechter..... 8	6
Masch..... 9	6	Showalter..... 9	7
Massey..... 11	4	Sterling..... 1	14
Marshall..... 12	3	Tschigrin..... 10	5
Mason..... 4½	5½		

As Lasker's present score can not be reached by any other competitor, he has already secured the first prize, consisting of 5,000 francs and a Sevres vase.

The King's Gambit.

A NEW MOVE.

The British Chess Magazine publishes a "recent discovery" in the King's Gambit, taken from the Cheltenham Examiner:

White.	Black.
1 P-K4	P-K4
2 P-KB4	P x P
3 Kt-KB3	P-K Kt4
4 R-R4	B-Kt2
5 Castles	P-Q3
6 P-Q4	P-KR3
7 P-B3	Kt-K5
8 P-KKt3!	P-Kt5
..... If P x P; 9 QB x P, or KB x P, ch.	
9 Kt-R4	P-B6
10 Kt-Q2	
11 Q Kt x P	Castles
12 Q x P	P x Kt

What is Black's best move now? And if he had not played 10... Castles, what should he have done?

This position may be looked upon as a problem of less than fifty moves. Black to move, and save his bacon. To draw will be no disgrace—can he do it?

The Literary Digest

VOL. XX., No. 26

NEW YORK, JUNE 30, 1900.

WHOLE NUMBER, 532

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

The above list contains only those contributions received prior to June 25. They have been forwarded to Messrs. Brown Brothers & Company, 59 Wall Street, New York, who are custodians of the fund received by the Committee of One Hundred.

OPENING OF THE REPUBLICAN CAMPAIGN.

THE nomination of Governor Roosevelt for the Vice-Presidency, and the developments leading up to it, have brought out more remarks in the press than any other feature of the Republican national convention held in Philadelphia last week. The opinion seems to prevail, in papers of every political hue, that his nomination materially strengthens the ticket. Senator Hanna, according to newspaper report, agreed with Governor Roosevelt himself that the latter could help the party most by running again this year for governor of New York. Senator Platt, however, is reported to have said that Governor Roosevelt could not carry New York next fall, a view which some Democratic papers think well founded, pointing to the narrow margin

by which he was elected two years ago when military hero-worship was at its height. Mr. Platt's enemies, however, construed his desire for the governor's nomination on the national ticket more to the fear that Roosevelt would be reelected governor than to any fear that he would not be. The fruitless efforts of Governor Roosevelt to escape the nomination, and the counter-efforts to compel him to accept it, gave the newspaper men the larger part of the material for their despatches, and furnished the only bone of contention in the gathering, after the contests of rival delegations had been adjusted by the national committee. All

THEODORE ROOSEVELT.
(Photograph by Pach Bros.)

the reports of committees were adopted without contest, and the nominations for President and Vice-President were finally made by unanimous vote.

The renomination of the President was so fully expected that it has so far aroused no unusual comment. The platform contains little that is novel, and is considered disappointing by some of the Republican press.

THE TICKET.

A Republican View.—"McKinley is not the first President of this age to be renominated practically by acclamation, but during his four years in the White House there has arisen no anti-administration party; nothing of that kind has been seriously attempted or, so far as the politically initiated confess, has it been considered. At Philadelphia there was no hostile faction marching sullenly with the friendly delegates because opposition

Copyright by Francis B. Johnston.

WILLIAM MCKINLEY.

was hopeless, and in this happy respect President McKinley has not had a predecessor.

"The renomination is fully earned. During a strain of war and political evolution the like of which the country experienced but once before, McKinley as the national executive has at no moment stood with the doubters or the pessimists. He has shirked no duty of the moment because it was forbidding or novel. He has never once sought refuge in the ever-open shelter of anti-expansion argument that for many of the Administration's determining acts in the progress of expansion there were no precedents. He has gone ahead on the path of our manifest destiny without flourish, with a cautious tongue, but with an unfaltering foot, until to-day the United States are greater in truth and in the estimation of the world than ever before, and the Republican Party is not only hopeful, but wholly convinced of the wisdom and patriotism of the canvass about to be made in McKinley's name.

"The first man to be nominated for Vice-President, tho, by a like outpouring of party sentiment, is Theodore Roosevelt. Even if the second McKinley term should close Roosevelt's career in politics, he would have reward enough for public service through a lifetime. No man ever received so stunning a tribute of popular approval as Roosevelt received in the persistent and at last triumphant demand that he should be the candidate for Vice-President. The bosses who scare political kindergartens with visions of their absolute and awful domination in public affairs were chips on the stream of the irresistible sentiment for Roosevelt, insatiable until it got him."—*The New York Sun (Rep.)*.

Another Period of Backing and Filling.—"Mr. McKinley is nominated. This is the reward he receives from the Republican Party and its leaders for the lamblike docility with which he has obeyed their orders in every particular during the last four years.

"It is also a guarantee for the United States that if McKinley's nomination be followed by his election there is going to be another period of backing and filling, of sophomore statesmanship

and of bowing to the will of party leaders. This is encouraging! . . .

"In any case the die is cast, so far as the Republican Party is concerned, unless McKinley should prove disinterested enough to withdraw in favor of Roosevelt. But it is not yet too late for the Democrats to save the situation. There is still time for them to avoid the pitfalls of Bryanism, Populism, and silverism."—*The New York Herald (Ind.)*.

Roosevelt the Fallen.—"As governor of New York Roosevelt dared to challenge the enmity of the Platt machine. He instigated and jammed through the Legislature a corporation franchise tax law, which made every trust, monopoly, railway, and tramway combination in New York hate him and long for his destruction. On some occasions, it is true, he showed the white feather. He did surrender to Platt on more than one occasion, but, whenever he did so, the act was so manifestly in the interest of 'harmony' that nobody in his own party felt that it counted. But none of his friends ever believed that he could be brought to throw up the sponge at Philadelphia without ever getting out of his corner.

"He has done so, and it only remains for the next legislature of the Empire State to pass an act changing his Christian name from Theodore to Dennis. If there had been a fraction as much sense as 'bounce' in his composition it would have occurred to him that he, and not Platt, nor yet Hanna, held the game in his hands. He could have continued to say to the latter that an honest citizen could not allow his name to be put on a ticket which reeked of Algerism, Eaganism, Sampsonism, violation of the constitution, and carpetbag corruption in the colonies. He could have refused to stand for the defeat of the Nicaragua canal bill in the interests of the Hanna-Panama syndicate, and for the ship subsidy steal, and his refusal to shoulder those policies of infamy would have strengthened him with the American people. He could have dared Platt to refuse him a renomination for the governorship of New York.

"But Roosevelt is a fallen idol. . . . All that his name might have meant to Republican voters in case he had honestly asked for the nomination has been lost to the party by his invertebracy at Philadelphia. It does not lie in his mouth any more to say that William McKinley 'has the backbone of a chocolate éclair in a candy-store window.' His own is demonstrated to have the consistency of a fresh marshmallow drop."—*The Washington Times (Dem.)*.

Chairman Hanna.—"The reelection yesterday of Marcus A. Hanna as chairman of the Republican national committee naturally followed the good work of the convention in nominating McKinley and Roosevelt.

"Chairman Hanna has grown steadily in the favor and respect of the country during the four years past. No man has been more mercilessly caricatured, but these caricatures, so far from affecting the opinion of the people, do not even amuse them. He conducted the Republican campaign four years ago in a clean, vigorous, aggressive, and successful manner. Since then he has been prominently before the people and has continued to grow in public estimation the better he is known.

"His remaining as head of the Republican national committee insures a campaign of vigor and thoroughness, of education and conviction. No reasonable person can doubt that the result will be an even more decisive victory for the Republican ticket than in 1896."—*The Philadelphia Press (Rep.)*.

THE PLATFORM.

The platform reviews the record of the past four years, pointing to the prosperity of the country, and noting "that while during the whole period of one hundred and seven years, from 1790 to 1897, there was an excess of exports over imports of only \$383,028,497, there has been in the short three years of the present Republican administration an excess of exports over imports in the enormous sum of \$1,483,537,094." It also speaks with pride of the war with Spain and the "new birth of freedom" given to

ten millions of people as a result. It expresses renewed allegiance to the gold standard and "stedfast opposition to the free and unlimited coinage of silver." As the paragraph on trusts seems likely to be the center of considerable discussion, we quote it in full:

"We recognize the necessity and propriety of the honest cooperation of capital to meet new business conditions and especially to extend our rapidly increasing foreign trade, but we condemn all conspiracies and combinations intended to restrict business, to create monopolies, to limit production, or to control prices, and favor such legislation as will effectively restrain and prevent all such abuses, protect and promote competition, and secure the rights of producers, laborers, and all who are engaged in industry and commerce."

In the platform protection and reciprocity are indorsed, restriction of the immigration of cheap labor, aid to American shipping, and liberal pensions are favored, "the policy of the Republican Party in maintaining the efficiency of the civil service" is commended, the choice of civil servants in our new possessions is applauded, and the belief is expressed "that employment in the public service in these territories should be confined, as far as practicable, to their inhabitants." The Southern States are condemned for their restriction of the negro vote. Favor is expressed for good roads, rural free postal delivery, the reclamation of our arid lands, the admission of New Mexico, Arizona, and Oklahoma to statehood, the reduction of the war taxes, "the construction, ownership, control and protection of an isthmian canal by the Government of the United States," a department of commerce and industries in the Cabinet, and the reorganization of the consular system. Approval is given to the Administration's action in the partition of Samoa, the annexation of Hawaii, and the tender of friendly offices in the interest of peace in South Africa; also "stedfast adherence to the policy announced in the Monroe doctrine" is asserted. The statement is included that after the war with Spain we were bound to provide for the maintenance of law and order and the establishment of good government in our new territory, and "to put down armed insurrection and to confer the blessings of liberty and civilization upon all the rescued peoples. The largest measure of self-government consistent with their welfare and our duties shall be secured to them by law. To Cuba independence and self-government were assured in the same voice by which war was declared, and to the letter this pledge shall be performed."

Well Built.—"The only criticism that can stand against such a platform is to show that, if executed in good faith and with knowledge and efficiency, as the platform of 1896 has been, it would fail to defend the honor of the nation or to promote its prosperity, and of such criticism little indeed will be heard in the coming months of discussion. . . ."

"The representatives of the party, this year as heretofore, have preserved a due order and subordination in framing its platform. They declare its opinions on all issues of broad national concern without timidity, but also without exaggeration. No survey of Republican success during the last four years or throughout the long period of general prosperity of which the party has been the chief instrument would be adequate if it did not recognize the wisdom with which it has refused to assist in imparting an appearance of paramount importance to proposals of doubtful value and topics of ephemeral interest. Demagogues and fanatics have uniformly failed to receive its countenance. The incalculable service thus rendered to the nation in times both of tranquillity and disturbance is repeated this year, and again the Republican party, upon its history and upon this declaration of its principles and policies, confidently invokes the considerate

and approving judgment of the American people."—*The New York Tribune (Rep.)*.

Nothing in It.—"The so-called platform adopted at Philadelphia is not a platform at all; it is not a declaration of principles nor a program of action. It is a declaration of ends to be attained by government. Now, there is no difference among rational men as to the ends to be attained; everybody desires to be prosperous; everybody desires to have the nation honored and influential; everybody is in favor of the millennium; the only practical question is as to the means of attaining it. As to this the campaign speech adopted in Philadelphia in place of a platform tells us very little. It declares against the free and unlimited coinage of silver; but that has already been disposed of by legislation. As to further financial legislation the platform is in 'favor of such legislation as will enable the varying needs of the season and of all sections to be promptly met in order that trade may be evenly sustained, labor steadily employed, and commerce enlarged.' The greenbackers and silverites are in favor of just the same thing; what a party platform is for is to tell how a political organization purposes to attain this end, but the Philadelphia document gives no information."—*The New York Journal of Commerce*.

Strong, Direct, Unequivocal.—"Fortunate is the party that can point to the past and the present as the index and assurance of what is to come. . . . The Administration now in its fourth year is exceptionally happy in its record of achievements. It can refer to the fulfilment of promises and to the highest degree of success in dealing with great and unexpected emergencies. . . . The platform is strong, direct, unequivocal, a vigorous avowal in regard to work to be performed within the next four years by the great executive and progressive party of the country, unless the people decree otherwise, a most improbable event."—*The St. Louis Globe-Democrat, (Rep.)*.

A Disappointing and Unsatisfactory Declaration.—"The platform of principles presented to the people of the country by the

straw and inadequate in its handling of the pertinent questions of the day.—*The Atlanta Constitution*, (Item.)

THE CHINESE DISORDER.

IN the midst of the conflicting reports from China, three points—Peking, Tien-Tsin, and Taku—stand out as the important centers of interest. Peking and Tien-Tsin each contains hundreds of Europeans and scores of Americans, whose fate is a matter of grave anxiety, while Taku, covered by the guns of the allied fleet, is quiet. The Peking reports have been from day to day of the most various kind, at one time representing that all

the foreigners are massacred, the Emperor killed, the Empress Dowager a suicide, and the city in the hands of a seething mob; at another time, that the relief column under Admiral Seymour and Captain McCalla arrived safely, that a large Russian relief force reached the city about the same time, and that all the foreigners were safe. At Tien-Tsin the situation is serious. A large force of Chinese

COL. E. H. EASTON.

Of the 9th Infantry, ordered from Manila to Tientsin.

with many big guns, have been bombarding the city, particularly the foreign quarter; many buildings, among them the American consulate, have been destroyed, and three hundred or more foreigners killed or wounded. Among those killed are four American marines, and the commander of the British war-ship *Rattlesnake*.

So much for the situation. As to the remedy, the powers are agreed, so the German foreign office announces, that the first thing to be done is to rescue the Europeans and Americans in Tien-Tsin and Peking at all hazards. Admiral Kempff reports that Russia is moving twenty thousand men down through Manchuria upon Peking, and the Yokohama correspondent of the *London Daily Mail* says that Japan has chartered fifteen transports and is mobilizing her fleet, and will soon land a large force in China. The other powers also are preparing to send troops, and Secretary Long has ordered Admiral Remy to sail immediately from Manila to Taku with the *Brooklyn*. After the relief of the beleaguered foreigners, the next step of the powers, it is supposed, will be a demand for adequate satisfaction for the injuries to European interests; and the third step will be the establishment of guarantees against the repetition of such outrages.

An important phase of the affair is the attitude of the Chinese Government toward the "rioters." The attack of the Taku forts on the foreign war-vessels, and the bombardment of the American consulate and other foreign buildings in Tien-Tsin with big guns, would ordinarily, of course, be acts of war; but many believe that the central Government has lost control of the army and can not be held

responsible for the disorderly acts of soldiers who have thrown off all authority. As communication with the Chinese capital is cut off, it is impossible for the Chinese Government to disavow the outrages, and the Chinese minister at Washington seems to be totally in the dark as to the whole affair, and merely reiterates that the hostilities must have arisen from a misunderstanding, and that all will come out right if

the powers do not provoke the Chinese by invading their country. The Washington correspondents, however, report that our cabinet inclines to the view that the hostilities at Taku and Tien-Tsin are acts of war, and that the Chinese minister is likely to receive his passports in a few days.

A Good Quarrel to Keep Away from.—"But if the Chinese Government should admit its responsibility for the attack, what will be the next step taken by the powers interested? And is there any hope that they will be able to work together in a sufficiently harmonious way to compel China to fulfil its treaty obligations without going to war among themselves? It is one of the regrettable characteristics of war that it tends toward the spread of warlike operations even among nations not actually involved in the original quarrel. Two army or navy officers of different nations may precipitate a war between the powers to which their commands belong, even tho they may try to act with the most careful judgment. Particularly is this true when there has been a previous jealousy or rivalry between the two countries.

"When to this chance of friction is added a suspicion that several of the great powers have designs upon the territory of China, it will be seen that the chief anxiety in Europe and the United States does not relate to the result of any hostilities that may be

CAPT. G. E. F. WHITE.

Of the Battleship *Oregon*, ordered to China.

directed against China alone. It is highly probable that a very moderate force of trained troops, armed with the most improved modern weapons, will absolutely crush or annihilate any force the Chinese may be able to put in the field, especially as the latter's supply of ammunition is supposed to be insufficient for a successful campaign. But it is the next step after the overthrow of the imperial troops that is likely to worry the statesmen of the civilized world. They will have to deal with each other after they have finished with the 'heathen Chinese,' and so far as the present outlook extends they would rather tackle two Chinese specters than run the risk of breaking up one European concert.

"It would be wise for the United States to hold aloof from all concerted action with other powers except in cases in which there is absolute harmony and unanimous cooperation. If a great war must come out of the Chinese problem it is better that we should keep out of it."—*The Chicago Record*.

A Word for the Chinaman.—"Of course, the Chinese are heathens and all that. And they have acted very badly toward our missionaries and travelers and traders. But history is by no means silent on the subject of the imposition of the opium trade, and of legislation dictated from the Sand Lots, and of the Rock Springs massacre, and of a thousand other abominable outrages inflicted upon those benighted heathen by civilized Christians. Perhaps it was all for their good. Eels are much more useful after they are skinned than before, but that fact seldom reconciles them to the skinning. The simple fact is that the Occidental powers—England, France, Russia, and the United States—have for many years been treating China and the Chinese very badly—as badly, from the Chinese point of view, as the Chinese have treated the strangers who have, uninvited, intruded themselves within their gates. We have heard some of the most eminent and experienced American missionaries to China, at the time of some of the worst Chinese anti-mission riots, declare that they did not wonder a bit at the conduct of the Chinese, and, on the ground of the natural *lex talionis*, did not greatly blame them.

"We are going on, however, to coerce China into submission to our ways. We are all agreed that it is our right and our duty to do so. We can not permit that vast empire to be shot against us. There is too vast a prospect of profit in the development of its resources and in the sale of our goods to its inhabitants. Why, if China were as well supplied with railroads as is the United States, it would have at least two million miles. We have simply got to go in and build those roads and make thirty per cent. dividends on their stock if it takes all the smokeless powder in the world to do it. But what a wretched travesty upon sense and justice it is to approve and urgently promote such a campaign against China, which is, or should be, as independent a sovereign state as there is in the world, and at the same time to cavil at the suppression of insurrection and brigandage in the Philippines, which by every principle of international law and natural morals are subject to our sovereignty and to control which is legally and morally our duty as well as our right!"—*W. F. J.* in *The New York Tribune*.

Value of the Philippines Now Appears.—"But for the Philippines, our fleet and our army there, where would American interests be in China to-day? . . . Where would the United States have once been in this settlement? We should have had two or three ships in China. We could have landed a couple of hundred sailors and marines. We would have been without a battle-ship or a soldier. Our forces would have been eight thousand miles away. No transport would have been in existence. The United States, with all its vast interests, would have stood silently by, unable to speak with authority or to act with decision, to have weight in the council of nations to safeguard the future of a great and growing trade.

"To-day the Ninth Regiment is already on the way from Manila. It will be at Taku in a week. No fleet but Japan's is stronger in the East. No power speaks with a more authoritative voice or is more heeded. The treaty rights of American trade and manufactures in Chinese commerce will be regarded by every nation and remain safe because under the Republican policy of expansion the United States is planted on both sides of the Pacific, asking no more than its rights, and equal to their protection."—*The Philadelphia Press*.

HOW THE AMERICAN PRESS VIEW THE SOUTH AFRICAN SITUATION.

NOW that the newspapers on both sides of the Atlantic seem to agree that the Boer cause in South Africa has waned to an all but total eclipse, some interesting observations on the British triumph are appearing on the editorial pages, and a brief glance at the American comment from the Atlantic to the Pacific reveals many side-lights on the situation.

The *Providence Journal* (Ind.) expresses a view widely held by the pro-British press when it says that the British triumph "will be to the advantage of everybody concerned, and within that liberal category may be included all the nations on the face of the earth." The *Hartford Courant* (Rep.), too, thinks that "there are good days ahead—better days than any in the past—for Boer and Briton alike in South Africa." The *Hartford Times* (Ind. Dem.) sees nothing to glory over in the fighting exhibition that South Africa has given the world. It says: "We certainly hope this South African 'killing match' is finished. Some thousands of valuable lives have been needlessly sacrificed, and the Boers should be able to realize that, in forcing the war issue, rather than to yield fairness and equality in government to all within their borders, they have, after all, only been playing into the hands of the British." A pro-Boer view of the end of the war may be seen in the comment of the *New York Sun* (Rep.), which says: "We can only say again that it is an ominous event when in the present age one civilized state conquers, annexes to itself, and abolishes the independence of another, even when the victim is no bigger or stronger than a Boer republic." The *Philadelphia North American* (Ind. Rep.), too, declares that England's cold-blooded performance in blotting out the two republics "marks the lowest stage to which international morality has ever descended since the modern world took shape."

Some of the Democratic press, such as the *Indianapolis Sentinel*, the *Cincinnati Enquirer*, and the *Kansas City Times* charge that the administration at Washington has aided England. The *Times* says: "England has committed the crime of the century and this Government has been an accessory. . . . The cowardly and truckling pro-British Administration at Washington should be and will be held to a strict accountability for bringing this reproach upon the republic and its liberty-loving citizens." Many Republican papers heartily sympathize with the burghers. Says the *Cleveland Leader* (Rep.): "The spread of Democratic institutions is beaten back by armies. It is a turning backward of the tide of progress which must distress millions of lovers of human freedom in other parts of the world than South Africa. . . . Every despot feels more secure because the Boers have been unable to save their country, however much his sympathies may have been with the weak against the strong, or influenced by dislike of Great Britain."

The Southern press, too, contain many interesting comments. The *Baltimore American* (Rep.) says: "If humanity is not staggered by the losses or by the cost of the war, it is astounded by the heartless policy of the British Government from the beginning to the end. In this it has paid the price which Kruger predicted." The *Baltimore Sun* (Ind.) says: "Cecil Rhodes realizes his program as to the map of South Africa, which was to 'color it all red,' and it is the reddest thing of the kind since the partition of Poland." The *Baltimore Herald* (Ind.), in surprise at the Boer "collapse," says: "It is difficult to resist the impression that the scheme of defense has been for the most part a gigantic bluff, and that, when the real truth about the cam-

YOUNG OFFICERS WHO HAVE WON DISTINCTION IN SOUTH AFRICA.

paing shall have been revealed, the world will yield to a feeling of undisguised astonishment at the one-sidedness of the struggle." The *New Orleans Picayune* (Dem.) compares the Boers with the Confederates, saying that "in both cases the beaten people made a grand fight," and that all they have to show for it is a fine military record and "the consciousness of having done their duty."

Looking to the future relations between Boer and Briton, the *St. Louis Globe-Democrat* (Rep.) declares that nothing short of a federation of the British possessions in South Africa, with the same measure of home rule enjoyed by Canada and Australia "can prevent the recurrence of rebellions in South Africa which will be more formidable than the war which is now drawing to a close." "The least England can do," declares the *Minneapolis Times* (Ind.), "is to make the Boer at home in his own land, and England will miss a glorious opportunity if she does not put pacification above revenge." The *Colorado Springs Gazette* (Rep.) remarks: "There is no occasion for freedom's shrieking whichever side wins in this contest. . . . For after all, a cause such as this can not be determined by war. The control of South Africa in the future and the direction of its development depends less upon the relative strength of the armies that have been facing each other than it does upon the relative vigor of the two races that will compete or cooperate in the task of making that land what it is to be." But the *Deseret News* (Ind.), Salt Lake, observes: "The downfall of the republics is certainly a matter of regret, but the defeat of Great Britain in this unequal conflict would have been still more deplorable. For that would have

been a signal for the advance of the opponents of liberty from all sides."

On the Pacific coast the *Seattle Post-Intelligencer* (Rep.) says: "England can use her triumph only to build up thriving, free, and happy colonies—by and by to become loyal as well—upon the ruins of the subjugated states. For them the high hope of independence fades forever; but as English subjects they will enjoy rights and privileges that have been won through centuries of struggle happier than their own. Whatever their sympathies, the people of this country will be glad that this sorrowful war is at an end." The *San Francisco Call* believes that "history records no more pitiful tragedy than has been enacted in South Africa. Nor does history record a more amazing spectacle than the wild rejoicing in Great Britain that a victory has been gained by that empire over two weak republics. The British force outnumbered the Boer army more than twelve to one. Yet London went mad over the victory! If the record of human affairs has been correctly written such rejoicing over such a victory is a symptom of national decay." The *Freeman's Labor Journal* (Spokane) finds in the British triumph this moral: "The Boers are whipped; their nation is no more. God and man knows that might, not right, won. Public sentiment had nothing to do with the case, and God was on the side of the fellows with the biggest guns and bank accounts. Let labor profit by the lesson, organize for power, and rely upon themselves to fight and win. Sentiment will neither release the mortgage on the cow nor buy bread for the babies. It is a business proposition. Unite by and for yourselves."

THE CUBAN ELECTIONS.

THE municipal elections which took place in Cuba on June 16 were the first held in that island since it has come under American control, and on that account have attracted wide attention. The election, by a majority of 13,073 to 6,534, of General Alejandro Rodriguez as mayor of Havana is regarded as a victory for the Cuban military element, as well as for the cause of Cuban independence. Rodriguez represented the Nationalist party—the party of General Gomez—and was opposed by the

more radical "Republican party," which won some small victories in the provinces of Santa Clara and Matanzas. At Santiago the issue was fought out on the basis of the color line, the white man's ticket being elected. The Democratic Union party, the most conservative party of all, met with such small success that in many cities it withdrew its candidates.

Much comment has been aroused by the light vote

cast. In Havana, where about 60,000 men were entitled to vote, less than 25,000 registered and only 19,600 votes were cast. Says the *New York Sun*: "When it is considered that the decimating wars through which Cuba has passed, with the frightful accompaniments of disease and starvation, have led straight toward a ballot-box for their reward; when it is remembered that for generation after generation it has been the dream of Cuban patriots and the hope of its people to secure the boon of self-government, last Saturday's vote is disappointing." On the other hand, the *Philadelphia Public Ledger* points out that "the proportion [of voters] in Cuba is the proportion of the Latin countries of Europe," such as France and Italy, and adds that if the vote was a light one, the election was peaceful and orderly. The *New York Tribune* declares that the first result of the election is to give "some assurance of the orderliness of the Cuban people in such matters," and comments favorably on the fact that no riots or other disturbances took place. This feature also elicits praise from the *Columbia State*, which says:

"Three things stand out prominently from the record: First, the candidates were few; showing no such craze for office as had been forecasted. Second, the vote was light; showing that many electors felt easy as to the consequences, no matter who might be elected. Third, the voting and the count were conducted with marvellous order, showing that those who took part in the contests were unswayed by passion and appreciated their duty as good citizens to respect the decisions reached. . . . Not finally, but very thoroughly so far, the Cubans have vindicated themselves against their detractors."

By many of the papers it is claimed that Cuba, having shown herself fully capable of self-government, should now be given complete independence at the earliest possible opportunity. In the eyes of the *New Orleans Daily Picayune*, the election proved to be "a direct rebuke to the annexation desires of the administration," and "shows conclusively that the majority of the

Cubans are opposed to annexation, and favor the absolute independence of the island." The *Philadelphia North American* declares:

"It now only remains for the United States to hasten the completion of the work which it has so auspiciously begun. A government, civil in all its branches and free from the taint of military control, should be erected at once. Its administration should be left solely in the hands of the citizens of the island, and our soldiers should be withdrawn and department commanders recalled at the earliest possible day. The end of our usefulness is arriving."

PHILIPPINE AMNESTY PROCLAMATION.

THE President's proclamation of amnesty, promising "complete immunity for the past and absolute liberty of action for the future" to all Filipino insurgents who within ninety days "formally renounce all connection with such insurrection and subscribe to a declaration acknowledging and accepting the sovereignty and authority of the United States in and over the Philippine Islands," is regarded as a move that may mark a new phase of the Philippine situation. The proclamation promises free transportation to any part of the archipelago to those who accept it, and promises that "the military authorities of the United States will pay 30 pesos [\$27 in silver] to each man who presents a rifle in good condition." It is considered significant that on Thursday of last week, the day the proclamation was issued in Manila, two hundred Filipinos who are not pro-American in their sentiments met in Manila to determine methods for securing peace. The despatches from Manila say that the conference "was composed of the distinctly revolutionary element," and thirty political prisoners were released from jail in order to attend. The *New York Sun's* despatch says: "The spirit of the assembly was apparent, since the members believe that Aguinaldo will abide by their decision. Señor Paterno declared: 'All failing to observe the mandates issuing from this chair, which is backed by Aguinaldo, are criminal traitors.' This was the first general meeting of Filipinos since the fall of Tiarac. . . . All those who took part in the meeting were in favor of peace." The meeting unanimously adopted the following seven conditions which they considered necessary to an honorable peace. A request for independence does not appear in the list. The demand for the expulsion of the friars, the despatches report, was passed with shouts of approval, the entire assembly shouting, "Expel, expel!" Here is the list:

- First—Amnesty.
- Second—The return by the Americans to the Filipinos of confiscated property.
- Third—Employment for the revolutionary generals in the navy and militia when established.
- Fourth—The application of the Filipino revenues to succor needy Filipino soldiers.
- Fifth—A guaranty to the Filipinos of the exercise of personal rights accorded to Americans by their Constitution.
- Sixth—Establishment of civil governments at Manila and in the provinces.
- Seventh—Expulsion of the friars.

The *New York Evening Post* (Ind.), which has opposed nearly all of the administration's Philippine measures, admits that "it is a good thing, however, that the administration has now done" in issuing the amnesty proclamation, "and the issue of the proclamation is cause for congratulation. What every right-minded man wants most of all is a cessation of the fighting, and it seems only reasonable to expect that the offer of clemency now made will help much to bring about this result." The *New York Times* (Ind.) says:

"It is impossible at this distance and with the information accessible to tell what will be the effect of this offer. It is a fair presumption, however, that the President, General MacArthur, and the commissioners have sufficient evidence that it will be

GEN. ALEJANDRO RODRIGUEZ,
Elected Mayor of Havana.

generally accepted or it would not have been issued. The criticism that it is intended as a starter in the campaign for the reelection of the President does not seem very profound. Mr. McKinley is not exactly that kind of a politician. He is much too shrewd not to see that such a step, unless it was warranted by the facts, would react heavily against him. There are four long months yet before the election. That is quite long enough for the truth to be known about a proclamation issued to deceive the people, supposing that he wished to do that, which we do not for a moment believe."

Quite a different view appears in the *Philadelphia Record* (Ind.), which says:

"Evidently a herculean effort is being put forth to make the facts square with the frequent announcements that 'the war is over.' The situation in the Philippines is dreadfully embarrassing for an executive reelection. The most dexterous spellbinders experience great difficulty in finding apologies, to say nothing of justification, for the suppression of the Filipinos' aspirations to be masters of their own destinies—aspirations which the American people enthusiastically approve when manifested among any liberty-loving people. The weak plea that the opposition of the Filipinos to American domination was the result of the incendiary agitation of ambitious and unscrupulous leaders, hungry for spoils and power, has been exploded. The native Government has been scattered to the winds; most of the chief 'conspirators' are our prisoners—and still their alleged dopes fight on. Our sovereignty does not extend beyond the range of our guns. If a cause have ever earned respect by the devotion of its supporters the Filipinos have become entitled to generous consideration."

ANOTHER FEDERAL JUDGE ON PORTO RICO.

LESS newspaper discussion has followed the opinion of Judge Townsend, of the United States circuit court for the district of Southern New York, to the effect that the Constitution does not necessarily "follow the flag" to Porto Rico, than followed the opinion of Judge Lochren, of the United States district court of Minnesota, considered in these columns May 26, who held that the Constitution does follow the flag to that island. Yet it is remarked that Judge Townsend's opinion is of considerably greater legal weight, inasmuch as the case under consideration (a dispute over tariff duties on tobacco imported from Porto Rico) directly involved the status of the island, while Judge Lochren's opinion was an *obiter dictum*, the question in that case not being directly involved.

Judge Townsend decides that our federal government has the power to acquire territory and rule it independently of the Constitution; so that the clause in the Constitution providing that "all duties, imposts, and excises shall be uniform throughout the United States" does not necessarily mean free trade between the United States and its "dependencies." In short, the Constitution does not "follow the flag," and our Government can rule the people of acquired territory as subjects. Judge Townsend says:

"The framers of the Constitution intended that instrument not as a limitation upon the freedom of the new sovereign in acting for the States in foreign affairs; not as a check to growth, but as the organic law of a nation that can live and grow. To deny this power to govern territory at arm's length would be to thwart that intention to make the United States an unfettered sovereign in foreign affairs. For if we wage war successfully we must some time become, as many think we are now, charged with territory which it would be the greatest folly to incorporate at once into our Union, making our laws its laws, its citizens our citizens, our taxes its taxes, and which, on the other hand, international considerations and the sense of our responsibility to its inhabitants may forbid us to abandon. The construction of the Constitution which would limit our sovereign power would force us into a dilemma between violating our duty to other nations and to the people under our care on the one hand and violating our duty to ourselves on the other. That construction would in such case imperil the honorable existence of our republic. It

could not have been intended by those who framed our Constitution that we should be born a cripple among the nations.

"There has been found, then, no reason either on principle or authority why the United States should not accept sovereignty over territory without admitting it as an integral part of the Union or making it bear the burden of the taxation uniform throughout our nation. To deny this power is to deny to this nation an important attribute of sovereignty. The intent of the

Constitution is to make the Federal Government a full sovereign with powers equal to those of other nations in its dealings for the States in foreign affairs."

Anti-expansionist papers like the *Springfield Republican* (Ind.) remain unconvinced by the Judge's reasoning. *The Republican* says:

"And so the President and the Senate, as the treaty-making power, may annex any territory they are able to; and may then delegate

JUDGE WILLIAM E. TOWNSEND.

to Congress the power to act beyond the Constitution, and exactly as it pleases, in relation to the new territory. . . .

"Such views as these place the Government above the people who created it, and who in a written Constitution imposed bounds upon the scope of its authority. They seem to us to be revolutionary doctrines and to mark with renewed emphasis the great change which is quietly being forced into American institutions to meet the needs of a revolutionary policy of distant conquests and alien annexations. The people of the United States are, or were, the sovereign power in this country, and not the Government at Washington. The people can, if they choose, delegate to President or Congress the unlimited powers claimed for them by Judge Townsend; but this the people have not as yet done, and until they have done so Congress can step beyond the constitutional law of its being, in the government of territory of the United States, only by an act of usurpation. Presumably the case before Judge Townsend will be appealed to the higher courts."

TOPICS IN BRIEF.

A GREAT deal of promising laundry talent is going astray in China.—*The Baltimore American*.

SOMEbody is writing about "How the Turk Works." One of his ways is to work Uncle Sam.—*The Louisville Courier-Journal*.

THE Republican convention of 1900 administered to Theodore Roosevelt a large, bitter pill, heavily sugar-coated.—*The Philadelphia Ledger*.

IN dividing the profits of Christianizing China it is believed that Russia will consent to take the territory and permit the other nations to have the converts.—*The Milwaukee Sentinel*.

NOBODY will question the accuracy of Mayor Van Wyck's statement that his purchase of ice stock was "not a big transaction." It was about the smallest transaction on record.—*The New York World*.

A MONTANA VIEW.—So long as it was wrong for W. A. Clark to spend \$250,000 to be elected Senator it must surely be right to spend one hundred times as much to elect William McKinley President of the United States.—*The Butte (Montana) Miner*.

PRESBYTERIAN: "Now the time limit is abolished, how will you Methodists get rid of a clergyman when you don't like him?" Methodist: "Oh, I suppose we shall have to cut off his pay and starve him out, as you other sects do."—*The Indianapolis Journal*.

MR. JOSEPH F. MALONEY of Lynn, Mass., is the candidate of the Socialist Labor Party for President. Mr. Maloney's name begins and ends properly for a Presidential nominee, but the middle of it stands most dismally and discouragingly alone.—*The Chicago Tribune*.

LETTERS AND ART.

BROWNING AND HOW TO STUDY HIM.

MR. HAMILTON W. MABIE speaks of women's clubs as "one of the most efficient instrumentalities of culture in our time"; and the study of Browning by so many of these clubs he finds to be quite the natural thing. "For Browning's intense and passionate modernity," he explains (*Harper's Bazar*, May 26), "makes him, in a peculiar sense, the spokesman of a host of people who are just coming to intellectual self-consciousness. He is preeminently the poet of self-expression, of vital impulse, of the life which realizes itself in passion and action."

Mr. Mabie quotes from some critic who characterizes Browning as "a barbaric genius," "a truncated imagination," "a thought

and an art inchoate and ill-digested," "a volcanic eruption that tosses itself quite blindly and ineffectually into the sky." Of this characterization Mr. Mabie says:

"If it is agreed that the poetry of civilization as contrasted with the poetry of barbarism is concerned with order, symmetry, pure rationality, perfect poise of all the seething elements of life, harmonious rationality at all points and in all moods, then Browning is a barbarian; but if mod-

ern civilization, made up of a thousand thousand individual expressions of every form and kind and degree of intensity, includes elements too numerous and vast for that final mastery in the imagination which the Greek secured for a few brief years, then Browning at his best must be regarded as one of the poets of dawning order and intelligence; the prophet of a new spiritual synthesis vastly higher than that attained by the Greek, and requiring a much wider range of expression. . . . Browning is not the poet of a complete philosophy of life; nor, for that matter, is any other modern poet. And it ought to be added that no classical poet secured completeness save by a process of elimination, which has been impossible since Christianity and science have appeared. Browning is preeminently the poet of the active side of modern life in maturity, emotion, and experience; he stands preeminently for the putting forth of the entire inward force; for the resolute surrender of the soul to the general movement of life; for the reality and the spiritual value of experience. It is true that, from Browning's point, the volume and intensity of experience are sometimes out of all proportion to our ability to rationalize them. This is, however, in Browning's conception, not a confession of weakness, but a clear affirmation of the modern idea that life itself is the first and most searching of teachers, and that in the order of experience we live first and rationalize afterward. If there is to be always a cool balancing of reason before a decision is made, if the man whose instincts and impulses sweep him into action is to hold back and deal with life as a spectator, then the secret of life is missed, the lesson of life unlearned, the penetrating power of life never felt. There are other organs of knowledge besides the mind, Browning affirms; man is greater than his conscious intelligence. By surrendering himself to the play of the great forces of life, by giving himself body and soul to its tasks, by living with passionate intensity in the great human relations, a man sets free his personality, and in giving himself

in perfect self-surrender finds his growth, his work, his destiny, and his happiness."

How is Browning's work to be studied? He is, Mr. Mabie reminds us, primarily a poet, and it is a great mistake to give his philosophy of life first place. If he fails of ultimate acceptance as a poet, he will have no inspiration for posterity. Now poetry "ought always to be heard first and read afterward." If the best of Browning be sympathetically and intelligently interpreted by the voice, his much-discussed obscurity will be no longer in evidence. Then a work of art but slowly discloses its meaning, and familiarity with it is the first condition of comprehension.

Browning must be read aloud and read until he takes possession of the imagination. When the central and formative conception of his poetry has become clear and convincing, it is time enough to resort to handbooks and commentaries to clear up details. It is well then to study the poems in groups, arranging them ourselves without expert assistance. Then the study of poetic form is essential. From such a study we shall attain a clear conception of Browning's attitude toward life, and of the sources of his power; and such conception will bring with it a share in the poet's spiritual experience and an enlargement of our own life.

THE LITERARY INSPIRATION OF IMPERIALISM.

THE future historian who writes of the last years of the nineteenth century will probably turn unhesitatingly to the imperial idea as the great dominating impulse not only of the Anglo-Saxon but of the whole Aryan race. A writer in *The Scottish Review* (April) points out that tho we commonly regard Mr. Rudyard Kipling as the Tyrtæus of imperialism, this sentiment—which Walt Whitman defined as "the fused and fervent identity of the individual, whoever he or she may be, whatever the place, with the idea and fact of . . . totality, and what is meant by the flag"—has been held by Tennyson and all the great Victorians, and antedates even them. He writes:

"That imperialism should become a force—in some respects the prominent force—in our literature, was as 'inevitable' as the war in South Africa itself.

"At the present moment we are not specially concerned with the non-literary 'con-causes' of imperialism, except to the extent that literature is or ought to be the application of all ideas to life. That imperialism is allied to, and has been fostered by, the recent British delight in athleticism is as certain as that it is a passionate and yet philosophic protest for nationalism as a force in the life of the world against internationalism, especially in the destructive forms of Socialism and Nihilism. But, looking to Victorian literature, and the great names which were all-influential in those decades of it which are quite familiar to middle-aged men, it is really one of the most easily explicable of phenomena. On the moral side it is a protest against the merely materialistic view of life—the notion that a man is to be valued not according to the good that is done through his influence while he lives, but by the amount of wealth he leaves behind him. However much 'the simple great ones gone' of the Victorian era may have differed from each other—Carlyle from Arnold, Ruskin from Swinburne, Clough from Browning—they have agreed in holding up to scorn and reprobation that materialistic conception of happiness which has naturally obtained great importance in a reign so remarkable for its fat years of prosperity as that of the present sovereign.

"But imperialism goes back further than the Victorian era, to the time when Byron captivated Europe, even altho he was boycotted in Great Britain, with 'the pageant of his bleeding heart.' His romantic heroes, and still more romantic villains, his Corsairs and his Laras, dashed their heads as gallantly and as ineffectually against their prison walls of conventional Philistine sentiment as he did himself. But the strength of Byronism, apart from the views on special things with which it will be associated, lies in energy and in action. Imperialism means, there-

HAMILTON W. MABIE.

fore, the revival of Byronism, an attempt to place action above speculation on the one side, and above materialism on the other side. Mr. George Meredith, who more than any living man of letters represents the transition between the older and the younger Victorian ideas, puts into the mouth of one of his best characters, Alvan of 'The Tragic Comedians'—notoriously and even confessedly Ferdinand Lassalle, the orator and inspirer of German social democracy—a theory and special application of the Byronic gospel of action. When Clotilde first heard him (Alvan) speak, 'His theme was action; the political advantages of action, and he illustrated his view with historical examples to the credit of the French, to the temporary discredit of the German and English races, who lead to compromise instead. Of the English he spoke as of a power extinct—a people "gone to fat," who have gained their end in a hoard of gold and shut the door upon bandit ideas. Action means life to the soul as to the body. Compromise is virtual death; it is the path between cowardice and comfort under the title of expediency. . . . Let then our joy be in war; in uncompromising action, which need not be the less a sagacious conduct of the war. Action energizes men's brains, generates grander capacities, provokes greatness of soul between enemies, and is the guaranty of positive conquest for the benefit of our species.' "

Mere "bandit ideas" of the Byronic type, however, have never had a permanent influence in England, says the writer; for the truly commanding force in modern English literature we must go back to Carlyle, who, tho a hero-worshiper, denounced Napoleonism and the Dick Turpinism of Byron. And, says the writer, the revival of the worship of Cromwell as the best type of what British influence abroad should be is evidence that the true gospel of Carlyle is still a power.

Carlyle's greatest and most articulate disciple, continues the writer, was Tennyson; and in Tennyson's "Riflemen Form" we have the spirit, tho not the music-hall air, of Kipling, "the contention that domestic reforms should be postponed to the great work of setting the empire in order." This spirit is still more clearly discerned in Tennyson's "Maud":

I stood on a giant deck, and mix'd my breath
With a loyal people shouting a battle-cry,
God's just wrath shall be wreck'd on a giant liar;
And many a darkness into the light shall leap,
And shine in the sudden making of splendid names,
And noble thought be free under the sun,
And the heart of the people beat with high desire;
For the peace that I deem'd no peace is over and done,
And now by the side of the Black and Baltic deep,
And deathful-grinning mouths of the fortress, flames
The blood-red blossom of war, with a heart of fire.

For this sentiment, remarks the writer, Tennyson received the same denunciation as Kipling now gets from the anti-imperialists. They accused him, as Taine has pointed out, of employing "the rebellious accent of the Satanic school," and were shocked at his crudities and incongruities. Tennyson, says the writer, simply showed in these lines that he was considerably in advance of his time: "He was not so much a man of war as a man of the cloister and the cathedral close, who, having been seized with the patriotic fervor, rushed out of his retirement, shook his fist in the face of the Czar, and, alarmed by the sensation caused by his unexpected militancy, 'turned him to his thought again' somewhat shamefacedly."

The two recent writers who have done most to foster the spirit of imperialism, says the writer, are Mr. Kipling (of course), and Mr. W. E. Henley. The latter is "the candid prophet of latter-day Byronism. He maintains that the singer of 'Lara' is the greatest master in English poetry since Shakespeare. He is a believer in and preacher of the vigor of the senses; he advocates action and annexation as a cure alike for Arnoldian megrims and for flabby politics."

On the other hand, Kipling's chief strength lies "in his always intense, frequently grotesque, and occasionally repellent realism." Yet there is a strain of Wesleyanism in his blood which makes him "The General Booth of Atkinsesque Imperialism"; and, withal, he "is a Carlylian in his love of a strong man

wherever he finds him." Mr. Kipling's Wesleyanism, too, is "flavored with mysticism" in such poems as "The Recessional."

Kipling and Henley, however, thinks the writer, do not give us the last or the best word of modern imperialism:

"It may be expecting too much of human nature, it might even be prejudicial to the best interests of the United Kingdom, as the center and citadel of the empire, to 'bind our sons to exile' in Africa or in India. It is highly probable, to say the least, that the energies of 'the best we breed' will be fully taxed with the domestic problems which will demand consideration when the present crisis has terminated. That, however, can not be discussed here and now. Enough has been said to show that Kiplingism—more especially in its serious and religious aspects—is, like imperialism itself, a natural stage in the evolution of the unprecedently protracted and marvelously diversified Victorian period."

SOME EDITORIAL REMINISCENCES.

THE house of Harper Brothers published its first book seventy years ago. Not until twenty years later did it begin the publication of *Harper's Magazine*, "as a tender to our business," to quote Mr. Fletcher Harper. At first the magazine was wholly eclectic, containing the cream of foreign periodicals. In six months' time, under the editorship of Henry J. Raymond, it had attained a circulation of 50,000. Its evolution from that day to this is traced by the present editor (H. M. Alden) in an article in the June number.

There are some interesting reminiscences of the many notable authors and artists that have had a share in the making of the magazine. So numerous is the list of these that the writer is forced to content himself with but brief mention of most of them. In a few cases, however, we get something more satisfactory. This, for instance, concerning Amélie Rives and Mary E. Wilkins:

"One writer, whose best short stories (excepting 'A Brother to Dragons') were contributed to *Harper's Magazine*, stands alone in the field of fiction, without precursor, or successor, or even kindred—Amélie Rives, of Virginia. American literature has no such example to present of genius in its simplest terms and most naïve expression as is shown in the tales and dramas known to have been written by Miss Rives before she was sixteen, and published, most of them, years afterward.

"In some way Mary E. Wilkins, of New England, is associated in my mind with certain qualities of Amélie Rives's genius; for, while the results are so widely variant, there is a like spontaneity and dream-like freedom of subjective construction. Both these writers would have been suppressed by early academic training; they remained plastic long enough to show native qualities and moods. Any one supposing that Miss Wilkins derives her stories from studies of New England life and character is greatly mistaken; she is, first of all, an impressionist, with a dominant subjective motive, her fiction taking its outward shape from an inward prompting, having only such connection with actual life as there is in the texture of a dream. Whenever she deviates from this procedure, the result lacks her individual quality."

HENRY M. ALDEN.

Here also is a brief sketch of Charles Reade:

"If a story had been told before, that was no objection to his use of it, but rather an incentive. A good story could not be invented, except in the original sense of *invent*—i.e., it must be *found*. He often sent his manuscripts to me, keeping no copy. Once, in the second part of a series, he left it to me to supply the name of a character used in the first part and which he had forgotten. The habit of telling old stories probably prompted his undertaking a series of Bible stories, and telling them in the idiomatic phrase of the day, even tolerating unmistakable slang. In his story of Nehemiah, I remember, he used this phrase: 'The Prophet did not smell a rat.' I had a liberal indulgence toward slang, which often gives the most effective expression to a thought, but I could not editorially sanction this particular instance in its connection, and I uttered my protest, thereby bringing upon myself a storm of violent indignation. I quietly modified the phrase, and in due time received the author's cordial thanks, with the acknowledgment that I was right. In all cases of conflict between us—none of which would probably have occurred but for an excessive irritability preceding his last illness—there was always this welcome sequel."

The advantage which fiction has over other forms of literature in treating the problems of life is well presented in the following words:

"A notable gain in the advantage of the [modern] magazine with its readers is that whatever can be told in the form of a story takes this form rather than that of the conventional magazine article. The problems of our modern life—its complex texture, its lights and shadows—are best presented in a living, moving drama. The writer of an article that is going to have any human interest is usually tempted to the undertaking by some specially attractive points that have arrested and fixed his attention, but in the final presentation he will have, for the sake of completeness, given a larger amount of space to features that neither he nor his readers care for in the least. This is the vice of the article—its waste and unvital diffusion. The story, even if it occupies more space, is in every part vital, but by reason of its suggestiveness it can convey more in less space; besides, it has its own separate dramatic interest—and it is a human document. Brander Matthews's 'Vignettes of Manhattan' were more to the purpose than a like number of articles on New York life. Our story-writers, from Irving and Cooper to Mark Twain and his contemporaries, have best shown the atmosphere and conditions of our American life. George Eliot's 'Romola' was a vivisection of Savonarola's Italy, as is Mrs. Humphry Ward's 'Eleanor' of the present. Hence the importance of the historical romance, from Scott to Winston Churchill.

"On the other hand, the effort of the imagination to produce pure fiction—i.e., to produce a story that has no real basis either in emotional experience or in the facts of life, individual or social—is a waste of the divine faculty. In every great work belonging properly to what De Quincey calls the 'literature of power' (as distinguished from the 'literature of information') there is, indeed, a transcendent *motif*, a font invisible, such as all living watercourses have, unseen in the skies, yet must there be the earthly issue—the vital current from the human heart, or, to change the figure, an edifice founded in human experience. Shakespeare's plays are the ever-patent illustration of this principle—such exceptions as may seem to be presented in 'The Tempest' and 'A Midsummer's Night's Dream' only proving the rule. I am dwelling upon this primacy of fiction because it seems to me that the change which has been going on during the last quarter of a century, more and more displacing the literature of information by the literature of power, is still to go on, showing more remarkable results than have yet been obtained, and offering to the pictorial art fresh fields of conquest. Always, of course, the drama of the present—the human conflicts for every sort of earthly kingdom necessary to consummate Christendom—takes the foremost place, and there is in no other connection so great a prompting of the highest literary genius to instant service. Here there is no exception to the new order, no diversion from the lines of advance in the literature of power. It is journalism; but Renan was right when he called the great Hebrew prophets journalists. Captain Mahan is a prophet of American destiny."

"THE FAILURE OF BOOK-REVIEWING."

THE critics of books, who, like the preacher in the pulpit, usually have things pretty much their own way and do all the talking, are themselves held up to keen examination and criticism in a recent article by Mr. John Cotton Dana, librarian of the City Library, Springfield, Mass., and late president of the American Library Association. Mr. Dana looks at the subject from the standpoint of the librarian, and finds the usual book review of to-day lacking in most of the qualities which would render it of practical use to the purchaser and reader of books. In the first place, Mr. Dana finds fault with the current book review because it usually does not give helpful information about what he terms the "physique" of the book—the workmanship of the binding, the quality of paper, type, ink, margins, illustrations, and index. These facts, he remarks, are very important not only to the librarian but to all users of books, and in most cases they can not be ascertained by the large purchasers until the book is bought.

But more important than the book's "physique" is its "character," and it is here, says Mr. Dana, that the literary journals most fail to live up to what they profess. He writes (in the *Springfield Republican*, May 23):

"Every new book they mention is excellent. If one reads with credulous mind the things said by most reviewers about most books, one would feel that an Augustan age of letters comes round again with every rising sun. To test this statement a little I have gone over all the longer notices of books in four literary journals for two months. The journals examined were *The Bookbuyer*, *The Bookman*, *The Critic*, and *The Nation*. The first two [the third also now—ED. L. D.] are publishers' organs, and perhaps it would be asking too much that they should do anything but praise their own books and for the sake of peace refrain from condemnation of those of rival publishers. But if this is their policy they should not cultivate quite so sedulously the air of fairness and breadth. And of the purely literary journals like *The Critic*, which must support itself largely by the advertising in one column of the books it professes to criticize with unbiased mind in the next, it is perhaps seeking grapes of thorns to expect unterrified censure. But the three are in large measure typical, in this country at least, of the journals to which the book-buyer must turn for information on the latest books. *The Nation*, as the returns of my brief examination indicate, is almost in another class, and helps to relieve American book-reviewing of the full measure of condemnation.

"In the four journals considered there were, in the two months' issues which were examined, 243 reviews. In *The Critic* 75, with about 470 words in each; in *The Bookman* 54, with 570 words in each; in *The Bookbuyer* 60, with 500 words in each; and in *The Nation* 54, with 1,020 words in each. These 54 reviews in *The Nation* do not include a large number of shorter notes, such as would be ranked as reviews proper in the other three journals, each containing 100 to 300 words. The greater length of *The Nation's* reviews is not due to simple prolixity. They are in general stronger as well as longer than the others. Of these reviews, those dealing with fiction were in *The Critic* 28 per cent., in *The Bookman* 50 per cent., in *The Bookbuyer* 37 per cent., and in *The Nation* none.

"Had my examination happened to cover one of the months in which *The Nation's* novel-reader does up with a vigorous hand a batch of recent fiction, these figures would have been different. But it would still have been true that in that journal an unusually small amount of space is given to novels. Dividing these 243 criticisms of recent books into four classes—those which very warmly praise; those which moderately praise, but very lightly, if at all, condemn; those which take the aggravating middle ground, blowing neither hot nor cold, simply prattling; and those which frankly condemn—we get these results:

Journal.	Total Reviews.	High Praise.	Some Praise.	Saying Nothing.	Condemn.
<i>Critic</i>	75	40	15	17	3
<i>Bookbuyer</i>	60	31	20	4	5
<i>Bookman</i>	54	39	9	5	1
<i>Nation</i>	54	37	8	1	14

All, it will be seen, with the exception of *The Nation*, lack the courage of condemnation. And of the 189 works examined by the three first named, 154 are found excellent and only nine are actually disapproved of."

This table, says Mr. Dana, tells the story of American literary criticism; it is "a chorus of praise." Neither can it be said, in justification of this endless gush, literary journals notice only the books that can be praised, those that have attracted attention and are for sale everywhere. "Book reviews are written to please authors and publishers." 'Tis true 'tis pity—and pity 'tis 'tis true. "*The Bookman's* one condemnation in its ocean of praise," says Mr. Dana, "was directed against 'David Harum.'" "Later the editor wrote a very flattering estimate of the book in another journal—when the tide had turned strongly in its favor."

As to how books ought to be reviewed, Mr. Dana writes:

"A good book review—I am not speaking here of 'criticism' in the broader sense of the word—should tell the busy book-buyer and the busy reader who wants to know about the books he can not read or even see, these things: What the book is about; with what authority the author speaks; what part of his field he covers; with what degree of definiteness he covers it; the relation his work bears to others in the same or cognate fields; if it is well arranged; if it is a book for the student and specialist or for the general reader. By a man who knows his subject, these things can be told in a few words. They are told in the columns of *The Nation* and a few other journals not infrequently. Generally the reviewers do not set them forth, and sad experience leads the reader to feel that the study of book reviews simply leads him astray. They generally darken counsel.

"An illustration of how books ought to be reviewed—ought to be, that is, if the reviews are to be helpful guides in book-buying—is found in the admirable 'List of books for girls and women and their clubs,' compiled by George H. The work was largely done by experts. They felt they were untrammelled by an advertising agent, and they spoke their minds. It is a pity there is not more such work available."

Personal Habits of FitzGerald.—Few men have cared so little for public notice or commendation as did Edward FitzGerald. His translation of the "Rubáiyát" is now one of the most widely read classics in the English language, and during the past years forty thousand copies of a single American edition were disposed of in three months; yet in his lifetime FitzGerald preferred to have this incomparable poem remain for many years in manuscript for the use of his private friends before he could be induced to have it printed, in the famous Quaritch edition of 1869. Doubtless on account of this indifference to fame, comparatively little has been made public of his personal life and habits. Now, however, the indefatigable biographer has seized upon him as a promising subject; and in Mr. John Glyde's "Life of Edward FitzGerald" the light of publicity is turned upon the personality of one who always shrank from the common gaze. Some of the unique ingredients of that personality, as shown in Mr. Glyde's volume, are thus summed up by the London *Specialist*:

"The bronzed, blue-eyed, slouching, old-fashioned man, with his noble and thoughtful head; stern and absorbed in expression; his clothes, chiefly 'old acquaintances,' put on anyhow, his neck wrapped in a gray plaid shawl, an old hat, even indoors, on the back of his head. Such a figure in the small space he allowed for himself in his Suffolk home, heaped round with books, music, paintings, smoking a long clay pipe, and seldom admitting his fellow creatures, is certainly remarkable enough. Proud and shy, capable of being both rude and severe on occasions, he was yet loved and admired by all, old and young, who had any intimate knowledge of him. His friends, as everybody knows, were all more or less famous people, and sometimes there is a half-tone of humorous sadness in his many affectionate letters; yet it was entirely his own doing that he lived out of the stream. Sit-

ting there in his study, independent and quite uninfluenced by the world's opinion, yet not altogether insensitive to it, with no rule of criticism but his own keen judgment, he was about the only man who dared to criticize Tennyson at the height of his glory. But all his remarks on poetry and on literature generally might be made into a little book, which would be at least a treasure of originality, tho some of these sayings are startling to trained modern minds.

"FitzGerald loved his books, but some of his ways with them were eccentric. He used to pull out whole pages that he thought unnecessary, and there were, indeed, few authors whom he did not wish to treat in this way. He also used some of his books as a strong-box; after his death many leaves were found lined with bank-notes. He had no fancy for first editions or for beautiful bindings; the soul of a book was everything to him, its body nothing. He had not the ideal kind of feeling for books which includes a reverence both for one and the other."

NOTES.

A COMMISSIONER of *The Academy* (London) considers that memoirs are of three kinds: biographies, autobiographies, and ought-not-to-beographies.

BEFORE Mr. Stephen Crane's last illness, he completed a novel which will soon be published under the title of "The O'Ruddy," a study of Irish life and character.

THERE has been some discussion lately as to the correct way of spelling Omar Khayyám. So far the varying forms are as follows, the first one being most widely used: Omar Khayyám, Omar Khaiyam, Omar Alkhaiyam, Omer Chejjam, Omar Chijani, Omar Chajjam, Umar Kkaiyyam, Umar Chaiyyam.

THE death of Miss Mary H. Kingsley, daughter of Henry Kingsley and niece of Charles Kingsley the novelist, adds another name to the long list of recent deaths in the field of letters. Miss Kingsley was a great traveler, and gave some charming bits of descriptions of her many journeys. At the outbreak of the Boer war she volunteered as a nurse and went to Cape Town.

OF the living musicians, *Musik* states that "Pachman, born in 1848, is now about 52; Emil Liebling, born in 1851, is now about 49; Joseffy, born in 1852, is now 48; Sherwood, born in 1854, is 46; Hyllested, born in 1848, is 52; Friedheim, born in 1859, is 41; Paderewski, born in 1853, is now just past 47; Sauer and Rosenthal, born in 1860, are 38; Siloti, born in 1864, is 35; D'Albert, born in 1864, is now 36; Busoni, born in 1866, is 34; Godowski, born in 1860, is 39; Hambourg, born in 1873, is now 27."

MUSICAL criticism as it appears in Kansas may be seen in the following estimate of Paderewski, quoted from a Kansas journal: "The fellow is deceitful. He makes you think all the time he is going to play a tune, but he never does. He flirts all around a tune, but never touches it. His hair looks like a wig, but it isn't. He deceives you in a hundred ways. He makes the sweetest sounds you ever heard that were not a tune. He has his piano so trained that it will keep right on playing when he is not touching it. He reaches out slowly and strokes it, drawing back his elbows like a man brushing a girl's hair. You see the moonlight, and you're there with your girl, but somehow she doesn't love you. You know the sorrow of that, and that's why we don't like Paderewski."

A PEN-SKETCH of Edmond Rostand, the creator of "Cyrano," appears in the London *Daily News* as follows: "There is no portrait which one sees that gives the true Rostand. . . . The forehead now loftier than ever, the features are perhaps more pinched, and there is a wrinkle here and there. A cigarette between the fingers always. A nervous, tired, anxious air at all times, the shy look of a man who is self-centered, or, rather, always preoccupied with some ideal. A soft, low voice which in its rare moments rises rich and full, eloquent above others. No gestures. Only now and then a weary wave of the hand, as the fine head rolls from one side of the Voltaire chair to the other. An extreme, a polished courtesy. Manners which go better with the Louis XV. cartel than with the Louis XVI. furniture. In the sleepy eyes occasional flashes which show who there is behind this mask of extreme fatigue."

The cable announces that Rostand is recovering from his severe illness.

THE Boer war has resulted in a long list of correspondents and journalists who have suffered not only some of the hardships but the tragedies of war. *The Sphere* (London) gives the following table:

Mr. G. W. Stevens.....	<i>Daily Mail</i>	Died at Ladysmith of fever.
Mr. Mitchell.....	<i>Standard</i>	"
Mr. E. G. Parslow.....	<i>Daily Chronicle</i>	Murdered at Mafeking.
Mr. Alfred Ferrand.....	<i>Morning Post</i>	Killed at Ladysmith.
Mr. E. Finlay Knight.....	<i>Morning Post</i>	Wounded at Belmont; right arm amputated.
Mr. Winston Churchill.....	<i>Morning Post</i>	Captured, and escaped.
Mr. Lambie.....	Australian correspondent.....	Killed at Rensburg.
Mr. Hellowell.....	<i>Daily Mail</i>	"
Mr. George Lynch.....	<i>Morning Herald</i>	Captured.
Mr. Hales.....	Australian.....	"

To the foregoing list may be added Mr. John Stuart of *The Morning Post* (captured); Mr. Charles Hands of *The Daily Mail* (severely wounded), and Mr. Julian Ralph (severely wounded).

SCIENCE AND INVENTION.

TABULATION OF CENSUS STATISTICS BY MACHINERY.

It is not generally known that our census returns are tabulated by machinery working by the aid of electricity. The method is explained in *The Scientific American Supplement* (June 9) by George E. Boos, the Superintendent of Printing. Mr. Boos says that the object of his article is to enlighten us regarding the use of the card record (of which a cut appears below in reduced form), for ascertaining the population and other information. There will be, he says, eighty millions of these cards—one for each living inhabitant. To quote from the article:

"The paper is made in one large roll, then this roll is cut into four smaller rolls and placed on two 'Kladder' printing-presses, which print, number, cut, and clip 14 cards in one impression at an average rate of 600,000 cards per day, requiring 134 days to complete the job, provided there are no delays from accidents."

"Each card is fed through several devices—the first, a key-board punch—and is perforated by symbols just as the schedule represents each individual that is taken by the 52,000 enumerators, giving his district, language, color, literacy, sex, months unemployed, age, occupation, conjugal condition, birthplace, etc. This work will be done by an army of clerks acting in the capacity of punchers, tabulators, and sorters."

"The enormity of this undertaking can hardly be realized. Each card is handled a number of times. These eighty millions, if piled on top of each other, would reach a distance of over nine miles. It became necessary to invent the best labor- and time-saving device that brain could produce."

"The following is a description of the three principal parts of these almost human machines:

"The keyboard punch is about the size of a typewriter tray, having in front a perforated punch-board of celluloid. Over this keyboard swings freely a sharp index finger, whose movement, after the manner of a pantagraph, is repeated at the rear by a punch. The movement of the punch is limited between two guides, upon which are placed thin manila cards $6\frac{1}{4}$ inches long by $3\frac{1}{4}$ inches high, with the lower corner slightly clipped. The keyboard has twelve rows of twenty holes, and each hole has its distinctive lettering or number that corresponds to the inquiry and answer respecting every person. Hence when the index-finger is pressed down into any one of these holes the punch stamps out a hole in the manila card. The keyboard is scientifically grouped, and it is very readily learned. For such inquiries as are answered by one of a very few possible classes—sex, for example, which recognizes only two parties in the State—the answer is simply 'male' or 'female,' or 'M' or 'F.' So, too, in regard to conjugal relations, where the

answer would be either single, married, widowed, or divorced. These holes may easily be found in 'D,' 'Wd,' 'Mr,' or 'S.' Where, however, the answers would cover a wider range of classification, as in age, running from 1 to 100, recourse is had to a combination of two holes, the first indicating a group, as from 25 to 29 years, while the second hole designates the detail single year in that group."

"To assist the clerks in memorizing the keyboard for punching, classification lists are used, which show the combinations used to designate each occupation. At first this looks a little complicated, but, after all, the symbols 'come easy' with each lot of schedules."

These combinations, Mr. Boos asserts, are no more burdensome to the memory than the details of a typewriter keyboard, and they are vastly interesting. The clerks punch an average of 800 cards per day, and some of the more expert, working seven hours, have done 1,100 cards, with an aggregate of 18,700 holes, each card having 17 holes in it that relate to an individual life history. So familiar do the clerks become with the position of the holes that they can read them off at a glance. When the work of punching has been completed, there will be over 70,000,000 cards, each able to tell its own story to him who understands. The information that they contain must now be combined and tabulated, and this is done by machinery. Says Mr. Boos:

"The cards are stacked up on end in boxes, measuring 20 by 7 by $3\frac{1}{2}$ inches, each box taking 2,000 cards. In front of each box is a label stating its contents."

"The electric tabulating machine consists of three main parts, namely, the press or circuit-closing device, the dials or counters, and the sorting-boxes. The press consists of a hard-rubber plate, provided with 316 holes or pockets, the relative positions of which correspond with those of the holes in the keyboard and gang punches. Each of these pockets is partially filled with mercury, and they are thus in electrical connection, when the circuit is closed, with the binding-posts and switchboard at the back of the machine. Above the hard-rubber plate swings a reciprocating pin-box, which is provided with a number of projecting spring-actuated points, so hung as to drop exactly into the center of the little mercury cups below. These pins are so connected

that when a punched card is laid on the rubber plate against the guides or stops and the box is brought down, all the pins that are stopped by the unpunched surface will be pressed back, while those that correspond with punched spaces pass through, close the circuit, and count on the dials. . . . Each dial is divided into 100 parts, and two hands travel over the face, one counting units and the other hundreds. The train of clockwork is operated electrically, by means of the electromagnet, whose armature, as it moves each time the circuit is closed, carries the unit hand for one division."

The illustration shows a rectangular card divided into 19 sections by black lines. The sections are arranged in a grid-like fashion. The top row contains 'BIRTHPLACE OF PERSON' (left), 'BIRTHPLACE OF FATHER' (right), and a small 'AGE' section. The second row contains 'BIRTHPLACE OF MOTHER' (left), 'NATURALIZATION' (right), and another 'AGE' section. The third row contains 'CHILDREN LIVING' (left), 'OCCUPATION' (right), and a third 'AGE' section. The fourth row contains 'CHILDREN BORN' (left), 'UNEMPLOYED' (right), and a fourth 'AGE' section. The fifth row contains 'CONJUGAL CONDITION' (left), 'LITERACY' (right), and a fifth 'AGE' section. The bottom row contains 'SEX' (left), 'COLOR' (middle), and 'LANGUAGE' (right). Each section contains a grid of small circles, some of which are filled in, representing the punched holes on the card.

ILLUSTRATION OF TABULATING CARD.

This card is blocked out in nineteen (19) divisions indicated by black lines. The first relates to "Birthplace," the one below this on the left (read downward) indicates "Children living," and "Children born," "Conjugal condition," "Age," "Sex," "Color," "Birthplace of father," and next below this "Birthplace of mother." Thus, "Naturalization," "Occupation," "Months unemployed," "Literacy," "Language," and the last six divisions at the bottom of the card indicate "Enumeration District."

The operation of the machine is described as follows:

"If it is desired to know in a given enumeration district, or all of them, the number of males and females, white and colored, single, married, widowed, etc., the binding posts of the switchboard corresponding with these data are connected with the binding-posts of the dials on which these items are to be counted. If it is also desired to assort the cards according to age groups, for example, the binding-posts of the switchboard representing such groups are connected with the clips into which the sorting-box plug fits. The circuits being prepared, when a card is placed in position in the press and the handle of the pin-box is depressed by the operator so that the circuit is closed through each hole in the card, not only will the registration be effected on the counting-dials, but the sorting-box that has been selected for a given age group is opened. The operator releases the handle, removes the card deftly from the press, deposits it in the open sorting compartment with the right hand, and pads the lid down again, at the same time bringing another card into position under the press with the left hand. It is done much more quickly than it is described. When all the cards in the case of any district have thus gone through the press, the record taken from the dials will show the number of males, females, white, colored, etc., while the cards will have been assorted into age groups.

"The machine automatically throws out any card that is wrong. Suppose, for instance, that the age or sex has not been punched. Where there should be a hole for the plunger-pin to go through, closing the circuit, the card is intact. The circuit is open, and the monitor bell just to the left of the press refuses to give its signal of correctness."

The mechanism of these devices is the invention of Dr. Herman Hollerith, of Washington, D. C. It is said that the operation of these machines will effect a saving of fifty per cent.

THE HYGIENE OF SWEEPING.

CLEANLINESS is next to godliness; but what is cleanliness? Harmful dirt is not always that which is most evident to the eye. T. M. Johnson, writing in *Science and Industry*, reminds us of this fact, and thus discourses on the difference between real and false cleanliness:

"A certain woman, weary, worn, and sad, spends most of her time stirring up dust in her house, thus keeping the atmosphere of her home almost constantly charged with flocculent solid matter to which germs may or may not be clinging. This part of her appointed task is known as sweeping and dusting, or 'cleaning house.' She takes a broom and works it vigorously over the carpet, displacing dust and dirt in three ways. Part of it works down through the interstices of the carpet and remains there until the carpet is lifted, or, indeed, if the carpet is closely woven on the under side, the upper soft fabric will become so thoroughly clogged with dust that nothing but a good beating or washing will remove it. Another part of the dirt, the larger particles, is swished with measured strokes to the point where the accumulation is gathered up or swept out after it has been separated from the finer particles. Most women take a delight in removing this part of the household dirt in a dust-pan, for it is visible, and, if allowed to remain long, would soon discolor the carpet. Many of them pick up a surprisingly large quantity too, for they have the knack of *throwing* it forward and thus pushing the least possible amount into the carpet. But some women, and I think it safe to say *all* men, have the unhappy faculty of sweeping a dirty carpet without taking a teaspoonful of dirt from it: on the contrary, they rub it in. Men are particularly noted for 'rubbing it in.' The third part of the dirt disturbed by the house-cleaner's broom is wafted upward in air-currents produced by the motion of the broom. This is the fine flocculent dust that is almost invisible in a dingy room, but is very noticeable in a well-lighted apartment."

The writer tells us that if the housewife is desirous of effectively removing dust and dirt from carpeted floors, the carpets must be taken up and shaken outdoors. Mats or rugs are the best floor-covering, because they are not tacked down and can be lifted easily. The floor should have close joints and an oil finish.

Open joints in the floors are receptacles for dirt, and they can not be cleaned out. The dust on the closely jointed oiled surface can easily be removed with a damp mop, and no dust will rise to vitiate the air or settle on the furnishings. The damp mop is also of service in cleaning an impervious floor such as oilcloth, linoleum, oiled wood, rubber, flagstones, marble, tile, etc. Linoleum he considers a thoroughly hygienic floor-covering, and especially desirable for kitchens, pantries, dining-rooms, bathrooms, and halls and passages, particularly if there are children around. The best thing with which to sweep a carpet is a modern carpet-sweeper of approved make. This picks up most of the dirt, throws it into a receiving-chamber inside the sweeper, and reduces the amount of floating dust to a minimum. Especially objectionable is the "despicable feather-duster," which simply scatters the dust to other places of lodgment instead of removing it.

HUMANIZING ANIMALS.

SOME time ago we quoted in this department a protest against "nature-study" as it is conducted at present in many schools, on the ground that it tends to make children take unscientific views of the animal and vegetable worlds and to endow dumb creatures and plants with feelings and qualities that belong only to man. Somewhat the same view was taken by Caroline G. Soule in an article in *Bird Lore* (December), entitled "Humanizing the Birds," in which she protested against the practise of ascribing to them human qualities which they do not possess and mental traits with which they are not endowed. In a letter to *Science* (June 1), F. A. Lucas asserts that too much of this "humanizing" is indulged in not only about birds, but by writers in all branches of natural history, and not only in stories for small children, but in articles for the edification of older persons. Writers on evolution are very much at fault, especially in their treatment of so-called "mimicry," protective coloration, etc. Says Mr. Lucas:

"It is a common fault to make the mimicking process active instead of passive—to say, for example, that 'many butterflies escape destruction by mimicking the colors and markings of un-eatable forms,' as if the butterflies had given serious thought to the matter. When an author writes that 'butterflies are often attracted by the excreta of birds, and a spider takes advantage of this fact to secure his prey,' he implies a considerable amount of reasoning power in the spider. That this implication is not intended is shown a little later by the statement that 'the whole combination of habits, form, and coloring afford a wonderful example of what natural selection can accomplish,' but the damage has been done and the suggestion made that the mimicry is intentional."

"When we read that the 'witch-hazel, knowing that neither boy nor girl, nor bird nor beast nor wind, will come to the rescue of its little ones, is obliged to take matters into its own hands,' we realize that it was written for a child, altho we may deplore this manner of writing and wish that the case had been differently stated. But here is a statement almost, if not quite as bad, taken from an important work on zoology and not written with the view of interesting a child:

"* In the Mediterranean the embryos [of sponges] . . . escape from the tissues of the parent when they have arrived at the blastula condition . . . in the same species on the shores of the English Channel the young are retained until after gastrulation . . ."

"The explanation of this, it is said, is not difficult:

"* In the Mediterranean there are no strong currents and it is evidently best for the parent to get rid of the young at as early a moment as possible, thus escaping longer drain upon its energies. In the English Channel, on the other hand, the current is very strong, and were the embryos to be set free at the stage at which they are in the Mediterranean the chances are that they would be swept away . . . and hence they are retained [italics ours] until nearly ready for attachment to the rocks."

This seems to be a direct transposition of cause and effect, and credits the lowly sponge with an amount of reasoning power and a degree of intelligence that few have suspected it to possess.

Why would it not have been quite as accurate and decidedly less confusing to have said that, while we do not *know*, it seems probable that in the first case we have the normal condition of affairs, while in the second there has been an elimination of those sponges whose young were turned loose into a cold world at too tender an age?"

These, Mr. Lucas remarks, are merely the first examples that came to hand of a very prevalent style of writing; but they are typical. Such statements are intended to popularize science, but they create an entirely erroneous impression. The non-scientific reader is led to think that not only the higher, but the lower animals, even the plants, pass many anxious moments considering what they may do for the benefit of posterity. Sooner than leave such an impression as this it would seem best, Mr. Lucas concludes, to cease "humanizing the birds."

THE MEASUREMENT OF TASTE.

THE modern school of physiological psychologists has devoted much time to the measurement of the intensity of sensations in different persons and in different parts of the body. They have even discovered, in this way, new senses, or rather new subdivisions of old ones, such as the temperature sense, which is now recognized by all students as having its own particular set of terminal organs in the skin. The most elusive, because the most indefinite, of the senses, so far as scientific investigation is concerned, are undoubtedly those of smell and taste; yet even these have been attacked experimentally with results of some value. The following account of one of the most recent attempts to measure the sense of taste is contributed to *Cosmos* (April 25), by Messrs. E. Toulouse and N. Vaschide. These experimenters say:

"There does not exist, properly speaking, any systematic method for the measurement of taste. Certain experimenters have made use of 'gustative powders'; others have employed solutions placed on the tongue with the finger, piers, a sponge, or tubes; while others use electric currents. But the conditions of the experiments have not been rigorously established, which is the one thing of importance if the results are to be comparable one with another. . . .

"These writers have adopted sodium chlorid for the salty tastes, saccharose for sweet tastes, dibromhydrate of quinin for bitters, and citric acid for sour. These substances, which are definite and familiar to all normal subjects, are soluble in distilled water."

After diluting the solutions respectively to 10 per cent., 1 per cent., 0.1 per cent., etc., each is divided into nine sub-solutions having the strengths 1 to 9 per cent., 0.1 to 0.9 per cent., etc. By means of a chemical dropper, drops of the same size and practically equal weight are secured, and the solution is kept at the temperature of the body, the object being to exclude sensations of weight, touch, or temperature, so that taste alone shall be dealt with. The experimenters begin with the most dilute solutions, which provoke no sensation of taste at all; such are salt or sugar solutions of 1 in 10,000, and acid or bitter solutions of 1 in 100,000. The drops are used alternately and in no particular order, with drops of pure distilled water, so that imaginary sensations of taste may be detected and excluded from consideration. More and more concentrated drops are used, until the subject experiences a real and undoubted sensation of taste. To quote again:

"Ten similar experiments furnish an average for one particular point of the tongue. . . . After each experiment, the subject rinses his mouth with distilled water at 35° C. and rests for a time sufficient for the disappearance of the salty, sweet, acid, or bitter tastes; about a minute for the first three and five minutes for the last.

"For the study of 'odor-tastes,' to which we give this name

because they are not recognized when the nose is stopped, but are recognized as soon as it is unstopped, and which give us useful information regarding the functions of odor associated with taste, we employ the following solutions or mixtures: Orange-flower water; laurel water; essence of anise; essence of mint; camphor water; vinegar; solution of sulfate of iron; rum; olive oil.

"It should be noted that these are ordinary but not definite products. Used in this form they should be recognized by normal subjects, for their gustative value, variable with their quality, is in all cases far above the minimum perceptible. On the other hand, we do not inquire, in these cases, what minimum intensity is necessary to provoke perception, but only the state of development of memory and judgment connected with the exercise of taste."—*Translation made for THE LITERARY DIGEST.*

ELECTRIC OCEAN NAVIGATION.

ACCORDING to an article that has recently appeared in several of the daily papers, the era of electric ocean steamers is near at hand. This article is quoted by *Electricity* (May 30), which makes fun of it, premising as follows:

"Owing to the fact that electricity is extremely flexible and easily adapted to very many purposes, a large number of persons appear to labor under the delusion that it can be applied economically and efficaciously wherever power is needed. Such, however, is far from being the case, for, as every one knows, everything in this world has its limitations, and the electric current is no exception to this rule. Thus up to the present it has been found impossible to apply electricity to the propulsion of ocean-going steamers, owing to the excessive weight the necessary storage-batteries would entail. Granted there are several small ships driven by electricity, the largest of these plying, if we are not mistaken, on the River Mersey, in England, which, however, is scarcely more than a good-sized tugboat, being but 75 feet in length. In view of this fact and the present state of the art, it is, to say the least, rather surprising to hear people talk of the early possibility of journeying from New York to Liverpool in an electrically driven ocean liner."

Passing to the discussion of the article already noted, the editor of *Electricity* asserts that it is amusing, principally on account of its inaccuracy. The author compares the weight of an ordinary steam plant in an ocean liner of 10,000 horse-power with an electrical plant of similar capacity, and makes it appear that the necessary apparatus would weigh but little more than the steam-engines, boilers, and coal. In the article criticized, the following estimate is made as to the relative weight required for steam and electricity:

"A rough estimate as to the weight of the steam plant on board an average ship would show that 6,000 tons of coal added to the weight of the engines and boilers would give in round figures an aggregate weight of 10,000 tons. A storage-battery capable of giving 10,000 horse-power for six days would weigh, on the basis of 75 pounds per horse-power an hour, 75 times 10,000 times 24 times 6, divided by 2,000—equal to 9,000 tons. Making an allowance of 2,000 to 3,000 tons for motors, with their appurtenances, a fair balance would be struck of 12,000 tons weight of electrical machinery, against 10,000 tons weight of steam appliances."

Regarding these figures the editorial writer in *Electricity* remarks:

"Ten thousand tons for steam plant and fuel as compared to twelve thousand tons for storage-batteries and appliances would really be very satisfactory, and would augur an early solution of this problem. Unfortunately, the author of the article, in the figures given, has figured on the weight of batteries for *one* day and not for six days. For, with the figures given, $75 \times 10,000 \times 24 \times 6 = 105,000,000$, and divided by 2,000, to reduce to tons, gives 54,000 tons, and not 9,000 tons as the article has it. This rather changes the aspect of affairs, and impresses one with the fact that the weight of storage-batteries will have to be materially reduced before it will be either necessary or advisable to

relegate to the scrap heap the triple or quadruple expansion steam-engines now in use on ocean greyhounds."

BALL LIGHTNING IN THE LABORATORY.

A RECENT discovery by Professor Nipher, of St. Louis, in which he found that x-ray photographs could be taken on plates that had already been overexposed to light, was described in these columns a few weeks ago. A report in *Science* informs us that these effects are shown also by photographs taken with the electric spark. The most curious fact brought out by the experiments was that this sort of photography is sometimes accompanied by the production of what seems to be "ball lightning" on a small scale. Says the report already mentioned:

"The result, which is most interesting from a scientific point of view, is shown on twelve negatives which reveal ball-lightning effects. Ball lightning is to the electrician what the sea serpent is to the zoologist. It has often been seen, but never by those who are most competent to study and describe it, and all efforts to produce ball-lightning effects by artificial means have hitherto failed. But these twelve negatives show with perfect distinctness discharges of this character. They could be seen while they were being photographed. They looked like little spheres of light, which traveled over a non-conducting plate, forming the insulation of a condenser. They traveled very slowly among the sparks of the ordinary disruptive discharge. Their speed was usually at the rate of an inch in three or four minutes. Their tracks showed with the greatest sharpness among the more indistinct flashes of miniature lightning. They sometimes jump for a quarter to a third of an inch, with such quickness that the eye can hardly follow them. Five or six such spheres of light sometimes appear at once, each following its own track. Sometimes one will cross a track previously traced by another, but it never follows the track of another.

"By proper illumination of the room the effects of the spark discharges can be nearly obliterated in the negative, but the paths of the ball discharges are not materially affected. One negative thus treated had been exposed for thirty-five minutes, and the ball-lightning tracks were most elaborate. The branching network of lines must have been produced by hundreds of these little spheres.

"The same results can be obtained by fixing the negatives without any developing process. Everything then vanishes from the plate but the ball discharges.

"Professor Nipher stated that this phenomenon could not be identified as the same thing as ball lightning, since the latter had not been studied. But it responds to the same description in many ways. As soon as the ball-lightning effects appear, the behavior of the machine changes in a very remarkable way."

Some Defects of the Holland Torpedo-Boat.

Altho the Government has purchased the Holland submarine boat, authorities are still divided in opinion regarding her utility. The fact that experts of the Navy Department had previously reported against the purchase has led some critics to assume that it was finally forced to change its mind by the pressure of public opinion. There has been an impression that professional jealousy played a part in the matter, but this is denied by naval officers. A member of the Board of Construction is reported by the Washington correspondent of *The Evening Post* (New York) as approving the purchase of the boat while denying its efficiency. He said, according to this report:

"I regard this purchase as a noteworthy step in advance toward the solution of the great problem of submarine locomotion for war-vessels. By that I do not mean that I consider the *Holland* an efficient boat, but it is a great improvement over anything made heretofore, and I am glad it has been bought and that two others like it are to be bought. . . .

"The *Holland* is a long step forward, and her owners have reason to be proud of her; but she has such inherent defects as to make her likely to be abandoned in a short time. In the first place, it is her rudder which causes her to sink, and any disaster

that stopped the working of the rudder would send her to the top at once. Furthermore, her speed under water is so slight that any strong current could deflect her from her course, and even carry her directly astern. It is impossible for the men inside the boat to know where she will come up. Imagine one of these little vessels attempting to torpedo a war-ship, but not finding her prey, and coming to the surface to take her bearings afresh!

"Now, as to her use in harbor defense. Suppose she were on the lookout for a hostile fleet: she is so small that she has no space for any one to sleep or store provisions aboard her, and the men who operate her would have to be relieved every day, or another boat of the same sort must take her place—an awkward arrangement in the presence of the enemy. And in order to do any damage this boat must be sent well out, where a storm might soon make her a wreck. These are only some of the general defects which any one can see. Naval experts see many more that need not now be mentioned."

Treatment of Sea-Sickness.—In a recent communication to the French Academy of Medicine, M. L. Dutremblay advocates the treatment of sea-sickness by inhalation of pure oxygen under pressure. "The first attempts in this direction," says *La Nature*, "were made successfully by Dr. Dubois, professor in the Faculty of Sciences at Lyons, who recognized as the principal cause of sea-sickness the incomplete ventilation of the lung, with consequent increase of the residual air and imperfect respiratory action. Dutremblay, aided by Dr. Perdriolat, physician to the Compagnie Générale Transatlantique, took up and completed these experiments on numerous persons at sea. According to him the sudden and violent displacements of the visceral mass and the contraction of the diaphragm act as principal causes and bring about such secondary manifestations as headache, nausea, chills, etc. In these conditions, the use of oxygen is perfectly justifiable. From numerous observations it appears that this gas generally acts favorably and gives rapid relief. Nausea and vomiting cease, a feeling of comfort supervenes, and this is followed by calmness and sleep; the frequent and incomplete breathing becomes regular, the pulse-rate rises, and headache disappears. Patients should make long and deep rhythmic inhalations. Eight or ten gallons of the gas suffice. The inhalation should take place through the mouth, the nostrils being tightly closed so that nothing but the oxygen is taken into the lungs." *La Nature* goes on to say that it would have been a good plan to try whether deep and regular breathing would not have produced a good effect, even without the oxygen.—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

OF Dr. Woodruff's article on the health of our army in the Philippines, recently quoted in these columns, the *Boston Transcript* says: "Dr. Woodruff's position in the army commands for it an attention which an article by a tyro would not receive. It suffers, however, from one fault, which marked the utterances of Bishop Potter, in being the fruit of too brief an observation. Dr. Woodruff appears to have returned from Manila about the time our war with the Philippines began. Medical officers who have spent a year or so in the Philippines while our military operations were in full blast, give a different picture of the situation."

PROFESSOR LOFT's experiments with sea-urchin's eggs, in which he caused them to produce larvae by treatment with magnesium chlorid and sea-water, are thus characterized by *The Popular Science Monthly* (June): "Eggs thus treated segmented and underwent a development which, tho somewhat slower than usual, was otherwise normal and produced perfect larvae. This effect can not properly be called fertilization in the ordinary sense of the word, but is rather to be regarded as artificially induced parthenogenesis. It points unmistakably, however, to the possibility, or rather probability, that in normal fertilization the spermatozoon incites the egg to development by bringing to it certain definite chemical substances."

FORCE OF AN AIR CURRENT.—The enormous force of a current of air moving at high speed, which causes wonder when we read of it in accounts of tornadoes, is illustrated by the following report of a curious accident in a laundry at Hutchinson, Kans., which is described in *The News* of that place. A man by the name of McMullen, so the story goes, held his hands over the wringer to dry them. He got one hand too low, so that the air suction caught it, and his arm from the elbow down was taken off as by a miracle. The wringer is a large circular iron affair, with a smaller bowl inside it in which the clothes are placed. The smaller apartment is perforated with holes upon the sides, and the whole thing revolves at the rate of several thousand revolutions a minute. The effect is that the air currents within the wringer are as terrific in their power as the center section of a Kansas cyclone. The instant the arm came into contact with the current it was parted at the elbow. One part lay on the clothes that were in the machine and the other dangled from his shoulder.

THE RELIGIOUS WORLD.

THE MISSIONARIES AND THE "BOXERS."

LORD SALISBURY, speaking last week before the Society for the Propagation of the Gospel, in London, referred to the present trouble in China and urged the necessity of caution on the part of Christian missionaries. The murders in China, he said (as reported by cable), are not due simply to the dislike of the Chinese for the Christian religion. There is no other nation so indifferent as China to the subject of religion. The uprising is caused because in that country and other countries the people have formed the conclusion that missionary work is a mere instrument of secular government. The conclusion is utterly erroneous, he added, but caution and prudence are necessary to overcome it.

This question of the relation of missionaries to the Chinese insurrection has also led to some severe reproaches between Catholics and Protestants in this country. The daily papers have been quoting a member of the Presbyterian Board of Missions, who attributes the present strife to an abuse, by the Catholic missionaries, of the privileges secured for them by the French Government. Under the terms of the French treaty, ecclesiasts of the Roman Catholic Church rank in China with viceroys, governors, and magistrates. This gives them a civil power which they have used to induce natives to join their churches, in some cases promising even criminals protection from punishment. The situation is thus described by Prof. Isaac Taylor Headland, of the Methodist University of Peking, in *Harper's Weekly* (June 16). He says:

"About three years ago the Roman Catholic priests, through the influence of the French minister, were given official rank corresponding to that of the various Chinese officials—viceroys, governor, taotai, etc.—and it was made obligatory upon the Chinese officials, when appointed to a new or leaving an old post, to call upon or send his card to the bishop or priest, while at the same time it put into the hands of the clergy no small power when they met an official, especially in cases of litigation.

"The Roman Catholic Christians were often oppressed by non-Christian members of their community, and as a result the church appointed two of her priests to attend to no other duties except the investigation of evidence in cases of litigation, and the conduct of such cases as they thought unjust before the official. The fact that they had official rank, and the other very important fact that they were foreigners, both added to their power, and they were thus able to meet the official not only on his own ground, but with the additional power of understanding foreign law. The Christians were therefore enabled to obtain justice.

"But it is supposed by the Chinese that they sometimes obtained more than justice, and that the priest was more than a match for the official, and sometimes obtained a decision in favor of his clients when the decision should have been against them; however that may be, both officials and people began to develop a secret hatred for the foreigners and the Christians. It must not be hastily concluded that the priests were wrong and the Chinese right, nor at the same time is there warrant for concluding that the Chinese were wrong and the priests always right. The right and wrong of it, it is not our intention to discuss, but only to account for the present condition of affairs. For proof that this is the true explanation of the present situation we need only examine the attitude of ex-Governor Yü, the conduct of his successor Yüan, and various expressions in the edicts issued by the Empress-Dowager some four months ago, in which she mentioned the difficulties which were constantly occurring between her Christian and non-Christian subjects, and advised that they be settled in accordance with right and justice."

Professor Headland, by the way, did not think, when writing, that the foreigners in Peking were in danger of being murdered. The Chinese, he thinks, fully understand the power of foreign nations to punish such murders, and those which have already occurred were a mistake, and not sanctioned by the Boxers them-

selves. He deprecates the possibility of a partition of China, and thinks that that would be a calamity even greater than a general quarrel among the European nations. The triumph of the progressive party of young Chinese will do a thousand times more for China than partition among European nations can effect.

The charges against Catholic missionaries are, of course, resented with some heat. An explanation given in *The Sun*, after interviews with some of the Catholic clergy, is to the effect that the powers conferred by the French treaty are purely ceremonial, intended to make personal intercourse possible between ecclesiasts and the Chinese officials. An explanation furnished by the editor of *The Messenger of the Sacred Heart* is to the effect that it has been the aim of the Catholic missionaries to have the spiritual, industrial, civil, and military forms of civilization go hand-in-hand, and had the Protestant missionaries followed the same course they would not be in such terror now. As soon as inhabitants of a certain district are converted to Catholicism, the priests see to it that they are familiarized with the use of modern arms. This is necessary in order to protect themselves from the numerous robber hands. The result has been that every Catholic village has become a sort of stronghold to which the peaceable element among the people flees for protection in time of danger.

The Standard and Times (Philadelphia, Rom. Cath.) stigmatizes as "a malignant lie" the assertion already quoted from a member of the Presbyterian Board, and says (June 16):

"Sober-minded lay observers find a far different reason for this alarming recrudescence of nativism in China. It finds it in the sudden development of the spirit of militarism on the part of England and this country, and the avarice of the rest of the Western powers in the scramble for commercial supremacy in the East. It is more than ordinary flesh and blood could endure to behold a set of outside governments coolly dividing up a vast country into so many 'spheres of influence,' without as much as 'by your leave' to the party most interested."

The Catholic News (June 16) insists that the uprising of the Boxers is anti-Christian rather than anti-Catholic, and that both Catholics and Protestants have done all in their power to protect their own converts from persecution. It quotes in support of this view an article by William W. Rockhill, former secretary of legation at Peking and now director of the Bureau of American Republics. Writing in *Collier's Weekly*, Mr. Rockhill says that to nine tenths of the Chinese Christianity is the source of all the present troubles of the empire, and that their very existence as a nation depends upon its eradication. He quotes from the general provisions of our treaty with China (Art. 29, treaty of 1858), which insures that Chinese converts who peaceably teach and practise the Christian religion "shall in no case be interfered with or molested," and he says:

"The above provision of our treaty has led the Chinese Christians to believe that they are practically independent of the government of their own country; that in all cases of trouble, whether private feuds or when charged with some offense by the officials, they can appeal through the foreign missionary to his legation in Peking, and thus escape the punishment usually meted out to Chinese.

"In case of the Roman Catholics, the Christians in many cases have been organized into communities from which all non-Christians were excluded, and the priest has been not only the spiritual guide but also the temporal ruler. When they had paid their taxes to China, they had discharged the only duty they owed to their country. The priest protected them against all exactions of the provincial authorities, and argued their case in person before prefects and governors.

"Altho the foreign Protestant missionaries have not heretofore as strenuously defended before the local authorities the rights and privileges of their flocks as have the Catholics, nevertheless they have done so sufficiently to make all their Christians feel that they were upheld by some one or more foreign power, and that they could successfully resist the petty exactions and

vexations common from time immemorial to all Asiatic governments."

A writer in *The Independent* (June 21), Henry Liddell, M.D., quotes from a small book published in China for the purpose of combating the Christian religion. It is entitled "A Death-Blow to Corrupt Doctrines," and has had an enormous circulation, one person having paid for the distribution of 800,000 copies. It has been translated by the Christian missionaries themselves for the purpose of letting in light upon the character of the opposition they encounter. Here is one of the passages descriptive of Christianity:

"The religion of T'ien-chn [lit., 'Sect of the Lord of Heaven'] originated with Jesus. Its adherents falsely assert that Jesus was endowed with divine gifts. . . . Priests are for the most part educated to their profession from their childhood. They are emasculated. . . . Those who enter this religion practise wickedness with the priests without restraint. Every seventh day all assemble in church. . . . When the ceremonies are over all give themselves up to debauchery. This they call 'the Great Communion,' or 'Love Gathering'! . . .

"They make use of occult and devilish arts and bewitch the ignorant by magical arts and incantations, so they joyfully enter the sect. . . . When a person enters this religion the teacher gives him four ounces of silver and a pill. When he has taken this pill his whole mind is confused and darkened, so that he destroys his ancestral tablets and only worships an image of a naked child which points one finger toward heaven and another toward the earth. They say this is the Prince Jesus. Families having daughters, on entering their religion, restrain one of them from marriage. These are the guardians of the locks and keys of the chest containing magical spells and incantations. They are called 'the old women who open the chest.' . . . In case of funerals, the religious teachers eject all the relatives and friends from the house, and the corpse is put into the coffin with closed doors. Both eyes are secretly taken out, and the orifice sealed up with a plaster. The reason for extracting the eyes is this: From one hundred pounds of Chinese lead can be extracted eight pounds of silver, and the remaining ninety-two pounds of lead can be sold at the original cost. But the only way to obtain this silver is by compounding the lead with the eyes of Chinamen. The eyes of foreigners are of no use for this purpose. . . . It is impossible to enumerate all their practises. If we seek for the general motive which leads to them, it is a fixed determination utterly to befool our people, and under false pretense of religion to exterminate them. Thus they wish to take possession of the Middle Kingdom."

Influence of the Quakers.—The Yearly Meeting of the Friends has recently been held in New York, and the doctrines peculiar to them have attracted more than usual attention from the secular journals by reason of the recent wars in which the United States has been engaged. We find, therefore, an expansionist and an anti-expansionist view of the Quakers. The *Springfield Republican* represents the latter. It says:

"It is not a good omen for the republic that the society of Friends continues to decrease in numbers, even in Philadelphia, where it should still be strong. It is, indeed, still strong in that city and in Baltimore in the personal representation it has in every excellent cause, national or local—in the moral strength it gives through the men and women of the meeting who are engaged in humanitarian work. Note the membership and the official list of unpaid service in important causes—of the red man, of the negro, of public charities, of the purification of the civil service; wherever there is even a small body of Friends, there will be found the Quaker element strongly in evidence. The time has come for a vigorous proselytization, like that of George Fox, tho adapted with judgment and prudence to the conditions of the day—to renew and magnify the Quaker spirit, which is always in behalf of the finest and noblest life. Now more than ever the declaration against war should be emphasized."

Quite otherwise is the tone of comment in the *New York Sun*.

Quoting from one of the speakers in the Yearly Meeting who called attention to the unswerving opposition of the Friends to war, *The Sun* asks whether they have ever exercised any influence on government affairs, and answers by an appeal to history:

"The Religious Society of the Friends was founded by George Fox about the middle of the seventeenth century, or about two hundred and fifty years ago, a period during which war and great wars have been almost continuous. In 1647, when he first traveled through England preaching his doctrines, the terrible Thirty Year's War, one of the most prolonged and destructive in the history of mankind, was still raging, the Peace of Westphalia not having been concluded until the year after. At that time, too, England was distraught with the civil war, which began five years before."

The various wars since the days of Fox are catalogued, and *The Sun* concludes:

"Whatever other influence, therefore, may have been exerted by the Friends on public opinion, the history of Christendom since their rise has not demonstrated that, so far as fighting is concerned, the precept and practise of this peace-loving people has been [?] powerful; yet that they have neglected no [any] opportunity to proclaim their principles can not be charged against them truthfully. They have done all they could against war and in behalf of peace; but as the new century approaches we see all Christendom armed as never before, and the nations outside of its domain learning more and more the lessons of fighting."

THE LATE PROFESSOR PARK.

A FEW days ago, at the ripe age of ninety-one, Prof. Edwards A. Park, once the storm-center of theological controversies that raged around Andover Seminary, passed to his rest. The youngest of his pupils, as *The Outlook* observes, must be now forty-five years of age, and to younger men he is little but a name. But "among the present leaders of religious thought, one can hardly find a name that equals his in the peculiar combination of the impressive preacher and the subtle lecturer." The following incident is told, which, whether true or not, illustrates the prominence which the professor held a few years ago in the theological field:

"In Germany he purposely got into conversation, *incognito*, with Strauss, the author of the 'Life of Jesus,' and asked him some simple question. This he followed with others equally simple, working round, in the Socratic style, to his real objective, where Strauss made an answer in plain conflict with what he had said before. 'Who are you?' said Strauss: 'I know who you are. You are either the devil or you are Professor Park.'"

The Outlook says editorially of him:

"He was the last and among the most eminent in that line of theologians, headed by Jonathan Edwards, of Northampton, who for a century strove by their 'improvements' of Calvinism to relieve it of objections apparent in the dawn of the more ethical and humanistic spirit of our times. He and his somewhat older contemporary, Dr. Nathaniel W. Taylor, who was professor of theology at Yale from 1822 till his death in 1858, were for sixty years the chief representatives of the improved or new Calvinism that was called 'the New England Theology,' and outside of the Congregational churches was known as 'New School' Presbyterianism. The bleaching effect of their work, resulting in varieties which Professor Park himself characterized as 'Calvinistic, Calvinistical, Calvinisticalish,' was feared and detested by those to whom pure Calvinism and pure Christianity were synonymous terms. Dr. Park's progressive orthodoxy was regarded as a lapse toward Unitarianism. During the middle third of this century the theological presses at New Haven and Andover on one side, and Princeton on the other side, teemed with polemic essays and reviews. . . .

"In the new series of theological controversies which began about the time of his retirement in 1881, Professor Park has been for the most part a spectator, but a spectator known to be warmly interested in holding fast to the theological limits which he himself had reached. The 'progressive orthodoxy' of the younger

professors at Andover found no more favor with him than Princeton had shown forty years before to his own. The denunciation then visited on him for "semi-Unitarianism" was now atoned for by the epithet "the Nestor of Orthodoxy."

Of the professor as a preacher, the editor of *The Independent* has this to say:

"Professor Park was as much of a rhetorician as Dr. Storrs. He had the nature of the poet and of the orator, as well as of the logician. In these respects he more nearly resembled Jonathan Edwards than any of the successors of that great theologian; and it is not strange that his admiration for President Edwards was so profound, and that he planned, but never published, a full exposition of Edwards's life and theology. Professor Park was a most persuasive preacher. Men listened spellbound to his sermons of an hour long. Some of them, the Peter sermon, the Judas sermon, became famous. And his delivery was sweet or powerful, as the thought might require. When he preached a sermon in criticism of Episcopalian liturgicism before the Massachusetts Congregational Association, a distinguished clergyman found fault with its severity. 'But,' replied Professor Park to him, 'I read it over to you beforehand, and you approved it.' 'Yes,' replied the clergyman, 'but when you preached it you put the devil into it.'"

ANTIQUITY OF RELIGIOUS MUSIC.

THE line of demarcation between secular and religious music, tho inherent in the music itself, is difficult to define accurately. Some contend that church music is totally different from secular music, but D. E. Hervey in *The Church Eclectic* (April) asserts that both sides to the controversy are wrong, and that the true idea is to be found in a judicious mean. While Rossini's music is fertile in beautiful melody, sound theoretical knowledge, and mastery of effect, it is evident, Mr. Hervey observes, that his religious music is strikingly inappropriate. Such distinctions are felt rather than defined, and it needs no musical education to mark the difference. But that music and worship are bound closely together, Mr. Hervey shows by tracing the evolution from the earliest times, when homage to a god was accompanied by barbarous sounds upon primitive instruments. The Egyptians, Assyrians, and Babylonians developed their music to the utmost extent possible at that time. Religious processions, when vocal and instrumental music were important, are mentioned in the sacred books of the East, ceremonies in which "all the known instruments were employed, combined with the singing of odes." Mr. Hervey writes:

"A thousand years before the Christian era the Persians formed religious processions in which they sang their prayers and praises. . . . The various religions of India all employ music in their services of worship, and in the Buddhist temples the choristers, clad in white robes, are ranged down the sides very much as in some Christian churches. . . . Even among the pagan inhabitants of the Pacific islands the same general custom is found. In Tahiti, the offering of human sacrifices was accompanied by the chanting of long prayers."

Everywhere music was looked upon as the essential accompaniment of worship, and this fact is not strange, thinks Mr. Hervey, "for music is the highest expression of the emotional faculties, and true worship is thoroughly emotional." If we turn to the Bible, he says, we shall find innumerable references to music and musical instruments. In the Song of Moses, in the Psalms of David, in passages where we are told to "sing unto the Lord," the religious fervor and exalted poetry are closely allied to music in the sacred services.

And history carries us further back still to the year 3800 B.C., when Sargon the Great ruled over the Akkadians, a remarkably cultured people, accounts of whose exploits have been preserved and translated. Their hymns, psalms, and prayers reveal the most exalted poetry, some "so strongly monotheistic that they

could be sung to-day, in the worship of Jehovah or Jesus, with little or no alteration," such, for example, as their prayer to the Mediator, which was chanted:

"O Benefactor, who can escape Thy hand?
Thy will is the sublime sword with which Thou rulest heaven and earth.
I commanded the sea, and the sea became calm;
I commanded the flower, and the flower ripened to grain;
I commanded the circuit of the river, and by the will of the Benefactor I turned its course.
How sublime art Thou!
What transitory being equal to Thee!
O Benefactor amongst all the gods,
Thou art the rewarder!
O Lord of battles!
Merciful One among the gods!
Generator who bringest back the dead to life!
Beneficent King of Heaven and earth,
To Thee is the life of life,
To Thee belong life and death!"

From what has been said, it is clearly seen that the relation of music to worship has been a development, reaching its culmination after "ages of experiment and growth." Church music, instead of being sensuously emotional, as it was in the Middle Ages, should aim at the exaltation of the soul. Mr. Hervey concludes by saying:

"From the masses of Haydn and Mozart, and their imitations, equally as beautiful and equally as inappropriate as the works of Rossini already referred to, church musicians have revolted, and a new school has arisen that would restore to worship-music its spiritual character. This school is gradually gaining the ascendancy, and the time is certainly near when the ideals of the ancients will be renewed in our music for worship."

DO CHRIST'S TEACHINGS FURNISH GUIDANCE IN POLITICS?

IN the ranks of practical Christian workers in Germany, the recent work of Pastor Friedrich Naumann, entitled "Demokratie und Kaiserthum" ("Democracy and the Imperial Power"), has aroused a deep and disappointing sensation. The author has been one of the most active representatives of the Christian Socialist agitation, which has seen in the application of the teachings of Christ to the social and political problems of the day the panacea for all the ills that afflict humanity. He has also been and still is the editor of the *Hilfe*, the organ of this propaganda, and on account of his prominence in the church life of the empire he was invited to accompany the Emperor on his Jerusalem journey in the fall of 1898, the result of which was his book "Asia," an excellent account of the modern Biblical Orient.

In his new work, Naumann has practically withdrawn from his former position and now declares that the principles of Christ are not applicable to the problems of modern, social, and political life. He states his present position plainly in these words:

"Jesus Christ was not a politician. The attempt has often been made to extract from the never-failing fountain of His Word the rules that should control political thought and action. Protestants, too, have made such attempts, and in former years the author of this book has joined in these efforts. But the result of all these studies has been the conviction that the moral ideas of the Master are of such a general character, being intended for application to all manners and conditions of men, and are so purely ethical and abstract in their nature, that they do not furnish a guide to conduct in specific cases nor answer such questions as, What should be our politics in the period of industrialism, or our attitude toward social democracy, or even toward aristocracy? Jesus thereby does not decrease in value for us; but we are not able to deduce our political tactics from Him."

Naumann's book is intended to furnish an ideal political program, intended primarily for Germany (where he urges the Emperor to sever his connection with the Conservative Party and head the Liberals), but in its fundamental principles applicable to political activity everywhere. After discarding the idea that Christ furnishes all necessary principles for managing pub-

lic affairs, Naumann considers the part which pity and kindness play as political motives. He no longer recognizes the principle of love of one's neighbor as the decisive factor in political action. Indeed, politics has nothing to do with seeking the happiness of mankind. It is not a contest for ethical ideas, but rather a struggle between various classes along economic lines; and that class is entitled to control the affairs of state which is best able to advance the total interests of the state. This is the central problem of practical politics. He summarizes his new views in these words:

"It lies in the nature of the case that politics is a struggle between certain powers for certain rights. He who sees in political agitation essentially a kind of application of ethics knows but little about it. Political activity has no power of realizing an ethical ideal that stands over and above all contest. The only thing that can be said in this connection is this, that the attainment of power through political movement should be sought as in harmony with the teachings of ethics, and that the party that has gained control should exercise its power without barbarism or wickedness. In this sense is to be understood the ideal of Christian Socialism, namely, that of 'ethicizing the struggle of the masses.'"

Politics are then virtually the struggle for supremacy. On this point Naumann says further:

"Rights and privileges originate in the course of historical development; but they are based on might. In the principle 'might makes right' there is contained a great historical truth. What good do 'natural rights' do a man if he has no power to secure for himself these 'rights'? What good does it do the proletariat if, on the basis of natural human rights, it demands freedom, and is too weak to fight for these?"

This change of front on the part of so prominent a representative of Christian Socialism has aroused as much excitement as did the step of Pastor Blumhardt, of Bohl, who several months ago joined the Social Democrats on the plea that only through their ideals could the ethical ideas of Christ be realized.—*Translation made for THE LITERARY DIGEST.*

IS THE PROTESTANT CHURCH OF GERMANY ORTHODOX OR HETERODOX?

IT has been repeatedly affirmed and denied, seemingly on equally good authority, that the critical views taught by the theological professors in the German universities also prevail in the pulpits and pews of the Protestant churches of the Fatherland. An investigation of this subject has recently been made by the *Protestant*, the organ of liberal theology, with results that rather disappointed those who conducted it. The *Protestant* reports the details as follows:

"The heresy trial and condemnation of Pastor Weingart [see LITERARY DIGEST, March 10], a representative of the newer and modern type of theology that finds its exponents in practically all German universities, induced the editor of this paper to send out a general appeal to all evangelical-minded men and women of the empire, of all parties and creeds, including more than one hundred copies to the chief political, religious, and ethical periodicals, in order to discover how the recipients stand on the question at issue. The leading question reads as follows: What do you think concerning the resurrection of Christ, and what do you think of the statement in the Easter sermon of Weingart, on account of which he was deposed from office, namely, that 'the tired body of Christ remained in the tomb, dust to dust'? The answers to this appeal were exceedingly meager in number. Altho thousands of copies were sent out, the actual number of replies was only eighty-four, and of these fully thirty were in favor of the orthodox view. Accordingly only fifty-four voices responded from the liberal ranks of the German churches, and there is considerable reason for the papers of the conservative and confessional type to speak of this effort and its results as a 'glaring fiasco of liberal theology.'"

Most of these replies are representative of both the old and the new theological thought within the church of Germany. The

Protestant has printed them all, and we reproduce some of the most instructive from both sides:

No. 16. "I believe in the resurrection of Jesus Christ. This is the solid foundation and the central pillar of our faith. Without this, there would be no resurrection and no forgiveness of sins for us. Without the resurrection, all of Christ's work would be in vain."

No. 66. "I believe that Christ personally and bodily arose from the dead, as the Scriptures teach. Whoever can not believe this can be a pious person, in the sense of the classical world, but he can not be a true Christian believer."

No. 46. "Christ's own words (Luke xxiv. 39) must convince every true believer that He has risen indeed, and he who doubts the real resurrection of the Lord is without hope."

No. 23. "Either there was a bodily resurrection of Christ and a real Christianity or we have all been deceived in our faith in Jesus of Nazareth."

No. 10. "If Christ had not really arisen from the dead, then Christ's coming upon the earth would have been absolutely without a purpose or a blessing, and He himself would have been a powerful liar, and He would have been nothing but a mortal being."

The editor closes his review of these orthodox opinions with the words: "So much is certain, that, among this class, Christianity stands or falls with the belief in bodily resurrection of Jesus."

Just what those who deny this view see in the resurrection can be gleaned from the following "liberal" replies:

No. 42. "Such a thing as is described in the account of the resurrection of Jesus never really took place as an objective reality. This must be claimed not because the reports on the affair are contradictory, but because it stands in flat contradiction to the experience of mankind and to the scientific teachings of the day. It is the product of the wonder- and miracle-loving world of the ancients. Neither as one really arisen nor as a body of light (*Lichtleib*) did Christ appear to His disciples, but, as is the case with all mortals, His body returned to the dust. Christians have been accustomed to lay too much stress on the resurrection. Christianity has a better foundation in historical truth and reality, and should not be based on a disputed matter."

No. 40. "The belief in the bodily resurrection of Jesus Christ, in violation of all the laws of the physical world, is an insult to the scientific spirit and scholarship of the age and an insult to all true religiousness [*Religiosität*]; which does not put the impress of nonsense upon the incarnation of Jesus by claiming a bodily resurrection, but in the 'resurrection of Christ' recognizes the continued influence of Christ for the better and higher development of mankind."

No. 25. "In my estimation the resurrection of Christ signifies His ever-active influence for good in the congregations founded by His disciples. I do not believe in any supernatural process that took place in the empty tomb of the Lord."

No. 47 says: "I believe in the Easter message, 'Jesus lives!' But I believe it in this sense, that Jesus Christ, the God-man, was a child of God in the same sense in which we are asked to be such, and that like His brethren He was subjected to the ordinary laws of nature. I fully approve of Weingart's position and teaching."

Both friend and foe of the "liberal" view conclude from the test that the old Evangelical doctrines of the Reformation are still the controlling factors in the Protestantism of Germany.—*Translation made for THE LITERARY DIGEST.*

AMONG the curiosities of religion is a movement reported to be in existence in a remote part of Georgia, near Demorest. In a letter to the Rev. Lyman Johnston, editor of the *Toledo Stambler* (itself worthy of notice from the student of religious phenomena), a correspondent writes:

"The worst heresy and the wildest fanaticism I ever saw in my life is raging in this region. It is the Fire-Baptized Association. They are holy rollers and dancers. They boast of five distinct works of grace: (1st) Conversion; (2d) sanctification; (3d) baptism with the Holy Ghost; (4th) baptism of fire; (5th) the heavenly dynamite. Free Methodists are nowhere compared to this. H. L. Irwin, of Lincoln, Nebr., is the progenitor of this latest travesty on true religion. The thing needs to be probed with the sharp sword of truth. Yours in His name."

FOREIGN TOPICS.

EUROPEAN POLITICS AND THE CHINESE IMBROGLIO.

THE press of Europe are pretty nearly unanimous in declaring that the lives of foreigners and the treaty rights which the powers so hardily won from China must be protected at all costs; but here their unanimity ends, for the evident weakness of China renders a successful defense against European forces very improbable, and there is a fear that one or the other power may unduly and dangerously increase its strength by grasping

THE EUROPEAN SPIDER SPINS ITS IRON WEB OVER THE WHOLE WORLD.
—C. K. Herlin.

at an overwhelmingly large share of the prostrate empire. That the Chinese ascribe the aggressiveness of the Western powers solely to their own military incapacity is shown by the writings of Chang Chih Tung, Viceroy of Liang Hu, of which the *Shanghai Celestial Empire* gives several instalments. We quote from them as follows:

"With fifty war-ships on the sea and thirty myriads of troops on land; with daily additions to both ships and troops; with the daily strengthening of our forts and equipping them with the best engines of modern warfare; and with the railways intersecting the land, what country would dare begin hostilities against China, or in any way infringe upon her treaty rights? . . . China is not on an equal footing with the West. This is perceived in the fact that the duty on imports is fixed by Western governments. Not so in China. Merchants engaged in business abroad are subject to the laws of the country in which they reside. Not so in China. Foreign commerce is confined to seaports in the West. Not so in China. The murder of a foreigner by a Chinese is a very serious matter, but the killing of a 'Chinaman' by a foreigner is a trivial thing. Foreign countries have no mixed courts. In fact, China is really not in the comity of nations, and it is useless to prate about international law. Disarmament is an international joke, and international law a deception in the present circumstances. There is nothing for it but to seek help in ourselves."

Many writers point out that overweening national pride is to a large extent responsible for China's present helplessness. After the war with Japan the mass of the people were prevented from knowing what a sorry spectacle China presented in that struggle. The scribes, whose position corresponds in a general way to that of our newspaper men, feared loss of influence if they were to admit inferiority in anything that is Chinese. Hermann Schumacher, in the Berlin *Tageblatt*, writes in the main as follows:

Nothing has been saved from the wreck of China's former greatness but this overweening self-sufficiency, which leads every Chinaman, especially every mandarin, to regard the foreigner as in some way inferior. The entire history of Europe's dealings with the Chinese is a series of assaults upon this objection of the Chinese to equality with the Western barbarians. But when this feeling of superiority once vanishes, the faith of the people in their institutions and government will also be lost, and, as the empire is really weak, frightful revolutions must occur. It is impossible to preserve this Chinese self-esteem. The interests of the foreigners are no longer confined to the trade of the treaty ports. Railroad interests, mining interests, industrial interests, have been added, and these must be protected.

For some years the British element has favored the factions which oppose the Manchu dynasty. These factions are regarded as progressive, while the defenders of the dynasty are viewed as hopelessly reactionary.

Russia, however, is supposed to favor the dynasty, and, according to the general tenor of the British press, Great Britain is not desirous of an open rupture with Russia. It is hoped that Japan will make the first move. *The Saturday Review* (London) says:

"The same shortsightedness which has led the Empress and her advisers to encourage the Boxers to persecute missionaries and their converts, without foresight of the dangers entailed, might lead them to accept Russian intervention as a device of the moment, without regard to consequences which Japanese statesmen clearly apprehend. . . . Certain eventualities come, curiously enough, to be accepted as axiomatic. Conflict between Russia and Great Britain on the frontiers of India is by many so regarded. Conflict between Russia and Japan in northeastern Asia appears to be more imminent still. Korea may be the crux of the situation. But Japanese statesmen would regard probably with scarcely less anxiety an extension of Russian influence beyond the Great Wall over Pechili. Nor, certainly, would they stand alone. Germany's avowed sphere of influence is the adjacent province of Shantung with a more or less clearly defined hinterland stretching back up the course of the Yellow River toward Honan. The commercial interests of Great Britain and the United States in North China are very great; and neither could view with indifference any increase of the great influence which Russia has already acquired at Peking. We may smile at the suggestion that French troops should be sent up the Yang-tze to Hankow. Strong protest was made in well-informed quarters against the apathy which allowed a line penetrating the heart of the Yang-tze valley to pass into other than British hands. We have not probably yet seen the end of that blunder; but the Boxers are not yet demonstrating in Hupeh, and a French occupation of the Hankow terminus would scarcely be endured."

The *London Globe* speaks of "Russia's shameless exploitation of Great Britain's troubles," and demands an Anglo-Japanese ultimatum to Russia. *The Journal des Débats* (Paris) says:

"For some years Great Britain has lost ground in the Far East. Her share of the commerce there is, by dexterously cooked statistics, made to appear as if it were increasing; but her loss of political influence is patent to all. . . . The jingo press, with *The Times* at its head, incites the Cabinet to stop Russia's advance; but with 200,000 men locked up in South Africa, it will be difficult to find the necessary troops. . . . As for ourselves, we have no secret ambitions. All we desire is the restoration of order, and our forces will be directed solely to assist in that."

The *Handelsblad* (Amsterdam) says:

"It is quite possible that Russia will pull the chestnuts out of the fire—to keep them herself. Russia has enough troops near the seat of the trouble to do it. The *London Times* is worked up about this prospect. England, says *The Times*, has the oldest rights in China, and to her must be left the task of restoring order. The United States will be permitted to join England, if the Americans wish it. . . . All that sounds very grand, but for the present you can't do much, Mr. Bull. You must first get rid of 'Mr.' Kruger, the 'late' President, and his 'robber' government. You must civilize the 'demoralized' Boers. For that you need 150,000 men in South Africa; if you withdraw them, the 'robber

Boer' will immediately be in evidence again. No, sir; you can't do anything to the Russians in China!"

Indeed, nearly all Europe seems to agree that, besides the pacification of China in the interest of Western civilization, the present troubles must lead to a measuring of strength between Russia and Great Britain. M. v. Brandt, in the *Deutsche Revue* (Stuttgart) says:

"Nothing that English diplomats and parliamentary secretaries may say can take away the fact that the Chinese and the Japanese both since 1895 have received the impression that England is afraid of Russia, and that she is a broken reed which will pierce the hand that relies upon her for support. . . . Two points, however, may fill the British people with proud confidence for the approaching struggle. One is Great Britain's wealth, and the other the willingness of the British people of all classes to part with this wealth for the advantage of imperial interests."—*Translations made for THE LITERARY DIGEST.*

CHINESE IDEAS ABOUT CHINA.

A CHINESE writer by the name of Kang Yu Wei has recently published a book (in Chinese) dealing with the condition of his native land. *The North China Herald* (Shanghai) regards the book as such a fair and able presentation of the ideas of a large number of patriotic Chinamen that it has had the most striking passages translated. From them we cull the following:

"We shall all be driven out of China. Russia has ejected the Jews, one hundred and sixty thousand being driven forth. Twenty-four hours were allowed them to get beyond the Russian boundaries. They could sell neither their lands nor houses, and could take with them only a little ready money. Not being allowed to avail themselves either of train or steamboat, their aged and their little ones had to be carried by the strong, and were in great fear. Moreover, when ejected from Russia, they had no native land to which to turn. Long ago Palestine had been parcelled out among its powerful neighbors.

"So, if our country were conquered, and we were driven forth to live among foreigners, we, too, like the Jews, should have no fatherland to which to turn. We might attempt to enter some other country, but its people would eject us. Even if they admitted us among them, their rulers would tax us.

"Our race will be destroyed. See how Russia has treated Poland. The Russians banished all the able-bodied men and allowed only the old men to remain in the country. Therefore the Polish race has been exterminated. At present the women of India are married to foreigners. Everybody knows that the races of India are in danger of being exterminated. To-day the white races predominate over the entire globe. Among the yellow races, the Chinese only wield any political influence and rule their own country.

"If our country should be conquered and its government controlled by foreigners, they would assuredly treat us as they have treated the Poles and the Hindus. We, our children, and our grandchildren would be altogether exterminated. Japan foresees this calamity, and she therefore retroceded to China ten of the captured battle-ships. She fears that our annihilation would jeopardize her independence. China and Japan hold the same close relationship to each other as do the lips to the teeth.

"The Chinese race is vast, and our country is extensive. We are 400,000,000 and China is larger than the sixteen countries of Europe. The precious metals in our mines have no equal in the world. Yet tho we are so numerous, we are despised, insulted, and murdered by other people. The Chinese who live beyond the seas, numbering at least 5,000,000, are also daily abused and insulted by those among whom they live. Their government can not protect them.

"But who are the government? China has no parliament. The power is all vested in one person. During the past thirty years, England, France, Russia, and Germany have all extended their boundaries and increased their power. China alone has retrograded. Who has done this?

"This is all the doing of the Empress—the work of one woman who has profligately and disgracefully clung to the old ways."

After a detailed list of the crimes of the Empress, and lamentation for the weakness of giving up Formosa, the writer gives, as the remedy for the present state of affairs, the overthrow of the Dowager Empress and the reinstating of the deposed Emperor, and steady pursuit of necessary reform. Only the Emperor, he declares, can win back power for the country and protect the 400,000,000 inhabitants of China.

Kang Yu Wei ends with the following appeal for drastic measures:

"Those [the Dowager Empress and Jung Lu] who have heaped all this wretchedness upon him [the Emperor] are robbers, villains, and traitors, and any one would be justified in assassinating them, as the Japanese, years ago, killed their ambitious generals, who, inspired by the same motives, acted in the same way. Heaven appeals to my 5,000,000 countrymen beyond the sea to unite in heart and purpose to save the Emperor, renovate the empire, ward off the threatened slavery, and save us from extermination. If the Emperor dies, all hope dies with him, and China's ruin will be swift and complete."

BEGINNING OF THE END OF SIBERIAN EXILE.

THE Russian Government has determined to abolish, or greatly restrict at least, the system of exile to Siberia, which was characterized by so many horrors, and which, a few years ago, was the subject of animated criticism in Europe and America. The reform is the direct result of the construction of the great Trans-Siberian Railway and the opening of that immense territory to civilization and industrial development. The Government has recognized the need of a radical change of its colonization policy in Siberia, and a special commission has been appointed to consider the problem and report upon the substitutes for exile and upon the proper regulation of what may remain of the system. In its order the Government said:

"At one time exile served as a means of peopling this vast and rich domain; but now, in proportion as Siberia has attracted more and more free settlers, who have, by honest and hard work, achieved their well-being in this former desert, further despatch thither of involuntary exiles has proved not only useless, but injurious to the territory. In its present form, the system generally operates to the detriment, not only of the exiles, but of free local population. Hence, recognizing therein a burden to Siberia and an obstacle to its further development, it has become immediately necessary to do away with or restrict the practise."

The following points are submitted to the consideration of the commission: 1. The substitution for deportation of offenders by judicial decree of other suitable penalties. 2. The restriction or abolition of administrative exile, so far as it relates to other than political prisoners. 3. The improvement of the condition of the exiles already in Siberia. The most numerous element of Siberian exiles is contributed by the administrative system. Not counting political offenders, Russian writers give 79,909 as the number of men transported in the period 1826-46, while for the decade 1867-76 the number was 78,686. Since then, the average annual number of administrative exiles of the ordinary class has been 6,000, not including the families of the offenders who follow them to Siberia. The total number of men annually sent there is over 12,000.

In discussing the effect of the reform, a writer in the *St. Petersburg Russkai Bogatstvo* (*Russian Treasure*) says:

"Once entered upon the path of improvement, the Government will be obliged to go farther. Abolition or even restriction of the transportation system will necessitate other forms of repression. What is to be done with the enormous number of criminals whose destination hitherto has been Siberia? Our prisons are always overcrowded, having twice or thrice the number of criminals which they were designed to contain. The building of a sufficient number of new prisons would constitute a serious financial problem and would require considerable time. Hence it will be

necessary to have recourse to measures which are far beyond the limits of ordinary penal policy.

"Modern criminology has demonstrated that successful coping with crime involves not only influence upon the will of the individual prisoner, but also upon the social conditions which produce crime. Science recommends large measures of a preventive character—the elevation of the material and moral state of the masses; protection of health, especially of the health of factory labor; temperance legislation, etc. . . . But the means immediately available to which the Government will have to address itself are those already adopted into European codes—indeterminate sentences; conditional penalties; the parole system. All this will mean a total reorganization of our reactionary penal system."

The writer believes that for political offenders exile should continue, because such offenders are a blessing, not a curse, to a newly opened country, being cultured, resourceful, and anxious to assist the backward, illiterate population. The Government, however, he observes, would have to treat them with some liberality and grant them a large degree of freedom.—*Translation made for THE LITERARY DIGEST.*

INTERNAL TROUBLES IN FRANCE.

VOILÀ! Again the Affaire Dreyfus! A detective named Tomps has unearthed some letters relating to the case which, it is said, contain matters incriminating Dreyfus, and the Nationalists thereupon threaten to revive the charges against him. On the other hand, Émile Zola comes forward with demands for a new trial and for another chance to prove the guilt of the French General Staff. He says that "unless the matter is investigated thoroughly, Germany, which has it in her power to prove how corrupt our military administration is, will do so on the eve of a war with France, thus robbing our soldiers of their faith in their commanders." F. de Pressensé, in the *Aurore* (Paris) says:

"The Nationalists are about to reopen the Dreyfus affair, thanks to the weakness of the Republicans. . . . Again the campaign is opened with lies and forgeries. To present these they claim full liberty, but they deny to us the right to reply in the name of truth and justice. It appears, too, that the Government is willing to assist the enemies of justice with the dogma that the criminals who wear a uniform may not be punished. Justice is violated under the claim that 'reasons of state' prevent the truth from being told! . . . It can not be said too often that the Affaire Dreyfus is a violation of justice in the interest of politics, and that this supposed secrecy for the public good is only the cloak of brutal force in the interest of injustice."

Meanwhile one of the strongest characters in the French Cabinet, General de Gallifet, the Minister of War, has resigned, ostensibly on account of ill health, in reality, as no one seems to doubt, because he dreads the reopening of the Dreyfus Affaire. His successor is General André, commander of the Tenth Infantry Division. He is evidently not popular with the anti-Republicans. "We know little of the general," says the *Éclair*, "but we know that the Dreyfusards give him their support. That is a bad sign." The *Echo de Paris* declares that André at Orleans prohibited all newspapers from being distributed among the soldiers. The *Gaulois* declares that he prohibited anti-government papers alone, an act by which he earned the enmity of the Socialists. That paper further says:

"Socialists, Freemasons, and Dreyfusards may rejoice and think he is of them; but we will not insult him by believing it. General André will not confess himself a Dreyfusard; he will disappoint those who to-day rejoice at his elevation as much as Chanoine and Gallifet disappointed them."

The *Libre Parole* says:

"The new minister does not deserve our sympathies. He is very friendly to Dreyfus, and merely a theoretical soldier. He

was made a general of division because he kept the newspapers out of barracks; he could not command an army in the field, and it is easy to see that the experienced generals will not respect him."

The Republican press is very well satisfied. The *Radical* says:

"General André is a thorough soldier, and, what is more, he is a Republican soldier. For a Cabinet which must defend Republican institutions, he is a very valuable acquisition. He is an enemy of military pronouncements, just as Gallifet is. The very fact that the Nationalists attacked his reputation whenever rumors of Gallifet's resignation were about should speak for him."

The *Figaro* declares that General André is above all opposed to politics in the army. The *Indépendance Belge* (Brussels) believes that the choice of General André as Gallifet's successor neutralizes all bad effects of Gallifet's resignation. The *Spectator* (London) says:

"The program of the Nationalists is to revive the charge that the Ministry dislikes the army, and is controlled by Jewish capitalists, and then to throw their followers into the street, trusting that the infuriated officers will refuse to give the order to fire. If that happens, they reckon there will be anarchy for some hours, and then France, which dreads anarchy before all things, will throw herself at the feet of some strong man—for choice, General de Négrier. The plan is most astute, and tho we believe it will fail, it may produce most regrettable incidents and a European panic."

The *Saturday Review*, too, fears that even during the Exposition quiet is not assured in France.

The *Deutsche Rundschau* (Berlin) points out that the municipal elections have gone in favor of the republic except in Paris. "This," says the magazine, "indicates that the country at large is opposed to a change." The *Handelsblad* (Amsterdam) hopes that the Cabinet will endeavor to govern without the Chambers, at least during the Exposition; and according to the *Kölnische Zeitung* (Cologne), this is indeed the intention of the Government. The *Novoye Vremya* (St. Petersburg) says:

"Gallifet was forced to resign when he found that, after all, documents compromising officers of high rank existed. He realized that he had sacrificed already too many officers to the idea that military men may not dabble in politics. The position of the army in France is indeed difficult. For the fifth time a Minister of War, having satisfied himself of the injustice of the Dreyfusards, resigns. It is plain that there is no place for a minister willing to defend the army, and any officer who raises his voice in defense of the army is threatened with instant dismissal."—*Translations made for THE LITERARY DIGEST.*

BRITISH RULE IN INDIA.

THE distress in India besides being an occasion for widespread charitable activity, is also taken as an occasion for another display of the hostility to Great Britain which is so prevalent on the continent of Europe. The attempt is frequently made to attribute the famine, in part at least, to British rule in India and to the drain upon India's financial resources which that rule is alleged to cause. With remarkable persistence, European journals assert that the South African war has demonstrated such military incapacity in the British army that hopes of independence have been aroused in other of the British possessions. Especially, so it is asserted, have such hopes been excited in India, which is said to be again in a state of ferment. The *Hamburger Nachrichten* is among those that make this statement. It describes conditions in India as follows:

India is inhabited by two entirely different races—the Aryan Hindus, who live in the northern part, and the Dravida races, which are everywhere in the peninsula, but chiefly in the south. The latter are the aborigines, and were conquered by the Hindus

some fifteen or twenty centuries before Christ. Both races are divided into a large number of different tribes. In the most northern districts, again, are tribes of Tibetan origin.

India has about 290,000,000 inhabitants, or nearly as many as Europe. Of these, 220,000,000 are under the direct sway of the Briton. They are divided into 170,000,000 Brahmans and 50,000,000 Mohammedans. Religious hatred divides the Brahmans from the Mohammedans, but both hate the English still more fiercely. Altho the Mohammedans form only one sixth of the entire population of India, they are the most important section, for they are the most energetic, and live chiefly in the parts in which the English consider that their rule is most firmly established. The mutiny of 1857 was chiefly a rising of the Mohammedans, and they are ready to rebel again if the slightest chance offers. Now, it must be remembered that these Mohammedans acknowledge the Sultan of Turkey as their khalifa and spiritual head. The British Government earnestly begged the Sultan to exert himself on Britain's behalf during the great mutiny, and his influence caused the rebellion to collapse. Since then the British Government has changed its policy. It has become the enemy of Turkey, and that at a time when the pan-Islamic idea is gaining ground. The khalifa has suffered no little through this change of British views. British agents and British gold have fostered the rebellions in the Balkan Peninsula, in Armenia, and in Crete. The Sultan will not again save British rule in India.

The maxim *divide et impera* has been followed with great success by the British; but it is losing force. The Hindus have lately adopted an attitude of encouragement and sympathy toward revolts of the Mohammedans. Such revolts are chiefly due to the terrible exploitation by the zemindars to which the people are subjected. The British Government, like the Turkish Government, claims the ownership of nearly all the land. Of the harvest, three fifths belong to the Government, two fifths—subject to further taxation—are nominally left to the farmer. That is to say, the unfortunate natives pay sixty per cent. of their income for the blessing of British rule. But the soil is rich, and the farmers would not rebel if that were all.

But the Britons, who never fail to thunder against Turkish misrule, have no better system for gathering the taxes than have the Turks. What to the Turkish *rajah* is the *mullerim*, that to the Indian *ryot* is the *zemindar*, the taxgatherer. The zemindar receives one eleventh of the Government's share for his trouble; but he is given full freedom in the choice of his methods for gathering the taxes, and the oppression and corruption which result from this system may easily be imagined.

Much is said about the public works in India. As a matter of fact, the roads, railroads, bridges, etc., are built for the convenience of the exploiters only, and only accidentally do the natives profit by them. The plain truth is that India has been made very poor, despite the wealth of her soil, for the conquerors do not spend the revenue or their princely salaries in India, as native rulers do. Much noise is made of any half-hearted measure for the relief of a famine; but in reality only once were energetic measures taken—under Lord Northbrook, in 1873 and 1874.

Abert Métin, in a pamphlet on his late tour around the world, describes how the British keep themselves out of touch with the natives in India, precluding thereby all possibility of being regarded as anything but tyrants. A French gentleman invites a distinguished native, a knight of the Legion of Honor, to dinner. All the English immediately leave. A French lady appears before the viceroy with an exquisite piece of native jewelry. She is promptly censured for this recognition of native art. He says further:

"Yet there are many talented and able men among the Indians who keenly resent this treatment. The leaders of the national movement are as well informed on international subjects as are cultured Europeans, and they demand freedom of the press and freedom to discuss internal affairs. Only lately a native journalist was sentenced to five years' imprisonment because he dared to assert that the plague and the famine could be more effectively combated if the natives were given a greater share of the management of their affairs. As a matter of fact, the rule of the Briton does not differ from that of the grand mogul. There are troops to shoot down the discontented, and officials who are taxgatherers, administrators, and judges all in one person."

An article appears in *The Independent* (New York), written by Edgar Mels, formerly editor of an organ of the British Government in Johannesburg, and who "has made a special study of Indian and South African affairs." He writes on "The Famines in India," and he does not hold the British Government blameless

for the present condition. The cause of the famines he attributes to the "too rapid increase in population," "the failures of crops," and "the fact that the native princes, the maharajahs, the nizams, the begums, the raos, the nawabs, and the khans, retain control of huge tracts of arable lands, which they utilize for hunting instead of allowing them to be turned into fertile farms." The personal character of the Hindu, especially his fatalism, is also an important factor. But Mr. Mels reproaches the Government in India with tardiness in facing the situation that now exists and with parsimony in preparing for it. He proceeds with the following arraignment:

"But leaving aside the parsimony of the British Government, the fact remains that with Great Britain rests the onus of the frequent recurrence of the famines and their terrible consequences. One hundred and forty-five years of control by the East India Company and one hundred and thirty years' control by Britain has left India no better off than it was three hundred years ago—in the matter of famines, at least. To show how little is done to prevent famines, the writer will quote official figures:

"In 1897-98 the expenditure for military and military works was \$30,000,000 in round figures. For the far more important work of irrigation it was \$3,000,000!

"The expenditure during the same period for salaries to government officials was \$50,000,000; for the relief of the famine-stricken only \$17,000,000 was spent.

"But by far the most serious charge, and one that has so far been hushed up with considerable success, is the one which imputes the disappearance of a famine fund of \$100,000,000 to government officials. Shortly after the famine of 1877 the Government then in power, Lord Lytton being the viceroy, decided to take precautions against the recurrence of the distress of that year. Accordingly every native in the British provinces was taxed and the above sum raised.

"Time passed and many good crops drove all thought of famine out of the heads of the Government. Then, with the suddenness of a thunderclap, came the famine of 1898, finding the Government not only totally unprepared, but with a white elephant on its hands in the shape of a missing famine fund. Every effort was made to hush up the scandal. A report was sent broadcast that the fund had been utilized in building military roads and for similar purposes. The public at large, being complacent, shrugged its collective shoulders and said nothing. The press of India remained remarkably quiet, all save the Bombay *Guardian*, which charged openly that some one was guilty of theft and malfeasance. But the famine soon rose uppermost in the minds of all, and the famine fund was forgotten."—*Translations made for THE LITERARY DIGEST.*

JOHN BULL'S WOOLING OF AFRICA.

THE CONDITION OF JOHN'S INDIAN LOVE.

—Kladderadatsch.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Minister Finch, of Montevideo, under date of April 9, 1903, sends a statement to the trade of Uruguay in 1899, from which it appears that the total imports were \$25,551,788, against \$24,784,576 in 1898; and the exports, \$62,123,952, against \$55,001,276 in the preceding year. The chief increases in the imports were in raw materials, machinery, and "soft goods"; in the exports, gains were noted in slaughterhouse products.

Under date of April 14, 1900, Consul Smith writes from Moscow: The capital invested by insurance companies in Russia amounts to 418,000,000 rubles (\$209,000,000). The number of persons insured in 1899 was 21,114, the insurance amounting to 71,000,000 rubles (\$35,500,000). Of the above amount, 41,840,710 rubles (\$20,920,355) was received by American insurance companies, the balance by Russian. The Russian people, adds Mr. Smith, are only beginning to realize the advantages of life insurance.

Consul Richard Guenther writes from Frankfurt, February 21, 1900:

According to German newspapers, the German federal court has recently rendered a decision which appears to be of interest to United States consuls in Germany, as they are frequently requested by citizens of the United States to procure for them all possible information regarding manufacturing processes employed in Germany. It appears that a foreman in the employ of a certain establishment invented a substance which his employer used in finishing "rustling" velvet. The use of this substance was considered a trade or business secret of the firm. The foreman, however, imparted the composition to others, and the firm had him tried under the law of May 27, 1892, entitled "An Act for the Suppression of Base Competition" (Gesetz zur Bekämpfung des unlauteren Wettbetriebs). The foreman was found guilty in the lower court. The case was appealed to the federal court, and the defense made the point that the foreman had only imparted his own invention to others; that the same was his intellectual property. The federal court dismissed the appeal on the following grounds: The foreman was employed as such by the firm, and therefore it was his duty to try experiments by which the methods of work could be improved. His achievement in inventing the substance was

therefore only a part of the services which he owed to his employers. The invention belonged to his employers, and therefore the action of the foreman in imparting the secret to outsiders was in violation of the law referred to. Only an employee is entrusted with experiments which may lead to such inventions. A stranger, whose labor does not belong to the establishment, is excluded from such experiments. The foreman was admitted to the experiments only on account of his employment by the firm, and it followed that the invention in question was made by him in consequence of his employment by the firm, for which he was paid.

The Trans-Siberian Railroad, says Consul Cover, of Lyons, from an economic and a political standpoint, is the greatest work of the century. It gives Russia a superior standing in Peking. It now touches the Amur; in three years it will reach Port Arthur, making the distance but thirteen or fourteen days from Moscow to Peking. There is annually an excess of \$1,500,000 births over deaths in Russia, and Siberia is the outlet for this overflow. The black lands of Siberia form an area of not less than 20,000,000 hectares (50,000,000 acres), but high freight rates are an obstacle to the arrival of their cereal products in France. The average freight rate on the Trans-Siberian is three tenths of a cent per ton per kilometer (about five eighths of a mile). In France, the minimum rate is four fifths of a cent per ton per kilometer. French capitalists have invested a great deal of money in Russian railroads and various industries in that country. Since the date of these investments, the heavy imports from Russia and the meager exports from France to that country have been a cause of complaint among French capitalists. In return for something like \$500,000,000 invested in Russia, they see Russian purchases made in the United States, England, and Germany, while France receives Russian products as dividends for her capital. Some remonstrances have been made to Russia, but the only answer has been a suggestion that France should reduce her heavy protective tariff on Russia's wheat.

Consul Winter, of Annaberg, Germany, writes as follows of England, Germany, and the United States in the world's markets:

Of the \$10,000,000,000 worth of commerce done by all nations, England's share is 23 per cent, Germany's 18 per cent, and 27 per cent, falls to the United States. Germany has built up her foreign commerce at England's expense; and the United States, which is just entering the field, is building up a great foreign trade at the expense of both. In Australia, in Africa, in South America, and in China the commercial representatives of each nation are fencing for vantage-ground upon which to build safe markets for home industries. Formerly, English buyers bought manufactured goods in Germany at ridiculously cheap prices. These goods are forwarded to great merchant houses in London to be resold in foreign markets. To-day, these same goods for the most part are shipped from the district of manufacture direct to the buyer in foreign countries. The middleman's profits now go to enrich the German manufacturer and laborer.

The following causes have contributed to Germany's success in competition with England: First, German-manufactured goods are cheaper and in some cases better. Second, German merchants adapt themselves entirely to the wants of their customers. Industrial commissions have been sent out to South America, Mexico, China, Japan, South Africa, etc., to study and report upon the conditions and needs of the people in those countries. Third, the German traveling men have a better technical knowledge of their branches and are familiar with more languages than agents of other countries. They are active,

A LOGICAL RESULT.

Because of the close connection of the five boroughs of New York City by the proposed tunnel and rapid transit, an unprecedented boom in real estate on Staten Island is predicted by those most competent to judge. See Gigantic Plan and Tunnel Route, page 2.

INSTANT RELIEF FROM HEAT!

A cool and continuous breeze beside your office desk, in the dining room, at the sewing table—anywhere you wish it on the hottest of days—at your instant command, and at a trifling cost.

From the Bottom, with Ease, a Cool Breeze—No longer are you need of sweating your head or gasping for breath. We will ship to any point in the United States (freight prepaid on receipt of \$1 with order, one of our

PORTABLE AND RELIABLE ELECTRIC FAN OUTFITS

Consisting of a chemical battery, chemicals for 100 hours' work, motor, 6-inch fan, wire, and full instructions, with formula for making your own battery solution.

We Guarantee Satisfaction Money Refunded if it is Unsatisfactory

We will return your money (less express charges) if you are not satisfied with your purchase.

can be fitted into any ordinary fire-place and burns either coal, wood or gas. If you are looking for the best at the least cost, write at once for catalogue "D" and learn about it.

EDWIN A. JACKSON & CO.
54 BEEKMAN ST., NEW YORK

resourceful, and gifted with tact, three essential things in selling goods in a foreign country.

It we ever hope to obtain the first place commercially, we must watch and, to a certain extent, adopt the weapons of our rivals, viz.: technical schools, trained traveling men, permanent and able consular officers who are keenly alive to all commercial interests, a merchant marine large enough to carry three fourths of our exports, and sound money.

Consul-General Holloway sends from St. Petersburg, dated April 18, 1900, the following statement of the increase of exportation of eggs from Russia during the period of 1872-1898: 1872, 27,000,000; 1882, 96,000,000; 1892, 739,000,000; 1898, 1,331,000,000; an increase of 1,704,000,000 in twenty-five years. The value of eggs exported in 1898 was 31,134,000 rubles (\$16,000,876).

In his annual report on the commerce and industries of Nice for 1899, Consul Van Buren says, in part:

Owing to the efforts of the deputy for Nice, the plan of connecting Nice with the Italian frontier via Sospel has made considerable progress. The various ministries and the military authorities interested are now busily engaged in elaborating plans, which, when fully agreed upon, will be submitted to the Paris-Lyon-Méditerranée Company, which is to build and run the line. The Compagnie Générale des Eaux, which has the monopoly of furnishing the water-supply of Nice, has obtained possession of a copious spring in the Département du Var, and that it intends to build an aqueduct to Nice. It calculated that four or five years will be required to complete the work, and it is claimed that the town will then have a water-supply second to none in the world. The building of the new electric system by the Thomson-Houston Company is now completed and one or two lines are running. The importance of this enterprise can not be overestimated. During the last year, the Compagnie Électrique de la Méditerranée has been established at Cap d'Aglio, near Monaco, with a capital of 60,000 francs (\$60,000). Its object is to utilize water-power and to furnish electric light and power in its vicinity.

Vice-Consul Monaghan writes from Chemnitz, April 25, 1900:

Greece offers at this time a very good market for the export of gas motors of all kinds. The works of Athens and Piræus deliver gas to their customers for industrial purposes at very low rates. The Grecian mining industries have also increased in activity of late, causing a great demand for mining machines and apparatus. It will be of advantage to makers and exporters of such machines to investigate conditions in the Grecian market—i.e., time of payment, credits, packing, freights, tariff, etc. This would also be a good field for American gas-stoves. Catalogs printed in French would, if sent, be very advantageous. The German papers are calling the attention of manufacturers to the above line of machines.

Consul Hill writes from Amsterdam, May 5, 1900:

The statistics of German emigration for 1899 show that 23,740 persons left the country to cross the ocean. There has been a great falling-off in emigration since 1894, when there were 120,000 German emigrants. The decrease is due to the commercial and industrial prosperity of Germany and to the care taken by the state for the welfare of the working classes. Out of the 23,740 German emigrants, 12,006 went to the United States in 1899, and 1,089 sailed from Bremen for Brazil, against 629 in 1898. The increase is due to concessions obtained by the Hanseatic Colonization Society.

SHORTENED OCEAN VOYAGE.

The Pennsylvania Railroad's gigantic plans to extend main line to connect with ocean steamers by the way of Staten Island and Long Island will save much time in making ocean voyage. See Gigantic Plan and Tunnel Route, page 2.

PERSONALS.

MARY KINGSLEY.—There are a few vivid personalities in this world of whom it seems absolutely impossible to think as dead. Mary Kingsley was one of these. Her writings showed to some extent how brimful of life, of individuality, of power, of courage, moral and physical, she was. On personal acquaintance this impression was still stronger. Among a thousand women Miss Kingsley would always stand out, a distinct, intensely interesting personality, with her quiet face which at first sight reminded you of a Madonna type, till your eyes met the flash, the daring of her own, till the mouth curved into a mocking but always good-natured smile, and till the sense of strength and power surrounding the slight figure began to make itself felt. An entire absence of affectation or mock-modesty was a chief characteristic of Mary Kingsley's. She never under any circumstances sought notoriety, but neither was she in the least embarrassed or disturbed when, perhaps at a moment's notice, she was made to stand before a large and critical public or was otherwise brought into prominence. A wittier and more brilliant talker and speaker never was in all the ranks of excellent women conversationalists and orators, and a kinder and cheerier member of society could not be imagined. And ever and again there beamed through the mocking glance of the steady eyes a kindly, womanly, sympathetic light, quick to come and quick to go. Her adventurous, lonely journeys in Africa, where Africa is deadliest and loneliest and most marvelous, had given Miss Kingsley a discipline which made her appear perfectly calm and collected under any circumstances. But her serenity was, as it were, scintillating with inner life, and it is as yet quite impossible to think of her as lying dead who so recently stood in the midst and prime of life, full of plans and ideas for further travels on the West Coast of Africa, whose regions she had made her own by reason of long sojourns among the natives. It is at the outset of this long-planned journey that Miss Kingsley has died. Since South Africa was the scene of enormous interest, during the last winter, she "looked in," on her way out to the West, where she meant to go on with the researches, the first-fruits of which are embodied in her fascinating volume of "West African Studies." But she got no farther than the Cape. At the age of forty her work, which gave so brilliant a promise of future achievements, is done, and one of the finest types of modern English womanhood has disappeared. —*Westminster Gazette*.

One of the most interesting men engaged in scientific work is Andrew J. Stone, who returned not long since from a 5,000-mile sled journey over the ice and snow of the great Northwest, the most remarkable journey in the annals of Arctic travel. On this journey Mr. Stone made many important discoveries in animal life, as well as in the geography of the country. One of the results of

A GREAT PICTURE.

The impressive scene of the signing of the Protocol at the close of the late war with Spain has been transferred to canvas by the artist Charnay, the picture being now owned by Mr. H. C. Frick of Pittsburgh. A photographic reproduction of this painting is about to be placed on sale, advance copies of which are offered for a limited time at a low price. The full announcement by the Protocol Club, 156 Fifth Ave., New York City, will be found on another page.

Alois P. Swoboda

teaches by mail with perfect success, his original and scientific method of Physiological Exercise without any apparatus whatever and requiring but a few minutes' time in your own room just before retiring. By this condensed system more exercise can be obtained in ten minutes than by any other in two hours and it is the only one which does not overtax the heart.

It is the only natural, easy and speedy method for obtaining perfect health, physical development and elasticity of mind and body.

ABSOLUTELY CURES CONSTIPATION, INDIGESTION, SLEEPLESSNESS, NERVOUS EXHAUSTION

and revitalizes the whole body.

Pupils are of both sexes ranging in age from fifteen to eighty-six, and all recommend the system. Since no two people are in the same physical condition individual instructions are given in each case.

Write at once for full information and Booklet containing endorsements from many of America's leading citizens to

ALOIS P. SWOBODA, 34-36 Washington St., Chicago, Ills.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Dyspepsia

One of the many causes of dyspepsia is the use of cereal foods improperly prepared. People fancy that grain food is simple, and consequently healthful. Whole grains, wheat, oats, etc., contain quite largely an element as indigestible as wood and no more nutritious.

CREAM OF WHEAT

being entirely free from indigestible matter is peculiarly adapted to such as require an easily digested diet.

When buying Cream of Wheat ask for our beautiful gravures of north-western scenery. Your grocer gives one with each purchase of two packages.

Cream of Wheat Co., Minneapolis, Minn.

Rheumatic Gout.

A physician in Malden, Mass., writes:

"I have been a sufferer from rheumatic gout for many years; have taken preparations of all kinds, but TARTARLITHINE commended itself to my judgment and I am more than satisfied with the results. I am happy to introduce it to others."

Tartarlithine is supplied in bottles containing 50 doses at \$1.00 and can be obtained of all druggists or post-free by mail. Pamphlets with Testimonials sent FREE.

McKESSON & ROBBINS,

95 Fulton Street, New York.

IMPROVED BREATHING TUBE

Unequalled for prevention and cure of throat and lung diseases, also for strengthening voice. Sent post-free including ever published on the great value of lung gymnastics, by Dr. Patchen. Send 2 cent stamp for testimonials to C. HYGIENIC SUPPLY CO., BOSTON, MASS.

his work has been the changing of the Arctic coast line to North America. Few men, if any, have so perfect a knowledge of the larger wild animals of the West, North, and Northwest as Mr. Stone. He has studied the animals of these vast and inaccessible regions for years; he has traveled more of their country and visited more of them in their own native homes than any living man. He has had the courage to penetrate the most forbidden regions and suffer the deprivations one must experience in order to study these animals from life. The result of this work is found in many new and important forms of animal life never before known, one of which, the black sheep, is named in his honor, the *Ovis Stonei*. During Mr. Stone's travels in the North he was alone thirty-three days among the murderous Hellgate Indians of the Liard River, where his experiences were most thrilling. He has penetrated and crossed the most northerly reaches of the Rockies both summer and winter, and for forty-five days lived on nothing but fresh meat and tea. Mr. Stone is a true type of the brave, adventurous spirit; enthusiastic, strong, and determined, but controlled by cool judgment. It is such a nature as this, added to knowledge gained from actual experience, that makes a true leader of men in a difficult and dangerous expedition, and as such Mr. Stone has made for himself a name that is world-wide.—*Hall and Express*.

In the opinion of many members of the Methodist Church, the master-mind of Methodism is possessed by Rev. Dr. J. M. Buckley, editor of *The Canadian Advocate*, of New York. Methodist bishops assign Methodist pastors to charges, and, as their name implies, they superintend the affairs of the denomination. But the general conference committee on episcopacy assigns the bishops. More than that, it makes and retires them. Rev. Dr. Buckley is chairman of that committee. He is also its dominating power. A small man in stature, owing nature nothing of gratitude for the physique she bestowed upon him, he rules the Methodism of to-day by the strength of his intellect. There is no complaint heard. Since the recent general conference the remark is being heard in many quarters that he is by far the greatest man Methodism, English or American, has ever produced. He could have been elected a bishop several conferences ago, but he prefers to edit a periodical from New York, and edit general conferences from the floor and the committee-room. Writers of religious histories are putting down that in the year 1900 Rev. Dr. Buckley is the giant of American Methodism.

BUT few people know that the Prince of Wales once rode and won a horse-race. This event took place in Ireland nearly forty years ago, says *The Newark News*. The horse's name was Rupee, and the distance run a mile and a half. To the spectators the jockey was known as "Captain Melville," but in reality it was his royal highness the prince. His colors on this occasion were all white. Rupee was the prince's own horse. He determined to ride him himself, and, if possible, to win. This he did in excellent style, tho there were several well-known and experienced jockeys riding against him.

It is recorded that a Scottish innkeeper once said of the late Duke of Argyll: "His grace is in a verra deeficult poseetion whatever. His pride of intellect will no' let him associate with men of his ain birth, and his pride of birth will no' let him associate with men of his ain intellect."—*The Argonaut* (San Francisco).

A Summer Holiday

Do not plan your summer trip before seeing some of the handsome literature issued by the Grand Trunk Railway System, descriptive of the magnificent playgrounds and summer resorts situated in the highlands of Ontario, including the "Muskoka Lakes," "Lake of Bays," "The 30,000 Islands of the Georgian Bay," "The Magnetawan River," and the "Kawartha Lakes." Health and pleasure can be found in all of these unexcelled regions; good hotels, fine steamers on the lakes, good fishing and hunting, a region where perfect immunity from hay fever is assured, are some of the features which attract the tourist and pleasure seeker to these districts.

A postal card to F. P. Dwyer, Eastern Passenger Agent, 290 Broadway, New York City, will secure, free, descriptive pamphlets full of information, maps, etc.

The natural beauty and diversity of the scenery of the North is unequalled on the continent.

Play Whist?

Then You Will Be Interested in This Table.

It is intended for Duplicate Whist. In the illustration, the large cut is the table set up for use. The small disk is the pocket for holding the cards. It is fastened to the bottom of the table and revolves. The dot on the margin shows the spring which controls it. At the side is the table folded. The pocket holds sixteen decks of cards. There are sixteen hands and each player has four leads. After playing a hand, cards are replaced in the pockets, and by touching the spring, a new hand is before each player. The advantages over trays are no lost cards, no errors and a place on which to play. The table is made in oak or mahogany and is a handsome, substantial piece of furniture. Price of each \$6.00, f.o.b. cars, Green Bay, Wis.

MORE OR LESS PUNGENT.

Mixed.—"Did I understand you to say that one of your ancestors fought during the Revolution?" "Yes, my great-great-grandfather fell at Bunker kopje."—*Cleveland Plain-Dealer*.

On a Bargain Basis.—LAWYER: "Well, madam, let us understand each other. What do you want a divorce for?"

FAIR CLIENT: "Can I get one vor about \$4?"

The Winner.—"How is your brother, Tommy?" "Sick in bed, miss; he's hurt himself." "How did he do that?" "We were playing at who can lean the farthest out of the window, and he won."—*Exchange*.

Not Binding.—"Didn't I promise you a whipping if you disobeyed me?" asked his mother. "Yes; but I'll release you from the promise, ma," replied Johnnie diplomatically. — *Philadelphia North American*.

Up-to-date.—LIVERIED MENTAL: "Me lud, the carriage waits without."

LORD FITZ JOSHIE: "Without what?"

L. M.: "Without horses, me lud; 'tis an automobile."—*Chicago Record*.

Absurd Question.—CHOLLY: "Was the eclipse of the sun the other mawning visible from where you were, ole chapple?"

FWEDDY: "I should say it wasn't, deah boy. I was in bed."—*Chicago Tribune*.

Evidence.—FRIEND: "I suppose the baby is fond of you?"

PAPA: "Fond of me? Why, he sleeps all day when I'm not at home and stays up all night just to enjoy my society!"—*Brooklyn Life*.

A GOOD COMPLEXION

Depends on Good Digestion.

This is almost an axiom although usually we are apt to think that cosmetics, face powders, lotions, fancy soaps, etc., are the secrets for securing a clear complexion. But all these are simply superficial assistants.

It is impossible to have a good complexion unless the digestive organs perform their work properly, unless the stomach by properly digesting the food taken into it furnishes an abundance of pure blood, a good complexion is impossible.

This is the reason so many ladies are using Stuart's Dyspepsia Tablets, because they promptly cure any stomach trouble and they have found out that perfect digestion means a perfect complexion and one that does not require cosmetics and powders to enhance its beauty.

Many ladies diet themselves or deny themselves many articles of food solely in order to keep their complexion clear. When Stuart's Dyspepsia Tablets are used no such dieting is necessary, take these tablets and eat all the good wholesome food you want and you need have no fear of indigestion nor the sallow, dull complexion which nine women out of ten have, solely because they are suffering from some form of indigestion.

Bear in mind that beauty proceeds from good health, good health results from perfect digestion and we have advanced the best argument to induce every man and woman to give this splendid remedy a trial.

Stuart's Dyspepsia Tablets can be found in drug stores and costs but 50 cents per package.

If there is any derangement of the stomach or bowels they will remove it and the resultant effects are, good digestion, good health, and a clear, bright complexion.

THE testimony of 600 years' experience cannot be gainsaid by the unsupported statements of interested manufacturers.

Records show the use of White Lead since 1292, and in all that time it has proved itself the most durable paint. Why not be guided by the light of experience? The brands in margin are pure "old Dutch process" White Lead, the old-fashioned, honest kind that lasts.

FREE For colors use National Lead Company's Pure White Lead Tinting Colors. Any shade desired is readily obtained. Pamphlet giving full information and showing samples of Colors, also pamphlet entitled "Uncle Sam's Experience With Paints" forwarded upon application.

National Lead Co., 100 William Street, New York.

Worse Yet.—MRS. FLATTER (reading): "A bed of quicksand is the most treacherous and deadly thing on earth."

MR. FLATTER: "Guess the chump who wrote that never saw our folding bed!"—*Puck*.

She Didn't Have to.—HAUGHTY LADY (who had purchased a stamp): "Must I put it on myself?"

POST-OFFICE ASSISTANT (very politely): "Not necessarily, ma'am; it will probably accomplish more if you put it on the letter."—*Tid. Bitt*.

All in a Lifetime.—MISTRESS (greatly scandalized): "Is it possible, Mary, you are making bread without having washed your hands?"

NEW KITCHEN GIRL: "Lor', what's the difference, mum? It's brown bread."—*The Columbian*.

Looking Backward.—In a meeting at the St. George's Catholic Club in London last week a young Irishman declared that the Irish were "a grand race, and it riled w' them to see that the noble traditions were handed down to their fower-fathers."—*St. James's Gazette*.

He Didn't See How.—RASTUS: "What yo' tink is de mattah wif me, doctah?"

DOCTOR: "Oh, nothing but the chicken-pox, I guess."

RASTUS (getting nervous): "I 'clare on mah honah, doctah, I hain't bin nowhar I could ketch dat!"—*Judge*.

A Good Character.—"Can you give any evidence in regard to the character of the deceased?" said the judge. "Yes, my lord," replied the witness. "He was a man without blame, beloved and respected by all men, pure in all his thoughts, and—" "Where did you learn that?" "I copied it from his tombstone, my lord."—*Harlem Life*.

Baby-Talk.—Little two-year-old Harold had never been accustomed to hear "baby talk." One day when he was calling with his mamma, the lady of the house, thinking to amuse the child, pointed out a steam-engine standing on a railroad track not from the house. "Do you see the choo-choo, Baby?" she said. The little man looked first at her, then at the engine with a troubled look on his little face—then he asked gravely: "Do you mean the locomotive?"—*Current Literature*.

Ice Wasted.—A New York barkeeper who was spending his vacation in Maine found himself one evening in a hotel in Portland. While he fingered a terrible storm took place. The windows of the room in which he was sitting were broken by hailstones "almost as big as eggs." The proprietor of the hotel noticed that the barkeeper turned aside to drop a tear. "Does the storm scare you?" he ventured to ask his guest. "It isn't that," replied the barkeeper, "but I can't bear to see so much cracked ice wasted on a prohibition State."—*Mail and Express, New York.*

Current Events.

Foreign.

SOUTH AFRICA.

- June 18.—It is reported that President Kruger is in a feeble condition.
- June 19.—The burghers are surrendering their arms.
- June 20.—Lord Roberts reports that all is quiet in Pretoria and Johannesburg, with business resuming its normal state.
- General Methuen defeats the Boers under De Wet at Hellbrun, in the Orange River Colony.
- June 21.—General Buller's forces are advancing westward along the railway from Laing's Nek to Johannesburg.
- June 22.—A British relief force, advancing into Kumasi, sustains heavy losses.
- June 24.—Two hundred Boers surrender to General Warren at Bilkfontein; President Kruger refuses to sue for peace.

CHINA.

- June 18.—The Taku forts fire on foreign warships, which bombarded the forts for seven hours and compelled their surrender.
- The international relief forces fail to reach Peking, and return to Tien-Tsin.
- June 19.—The French Government will despatch a cruiser division and 4,000 troops to China.
- Li Hung Chang has been summoned from Canton to Peking to advise the Empress Dowager.
- June 20.—Despatches from Shanghai state that Admiral Seymour's international column of marines reached Peking on June 17, and that the legations were then safe; the Chinese attacked the column on the march.
- June 21.—Persistent fighting is reported at Tien-Tsin, where the American consulate had been destroyed.
- American marines are despatched from Taku by Admiral Kempff to Tien-Tsin.
- June 22.—The Russian Siberian forces mobilize; Japan prepares to advance its fleet; President McKinley takes steps to safeguard American interests.
- June 23.—Confirmation of heavy fighting around Tien-Tsin is received, the Chinese forces being led by Prince Tuan; no news is received of Seymour's relief column.
- June 24.—Admiral Kempff cables loss of four marines at Tien-Tsin; Secretary Long instructs Admiral Remoy to sail to Taku from Manila with the *Brooklyn*.

OTHER FOREIGN NEWS.

- June 21.—Baron Loch, formerly Governor of Cape Colony and British High Commissioner for South Africa, is dead.
- June 17.—President Loubet pays an official visit to the American Pavilion at the Paris Exposition.
- Count Muraviev, the Russian foreign minister, dies suddenly from apoplexy in St. Petersburg.
- June 24.—Despatches from Manila announce that American troops were ambushed in Mindanao, nine being killed, twelve wounded.

Domestic.

PRESIDENTIAL CAMPAIGN.

- June 18.—Governor Roosevelt again declines the nomination for Vice-President.
- The Republican clubs parade in Philadelphia.
- June 19.—The Republican National Convention opens in Philadelphia; the Vice-Presidency is still in doubt.
- June 20.—The Convention listens to a speech by Senator Lodge, adopts a platform, and hears reports of committees.

A GREAT PICTURE

AND A Remarkable OFFER

This announcement can not fail to interest all who appreciate the importance of history or the artistic value of a picture. The painting depicts the most important scene or event that has transpired in American history during the past twenty-five or thirty years. It is Chartran's famous canvas of

THE SIGNING OF THE PROTOCOL

The original was painted for and is owned by Mr. H. C. Frick, of Pittsburgh. He paid the artist \$20,000 for the painting and, at the present time, it is being exhibited in Paris at the Exposition.

THE HISTORICAL VALUE

can not be over-estimated; portraying, as it does, the signing of the documents which marked the close of our war with Spain, and inaugurating the expansion of our Government, its importance must appeal to all. This picture depicts a scene that marks a turning point in our country's history. It must be of deep interest to future generations, as the documents signed acquired for the United States a vast amount of new territory, thus widening the field for those who follow in the years to come.

DESCRIPTION OF THE PAINTING

The scene is laid in one of the rooms in the White House at Washington. There are gathered about a large table or executive desk the men who drew up and signed the famous document.

President McKinley stands at the head of the table, watching with intense interest the French Ambassador Cambon, who, pen in hand, is signing the document on behalf of the Kingdom of Spain. At his side sits the late Secretary of State, Judge Day. Behind stands a group of four consisting of Secretary of French Ministry M. Tiebout, First Assistant Secretary of State Prof. Moore, Second Assistant Secretary of State Mr. Cridler, and Third Assistant Secretary of State Mr. Adee. All evince the keenest interest in the signing of the papers.

The picture is correct in every detail; inkstand, pen, papers, calendar, blotting pad, books and draperies are all depicted just as they were upon that memorable day. Through a window one views a portion of the beautiful grounds surrounding the Presidential Mansion.

The picture was on view in New York City last February, and the New York papers at that time gave most favorable notices of the picture, particularly commenting upon the truthfulness of the likenesses of not only President McKinley but of all who participated in the event.

OUR PROPOSITION TO YOU

This fall we intend to sell an enormous number of these photogravures, and to aid this sale as much as possible we will for the month of July offer half-price. This will enable thousands of people to see and become acquainted with the interest and value of the picture and must result in many sales in the future. The photogravure would retail for \$5 or \$10 at the art stores. It is upon paper 36x28½ inches, but during July the price is only \$4. You can send this amount with your order, or if you prefer send \$1 with order and \$1 a month for 3 months. The picture is sent with the understanding that you can return it, if not found satisfactory, and we will refund your money.

THE PROTOCOL CLUB, 156 FIFTH AVENUE,
NEW YORK CITY.

The Minnesota Democratic State Convention chooses **Charles A. Towne** for Vice-President on the Bryan ticket.

June 21.—**William McKinley and Theodore Roosevelt** are unanimously nominated for President and Vice-President by the Republican National Convention.

OTHER DOMESTIC NEWS.

June 18.—**General Wheeler** is commissioned as a brigadier-general and assigned to command the Department of the Lakes until his retirement by age.

June 20.—**Philippines**—General MacArthur will formally announce President McKinley's decree of amnesty to-day.

Cuba: A constitutional convention will be held in Cuba shortly to prepare the way for independence.

June 21.—A passenger train on the **Maroon branch of the Southern Railway** runs into a washout, and thirty-five people are killed.

IF INTERESTED, ACT QUICKLY.

Only 24 lots left of the 100 set aside at special discount prices in Westerleigh (Prohibition Park), Staten Island, New York City, to warrant the immediate completion of the vast improvements planned. See Gigantic Plan and Tunnel Route, page 2.

"A Devout Bluebeard"

This book is a truthful satire of the snobbery of the day, together with the foibles of churches and their social machinery. The devout Bluebeard is so well portrayed that few will fail to recognize him. It abounds in naturalness and witticisms. If you would rather laugh than cry, read it. May be ordered from any bookseller or will be mailed for one dollar by the

Both problems solved by M. W. H., the Rev. I. W. B., C. R. O., the Rev. F. H. J., M. M., W. W., W. B. M., W. R. Coumbe, Lakeland, Fla.; J. E. Wharton, Sherman, Tex.; Prof. P. Dowell, Muhlenberg College.

477 (only): The Rev. S. M. M.; Prof. C. D. Schmitt, University of Tennessee; C. E. Lloyd, Sabina, O.; E. C. Dahl, Granite Falls, Minn.

478 (only): "Meropé," Cincinnati.

Comments (477): "Key hard to find; otherwise not specially interesting"—M. W. H.; "Chaste and charming"—I. W. B.; "Very fine"—C. R. O.; "Key well hidden, its only merit"—F. H. J.; "Without much variety"—M. M.; "Key difficult and ingenious; otherwise mediocre"—W. W.; "Compensating for the commonplace 3-er"—W. R. C.

(478): "Splendid problem"—M. W. H.; "Splendid study in Chess-mechanics"—I. W. B.; "First-class"—C. R. O.; "Capital piece of work"—F. H. J.; "Fine"—M. M.; "Easy, but good"—W. W.; "Disappointing"—W. R. C.; "Easier than 471 and not so pleasing"—J. E. W.

In addition to those reported Prof. C. D. S. got 475, and A. R. Hann, Denton, Tex., 473 and 474. M. Stivers got 475 and 476.

"Meropé," Cincinnati: Send your name and address, and we will show you that you are wrong concerning 474.

The Jerome Gambit.

CONSULTATION GAME.

White.	Black.
1 P-K4	P-K4
2 Kt-KB3	Kt-QB3
3 B-B4	B-B4
4 BxPch	KxP
5 Kt x Pch	Kt x Kt
6 P-Q4	

The majority of those who sent Black's 6th move played B x P. The reason given for this move is that as Black must lose a piece he had better get a P for it. This is not good reasoning, as White's continuation demonstrates: 6... B x P; 7 Q x B, P-Q3; 8 P-B4, and White still has the attack. If 6... Kt-B3; 9 Q-Q3 ch, B-K3; 10 Q-R5 ch, P-Kt3; 11 Q-B3, Kt-Q3; 12 Q-Q3, Kt-B3; 13 P-B5, and White has a good game. Another move suggested 6... Q-B3. The object of this is (a) to prevent P x Kt; (b) to continue P-Q3, Kt-Kt5, etc. The weakness of this is that it allows White to Castle. For instance: 6... Q-B3; 7 Castles, P-Q3; 8 P x Kt, Q x P; 9 Kt-B3, B-Q3; 10 K-Rsq, followed by P-B4, giving White a strong attack. We believe that Black's best (6) is Q-R5. The superiority of this move is discoverable in several directions. White can't play P x Kt; if P x B, then Kt-Kt5, with a strong game. We hope that Mr. Jerome and others will suggest White's best move after Black's (6) Q-R5.

The Paris Tournament.

LASKER TAKES FIRST PRIZE.

As in the London Tournament, Lasker lost only one game, and Marshall, the American, has the honor of winning that game. Pillsbury, who stood second, was two games behind Lasker, and only one-half point ahead of Marshall and Maroczy who divided third and fourth prizes. Burn was fifth; Tschigorin, sixth; Marco, Mieses, and Schlechter divided seventh and eighth. The Brillancy prizes went to Mieses for his game with Janowski, and to Tschigorin for his game against Mortimer.

The full score:

Won. Lost.	Won. Lost.
Lasker..... 14½ 1½	Showalter..... 9 7
Pillsbury..... 12½ 3½	Janowski..... 9 7
Marshall..... 12 4	Mason..... 4½ 11½
Maroczy..... 11 4	Brody..... 4 12
Burn..... 11 5	Rosen..... 3 13
Tschigorin..... 10½ 5½	Mortimer..... 3 14
Marco..... 10 6	Didier..... 1 15
Mieses..... 10 6	Sterling..... 1 15
Schlechter..... 10 6	

Game from the Paris Tournament.

Ruy Lopez.

White.	Black.	White.	Black.
1 P-K4	P-K4	16 Kt-Q3	Kt x Kt
2 Kt-KB3	Kt-QB3	17 R x Kt	Q-B2
3 B-Kt3	Kt-B3	18 P-KR4	R x B
4 P-Q4	Kt x KP	19 P x R	B-KB4
5 P x P	B-K3	20 R-Q2	Q-B7
6 Q-Q5	Kt-B4	21 R-Ksq	B-KR6
7 B-K3	Kt-K2	22 B-Kt5	Q-Kt3
8 Castles	Castles	23 P-B4	B x P
9 Kt-B3	P-B3	24 R-Q3	B-B4
10 Q-R-Qsq	K-Rsq	25 R-B3	B-Q3
11 Kt-K4	P x P	26 K-Bsq	B-K4
12 Kt x P	Kt x Kt	27 R-R3	P-KR3
13 Q x Q Kt	P-Q3	28 P-B3	B-B4
14 Q-B3	P-B3	29 R-Ksq	P x R
15 B-K2	P-Q4	30 P x P dis ch	K-Kt sq
16 Kt-B5	Kt-B5	31 Resigns	
17 B-B3	B-Q3		

We call attention to the position after White's 20th move. Now, Black's move, 20... R x B is clearly indicated; but, as *The Standard*, London, says: "Maroczy in refraining from doing this a move earlier shows how thoroughly he analyzes and judges a position. A move earlier the sacrifice is not sound."

Chess Nomenclature.

We published several weeks ago a table of names of pieces in various languages. The writer of the article from which we took the table has the following note in *The B. C. M.* (June):

"A philologist sends me a correction of a few of the Chess-terms given at last month, and some additional varieties of old spellings. 'Pawn' should be *Pawne*, plural *Pawnys*. In Spanish, 'Knight' *Cavalla*, and 'Rook,' *Roque*, as well as the terms given. Portuguese, *Delphino*, not 'Alfil.' In German, *Fende* is older for 'Pawn' (peasant) than *Bauer*, also in Dutch. And *Alte* and *Alfil* are additional very old German words for the 'Alfil.' The old form of 'Chess' in Swedish was *Skakta*, 1600; 1600, and the pieces *Konung*, *Drottning*, *Rik*, *Biskop*, *Riddar* (Knight), and *Finna* (Pawn)."
